yachts broke tacks. *Psyché* was first to make a board toward Dartmouth, then went about and lay a course for the buoy. She met *Muta* at the buoy, and, being on the port tack, was obliged to go about for her, being badly hampered by a schooner at anchor. *Muta* kept the lead gained on the ranch across to the Commissioners. Jibbing around she set balloon jib, and *Psyché* contented herself with a jib-topsail. All hands then round Fort Clarence mark as follows: *Muta*, 30m. 51s.; *Psyché*, 2h. 27m. 51s.; and *Seafan*, 3h. 31m. 38s. *Psyché* had some trouble with her jib-topsail sheet, and sowed the sail. *Muta* spinning out her lead once more. The race was between these two, *Seafan* and *Lily* having no chance any longer. The same order was maintained rounding Fort Clarence mark the second time. The craft trimmed sheets in and for the commissioners, when *Psyché* showed to better advantage, reducing the race after allowances by 4m. 30s. over *Psyché*, and by 16m. 13s. over the schooner. The club members and friends assembled aboard the squadron steamer *Carrie*, and the Honorable Secretary, having read the report of the Sailing Committee, the prizes were presented to the winners by Mr. F. M. Yassow, as follows:

Open Race, August 10—First prize, *Psyché*, Lieut. Capel Cure, 20th.

Schooner Race, August 24—First prize, *Seafan*, Capt. Larcom, R. A.

Sloops and Yawls Race, August 24—First prize, *Hebe*, Mr. J. E. Butler; second, *Kestrel*, Vice-Commodore White.

Open Race, August 28—Not awarded.

Five-ton Race, August 31—First prize, *Muta*, Lieut. Hussey, R. E.

Open Race, September 7—First prize, *Muta*, Lieut. Hussey, R. E.; second, *Psyché*, Lieut. Capel Cure, 20th.

Sloop Phantom, Lieut. Hammett, Trenton High Regiment, was in collision with a schooner recently and had bowsprit broken short off at the stem, and mast taken off close to the deck. The sloop was close-hauled, the schooner going free.

The R. M. Y. C. steam yacht *Novaya*, J. T. Molsen, sailed for Montreal on the 11th via Charlotteville.

General Sir P. L. McDougall, C. O. M. G., commander-in-chief at Halifax, has a new cat-rigged yacht of about two tons. She was built at Shelburne.

BOSTON YACHT CLUB.—We are in receipt of the latest issue of the Boston Yacht Club Book. It discloses a flattering prosperity of the club, for the book contains the private signals of no less than sixteen schooners, sixty sloops, three steamers and two catamarans. Among the schooners are the well known *Carrie*, *Julia* and *Stilet*, while the single-stickers include the smart *Undine*, a regular windjammer, *Shagard*, *Yacht* and many others of fame in the local regattas of the club. The club book is very attractively gotten up, contains a cut of the club-house as a frontispiece, list of yachts, owners, ports, dimensions, etc., and the name, of over 200 members. Then follow constitution, by-laws, sailing directions and time allowance tables, based upon length measurement, with full explanations of how the rule was fixed upon and allowances calculated. The flag-chart in the rear, handsomely lithographed on tinted paper, has been added to the club burgees of all the principal yacht clubs on the coast. One omission we hope to see supplied next season, at least as far as possible. A special column should be devoted to the builders, sailmakers and modellers' or designers' names as well as the dates of construction and alterations. This will serve to make the record of each yacht more complete and would interest much of the interest concerning them that is now too often overlooked or lost.

HAVERHILL YACHT CLUB.—The union regatta of this club, sailed Sept. 14, turned out quite a successful affair. In the first class *Lizzie Warner* won in 1h. 1m. 53s.; *Empress* second, 1h. 1m. 40s. In the second class *Linaie May* won in 1h. 40s.; *Eclipse* second in 1h. 2m. 15s. In the third class *Abbie M.* won in 46m. 33s.; *Adelaide* second in 48m. 17s. *Two* won in the special class in 44m. 37s.

NEW BEDFORD YACHT CLUB.—The fifth race in the series of matches given by this club was again won by *Enice*, making a tie of two races with *Sylph*. These two will have to sail a sixth match to decide the series. The last of the series of cat boat matches took place in New Bedford Harbor Sept. 21. Course, six miles. In 1h. 2m. 38s. *Enice* won, beating *Sylph* by 10s. This *Enice* wins three out of the six matches, and takes the cup, *Sylph* having scored two and *Clio* one. The last match was started to sail off the tie between *Enice* and *Sylph*.

ATLANTIC YACHT CLUB.—The small craft of this club sailed their closing race of the season in New York Bay, Wednesday, Sept. 18. Course, from flagship *Triton*, off Breakwater Point, to a stakeboat off Owl's Head, thence around stakeboat in Upper Bay and back to flagship, seven and one-half miles, to be sailed over twice. Prizes, a pennant, and cup for each class, sloops and cats. Wind light from W. and tide last of the flood. An uneventful race was finished as under:

SLOOPS.						
Name.	Start.	Finish.	Elapsed	Corrected		
	H. M. S.	H. M. S.	H. M. S.	H. M. S.		
Pilot.....	1 02 44	6 21 24	4 28 40	4 28 40		
Corinne.....	1 03 30	6 31 27	4 37 57	4 35 06		
CAT-RIGGED.

Lapwing..... 1 53 32 6 29 33 4 36 22 4 34 05
Truant No. 2..... 1 54 20 Not timed.

Pilot takes cup and pennant in sloop class, beating *Corinne* by 7m. 10s., and *Truant*, of New Rochelle, wins in cat-boat class, beating *Gentle* by 1m. 43s. The annual pennant regatta of the club will be sailed to-day.

DORCHESTER YACHT CLUB.—The third regatta of the season sailed by this club took place Sept. 17. Wind light but steady from S. W. First class centreboards, 25ft. and over; second class, 20 to 25ft.; third class, under 20ft. All keels sailed in one class. There was also a special for boats under 14ft. Start, from an anchor; no restrictions as to canvas, cat-boats being limited to mainsails, however. Judges, Messrs. Parkman Dexter, G. F. Clark and A. L. Jackson, aboard the gentleman's schooner, *Osceola*. Among the larger boats *Osceola* was brushed at 25ft. which left the latter shook her again. *Clara B.* was disqualified. *Charlotte* and *Roslyn* were to be re-measured before awarding the prize in their class. The prizes were awarded as follows:

First-class centreboards—First prize, marine glass, *Thone*; no second prize; consolation prize, *Panchoa*, tin fog-horn.
 First-class keels—First prize, marine glass, *Volante*; no second; consolation, fog-horn, *Lydia Adams*.
 Second-class centreboards—First prize, marine glass, *Fancy*; no second; consolation, fog-horn, *Little*.
 Third-class centreboards—First prize, marine glass, *Psyche*; no second; compass charm, *Scamp*; third, marine clock, *Orlean*; consolation, fog-horn, *Bubble*.
 Special class—First prize, opera-glasses, *Sadie*; second, compass charm, *Lena*; third class, galvanized anchor, *Char-belle* or *Roslyn* (yet to be decided); consolation, book, *Little Greta*.

It is probable another regatta will be announced before long. DORCHESTER YACHT CLUB.—The annual cruising trim contest regatta of this club will take place early in October. The prizes are the result of an annual subscription, brought into life some years ago by Mr. F. W. Weston, an active member of the club. It is expected that many large craft will enter this season as the regatta has become quite popular.

THE INTEREST IN BOSTON.—The Boston Herald remarks, concerning the recent visit of the schooner *Intrepid* in Eastern waters, that "she does not appear to be very stiff, judging by the way she was reefed coming up the harbor. But the *Herald* overlooks the fact that *Intrepid* is modelled on principles differing from those in force in the broader and shallower type of schooners which predominate, and that a greater angle of "heel" is expected in vessels of her design. They do not depend upon great statical stability, but rely rather upon a low centre of gravity, which comes into play at small angles only to a moderate extent, but materially increases the righting lever when it begins to blow and the craft gets down to her bearings. Such vessels are eminently safe in all kinds of weather, even though they heel more at the outset, while yachts of the opposite extreme are always liable to be *Mohanked* if they carry on beyond a certain point.

CUTTER ENTERPRISE.—This Boston cutter is having her head boom lengthened to carry a little more head sail.

BAD REMANSHIP.—Says the Boston Herald: "A great many of the topmasts were carried away through carelessness in not having backstays or not working their stays in time to prevent the topmast from receiving all the strain." That is about the length and breadth of the thing. There is a great deal of room for improvement in even the most elementary sailing, and it is high time a little more study and zeal were displayed in the direction of more prudent yachmanship.

SOUTH BOSTON YACHT CLUB.—For the closing regatta of this club, Sept. 18, open to all yachts, there were several entries, thirty-three boats actually going over the course, which was the judges' boat to Cow Pasture Bar buoy, Dorchester (No. 6), leaving it on the port, to buoy No. 7, off Fort Independence, leaving it on the starboard, to Sculpin Ledge buoy, leaving it on the port, to buoy No. 6, lower middle, leaving it on the port, passing between the judges' boat and flag boat. *Napoleon* took the lead, but upon carrying away her topmast, dropped to fourth place. *Fog* suffered a like loss, as did *Swallow*. *Gracie* carried away her booming out pole. *Unknown* was fouled by *Eureka*. It seems that *Unknown* was running free for the winning line and *Eureka* was on the wind. As the latter had the right of way, no matter how near *Unknown* was to taking the prize, it was, according to the rule of the road, the latter's business to haul her wind and give way to *Eureka*. As the latter could not content to take the prize for centreboards, common courtesy should have induced her to go about and cross the line in time, and not willfully took the keel-boat. As there was, moreover, no reason whatever for *Eureka*'s standing across *Unknown*'s bow, the fouling losses very much like a willful trick on the part of Capt. Fuller, and he will have only himself to blame should he and his boat be debarré from again sailing under South Boston's auspices. In the matter, such prompt action will be taken in the matter, as such tricks cannot be too summarily dealt with. We have no desire to see professionals bringing the sport to the low level they already have done in some other pastimes. Winners in first class: *Mame*, Floyd & Alwood, 10m. 11s.; *Panchoa*, A. Burgess, 11. 21m. 65s.; *Folly*, J. F. Sheppard, 11m. 22m. 24s. Second class: *Alia*, Mr. Chapman, 11. 21m. 21s.; *Nata*, Mr. W. C. Clark, 11. 33m. 62s.; *Veronica*, Mr. O. Haskell, 11. 36m. 63s.; *Wendy*, Mr. West, 11. 37m. 53s. Third class: *Waterwitch*, Mr. Hutchins, 11. 25m. 40s.; *Psyche*, Mr. Clark, 11. 35m. 51s.; *Fancy*, P. Grant, Jr., 11. 37m. 39s.

THE DORY NAVIGATES.—The following we take from *Hunt's Yachting Magazine* for September: "The dory is a first-rate idea for towing easily through rough water, as she would offer almost no resistance whatever. * * * We would publish her lines if any useful lesson were to be learned from them. They might mislead novices, but the experienced man would only regard them as something to be avoided, like a palpable rock in the water. We could not content to content to, and think the dory a most unfit boat to trust one's self to, especially under canvas and when not decked over. They are built for towing, as *Hunt's* surmises, and are in extensive use among our Down-East fishermen. In the ordinary long swell of the Atlantic they are found handy by the fishermen in tending the seines, but in bad weather they are poor things to get adrift in. Their chief recommendations are low first cost and the ready manner in which they can be towed and dumped on deck."

S. S. VEDETTE.—The S. S. *Vedette*, N. Y. Y. C., Mr. Phillips, was returned to this port from her cruise eastward, along the New Brunswick and Nova Scotia coasts, Sunday, Sept. 22.

FIDGET vs. BROWN.—The race for the Corinthian Challenge Pennant of the Central Hudson Yacht Club was sailed over the regular New Hamburg course, on the Hudson, Sept. 21. The pennant was presented by Mr. Philip Schuyler, and has been won by *Fidget* first, then by *My Emma*, of New Rochelle, then by *Victoria*, and second time, by *Victoria*. *Fidget* and *Victoria* sailed in the latter, beating *Dare Devil*. The race with the *Wigwag* came to nothing, owing to lack of wind, and *Fidget* was finally challenged by *W. R. Brown*, of Newburgh. The race was sailed in a good breeze of wind from the W., enabling the yachts to make the marks all over the course without any turning, though they were sometimes trimmed in about as far as it was possible to baulk sailing. Corinthian rules were in force each over sails with own staff crew limited to seven, and ballast fixed. *Fidget*, with Commodore Irving Grinnell at the helm, went across the line at 10. 58m. 18s., and *Brown*, towed by Mr. C. F. Brown, at 10. 59m. 18s. The lower stake was turned by *Fidget*, with a lead of 1m. 7s. On the run up *Brown* got a slant and went ahead, showing the way around the mark. *Fidget* luffed out on *Brown*'s weather on the second mark up, and after some trying luffing matches, came out the better of the two. The

New Hamburg crack set spinnaker, and *Brown* followed out with a big one a little later, but could not close on her rival, and *Fidget* went across the line a winner after an exceedingly smart and well sailed race. The absence of sandbags and a professional mob in cockpit did much to render the race interesting and instructive, and should carry a lesson to those who still insist upon over-balloasting and over-sparring. A summary of the results is appended.

New Hamburg course, twenty miles: Corinthian race for Challenge Pennant, Central Hudson Yacht Club, September 21, 1878. Tide, ebb; wind, W. S. W.

Name.	Length.	Start.	Return.	Time of Race.	Corrected Time.
Brown.	27 10	10 45	2 24 05	3 38 25	3 38 05
Fidget.	27 11	10 45	2 24 05	3 37 08	3 36 48

MATCH ON THE TARP.—It is no small play to handle a toy of a boom 55ft. long, but if report speaks true there is a likelihood of big *Ambassadors*, Mr. William Astor, turning up this fall in a racing mood. Her owner has all along averred that he proposed to put her speed to test sooner or later, and has stowed away for over a year a set of sails of racing size as ever was cut and sewed for any craft afloat. They need airing badly, and it is to be hoped that Mr. Astor, upon his return from Europe, will try on *Intrepid*, *Rambler*, or, better still, *Dreadnaught*. If there is anything in our waters that can cope with the huge City Islander it is *Dreadnaught*. In lighter weather, *Intrepid*, *Idler* and others could readily get away with her, but when it comes to bucking into a heavy sea and a strong wind, *Ambassadors* will very much compare with *Dreadnaught*, unless it be some of the big cracks which Nicholson has turned out the last few years in British waters; big ones, like *Ambassadors*, that run on to 500 tons and require some 15ft. to float in. Mr. Astor's schooner is altogether too large, however, for efficient racing property, and it would not surprise us one bit to find him pulling his mind and quite head for Southern climes without changing his craft to pieces before. As to these *Ambassadors* will very much belie her looks, should she display any. As a wholesome family coach she is all very well, but she lacks the lines of a goer. In a seaway, though, her tremendous power would tell heavily in her favor, as under such circumstances time allowance to the smaller craft would not make up the deficiency, and so, possibly, Sam Plue's big one might land a cup for her owner after all; but to these *Ambassadors* the schooner measures 146ft. over all, 28ft. beam, and 11ft. water with board up.

BUFFALO YACHT CLUB.—This organization is in its first year of existence. It has long been a matter of astonishment to us that yachting should not long ago have been developed to a greater extent in a port so favorably situated, and in which ample wealth has accumulated to warrant a successful following for the sport. At last it seems to have arrived at that stage of advancement where the formation of a club adds dignity and method to its prosecution. The club inaugurated its existence with a regatta on Lake Erie, Sept. 16. Entries—schooners, *Fleetwing*, *Mytic*, *Corsair* and sloop *Argo* took the first class, and the second class, schooners *Anna Argo*, *Delta* and sloop *Telephone*. *Fleetwing* and *Anna Argo* took the prizes.

EMPIRE YACHT CLUB.—The match for the Dowling cup, postponed from a previous day to Sept. 13, on account of lack of wind, resulted in a victory for the *Brothers*. The course was from foot of E. 104th street to and around a stakeboat off the Manhattan Club-house, repeat four times. Wind blowing equally all day. Only three put in an appearance, and after much delay, the *Brothers* were the victors, getting to pieces, *Brothers* managed to cross the line 5s. ahead of *Emma D*. The latter had won the cup twice and came near getting possession of it by a third victory, as required by the deed of gift.

NANASSET YACHT CLUB.—The special regatta held by this club off Nahant, Sept. 10, for the champion silk pennant presented for competition by Mr. P. Little, was open to cat-rigged boats only. Wind fresh from N. E. Won by the famous *Fancy*, Mr. P. Grant, Jr., in 53m. 57s.; *Psyche*, L. M. Clark, second, 50m. 24s.; *Alia*, W. O. Haskell, third, 11. 41s.; *Aron*, R. D. Sears, fourth, 11. 4m. 53s.; *Jaw*, F. F. Emery, Jr., fifth, 11. 3m. 28s.

BALTIMORE YACHT CLUB.—The regatta of this club was sailed Sept. 13, over the regular course, Perry Park to White Rocks and return, in 24 miles, and was won by *P. O. Lacroix* in first-class, *D. Collier* in second and *Emma* in third.

YACHTING IN CHINA.—From *Pacific Life*, we learn that the Hong Kong Yacht Club is again looking up. Some time ago it was in quite a flourishing condition, but latterly many of the craft had outgrown their time, many were sold, others were wrecked, and it looked for all the world as though the club might founder too. But there is always a leading spirit in all clubs, and so the Hong Kong has been once more revived. Most of the yachts are of the cutter type, but the *Loiterer*, schooner, is the handiwork of the famous Geo. Steers. She is no match for her more powerful sisters, being too beamy for racing work at sea. *Naomi*, a native cutter, built upon lines sent out from England, seems to be the crack and, with her crew of Chinamen, can handle her canvas in a style that would make some of our civilized tars stare with admiration. In the rigging John Chinaman is said to be like a cat, strong, wiry and agile, and he enters into the spirit of a race with great zeal. The Hong Kong club was founded in 1859, and at that time it was a small sea-going club. Since then their ranks have since been decimated, but in time will no doubt be filled by new comers.

NORFOLK, VA., YACHT RACE.—For the open regatta held at Norfolk, Va., Sept. 23, there were entered: *Vision*, E. W. Face; *Index*, Hiltchings Brothers; *Haidee*, Thomas Bain; *Aphrodite*, John M. Askins; *Coria*, Frederick Hardy; *Lelia*, Hiltchings Brothers; *Wanderer*, Ernest Graves; *Alina*, W. A. Graves; *Mist*, A. H. Kirby; *Little Fraud*, W. P. Crolley; *Campbell Grosner*, General V. D. Grosner. Won by *Index* in 2h. 50m. Course, from the Naval Hospital to Old Point and return, distance, 25 miles. Judges: Capt. Thos. Grellis, Captain James H. Robinson. Referees, Capt. O. E. Edwards; and F. Pfeiffer, timekeeper.

CRAB-BAT BROUGHT AT NORFOLK, VA., Sept. 23.—There never was better weather for a trial than to-day; the wind east-north-east, a leading breeze throughout the entire course, with all that the yacht could stand up to. Never was better time made by craft of this class and inches, taken collectively, as the summary will show, the distance of twenty-five miles being run in three hours. The course was from Hospital Point to and around a buoy near old Point Comfort and back to the harbor was a cozy affair with sailing craft and excursion steamers to witness the race, but a hundred or more vessels lay in Hampton Roads, wind-bound. Sewell's Point,

Old Point, Hospital Point, and the wharves in Norfolk and Atlantic City were covered with interested spectators, including many sailors from the Navy Yard and Hospital. Time was called for 10:30, and so prompt were the yachts that the whole fleet were off and away within thirteen minutes afterwards, an example which it were well worth while to imitate elsewhere. The following is the summary:

FIRST CLASS.			
Name	Owner	Length	Running Time
Vision	E W Face	93 10 1/2	4 59 00
Index	Hiltchings Bros	96 5	4 56 20
Haidee	T A Bain	91 10	5 11 15
Aphrodite	J Gaskins	25 6	3 01 45

SECOND CLASS.			
Coria	P Hardy	20 9	3 15 30
Lelia	Hiltchings Bros	21 3 1/2	3 14 45
Mist	W H Kirby	19 2	3 19 30
Campbell Grosner	Grosner	23 4	3 19 30
Little Fraud	W P Crolley	19 11	3 21 30
Alina	W A Graves	21 2	Got aground
Wanderer	E Graves	20 2	Got aground

The *Index* won the first prize in the first class, beating the *Haidee* 2m. 30s., and the *Lelia* beat the *Coria* by 57s. in the second class.

OAR AND PADDLE.

COURTESY AND HANLAN.

In view of the rapidly nearing day, when the two best oarsmen in America will meet for a trial of skill and endurance to settle the claim of either to the championship of the Continent, a glance at the records of both will be of interest, and may aid in forming an opinion concerning the probable issue of the coming match over the 5 mile Lachine course, Montreal, Canada.

Ed. Hanlan first took the shell in 1873, when he was but eighteen years of age. He was then living with his family on an island in the harbor opposite the city of Toronto, Ontario. In that year he won the championship of the harbor, defeating Williams and McKay. The next year he easily beat London, of Toronto, thereby securing the championship of Burlington Bay. In 1875 he repeated the performance, and pocketed the same year the same year over a two-mile course, he made away with London and Douglas. In a race for the Governor-General's Medal. In 1876 he defeated McLean and Douglas, and later in the year won the champion belt of Ontario. During the Centennial races he showed to the front in a prominent way, beating Harry Coulter, Thomas, of London, and next day Pat Luther and Fred Plaisard, winning easily in 21m. 54s. Finally, defeated Alex. Brynley, of St. John, N. B., for the championship in 21m. 11s. Next he got the silver Lake, Boston, where, June 13, 1877, he was defeated by Plaisard, through the breaking of his outrigger. June 25, he beat Frenchy Johnson and Driscoll, over a three-mile course, clearing \$150. He fouled his old antagonist, Plaisard, in the Boston City Regatta, July 4, and was disqualified. In October, 1877, he defeated Wallace Ross in a five-mile race near Toronto for \$1,000 a side. In May, 1878, he again defeated Plaisard in a three-mile race at Toronto. In July he got the best of Evan Morris at Pittsburg, finishing a five-mile course in 37m. 68s. Later on, he beat the whole lot, including Plaisard, Riley, Luther, and a host of minor lights, in the regatta of Brockville and Cape St. Vincent, Canada. In July he defeated Wallace Ross a second time in a five-mile race on the Kennebec, and added \$2,000 to his purse.

Charles Courtney, of Union Springs, N. Y., was born at Union Springs, N. Y. He is twenty-nine years of age. He early took to the water and engaged in many local contests, and when he branched out on a larger scale and appeared at the regular regatta of amateurs, he invariably led them over the course. So unflinching were his victories, that whenever "Courtney from Union Springs" came to the line it was a foregone conclusion. At Saratoga, September 15 and 16, 1874, he defeated Yates, Keator, and others of lesser note. In August, 1875, he took the diamond medal and the championship of the State of New York, by defeating such old hands as W. B. Curtis, David Roche, Ed Blake and Yates. The prize for double sculls went to him and R. A. Robinson, at Troy, September, 1875. With Frank Yates in his boat, at Saratoga, Aug. 8, 1876, he won the double-scull race without a start, and at Philadelphia he beat Courtney in the Centennial races. At Greewood Lake, N. Y., in August, 1877, he met Riley, being his first race as a professional, and after that he quit the ranks of amateurs and rapidly disposed of all professionals of a lesser sort. He beat Riley and Plaisard at Saratoga, August 28, 1877, three miles with turn, in 20m. 47s. In September he won the championship of the United States Lake, beating Riley, Frenchy Johnson, Ten Eyck and Laberge, three miles with turn, in 21m. 4s. Then followed an attempt to get on a match with Trickett, which failed, owing to the same bad management which has characterized his recent match with Hanlan. In June, 1878, he tackled such extremely light material as Dempsey, on Seneca Lake, but was capsized near the turn, as reported, by hidden obstructions, though, upon investigation, none could be found. The force of pulling Dempsey, whom he could beat with one hand, was repeated at Skaneateles, when the countryman was dropped out of sight right enough. Aug. 15, Courtney took part in the Silver Lake regatta, Boston, but was defeated by Frenchy Johnson, on account of being taken ill. It was supposed that the ducking he received while pulling Dempsey had affected him permanently, but recent reports state he is in the best of health, and that he may have no recurrence of the ill spells in the coming match. Hanlan is 5ft. 9in. in height and weighs 152lbs. in fighting trim; Courtney is 6ft. 4in. high in stocking feet, and weighs 168lbs. We have described their boats in our last issue.

ROWING AT ELIZABETHPORT.—The first annual Citizens Open Regatta was held at Elizabethport, N. J., Sept. 21, and was in every way a success, though the course might have been kept clearer. Double-sculls, won by Dury and Moore in 16m. 15s.; Lother and Conlin second in 16m. 30s. Single-sculls, one and one-half mile with turn. Molt took the lead, but collided with a strange boat, and the race went to John Hatfield in 14m. 3s. Senior doubles, won by Decker and Houghton, two miles, 16m. 55s. Ladies' double-scull race, half mile with the tide. Maiden crew, Misses Emma Lamond and Tillie Bonigen, beat the matron crew 2m. 20s., pulling a stroke of 40. Senior singles, won by J. W. Dederick, two miles, in 18m. 15s. Junior doubles, the Tate brothers won in 17m. 10s. Dederick and Baxter second, Dixon and Streke third. Junior amateur doubles, Clarke and Hatfield, 3m. 37s.; Hughes and Rogers second. Singles, open to all, won by David Clark in 17m. 55s., J. Lowther second, J. K. Moore third. Two races finished the day. Prizes were all useful as well as ornamental.

JOHNSTON-HOEMER.—At Burlington Beach, Ont., Sept. 21

Hoover beat Franchy Johnson over a four mile course with time, for \$500; time, 35m.

SINGLES ROWING CLUB.—The fall regatta of this club took place on Flushing Bay, Sept. 21. Course, one mile. Four-oared gigs, R. Lowman and J. Postlester, strokes. The former's crew won by three-quarters of a length. Single-sculls, won by J. R. Embree. Six and four-oared gigs, won by the latter by one length.

Hudson Boat Club.—The fourteenth annual regatta of this club took place at Jersey City, Sept. 21. Course one mile and a half including a turn. Single-sculls, F. E. Haugh winner, 10m. 22½. Four-oared barges, won by S. Pearson, stroke; H. V. Mator, C. F. Patterson, F. R. Baldwin, and H. C. Pearson, coxswain. Time, 9m. 37½. Four-oared shells, won by C. F. Ockerhausen, stroke; G. A. Ockerhausen, W. Clarke, H. Ockerhausen, bow. Time, 8m. 53½. Pair-oared shells, won by Ockerhausen and Haugh in 9m. 33½. Running races followed.

PACIFIC AMATEUR ROWING ASSOCIATION.—The regatta of this California association, which was to have been pulled Sept. 21, has gone over till next season, the organization not being fully perfected as yet.

STURGEON POINT PROFESSIONAL RACE.—In the race for a purse of \$650, held at Sturgeon Point, Ont., Sept. 19, there were nine starters. Course, four miles and a turn. Placid casted the foul line, and the boats of James Foster and the same. Kelley claims one from Morris. Placid and Kelley were disqualified by the referee, Wallace Ross. Morris took first money, Kennedy second.

COLUMBIA BOAT CLUB.—The fall regatta of this club, of Brooklyn, took place Sept. 18, at Bay Ridge, L. I. Course, a mile and a half. Single-sculls, won by J. F. Boyd, 10m. 22½. Second heat won by C. W. Lippitt. Four-oared gig race, won by S. S. Statser, stroke; C. W. Lippitt, C. S. Butler, R. G. Mallett, bow, and J. O. Twoach, coxswain. Second heat won by Geo. S. Barnes, stroke; Geo. O. Eyeland, Jr., T. C. Overton, J. F. Mallett, bow, and F. E. Seamen, coxswain. Time, 10m. 53½. James Foster, starter; C. L. Sanderson, judge, and R. Blacker, referee. Rowed Sept. 14, eight-oared bare race *Electra* and *Constitution*. Won by former in 13m. 13½. Crew: C. W. Lippitt, stroke; F. Boyd, G. S. Barnes, W. Chapman, C. England, J. F. Mallett, L. Aury and F. F. Lavens coxswain.

PASSAIC ROWING ASSOCIATION.—The annual regatta of this association was held on the Passaic, at Dundee, N. J., Sept. 19. Single-sculls, course one mile with turn, won by J. T. Nicholson in 6m. 53½, beating W. E. Clark. Pair-oared shells, won by Geo. Aterbury and C. G. Buckley, of the Adolphus Club, in 6m. 24½, beating W. Smith and T. Henderson, of the Patterson R. A. Single-sculls, second heat, won by W. Henderson in 6m. 42½, beating J. O. Hayes and H. D. Smith. Double-sculls, won by G. B. Nicholson and H. D. Smith, of the Adolphus Club, in 6m. 28½, beating W. Ryle and W. Henderson, of the Patterson R. A. Four-oared shells, won by C. G. Buckley, stroke; E. C. Wells, W. Ryle, and Geo. Aterbury, bow, in 6m. 56½, beating the Patterson crew.

HARLEM REGATTA ASSOCIATION.—The second annual regatta of this Association will be held on the Harlem, Saturday, October 19. Open to all amateurs. Races for eight-oared shells, six-oared gigs, four-oared shells, double-shell shells, pair-oared shells, single-shell shells for seniors and juniors. Course, one mile straight away, in heats. Prizes for each individual winner; also set of colors for the eights, sixes and fours. Entrance fees not returnable. Singles, \$34; pairs and doubles, \$6; fours, \$12; sixes, \$18; eights, \$24. National Association rules. Trial heats commence 9:30 A. M.; finals, 1:30 P. M. Conveniences are offered visiting crews by the clubs of the Association. Entries close October 9. Address George C. Power, Secretary and Treasurer, 62 Exchange Place.

THE HOPES OF NEW ORLEANS.—This Club has officially returned thanks to the citizens of Newark for the kind reception accorded their crews at the recent National Regatta at Newark.

DOLFIN BOAT CLUB.—This club held a race for single sculls over a two-mile course on Charles River, Boston, Sept. 21. Prize, a cup given by Mr. W. H. Hammond, the club's vice-president. Starters, Messrs. Granger, F. Kyle and F. Kyle. Kyle went to the front, with Jagdish second. Kyle fouled the turn, but kept his boat in the lead, losing in the water. Granger then passed him and won in 15m. 36½. Kyle second, with his boat half full of water.

THE LONDON "SPORTSMAN" CUP.—The sculling match for the cup offered by the London (Eng.) *Sportsman* was rowed on the Thames, September 16 and 17. In the first heat, William Elliott beat John Higgins, the champion, by four lengths. Second heat, R. W. Boyd beat T. Blackman. Final heat, Boyd proved the best man, but, taking Elliott's water, was run into by the latter, the foul being decided against Boyd. It is hardly likely that Elliott will be a match for Boyd in future races, and his prestige obtained on the strength of a foul will be short-lived. Higgins took third prize on a walk-over, Blackman failing to start.

SMALL SEA-GOING YACHTS.

BOSTON, Mass., Sept. 10, 1878.

EDITOR FOREST AND STREAM:

I have been so much interested in the subject of sea-going craft, that I have been induced to give you a little account of a regatta that is to take place Oct. 2, wind and weather permitting. Although an interested party, I will simply give you the facts, and your readers can form their own conclusions.

Two contestants—For there are only two in this case—are the yachts *Gael* and *Sunbeam*. The former is much the longer boat, and is reckoned here in the first-class keels in our usual club racing. She is about 27ft. 8in. water line, 30ft. over all, and 11 ft. beam. Her draught of water, aft, all, the peculiarity of which is her keel of almost 24in. depth amidships. Her stern and sides tumble in very much, the lines of her quarters giving very much the appearance of a sharp corner. Her bow is very much cut away, and the leanness is carried to her sheer plank. Her greatest power lies in her "hugs," and as she sits on the water, she presents a rather odd and graceful appearance. Her ballast consists of lead, with the addition of an iron keel weighing 1,700lbs. or more. She carries considerable canvas for the amount of submerged hull, is sloop rigged, and has the reputation of being one of the fastest keel sloops in our waters. She is certainly a credit to her builder and owner, Capt. William McCormack.

The *Sunbeam* is a second-class boat, and never was intended for speed, but, unfortunately, she developed that feature of her model from the first trial. Her stanchions on one questions who has seen her tried. She is 20ft. 7in. over all, 24ft. 6in. water line, 10ft. 8in. beam, and a draught of 6ft. aft. Her lines are round and full; she carries her bulk in body, and not so much in keel, the latter being only 12in. amidships in depth; but, having a long run, she has considerable deadwood aft. The depth of her hold from the under side of cabin to top of keelson is 4ft. 6in., giving ample cabin accommodations for four in cruising, besides a nice forecastle 6ft. long. Although the *Sunbeam* is the shorter boat she tons in the custom house about 11-75 or 12-75 more than the *Gael*. Her spread of canvas is considerable. Her mast is stopped 7ft. 6in. from bow; length of boom, 31ft. 6in.; gaff, 16ft.; mast above deck to track, 41ft. 6in.; bowsprit outboard to jibstay, 12ft.; bowsprit outboard to headstay, 31ft. 6in.; mainmast bolt, 24ft. 6in.; jib on foot, 22ft. 6in. Her main boom laps over the stern about 14ft., and is very heavy; there are about 173lbs. of 10oz. duck in jib and mainsail, besides a jib-topsail and gaff-topsail for cruising, and a large balloon-jib and gaff-topsail for racing. We never reef the jib, but set a storm jib on the stay, or from an eye-bolt on the bowsprit as occasion requires. A party of four have put in a reef in less than four minutes outside in a seaway without experiencing any trouble or losing any course. Her ability to carry so much canvas has been demonstrated many times, as most of the boats race before we think of it. She sails very well for a heavy boat, as her record will sustain, having taken prizes amounting to thirty-one in number.

This race is to determine the speed of the *Gael* and *Sunbeam* in a stiff breeze, and outside the light. The course is to be ten miles to windward and back for \$100 a side; no shifting by dead weight allowed; no restrictions as to sails; Boston Yacht Club rules with Herrschhoff's table of allowance to be followed.

It will also tend to demonstrate whether a shoal boat with weight on her keel is better than a deep boat with weight inside. The race is creating a great deal of comment, and is looked forward to with much interest.

In giving you the above measurements I have kept within the limits, so as to give your readers something of an idea to form their conclusions on. We are now entering the season of yachtsmen's bliss—fall winds and weather, rousing rowers and northerers, that make the timid stay at home, but calls us on deck, and makes one keep his weather eyes open.

We made a splendid run from City Point to Marblehead the other day in less than two hours (a distance of 17 miles), the wind fresh from westward, stopping in the mercurial to shake out a reef off Thinker's Island, and catching the fair before we got inside. Some of our fair friends expressed much anxiety as the squalls laid us into it, but we quieted their fears by telling them we had painted the top and sides of the house with copper paint.

KEDON.

A BRITISH YACHTSMAN GRADUATE.

EDITOR FOREST AND STREAM:

In your able notice of Mr. Thomas Brassey's yachting career, in your issue of 12th inst., you state that he "never did much racing." This is not quite correct, for Mr. Brassey at one time went into racing *con amore*, being one of the best supporters of the Birkenhead Model Yacht Club, which sailed many a hard match on the turbulent Mersey. He raced *Spray* of the Ocean, cutter, and some other small craft before he purchased his "flying fifty," the beautiful 54-ton cutter *Cymbia*, built in 1854 by Eife, of Fairlie, for Mr. J. M. Howan. Mr. Brassey raced her in the Irish and Mersey waters in 1856 and 1857, winning Her Majesty's Cup in the latter year; in 1858 he took her to the Thames, raced her there, on the south coast, and in Irish waters. He was not so successful with her as Mr. Rowan had been; indeed, while in that gentleman's possession, she was never beaten—starting five times in 1854 and taking five first prizes, total value £360; and starting four times in 1855 with four first prizes, total value £370. Mr. Brassey also raced the *Albatross*, schooner, built for him when he parted with *Cymbia*. Since then he has confined himself to cruising, and was the first yachtsman who obtained a Yachting (Master's) Certificate of Competency. ROYAL-CHIEF.

Halfpax, Sept. 10, 1878.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Scomber ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Morone americana</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Black Bass, <i>Morone saxatilis</i> .
Black Bass, <i>Morone saxatilis</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Scomber maculatus</i> .
Muskellunge, <i>Esox nigrilobus</i> .	Coho, <i>Oncorhynchus kisutch</i> .
White Perch, <i>Morone americana</i> .	Bonito, <i>Sarda sarda</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticirrhus menkensis</i> .

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; smelts, 25; bluefish, 8; salmon, 25; mackerel, 20; weak fish, 10; Spanish mackerel, 40; green turtle, 10; terrapin, per doz., 50; halibut, 12½; haddock, 8; king fish, 18; codfish, 8; black fish, 15; flounders, 1; porgies, 8; sea bass, 18; eels, 18; lobsters, 10; sheepshead, 25; turbot, 35; English sole, 35; scallops per gallon, 15-25; soft clams, 50 to 60; white fish, 15; pickered, 18; black bass, 18; pompano, 75; whitebait, 60; smoked salmon, 18; hard crabs, per 100, \$2.50; soft crabs, per dozen, 75.

THOSE WHITE MOUNTAIN TROUT.—We have often been amused at the persistency with which a lie will travel. There seems to be some magic quality in a misrepresentation of facts, which appeals especially to the taste of the average newspaper sportsman. Not one man in a thousand, outside of those New England States, really cares a fig whether "the great quantities of trout caught in the White Mountains this season have been discovered to be young salmon, with which the New England Fish Commissioners have been stocking the streams at great expense, etc.," or whether "the great, etc.," are so many crocodiles. But we have seen this important discovery hushed up in just sixteen papers, halting from every

part of the country, and the only satisfactory explanation of its travel that we can suggest is its utter nonsense and falsity.

MASSACHUSETTS—Cohasset, Sept. 18.—Shad are plenty in Weir River, and take the hook readily. Use shrimp for bait and a fly rod. The fish caught weigh from one to three pounds. S. K. J.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 61, with cod and 10 with halibut from the Banks, 18 from Georges, 5 from the Bay St. Lawrence, 4 from Shore mackereling trips, and one from Greenland; total, 44. Some good fares of Bank halibut have been received, several vessels landing upward of 40,000 lbs. each, the total receipts for the week being 834,000 lbs. Receipts of codfish, 1,070,000 lbs. from the Banks and 300,000 lbs. from Georges. The Haymen bring fair cargoes, the receipts for the week being 1,350 bls. mackerel, but late intelligence from the Bay show a meagre catch of late, with the probability that the season is about over. Receipts of shore mackerel, 950 bls., and of fletched halibut 60,000 lbs. from Greenland. The weather has been more favorable for curing codfish. *Cape Ann Advertiser, Sept. 20.*

NEW YORK—Port Jervis, Sept. 19.—Seven feet of "Albany beef," weighing 100 pounds, was killed by a discharge of firearms in the Neversink River, an affluent of the Delaware, at Carpenter's Point, near this place, yesterday afternoon. This is the second sturgeon ever captured in this neighborhood.

VIRGINIA—Clifton Forge, Sept. 17.—It is now in the height of the bass season here. A great many are being taken, though not so many as last year, on account of the great flood sweeping out a large number of them. Our Fish Commissioner, Colonel McDonald, paid us a visit short time since, and is making arrangements to transfer a large number to other portions of the State.

TENNESSEE—Columbia, Sept. 19.—Anglers are making preparations for the fall bass fishing. The anticipated catch is large. Several parties have already arranged for a week's hunt and fish on the adjacent trout streams. VAL.

TEXAS.—On Tuesday Mr. Archer, the great American whaler of the Colorado, caught fifteen alligators and pike gars at one haul with a seine, about five miles below the city. The smallest of the lot weighed 75 pounds. Mr. Archer has also caught several immense catfish the last two days. *Austin Statesman.*

WISCONSIN—Ashland, September 16.—The fishing party, consisting of Dr. E. R. E. Carpenter, of Chicago; Silas Humphrey, Esq., of Stillman Valley, Ill.; Eugene P. Prince and a number of the Ashland Press, with Alex. Welcome, John Madgwick, and George White, and a number of guides, returned from the headwaters of White River on Wednesday last, after a ten-day's trip among the pines on one of the finest trout streams in America.

BASS FISHING AT MONTAUK.—During the past week or two there has been some capital bass fishing at Montauk. Mr. S. Stearns, of Brooklyn, made an excellent score, including a splendid fifty-pounder, of which he has adorned the register at Stratton's with a capital portrait, that is, if one may say that a fish is susceptible of portraiture. Rod fishing, with a wind that has in it a point more or less of nothing, can be prosecuted with great comfort and convenience all along the south shore of Montauk. Just inside the lighthouse, on the extreme end, in a little bay, in which the long Atlantic surges thunder on a wide shore of great boulders, all round and polished from the crumbling cliffs, there is a capital fishing-ground. Here Mr. Sanford R. Gifford, one of our great masters of landscape painting and a most enthusiastic and accomplished disciple of the rod, has been playing the larder vigorously and successfully for a couple of weeks. The sport is fine, and is only occasionally interfered with by big, vicious dukes, whose ill-advised ambition leads them to aspire to the diet of their betters. This involves the loss of an occasional fine bait of lobster, adjusted with great pains and designed for a plucker quarry than a huge, ungainly fat-fish.

The weather just now at Montauk is heavenly, and the water beauty of the place is more impressive than any other season. The endless slopes of the downs are rich in autumn colors, and the little dells and sheltered nooks where the Montauk trees seek refuge are gardens of the richest and warmest colors. Now and then one hears the crack of a fowling-piece, and startled flocks of plovers fly wildly overhead, uttering their plaintive cries. Snipe abound in every reed-like shore of the countless ponds, and tall herons stand statue-like along the ditches. The water is clear and the fish are fat. One can drink the waters of the Great Pond. There is an abundance of game and solitude, and the whole place, its aspect and its people impress one with a sense of primitive and untamed wildness that is imparted by no other spot on the near Atlantic coast.

The accommodations at the Point, "such as they are and what there is of them," are good. Clean beds and a good table, including a sound and well-cooked country fare, with plenty of good milk and butter, can be had at Sanderson's or Osborn's or at the Lighthouse, where the domestic part of which Mrs. Babcock presides. The prices charged are very reasonable.

The best way to reach Montauk is to take the Long Island Railroad to Bridgehampton, buying a through ticket to Easthampton. At the latter place Mr. W. Gardner, irreverently known as "Bill Gardner," will house one comfortably, and make all the arrangements for terms across Napeague Beach to the Point, a distance of about twenty miles. Mr. Gardner kept Montauk Light for many years, and is a practical fisherman as well as hotel-man, and his advice and assistance are invaluable.

RAKE FISH AT FULTON MARKET.—Mr. Blackford has quite a series of rare and curious fishes at Fulton Market last week. There was a thrasher shark with an extraordinary development of tail. The creature measured some seven feet two inches in length, of which the tail alone was 45 inches. This shark was caught off Martha's Vineyard. What an awful whipping such a tale must give, and if it could be applied on oats or wheat threshing machines might be at a discount. A remarkable capture of spotted bass, or, as they are called, the "epot," was made off Sandy Hook, some twenty having been caught with hook and line. This fish resembles in many respects the bass, only different in color, having a golden shade, with a distinguishing black spot near the tail. The locality of this fish has heretofore been placed to the south of us, and we

have never known it to be caught north of Cape May. Ceros of large size, caught off the New Jersey coast, were also exhibited. Looking like an exaggerated herring, there was a huge tarpon of 180 pounds, caught of Newport, which was also exhibited. This fish has the largest of scales. We noticed also shad, in fine order, which had been taken in Gravesend Bay. The fish looked in prime order. There was also a rare specimen, a *Scourens fectens*.

THE ANCHOVY SPEARING—Editor *Forest and Stream*: In your issue of Sept. 13, 1878, I am credited with the identification of the "spearing" of New York market with one of the anchovies (*Engraulis vitellus*). The specimens sent to us from that market as "spearing" are, indeed, *Engraulis vitellus*; but we would by no means say that all the spearing are this species. We have good reason to believe that the common silversides (*Chirostoma notata*) is also called "spearing," and, perhaps, more generally than the *Engraulis*. Prof. Baird would be glad to have specimens of all the fishes called "spearing" in New York.

Yours very truly,
GLOUCESTER, MASS., Sept. 13.

Dr. Bean's request for spearing, or anchovies, might have been fully supplied last week. On the 16th Mr. E. G. Blackford succeeded in marketing no less than fifty pounds of fine anchovies, which were distributed next day among the various leading clubs of New York. The fish were caught at Gravesend Bay. Those who partook of the fish—old, experienced gourmands—declared them to be admirable. Thus, little by little, is the whole wealth of our waters being developed! The fish which we examined resembled very closely the anchovy we have seen caught in the Mediterranean. There is a charming reminiscence of a breakfast taken by us at Capri, where anchovies were served, like Eves, in fig leaves. A word of advice: In dressing an anchovy, the most delicate of all fish, beware of overcooking it! We are sure Miss Corson will back us up here. The fish ought to be just basted a little and broiled—grilled—over a hot fire. Where is your muddied Thames now, or your blue Sea of Capri? Whitebait and anchovies are now within the reach of our fork! One distinguishing trait of the *Engraulis* family is its transparency, and a thin band of quicksilver sheen, which runs lengthwise along the fish.

THE WATCHFUL TROUT.

MOOREHEAD LAKE, Me., September 18, 1878.
EDITOR FOREST AND STREAM:

I am not altogether ignorant of the character and habits of the speckled trout, having fished for and caught him in various waters; but I have lately made his acquaintance under different circumstances than ever before, and, as I have never seen any mention of him under similar conditions, I have thought that a description of what is to me a new discovery may not be uninteresting to you and your readers.

The Outlet House, as is doubtless well known to you, though it may not be so to all your readers, is situated on the shore of Moosehead Lake at the point where the Kennebec River flows out from the lake, the river being guarded by a dam used for logging purposes. The river—quite a large stream—is for many miles below the dam a succession of swift rapids alternating with deep pools.

I fish for the trout—with flies always—either in the pools or at the "heads of the pitches," that is, at the points where the swift, smooth water breaks into the ripples of the rapids. The trout caught at these points are large ones, varying in weight from two pounds up to six. I have within a few days past landed a number weighing from three to four pounds each. To fish these waters I make a trip of a mile or two down the river each day in a birch-bark canoe, under the guidance of Henry J. Wilson, the proprietor of the Outlet House, a famous canoeist and fisherman.

Mr. Wilson has more than once told me of a habit the very large trout have of coming to the surface of the water simply for the purpose of observation; while I have not wholly disbelieved his accounts, I have taken them with those grains of allowance which a little experience at fishing resorts naturally leads to. But yesterday, just at night, his accounts were confirmed by my personal observation and that of Mr. B. F. Barton, of Waterville, Me., who happened to accompany me.

I had just landed from a pool a trout weighing within a hair of four pounds, and was examining my flies and adjusting them for another cast, when a large trout, weighing certainly six pounds, and probably more, projected his head obliquely out of the water so that his eyes were fully two inches above the surface, and for a full quarter of a minute sailed slowly around the pool, moving no faster than a muskrat swims when undisturbed, eyeing us intently all the while, and at the end of his survey dropped as quietly back into the water. Mr. Barton and myself were simply speechless with amazement, which was succeeded by a roar of laughter on the part of both of us, as well as of Mr. Wilson, at the comicality of the sight.

The laughter had not ceased before another trout, slightly smaller than the first and in a different part of the pool, repeated the performance. My flies were in a tangle or I should have endeavored to hook this second gymnast fool. Either fish could have been easily hooked with a shot-gun.

Mr. Wilson assures me that this is not an uncommon thing for the large trout of the Kennebec to do, and that they never do it except when the flies have been thrown over them, their object being, apparently, to ascertain whether the offered food comes without the aid or presence of man. He has known a fish to keep up this sort of observation at short intervals for an hour or more. The incident I witnessed was certainly a novel, interesting and amusing thing to me, and it may be so to many of your readers as well as, perhaps, of some scientific value.

W. B. S.

THE BLACK BASS.

"Like, but oh! how different!"

EDITOR FOREST AND STREAM:
The genus *Micropterus*, black bass, includes but two species; *Micropterus salmoides* (Lac.) Gill, the small mouthed black bass, and *Micropterus pallidus* (Raf.) Gill and Jordan, the large mouthed black bass. It is to the former, sometimes called, the Oswego bass. Possibly no genus of fishes has been the occasion of so much confusion, scientifically and popularly, as the black bass. This is owing, no doubt, to its extensive habitat and wide-spread distribution; the original habitat of both

species being the great basin of the St. Lawrence, the whole Mississippi Valley, or almost the entire ranged country lying between the Alleghany and the Rocky Mountains, and the South Atlantic States from Virginia to Florida. It would naturally be expected, in view of this extraordinary and extensive habitat, to find differences of conformation, color and habits; indeed, it is surprising that the variations are not more marked, and the number of species consequently greater when one considers the great natural differences and conditions of the numerous waters and varieties of climate to which this genus is native. We find, however, that the most striking difference is in color, which will run from almost black through all the shades of slate, green, olive and yellow to almost white, and, indeed, these variations in color can be found in almost any one State, and to a great extent in any one stream or lake at different seasons of the year. Slight dissimilarities of contour and color, and variety of habits also exist. But all of these differences obtain, not only in the great lakes, but to most other genera of fresh water fishes, and depend on well-known natural causes. I lived for ten years in Wisconsin, where there were twenty lakes, abounding in black bass within a radius of eight miles of my residence, and from close and constant observation of the characteristics of the black bass in them I learned almost invariably that upon being shown a string of bass in what particular lake they had been caught.

Without going into a specific analysis of the color of the two species of black bass, it will be sufficient to say that as a general rule the small-mouthed bass is more trimly built and of a darker or more sombre hue than the other variety, where they both inhabit the same water; the large-mouthed bass being rather a coarser looking fish, with a much larger mouth, larger scales, thicker through the shoulders, with more depth of body, more ponderous build, and growing to a larger size, with the color more inclined to shades of green. The color of the small-mouthed variety sometimes approaches shades of olive or yellow; and there will often be more or less red in the iris of the eye, in some instances shading down to orange or yellow. This latter distinction, however, like the double curve at the base of the caudal fin, and the more forked tail—which have been mentioned as distinguishing characteristics of the small-mouthed variety—may or may not be depended on, as one or all of these distinctions are often lacking.

The former name of the large-mouthed species, *Micropterus nigricans* (C. & V.) Gill, has been very wisely discarded by Prof. Gill and Jordan, who have substituted therefor the more descriptive title of *Micropterus pallidus*. This has been in justice to Rafinesque, whose priority of description of this species has been admitted by the writers of the present work. Ichthyologists have at various times given to the genus numerous appellatives, and to the species more than thirty specific names, while laymen in different sections of the country have contributed their quota of vernacular names, among which may be mentioned: black bass, bass, black perch, juniper perch, trout, black trout, chubb, green bass, moss bass, Oswego bass, etc. In almost every issue of the *Forest and Stream*, correspondents write of black bass fishing, bass tackle, etc., meaning black bass in each instance, and take it for granted that the legion of readers of that widely-circulated journal will understand what particular kind of bass is meant. Now, this is all wrong, and is owing to the culpable carelessness, or perhaps, in some instances, to a want of proper information, and is a habit that ought to be reformed. Let us call things by their right names; a spade is a spade, and a quail is a quail. It is just as easy to write the distinctive name "black bass" as the general name "bass." Bass is a very vague term at best, meaning one thing in one part of the country and a totally different thing in another. Along the eastern coast it means either a striped bass or a sea bass; in the West it may be either a black bass, a rock bass, a white bass or a silver bass; while in Oregon County, N. Y., it means the Oswego bass, which is not a bass at all. Then again, your correspondents write of real black bass, meaning generally *M. salmoides*, the small mouthed species, seeming to imply that the other species is not real, or at least is not the black bass, but something else—a kind of *pseudo variety*. Others, in writing of the large-mouthed species, *M. pallidus*—owing to its former name, *M. nigricans*—have called it the real black bass, under the impression that, as it was named *nigricans*, it is the other species, and must be some other color, and was not the salmon color article. Now, one species is not more real than the other; the small-mouthed variety is regarded as the type species, because it was the first to be described. It is thought by some to be a gamier fish than the large-mouthed variety—indeed, I have sometimes thought so myself; but this notion, like the gamier superiority of the canvas-back among ducks, and the delectable excellence of the bluegill among fish, or the exquisite ambrosial flavor of Veuve Clicquot among wines, exists more in the imagination than in reality. Both varieties of the black bass are equally good as game fish and equally good for the table. The term "Black Bass," then, is distinctive, and should always be used when alluding to the genus generally. In writing of the different species they should be mentioned as the small-mouthed black bass or the large-mouthed black bass, as the case may be, no matter whether the color be black, green or yellow. Every reader will then know exactly what is meant, and much of the confusion and uncertainty that now prevail will be cleared away.

"Not, chaos-like, together crash'd and bruised,
But, as the world, harmoniously confus'd."
Where order is, there is confusion, and where confusion is, there is order.

And where, though all things differ, all agree."—Pope.

Cynthia, Ky., Aug. 20, 1878. J. A. HENSHALL, M. D.
We thank our correspondent for the little distinctions he makes between the large and small-mouthed black bass. The confusion arising from carelessness of description is very great, as shown, we must confess, by many of our friends who write to us in regard to black bass fishing. The little practice makes the difference immediately perceptible. One variation which, we think, can readily be seen is that in the small-mouthed bass the scales of the interpericardium cover only about half the bone, while in the large-mouthed the entire bone is covered. We might supplement the list of wrong names given to black bass as follows: It is called perch, chubb, trout, green bass, slough bass, bull bass, and everything save the right name.

NEW YORK HORTICULTURAL SOCIETY.—The Fall Exhibition of the New York Horticultural Society opened with a brilliant display at Gilmore's Garden last evening. The Garden is beautifully decorated, the display a most excellent one, and Thomas' music adds to the enjoyment.

Game Bag and Gun.

GAME IN SEASON FOR SEPTEMBER.

Moose, <i>Alces maculata</i> .	Black-bellied plover, ox-eye, <i>Squatarola helvetica</i> .
Caribou, <i>Barandus rangifer</i> .	Ring plover, <i>Actitis semipalmata</i> .
Elk or wapiti, <i>Cervus canadensis</i> .	Red-tailed sandpiper, or ox-bird, <i>Tringa americana</i> .
Gray squirrel, <i>C. virginianus</i> .	Great marshy godwit, or marlin, <i>Tatlet, Temnodactylus</i> .
Squirrel, red, black and gray.	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Reed or rice bird, <i>Zonotrichia querula</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Woodcock, <i>Colinus virginianus</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Pinnated grouse or prairie chicken, <i>Oreortyx pictus</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Sharp-shinned hawk, <i>Falco aculeatus</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Red-tailed hawk or phoeasant, <i>Bonasa umbellus</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .
Quail or partridge, <i>Ortyx virginiana</i> .	Yellow-bellied sapsucker, <i>Yellow-bellied sapsucker</i> .

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicola* of Shore Birds.

†† This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

GAME IN MARKET.—Pinnated grouse (prairie chickens), \$1.25 to \$1.50 per pair; partridges (ruffed grouse), \$1.40 to \$1.75 per pair; mallard ducks, 75 cents per pair; black do., 75 cents per pair; widgeon do., 60 cents per pair; broad bill do., 50 cents per pair; teal do., 50 cents per pair; Wilson snipe, 53¢ per doz.; plover, \$3.50 per doz.; bay birds, large, 83¢ per doz.; small, 60 cents per doz.; rails, \$1.25 cents per doz.; road birds, 40 cents to \$1 per doz.; Philadelphia quails, \$2.50 to \$3 per doz.

Poultry.—Philadelphia and Bucks County dry picked chickens, 20 to 25 cents per pound; do. fowls, 15 to 18 cents; do. turkeys, 18 to 20 cents; do. ducks, 18 to 20 cents; do. geese, 16 to 18 cents; State and Western chickens, 15 to 18 cents; do. turkeys, 15 to 18 cents; do. fowls, 18 to 16 cents; do. ducks, 12 to 15 cents; do. geese, 10 to 13 cents.

VERMONT.—*Burlington.*—The prospect for the fall shooting promises to be very fine. I have never known such a prospect since the season opened in the woods. The prospect of the lake ruffed grouse are not only to be found in large numbers, but very tame; the only drawback to shooting time is the density of the undergrowth, which almost prevents one from following a dog. Through the kindness of Col. Le Grand B. Cannon, I have twice used his fine red setter, Guy, given him by Dr. Goldsmith. Guy completed his education last week in the hands of Mr. T. D. Gladstone, of Boonton, N. J., and has proved to be in the field a splendid representative of his sire and dam, Plunkett and Carrie.

V. S. F.

MASSACHUSETTS.—*Cohasset.* Sept. 18.—The cooting season has opened with us very well, and some good bags of 13 and 14 to a man have been made. At present the weather is too warm. Bay bird shooting has been very good, better than for some years, as high as 25 black breasts to a man have been taken. Partridge quite plenty, but woods too thick as yet to do much. Woodcock scarce and wild. I got three the other day, best I have got this year.

S. K. Jr.

DEER IN PENNSYLVANIA.—By the omission of a word of three letters in an answer to a correspondent last week, our information was made mis-information. Deer hunting in Pennsylvania is not prohibited this year.

Pottsville. Sept. 23.—Game of every description (excepting deer) in this section is in great abundance, though several varieties have been hunted down before in season. An officer of the law has succeeded in securing the names of these marauders, and our "Game Protection Association" have taken the matter in charge for a proper adjustment.

DOM PEDRO.

OIL CRACK GAME AND FISH ASSOCIATION.—This organization, of Titusville, Pa., is now in its second year, and has a numerous list of members. Its object is to enforce obedience to the laws as they exist, trusting to increase thereby the field sports of the country. The president is David Emory, Esq., and the vice-president M. W. Quick. In the constitution and by-laws, which we beg to acknowledge, they adopt the excellent plan of putting on the outside cover of the little pamphlet, the close season for birds, beasts and fish in Pennsylvania. We strongly advise all game protection associations throughout the country to thus make public the game laws of their respective States.

TENNESSEE.—*Columbia.* Sept. 19.—The season opened 15th, and sport bids fair to be immense. As 15th came on a Sunday the more eager took Saturday for first day and returned well pleased.

The weather is too warm and weeds and grass too thick for much pleasure in the field.

Williamsport. Sept. 23.—Although we have no regular sportsman's club here, we have lots of boys that know how to handle a gun. We boys have had comparatively no practice at balls, but we have killed birds a few. A trial at the balls the other day, Bogardus traps and rules, resulted in these totals: Tinsman, 14; Ballman, 10; Lucas, 8; Post, 10; Kent, 10; Koch, A. J.; Koch, E. G.; 10; Moore, 10; Heavy, 7; Emory, 15; Wunderweh, 1. I would have sent you a full score, but I had to act the traitor to send you this.

BOBBISS.

VIRGINIA.—*Clifton Forge.* Sept. 27.—The season for deer opened on the 1st inst., and bids fair to be a good one. There is plenty of mast and the mountains are well filled with game. Hunters are beginning to flock in, and in a few days it will be hard to be out of hearing of the yelp of a bound or the toot of a horn. A party camped in North Mountain, near Dagger's Springs, have had fine success.

T. R. G.

SPORT IN LOUISIANA.—The following notes of an excellent game region in Louisiana are especially timely at this season. Before many weeks have passed scores of sportsmen and pleasure seekers will have turned their faces southward, some, who have "done" Florida, to seek new fields of conquest. One such field is to be found at Opelousas, La., where, in addition to a great abundance and variety of game, the hospitality of the people is extended to the stranger as a not unlim-

PANTHER, MOOSE AND MAN.—This version of a pleasant episode in Adirondack sport is vouched for by the writer, who was there. The story is told in the *Utica Republican*. Perhaps the moose was one of those recently introduced into the North Woods. We have been through some queer experiences ourselves in the course of our Adirondack campaigns, but we never kept watch between a panther and a moose, and, what's more, we never care to:

So much has been said about Smith's adventure with the moose, near Jock's Lake, and so little of which approximates the truth, that the writer, who was one of the party, deems it best to give the details. The party consisted of seven men, all experienced in woods life, and members of the Norway Foresters, as follows: Charles Hall, M. D., Hiram Austin, Walter Servis, Zenas Smith, Ellis Kelley of Norway, and Jay Delevan and George H. W. of the Foresters. The party met and organized at the house of Ed Wilkinson, at Wilmut, at 5 A. M., Wednesday, June 5, and proceeded to the last house on the Jock's Lake road, occupied by a one-armed soldier by the name of James Stevens, where we breakfasted, taking there about 8 A. M. An adopted son of Stevens carried our knapsacks as far as the Frazier clearing, taking the horse back to their place, where the others were stabled. From this point we packed in, making a short stop at the Jock's Lake outlet shanty; then crossing the outlet we arrived at the mouth of the Indian River, which makes into the west branch of the West Canada Creek, where the Frazier clearing, Ed Wilkinson's, on the east side. Here we went into camp and stayed until after dinner, when Smith's adventure commenced.

Zenas Smith is rather below medium height, sandy complexion, clear gray eyes, and, withal, a fine-looking, frank, easy-appearing young man of twenty-five years. He and I were to make out the baskets and go to the Four-Mile Stillwater, or the West Branch, and if we found the fishing good, were to camp there and fish the next day, a distance of about five miles from where we were. We left camp about 12 M., and kept along the creek trail for over a mile.

While we were clambering along we were suddenly startled by the appearance directly in front of us, and not more than twenty rods distant, of a large moose, probably eighteen hands high or more, which was making directly for us. In the same moment Smith caught me by the shoulder and pointed to a tree near the moose, where I beheld the glittering eyes of a panther. We were without arms, and ammunition of any kind, and the offensive or defensive weapons we possessed being our pocket knives. The moose was upon us; at a glance we knew that he came for protection, but the huge panther still loomed over us, and had stopped in his head-long course. "Smith," said I, "how is this?" "I believe we are all right," said Smith. "The moose has come to us for protection, consequently he is not belligerent; the panther is undoubtedly cowed by our numbers, or dare not tackle a man. Let us build a fire, and I will stay here while you go back to camp and bring the rifle, and have one of the other boys come back with you."

To this I declined for a long time, but finally concluded to go, leaving all my traps with Smith, to make the more rapid progress. This part of the story can be told very shortly. I got lost, wandered around until after dark, built a fire, slept some, got out next day and traveled till dark again, built a fire, and started next morning (Friday), and tramped until about 10 A. M., when I came to camp, and, following it down, came to Jock's Lake outlet shanty, and from there went back to the Indian River shanty, where the first man to meet me was Smith, who, I supposed, had been converted into panther's meat before this time. I was nearly starved, but asked Smith, "How was it?" "After you left," said Smith, "I got all the wood together I could and kept up the fire, the moose standing back a little, but keeping me between itself and the panther, which kept his position in the tree. We kept this up all night, the moose one side of me, the panther glaring with eye-balls of fire upon the other, and you may imagine what a weary middle of the night with me, when I fell asleep. About sunrise Thursday morning the panther gave a terrible growl, sprang from the tree, and rapidly disappeared in the forest. While I was watching the panther I had not thought anything about the moose, and when I turned my head he was gone. I immediately came up to camp and found you gone. So we went to look for you, and went back with me, but we found no further trace of either the moose or panther."

THE BERLIN TREATY AND THE ENGLISH GROUSE SEASON.—*London, August 31.*—I have heard it gravely asserted that the Berlin treaty would have been a much better piece of work had it not been for the grouse in Scotland. Grouse-shooting begins on the 12th of August, and the British plenipotentiaries, it is averred, were hurried into making concessions, which, with a little patience and firmness, they might have escaped making, by their anxiety to reach home with their work in time to permit Parliament to adjourn before the festival of the sacred bird of the moors. As it was, Sir Charles Dilke

and a few other unpleasant fellows contrived to keep the Government in town past that day; so that the sacrifice, if really made, was made partially in vain. Whether this story be true or false, it at least illustrates the passion of Englishmen for what they call sport. Whether this passion is a natural or an artificial passion might be worth discussing, perhaps, had I time just now to indulge in such a discussion, as luckily for your readers I have not. But, natural or artificial, it certainly determines the movements of half the upper classes of England, and on Monday morning every county in the island will be alive with gentlemen and their gamekeepers making war upon the English partridge as savagely as for three weeks past they have made war upon his Scottish cousin. The gamekeepers tell us that Marshal MacMahon, weighed down with the cares of state and all with the "nausea of office," has been heard to declare that he "would rather be a gamekeeper than President of the Republic." I think he would reconsider the matter if he were called upon to be an English gamekeeper for the next three or four weeks—indeed, it fell to his lot to be put in charge of one of the "let shootings," of which we hear so much now, and of which we hear that they are shot empty by their wily owners in advance of the season, on shares with the keepers, who divide the profit and undergo the painful experience of facing the disgusted and disappointed "cits" who, paying roundly for the privilege of killing off a certain number of birds, come down and find no birds to kill. Certain it is that partridges of the year have been procurable at the London restaurants for a fortnight past, and rumor even asserts that they were served up as long ago as on the 18th of August at a dinner in Cowes given by a lady of fashion and partaken of—my pen trembles as I write it—by no less a person than H. R. H. the Prince of Wales. Of course if the British public could be made to believe this the Prince would never be permitted to ascend the throne of his ancestors. Indeed, he would probably be put to death at once in the Tower. Let us hope, therefore, that the story is not true. Certainly the charming American ladies who are just now basking in an Indian summer of London fashion at the Isle of Wight owe it to so pronounced a friend and admirer of their sex and country as H. R. H. to unite a round-robin denouncing the tale as a wicked and revolutionary fabrication.—*Correspondence New York World.*

SEA-HORSE AND SEA-COW.—Not the queer creatures which are put down in the books. The sea-horse was discovered some time ago by Capt. Edwards, of the fishing smack *Amelia*, while beating off Skunknet, on the Rhode Island shore, one day last month. The captain made sail, but could not overhaul the animal, which was making desperate efforts to reach the main land, three miles away. At times he would disappear from view in the waves which broke over him, the sea running very high at the time, but a moment later he would reappear, and with a loud snort and toss of the head shake the water from his head, ears, and eyes, and renew his struggle with the billows. At last he made the shore, and, without pausing a moment, dashed up the beach, his long neck and mane floating outward in the wind. Keeping up a rattling pace, he soon disappeared from view, leaving the captain and crew to wonder what he was and where he came from. Since which time this natatorial equine has got on swimmingly in the papers, and the *Atlantic*. His exploit has been equalled by the adventure of a cow, which is thus set forth in the *Green Bay Wis. Advocate*: "Some two months ago Bligh Mitchell, of the Long Tail Point Lighthouse, took a cow from this place to the Lighthouse, and turned her loose on the island, where their is good feed. During the forenoon she showed signs of getting off, swimming toward the main land, and that was the last heard of her until a day or two ago, when it was ascertained that she was in Bay Settlement, some four or five miles by water. She evidently made a determined swim, that night, for home and liberty."

SPARROWS AND TOTAL DEPRIVACY.—Here is a story told by an unblushing correspondent of the *New York Times*. It is of the good old times, some fifty years ago, in England when they paid a premium on sparrows:

In the village where I was born the Overseer of the Poor was the person whose duty it was to pay the money for the sparrows' heads that were brought to him. It so happened that he was an elderly bachelor, and his mother (a very old and fastidious lady) kept house for him. He was generally absent on business during the day. Now, my boys would rob the sparrows' nests, get the heads of the young ones, wrap them up in a very dirty piece of paper and take them to the Overseer's house, of course knowing he was absent. The old lady would take them in her fingers as gingerly as if they were nitro-glycerine, give us our money (2 cents for every seven heads), and, as soon as we were gone round the corner, would throw them into the back yard. We would then watch the old lady, and, as soon as we were sure that she was in the front part of the house, one of us would slyly slip round to the back yard, pick up all the heads, and

then, in about an hour or two, go back to the old lady and sell them over again. I have myself sold the same lot of heads to her four times in one day, and got the money for them. But boys will be boys, you know. N. D.

"DEVIL BIRDS."—In the Lacadives a species of rat suddenly appeared which, dying in the crevices of the palm-trees, exhibited off the young nuts and threatened to ruin the colony. The Indian Government being appealed to for aid, sent over a stock of cats, but as the cats could get fish to eat below they declined to climb ninety feet up the trees to get rats. Tree-snakes were then tried, but the villagers were prejudiced against reptiles, so they sent the cats over some owls. But they had overlooked the popular prejudice against these birds, and in committee assembled the people decided that even rats up (in the trees were better than these "devil-birds." They accepted the birds in all apparent gratitude, but as soon as the coast was clear the owls, cats and mongooses were all conveyed in procession to a boat and solemnly deported to an uninhabited reef.

HOW THE SHRIMPS GROW FAT.—Sea-bathing cannot be safely indulged in at Ostend, neither will the shrimps grow fat till after the death of St. Nicholas has, on the last Sunday of June, blessed the sea. An altar, profusely decorated, is erected on the pier, and the path leading thereto is strewn with strawberries and small squares of colored paper. The procession consists of burghers in black, with medals and badges, bearing banners with strange devices supplemented by Flemish and French. The expected shrimplings upon tablets fixed to the tops of long poles, the banner and supporters of St. Nicholas, a band, seven children dressed as virgins, each escorted by a retinue of little ones typifying characters eminent in ecclesiastical history, and the Dean bearing the host and attended by clergy, beadles, incense bearers, etc. After an incensed service lasting a quarter of an hour, the host is carried to the back of the altar and held up facing the sea, a flag is hoisted and a salute of three guns fired. The bourgeoisie and rich peasantry commit hotly for the leading roles in the procession.

TWO WAYS—ONE WAX.—At Merthyr Tydvil one of the great events of the year is an athletic meeting on a large scale, organized by a society of licensed victuallers. Because this occurred before the meeting took place this year's public prayers were offered up in several chapels that rain might be sent to spoil the sport. The other way.—Beginning of the shooting season in Yorkshire.—Sporting Rector: "Saturday being the Feast of St. Enochus, there'll be morning service at eleven. To-morrow there'll be the usual Bible meet—" Ditto Clerk (in a whisper): "Hou'd on, parson! 'Tha's forgotten 't paritridges!" Rector (hurriedly): "Hem!—the Bible meeting will not take place. Let us slog," etc.

A BIT OF COMPARATIVE PHILIOLOGY.—I once heard of a green-colored South American parrot who was more than one hundred years old. This aged fellow could speak in a real language which was known to have been used by a tribe of South American who, it is supposed, had not been taught him when he was young. One by one the Indians died, until there was no one left who could understand a word of their language. The poor old bird tried hard to keep cheerful, but there were sorry times when he would moop by himself and say over some of the words of the language that had been spoken by his earliest and dearest human friends.—*St. Nicholas.*

HOW TO DESTROY THE MOTHS.—A large pile of brush was burned on the river bank at Selma, Ala. the other night, and during the hour and a half which it employed in burning a continuous swarm of moths from the neighboring cotton fields, attracted by the light, poured into the flames. It is estimated that several millions of the insects were thus destroyed, and the building of large fires about the cotton fields is suggested as a method of protection against the pest.

NOT REPRESENTED.—A great international show of horses and asses opened at Paris on the 1st inst. England, Belgium, Hungary, Denmark, Italy, Holland and Russia are represented. We regret that the American ass should be left out. We know several asses who would make a fine display of themselves at Paris, as they do everywhere else, and whom America could well afford to dispense with for time.

—Aaron Converse was accidentally shot by Newell Delphin, while hunting raccoons in Stafford, Conn. Converse had climbed a tree to drive a con out of its hiding place and was killed by a charge from his companion, who supposed he was firing at the game.

FISH STORY.—The pike placed in the Sacramento River form lines across the river with military regularity, having their heads up stream, and devour all the young salmon and other small fish that are borne down to them.

IF THE COAT FITS YOU, WEAR IT.—We know a sportsman who calls his tailor woodpecker, because he bores him with his little bill.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their TIMING WATCHES are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & CO., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. UNION SQUARE, NEW YORK

APOLLINARIS NATURAL Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the *Académie de Médecine* of France, and its sale in France authorized by special order of the French Government.

Recommended by the highest Medical Authorities in New York as

"A great relief for sea-sickness."

"A delicious beverage. Mildly antacid, most grateful and refreshing."

"Far superior to Vichy, Seltzer, or any other."

"Absolutely pure and wholesome, superior to all for daily use; free from all the objections urged against Carbon and artificially aerated waters."

"Improved only with its own gas."

"Healthful and well suited for dyspepsia and cases of acute disease, and where there is a gouty diathesis."

"By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach and Bladder, and in Gout."

"Not only a luxury, but a necessity."

"To be had of all Fine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

THE
HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed to point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6x10 kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6x10 kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

1 FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 35, and 6x10 kegs, and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT GANNOX & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

W. & C. SCOTT & SON'S
FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS NEW FINE TRIPLEX 12-GAUGE BREECH-LOADER, RECENTLY MADE BY W. & C. SCOTT & SON.

[From CAPT. A. H. BOGARDUS.]

W. & C. SCOTT & SON: Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with extra 12-bore barrels; also a light 12 and 20 bore; all of your make, which cannot be excelled in the shooting qualities, and impossible to beat in the solidity and power of your patent Triplex Action. I used your gun in my two recent matches with Mr. Pennell, June 23 and July 25, at which time I scored 70 and 71 in each match, winning by two birds; also in my match with Capt. Shelley, July 29, at which time I scored 84, "the highest score on record," and in the International Match with Aubrey Coventry, Esq., at Brighton, Aug. 4, for £1,000, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 50 yards rise. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is still in good condition.

A. H. BOGARDUS, Champion Wing Shot of the World.

[From COL. JOHN BODINE, New York.]

W. & C. SCOTT & SON: Gentlemen—I have received the Premier quality choke-bore gun, No. 8,696, in good order, through Messrs. Schnyler, Hartley & Graham, and am pleased to say that its performance exceeds my expectations, while its symmetry and finish is all that the most fastidious could desire. It fully comes up to specifications of order, both in finish and shooting qualities. I have disposed of my two guns by other makers.

"Keep cool, ad, you'll break your rod," said Ben, "if you lunge and jerk that way; recollect you are not catching black bass now with a two-pound trolling rod."

I cast again lightly in the same spot, when there is another rush, and a twenty-inch savage breaks water at once, with my fly already down in his stomach. This way he tears things about tells me he is firmly hooked, and I, for fear of my light bamboo tip, humor him by letting him take a spin down to

being clearly described by the mollusc. As to the direct and practical labors of the commission in shad-hatching last year, 1,295,000 shad spawn were collected and 1,600,000 fish hatched, which were turned into the Hudson. In crossing breeds, the commissioners have succeeded, by impregnating the spawn of the brook trout with the milk of the California salmon, in producing fish showing characteristics of both parents. Their future development will be carefully studied. Among numerous experiments tried was that of putting shad in the waters running into Lake Ontario. Shad of fair size have been found in Lake Ontario, mostly at the foot of the lake, but also in the Genesee River and Solus Bay. Last year, in September, a shad of five pounds was caught and sent to Mr. Seth Green for examination. The California salmon are more rarely heard from, though one of three pounds was picked up dead on the banks of Cayuga Lake. The California brook trout, now some three years or more old, were larger, so state the commissioners, than the native *Salmo fontinalis*, and a harder fish. This year an attempt will be made to secure their spawn. One great object of interest to those visiting the State pond have been the salmon trout. These fish are now from three to six years old, and the largest weigh over nine pounds. Of brook trout, the number of eggs collected and distributed has been over a million six hundred thousand. The commissioners are Messrs. Horatio Seymour, Edward Smith and Robert B. Roosevelt.

FISH EPIDEMICS.—"Rover" writes from Madison, Wis., Sept. 23, that the whitefish in Lake Mendota are dying by thousands, and the decaying bodies are cast up upon the shore. The fish of several Western lakes and rivers have recently perished in the same inexplicable way. There is no lack of surmised reasons for the fatality, but as yet no satisfactory explanation has been adduced. The recurrence of the epidemics has become a matter of serious consideration. The State Fish Commissioners should give the subject their attention. Let there be a scientific investigation of the waters, with an examination of the bodies of the dead fish, for the purpose of detecting the presence of poison. There must be a cause; intelligent work should not fail to discover it.

How HE RAISED HIS FISH.—A correspondent in Madison, Georgia, thus writes us: "I am greatly interested in what relates to fish and fish culture, and am indebted to the *FOREST AND STREAM* for much valuable information, through which I have succeeded in raising an abundance of fine fish in my ponds, which cover three acres."

THE TAIL OF THE TADPOLE.

MONMOUTH, Warren Co., Ill., Sept. 21, 1878.

My Editor—In your edition of Sept. 10 there is a correspondence signed "J. F. K.," entitled, "Raising Tadpoles." The author contributes his note in propagating the old error as to the "tail" dropping his tail. It does no such thing. The tail performs the same duty for the young frog which the yolk of the egg does for the chick in the shell. They are reservoirs for the nutritive organs to draw upon until such development is reached that the creature can obtain its livelihood in the usual way. The tail does not drop off, but is gradually absorbed. The legs make their appearance; the bones grow stronger and stronger *part by part* with the shrinking of the tail. The mouth and head in the meantime develop rapidly, and by the time the tail is reduced by internal absorption to a small tubercle of shriveled-up skin, the frog stands forth in all his reptilian glory and beauty, henceforth ready for business against any living thing which he can force down his capacious throat. Get more "tads," gentlemen, and observe a little more closely. VENTUR.

Our correspondent is partly right, but when he compares the tail of the tadpole to the egg sac in a fish, not entirely so. No doubt but that the tail of the tadpole when absorbed does add to the vitality of the incipient frog. Still, in this embryonic state, the tadpole is nearer to a fish than a frog, the caudal appendage helping its locomotion. The breathing apparatus is really formed like the gills of a fish, with fairly developed *branchie*. It is then, as a "Venator" says, a popular error that the tail drops off. Some time ago a wonderful paper on the frog was written by St. John Myvat in *Nature* which was exhaustive in character.

Natural History.

For Forest and Stream and Rod and Gun.
A STUDY IN INSECT LIFE.

A FRIEND of mine, who keeps a dry-goods store in this city, handed to me lately the remains of a piece of ribbon which was rolled on a cylinder of wood, in the way that such goods are usually exhibited for sale in shops. This remnant of ribbon, several yards in length, was perforated at one spot through all the folds, a small circular hole having been neatly drilled through. On removing the ribbon a hole corresponding in size was found in the cylinder, and in that hole an insect, still living, which was evidently the mechanic in the operation and the author of the mischief by which the ribbon was rendered worthless. The question at once presented itself, how did the insect get into its present abode so as to do the work? The bolt of ribbon had been in the shop more than twelve months; the piece of wood on which it was rolled must have been seasoned for a considerable time before it was turned and made into a cylinder. All this time—perhaps two or three years—the egg, out of which the perfect insect was developed, must have been advancing to maturity, and had at length attained its winged state, ready to emerge from its burrow. How was the egg deposited so deep in the

wood, and to what species of insect did the creature belong? On examination the creature proved to be a hymenopterous insect, belonging to the family *Euceroidea*, or "horntails," as they are popularly called. The name has been suggested by the circumstance that the males have a long, prominent horn (or process) on the abdomen, while the females have an ovipositor (made up of three pieces), which is attached to the middle of the abdomen, and extends far beyond its tip. The ovipositor had a sheath composed of two pieces, each of which is narrowly spear-shaped, with minutely serrate blades. With these a small hole is bored in the tree, and an egg is laid therein, by the ovipositor proper. This accounts, in the present instance, for the deposit of the horntail's egg in the wood of the cylinder. After it is hatched, the larva commences to excavate and make its long, cylindrical burrow, which, in this instance, extended to the ribbon wrapped round the wood. This is always done before going into the chrysalis state, and while yet in the larval stage, though it attains its winged state while yet in the tree. Now, it is a curious circumstance that, in multitudes of cases, the larvae of the hornails are destroyed by the operations of the ichneumon fly in laying its eggs. This occurs in the following way: About a year after the long, thin, cylindrical burrow, the grub has attained a fair size, two of the largest (Ichneumon flies, *Rhyssa atrata* and *Unator*)—species as slender as a small dragon fly and armed with fine bristle-shaped ovipositor nearly three inches long, thrust them into the holes made by one kind of hornails, and lay their eggs in the living larvae. When hatched the new-comer feeds upon the body of its host. In this way the efforts of the hornails to propagate their species are kept within moderate bounds. On the side of the Atlantic one species called the "banded hornail" does no small injury to maples, especially those planted in the streets of cities; while another, called the cimex, commits similar ravages on elms. Pine trees in England and on the continent of Europe often suffer great injury from the excavating powers of another hornail, called the *sirex gigas* and *juvenis*. In the distance before us even ladies' ribbons were remorselessly injured by one of these borers, as though they were a piece of pine.

The following extract from "Kirby and Spence's Introduction to Entomology" has a bearing on subject before us, and is in itself interesting. "Mr. Stephens informs me that the fir trees in a plantation of Mr. Folyambs's, in Yorkshire, were destroyed by the larvae of *Sirex gigas*, while those of another, belonging to the same gentleman, met with a similar fate from the attacks of *Sirex juvenis*. The proof of the ravages made by this last insect, Mr. Redd exhibited to the Entomological Society a portion of the wood of a fir tree from Bewdley forest, of which 20 feet of its length was so perforated by its larvae as to be only fit for firewood; and being placed in an out-house, five or six of the perfect insects came out every morning for several weeks. When fir trees thus attacked are cut down, it often happens that the larvae of the species of *Sirex* inhabiting them have not attained their full growth at the time the wood has been employed as the joists or planks for floors, out of which the perfect insects, *even after*, emerge, to the no small surprise and even alarm of the inmates. An instance of this, where several specimens of *Sirex gigas* were seen to come out of the floor of a nursery in a gentleman's house to the great discomfiture of the nurse and children, is related by Mr. Marsham, on the authority of Sir Joseph Banks, and a similar circumstance stated by Mr. Ingpen, occurred in the house of gentlemen in New Bedfordshire from the joists of the floors of which were swarms, literally thousands of *Sirex duplex* (Thickard) emerged from innumerable holes, large enough to admit a small pencil case, causing great terror to the occupants. As the house had been built about three years (the joists of British timber) there could be no doubt of the larvae having been more than that time in arriving at their perfect state."

I am unable to make out the exact name of the insect found in the cylinder, but it is closely related to *Sirex* and *Ziphiaria*. The cylinder and ribbon came from Britain, and, as might have been expected, the insect is not like any American species.

The *Hymenoptera* is a vast order of insects, including bees, wasps and their kin, hornets, ichneumon flies, the great family of saw-flies, gall-flies and ants. In the insects the wings are four in number, transparent, and the hind legs are veins comparatively few, and the hinder pair smaller than the others. Their mouth is furnished with powerful horny jaws, and with a tongue guarded by the modified maxilla. The females are armed with a many-valved stinging ovipositor.

St. John's, New Foundland, Aug., 1878. M. HARVEY.

DOMESTICATION OF QUAIL.

STANFORD, Ky., Sept. 24, 1878.

EDITOR *FOREST AND STREAM*:

It is with us a current belief that quail cannot be domesticated; but an upright and truthful gentleman, from that part of our county called "Over the Knobs," refutes the impression in an account of five full grown birds which he has raised this season. Seven of fifteen eggs were taken from a nest and placed beneath a bantam hen. Every egg was hatched, and five of the seven escaped the assaults of ravenous rats, safely passed through the multitudinous ills and dangers incident to infante and youthful fowlhood, and are today "as big as anybody's quails," the owner said. They dit about the yard and as unsatisfactorily invade kitchen and dining room as do any of the petted domestic fowls and animals. They spurnly assert their prerogatives by promptly appropriating a full share of all food they see through the cracks in the turkey, ducks, pups and kittens, and as regularly repair to the dining-room as do the members of the family. They have bulked the kittens completely, and invariably provoke an undignified "spat! spat!" and scamper to quarters of safety by brightly coloring their plumage and noisily and threateningly dashing upon the hapless possessor of a tempting tit-bit. They often saunter into the kitchen, and have been seen to scold from a bony of flushed birds and fly back into the poultry yard. In initiation of the brood of chickens with which they were raised, they roost in a back-yard apple-tree. Suddenly startled, they oftenest dash on wing toward the neighboring timber, but nearly always appear to recall the superior protections of yard and house, and circle back to alight near the door or on the porch. The novelty of their domestication rendered the nests of this household, and it is an intention to extend the care of them over another season, with hopes of rearing one or more berries in and about the poultry yard, in which event they can be preserved. By the way, the seven eggs abstracted from the nest were replaced by nine, and the old bird began sitting on seventeen, but was foully butchered

by some feathered or four-footed poacher, and from her death resulted the destruction of the embryonic brood—no affectionate or patriotic cock to gallantly cherish those eggs through the remaining days of incubation.

The same conscientious gentleman assured us that he found a nest a few weeks ago with the shells of thirty-seven eggs, from which the birds had been hatched; and, knowing the ferocity with which his yarn would generally be received by strangers, confirms it by the corroboration of neighbors whom he brought to the spot, and had to verify his statement by counting for themselves. If one mother attended to that nest, didn't she spread herself?

An old Christian farmer, who would have flogged a quarter section of hide off a twenty-years-and-eleven-months-old boy of his if caught in a lie, is authority for two quails laying in the same nest, which he watched day after day after his discovery of the nest. He patient, watched first one and then the other bird visit and leave the nest, and counted the daily addition of two eggs. To-day a gentleman told us that he flushed three coveys of quail at one time in his woodland pasture, a mile *o'm town*. There were seven or eight old birds, and the young ones, nearly fifty in number, were of three distinct sizes, the smallest scarcely able to fly and the largest but half grown. Apropos of the commingling of coveys, Mr. T. will be one of your correspondents, and information as to the consolidation of fragments of flocks in winter. Opinions pro and con have not been attended by satisfactory results, and remain mere opinions, so far as we have heard.

Robert White is a notoriously pugnacious gentleman, as has been observed by all old settlers when two coveys are brought in contact, and though perfect parental and filial harmony pervades the family circle, it is charged that visiting neighbors, or are severely warned to scrupulously abstain from crossing the dead line. Our acquaintance, who has the pets, says that Robert as recklessly bristles up to rooster and gobbler as the conventional bench-leg assails the passing big dog, differing from the loud little dog in the essential particular that Robert's demonstrations mean business, not bluster.

A *sub genis*, living alone within one hundred yards of a turnpike, thoroughfare and railroad, and within ear-shot of a dozen neighbors, had a bevy of quail raised near his house last year, which became so completely domesticated to recognize and regularly respond to his calls to fowls and pigs, and they ran about his feet in feeding with the poultry, and crowding about the pig-trough as absolutely fearless of his movements as were the chickens which he had raised. Uncle Tim says that he never saw a bird after some "son of a gun" came along one day "with a d—d botailed pointer dog, and got to shooting at him."

The writer has seen the domesticated wild turkey, and knew a neighbor several years ago to have a nest of partridge eggs hatched by a hen, but he couldn't catch enough flies and small bugs—which the little fellows would seize with avidity from his fingers ends—and they died of insufficient nourishment. We have known the mallard to attach itself to the flock of domesticated ducks and follow to the poultry-yard roost, till it had become so thoroughly domesticated as to demand a share in the corner shower, which was necessary to the protection of the pigs in their evening meal of shelled corn, and have often seen the not unusual participation in poultry yard feasts of many varieties of our migratory birds, and why not the domestication of our quail, which observation teaches is loth to leave its native field so long as food and cover are adequate to its moderate demands? KENTUCKIAN.

THE ENGLISH SPARROW.

The friends of the English sparrow are not few, nor are they at all undecided in their good opinion of his value as an insect destroyer. That the sparrow may be a blessing in one place and a nuisance in another is suggested by a Bay Ridge, L. I., correspondent who signs himself "Fair Play for the Sparrows":

It would not be easy to determine what is his specific natural food, for he seems to be capable of living upon almost any kind of aliment, and will find something to live upon under almost any circumstances. In England he lives almost entirely on insects and worms, and robbing the wheat stacks and picking in the barn yard during the winter months. In our ravaging the wheat fields to such an extent that the village officers very commonly pay so much per head for the pests, while the farmer watches them closely with his gun. In his native country the sparrow is rarely or never known to eat insects or worms. In our own cities, however, where grain is not obtainable, he is certainly insectivorous. Upon no other supposition can we account for the almost total disappearance of the worm pest from the street foliage of New York and Brooklyn since the importation of this little brigand. My own observation on three acres of thickly wooded lawn furnishes daily evidence of the sparrow being a deadly enemy to caterpillars and insects. It is unnecessary to adopt your suggestion of examining the contents of their stomachs, when I can at any time see them entering their nests with leaf worms in their beaks. This summer, three of my maples were attacked by "measuring worms," one so vigorously that in two or three days half the foliage disappeared; but as quickly the sparrows were seen actively at work in the trees, and the worms immediately vanished. The charge of pugnacity made against the sparrow has not been confirmed by my observation of his habits. I have never seen him offer injury to birds of "another color," and all the species common in this quantity might freely be considered his food. It is, however, quite possible that his voracity and large numbers leave so little food for his competitors that some of them may at times find it necessary to migrate to pastures he has not invaded. I am therefore disposed to conclude from a jealous observation of the little intruder, that, in our cities and in suburban localities, he is a valuable addition to feathered society and merits the distinguished condition of a generous peasant bird. But let him once get a footing in the farming districts and a very different reception is sure to greet him. In that case his original grain-eating instinct will be revived; he will forsake the worms for the wheat and the seeds, and the farmers will curse him for the heavy toll he exacts from their crops. When it comes to that, the farmer may seek his compensation by making the sparrow a turn minister to his own appetite, for a well-cooked sparrow pie is what that an epicure will always welcome as no common delicacy.

It may be very plausibly urged also that, while quarrelsome under certain conditions—for instance, when the struggle for subsistence is a hard one—the English bird under circumstances may live in harmony with our native birds. A de-

lightful picture of a home surrounded by feathered songsters is this:

"Thirty years ago I was a resident of Brooklyn, and the annoyance of caterpillars was the chief reason for seeking a home in the country. I chose a spot fifteen miles from New York that had one acre of old forest trees, and with a particular view of making it pleasant for song birds. I had always plenty of all kinds except English sparrows. The first years were noted for the ravages of insects. My rose-bushes were spoiled by an insect that burrowed in the roses, by worms, incipient moths and caterpillars, that eat up my flowers, infested my vegetables and defiled insect powder and slacked lime. I even sprinkled petroleum on them, which did not kill the insects nor improve the appearance or perfume of my garden. Sparrows about that time were landed from Canada steamers in Jersey City, and found their way to my home, taking possession of a bluebird's box of which I had ten. From this commencement they have multiplied. I have box room for about thirty each winter—and by autumn have had a flock of about two hundred. As thrush is as many as can find comfortable winter quarters, I think the balance are eaten up by the owls or find refuge in New York. But every spring for five years about a dozen of my bird house owners who commence household duties before the other birds come along. Bluebirds come next, and in two double boxes I have sparrows in one end and bluebirds in the other end. The wrens are more conservative, and I have six boxes with a hole so small that no one but Jenny can get in. A lively time she and her mate make when a sparrow looks in. But he rarely enters, though I envy his house a little more ornamental, and birds may be envious. I think the birds are grateful for a build all over—in the wisteria and honeysuckle, the pear trees and spruces, so that I have more than I want in strawberry time. Next in numbers are the cat-birds, who build in the darkest recesses of the Norway spruces. Three pairs of orioles and two nests of the thrush, in the deepest recesses of the hollyhock. Robert of Lincoln, Bryant's friend, has a meadow lot shared with a meadow-lark and a meadow-lark. I have sparrows are all around. I think the birds are grateful for an entirely freed from my enemies, the insect pests, except the potato-bugs and the crows. I have more song birds than I had before the sparrows came. NATURALIST.

FOUNDERS' EYES.—According to a paper by Mr. Agassiz in the proceedings of the American Academy of Science, the eyes of the young flounder immediately after hatching do not differ from the eyes of other fishes. Very soon, however, the eye on the pale side begins to work its way toward the dark side, passing over the frontal bone by a process of volition and translation. Just here comes a curious effect. Vonchard tells us that the tint of color on the blind side of the fish is due to the partial atrophy of the great sympathetic nerve caused during the passage of the eye from one side to the other. In the *plagiatus* the eye sinks into the head and works its way across, finally appearing on the other side.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN, FAIRMOUNT PARK, FOR TWO WEEKS, SEPT. 21.—Two lizards, *Sceloporus undulatus*; two alligators, *A. mississippiensis*; one red fox, *Vulpes fulva*; one water snake and twelve young, five copperhead snakes and six young, *Aneides carolinensis*; one glass snake, *Pseudoeurycea pallidus*; one green bittern, *Areolaria virescens*; one carrier pigeon; one young copperhead snake, *Aneides carolinensis*; one golden crowned thrush, *Sciurus caucasicus*; one little brown rat, *Vegetilia subulatus*; one hog-nosed lizard, *Amphibatrachus*; one alligator, *Amphibatrachus*.

Two capybaras, *Hydrochoerus capybara*; two bonnet monkeys, *Macaca radiata*; one rhinoceros, *M. rhinoceros*; one common macaque, *M. cynomolgus*; five Guinea baboons, *Cynopithecus cynopithecus*; one doronodon, *Nycticebus tricuspidatus*; one civet; two cinereus vultures, *V. cinereus*; two grama vultures, *Gyps fulvus*; four barn owls, *Strix flammea* var. *americana*; two brown rabbits; six weeper Capuchin monkeys, *Cebus castaneus*; one angora pelican, *Pelecanus fuscus*, from Florida; one pig-tailed macaque monkey, *Macaca nemestrinus*; one rhinoceros, *Macaca rhinoceros*; all purchased by Mr. Agassiz.

ARTHUR E. BROWN, Gen'l. Supt.

—The Manhattan Beach Hotel was closed on Monday, September 30th, and trains and boats ceased running on that date. The season has been most prosperous.

Sea and River Fishing.

FISH IN SEASON IN CANADA.

FRESH WATER.
Black Bass, *Micropterus salmoides*; Pike or Pickerel, *Esox lucius*; M. nigricans; Yellow Perch, *Perca flavescens*; Muskellunge, *Esox nobilis*.
SALT WATER.
Sea Bass, *Scomber oceanus*; Spanish Mackerel, *Scomber maculatus*; Striped Bass, *Morone saxatilis*; White Perch, *Morone americana*; Cero, *Cybinus regalis*; Weakfish, *Cynoscion regalis*; Bluefish, *Morone saxatilis*; Kingfish, *Menticirrhus nebulosus*.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; smelts, 25; bluefish, 8; salmon, 35; mackerel, 10; weak fish, 10; white perch, 15; Spanish mackerel, 41; green turtle, 12; terrapin, per doz.; 89; halibut, 10; haddock, 8; king fish, 15; codfish, 8; black fish, 15; dourine, 8; porgies, 8; sea bass, 15; eels, 18; lobsters, 10; sheephead, 25; scallops per gallon, 81; soft clams, 30 to 60; white fish, 15; pickerel, 18; salmon trout, 18; black bass, 18; pompano, 40; anchovies, 40; dry cod, 7; hard crabs, per 100, \$2.50; soft crabs, per dozen, 81; frogs, 3c.

CANADA—Gananoque, Sept. 25.—Measurements and weight of a black bass taken by a companion last Saturday: Extreme length, 19 in.; width across shoulders, 6 in.; girth around body, 14 in.; weight, 4 lbs. plump. Was taken on light rod with live minnow, and made it quite lively, as we were fishing from a skiff, with stiff sou'-west wind. G. M. S.

MASSACHUSETTS—New Bedford, Sept. 28.—During the past week some good shooting has been done in this vicinity, and I have seen quite a number of blue winged teal, plovers and black ducks brought to town. CONCHA.

MOVEMENTS OF THE FISHING FLEET.—The receipts of Bank codfish have been larger than any previous week this season, the fully 1,350,000 lbs., comprising the receipts of the bank haul for the week have been unusually light, 300,000 lbs. The number of mackerel arrivals for the week has been 12 from the Bay St. Lawrence, and 15 from

the Eastern shore. Receipts, 2,270 bbls. Bay and 1,630 bbls. Shore. Another Greenland halibut has arrived home the past week, with only a partial fare. Whole number of arrivals, 69.—*Cape Ann Advertiser*, Sept. 27.

NEW YORK.—New York.—There is just now a fine run of blue fish in the Bay and along the Long Island shore.

New York, Sept. 25.—Fishing yesterday in "Yates' Hole," in Fishkill Creek, our catch was 9, 1 to 2 1/2 lbs., weak fish; 4, 1 to 1 lb., striped bass, and the 14 blue fish, weighing from 1/2 to 1 lb. in weight, also and porgies too numerous to mention. We have had the best of fishing this year at all points around the island. This is my fifth trip, and I have always had a mess of fish. W. A. G.

NEW JERSEY.—Kinsey's Ashby House, Barnegat Inlet, Sept. 25.—Only three or four sheephead taken past week. Bluefish—No weather for fishing outside, consequently no report to make. Sea-bass and blackfish very plenty. Some good catches of striped bass reported. The following gentlemen made the annexed scores in parts of two days: Hon. A. B. Caldwell, of Washington, Pa., 90 blackfish and sea-bass; Gen. B. F. Fisher, Philadelphia, 145; J. P. Malsed, Philadelphia, 178; J. W. Mulholland, Pa., 84. Captain Charles Cox had the party in charge in his fine yacht *Elizabeth B.*

Ported River, Sept. 20.—The fishing at this favorite place still continues good for striped bass, black fish and sea bass. The yacht *Della*, Capt. Joel Barkow, with Mr. W. M. Leslie, of New York, and their correspondent, came in today with one hundred and twenty sea bass, a few porgies and some black fish. Mr. D. Chamberlain, last Saturday, caught twenty-one striped bass, several of which would weigh over three pounds each; he also at the same time took two weakfish that would weigh about five pounds a piece.

COLORADO—Hot Sulphur Springs, Sept. 22.—Fishing is about over except in the larger streams. Owing to the very warm summer trout pushed further up than usual, and were from two to three weeks later starting down. W. N. B.

A NEW FLOUNDER.—Professor Spencer F. Baird, writing from Gloucester, Mass., says: "One of the most important practical results of our operations on this coast is the discovery of a species of flounder, which, although entirely unknown to the fishermen and dealers here, is the most abundant species on the coast. It is the *Glyptocephalus cynoglossus*, or Polo Flounder of England. It is only found at about 40 fathoms, in a temperature of 36 to 40 deg. The mouth is so small that it is likely that it would not take a hook. A trawl would capture them, and I am confident that a schooner of 30 to 40 tons could easily take a ton or more a day. The fish is remarkable for the great quantity of gelatinous fat along the ribs, corresponding to the halibut." Some persons who have caught this flounder consider it extremely choice, and equal to any of its class. It would, perhaps, require no great effort to introduce it to the same place as the turbot and sole of Great Britain. On examining the fish at Mr. E. G. Blackford's, it seemed to us rather longer and more elongated. One distinguishing trait, we think, was a somewhat darkened appearance of the bottom side of the flounder. The fluke and fat being as white by comparison. There can be no doubt as to the value of the fish, and the United States Fish Commissioner is to be thanked for bringing it before the public.

FISH AT THE CHICAGO EXPOSITION.—The exhibition of living fishes at the Chicago Exposition is fine. The building, being near Lake Michigan, can of course command plenty of water. A lofty fountain plays in the centre of the building, and near the south end is a real waterfall; a sheet of water perhaps ten or twelve feet wide and six inches deep falls ten feet into a large tank or basin; more of a cataract than many of those which attract visitors in European countries. Around the fountain are arranged glass cases, but not one, but from those just hatched to those of one, two, three and four years old; Mackinaw trout, of the same ages; California salmon, from one to three years old. Another tank contains a pair of dogfish, *Amia ocellidens*, Kitch, an old-fashioned genus said by Agassiz to be extinct save in North America. Other tanks contain whitefish, black and white bass, pickerel and pickerel, young bullpout, minnows and a splendid collection of goldfish. In another tank are young alligators and snapping turtles, the latter extending their long necks to that length that they seemed to be snakes crawling out of a turtle shell, the head exactly resembling that of a serpent. There was also a curious water lizard, from Arizona, with a ruffle of gills extending all round the neck.

Professor Ward, of Rochester, had there his reproduction of the mammoth, *Elephas primigenius*, made from that in the Museum of Stuttgart, and stands 16 feet high, with a length of 26 feet, in his habit of long black hair, as when he lived, and is a most awe-inspiring monster.

One of the most interesting things in the Exposition is the collection of Indian pottery and implements, belonging to Mr. H. N. Rust, of Chicago, which fills two or three large cases, and consists of seven or eight hundred pieces of pottery, in the most remarkable style of preservation, taken from the mounds in Missouri. The workmanship of some of these shows considerable advance in the ceramic art, more than we have ever seen in the pottery of the North American Indians. There is also an extensive collection of arrow and spear-heads of flint, with the implements of war and the chase, from Dakota. This collection ought to belong to the Smithsonian, or to the Peabody Museum at Cambridge. We understand that it can be purchased for \$5,000. S. C. C.

IS THE ORTHODOX WAY.—A Syracuse clergyman, Rev. Mr. Van Slyke, who was fishing from a dock at Geddes last week, espied a large black bass swimming leisurely about. The fish was in perhaps two or three feet of water. The pastor decided to capture the fellow. Leaning over the edge of the dock, he reached out and succeeded in grappling the fish in both hands, and brought him out of the water. The surprised bass, when out of his element, gave a sudden jump, but again the minister was too quick for him, and grasping him close to his swollen crop, succeeded by a sudden movement in landing him on the dock. The fish was one of extraordinary size, and weighed just five pounds.

ART.—A very well meaning artistic correspondent's rough drawing of a queer fish, which he says is a striped bass. This fact we take on trust; but when we are requested by our correspondent to touch it up, to elongate the body, put the mouth ship-shape, in fine, to make the sketch plausible, we shrink from the task. We can do most anything with written copy, and slick up the roughest work until it reads like Alfred Tennyson's verses, but when we are called upon to touch up strange and monstrous drawings, then we declare that we are neither Brackets nor Killbourns.

ADJUSTING DISPUTED POINTS.—We print the following letters on sundry topics from interested correspondents:

HARTFORD, CONN., Sept. 25, 1878.

MY DEAR "E. A. K.":

I am but yesterday home from a fifteen-day sojourn at Moosehead Lake, and having just laid hold of the *FOREST AND STREAM* for Sept. 12, I am moved by "P. X." communication therein to write you, having first hunted up and read the first time "P. X." note in the issue of August 23. Your note in the issue of Sept. 1 had already seen, it having been called to my notice by "P. X." about three weeks ago. It seems to me on now reading the three articles together, that he and you are talking of different things, hence the apparent difference of opinion.

"P. X." in his letter dated August 21, reproached the dragging of a bass through the water by main strength with a long, stiff pole; you, in your letter of August 30, refer to playing a fish with a limber fly-rod which is an entirely different thing. I doubt if you have happened to see bass taken in the manner that "P. X." refers to, and I have as little doubt that if you were to see it you would consider it crude and unparliamentary.

With reference to the so-called "working" of West Hill Pond, I have to say that I have given the matter some thought since "P. X." talks with me about it, with the result of changing, or rather modifying, the opinion I then had. My present opinion—of little value, because not founded on scientific study—is that the green matter found in the water is a plant of the *Conferva* variety, which, in quiet ponds, hangs together, and goes commonly by the name of "frog spit" but which, in large ponds like the one in question, disturbed by high winds and choppy waves, separates into small particles. I think it is unnecessary that fish do feed on *Conferva* when it maintains itself as a mass, but it would seem that they cannot do so—at least as readily—when it separates into minute particles. I think it is also well settled that *Conferva* grows sometimes in the purest spring water, free from decaying vegetable matter. It would seem, however, that the presence of such matter would favor the growth. I do not know whether West Hill Pond ever "worked" before it was artificially raised, but I do know that the raise made since last summer was not the first of the kind. It had been artificially raised before that, for what, perhaps, you were not aware of. Yours truly, W. E. SIKES.

ARTHUR.

A Chicago correspondent who became dissatisfied with the performances of shop bass rods, made some experiments of his own with results which seem to have gratified him, and which he has made us acquainted with. He writes:

I determined to make a rod that would combine strength with elasticity and lightness. Last March I bought a Calcutta bamboo, cut off from the lower end of the tree, cutting close to the knot, leaving about 10 inches to insert my butt. At the bottom of my bamboo I put a thin brass ring, to prevent the possibility of splitting.

For my butt-piece I selected a piece of clear maple, put it into a lathe, and turned out a tapering dowel to fit into the bamboo until it touched the knot above, fitting it in quite snug. I lashed off the lower end of the line, cutting close to the knot, put on the reel bands and rings, put on a brass thimble piece for the bottom. I took out the butt, and to insure its holding fast, put on a coat of glue; putting in the rod again, found it was just as solid as the original bamboo.

The next thing was to whip the upper part of the rod, to strengthen it; for this purpose, black silk, waxed with shoe-maker's wax, was used, taking about a dozen turns round the butt, cut off from the lower end of the line, cutting close to the knot, leaving about 10 inches to insert my butt. At the bottom of my bamboo I put a thin brass ring, to prevent the possibility of splitting. The reasons for putting the guides so close was to prevent the line hanging to the rod, or catching over the guides. Many old fishermen were just as present, less successful, consequently less friction for a line to pass over, and guides made of wire will enable any one to make longer and better casts than the flat guides. Finally, giving the silk whipping a coat of white shellac varnish, putting on a linen braided line for the hand-piece, and giving the rod two coats of coach varnish, my rod was finished; a not a rough piece in it, and good looking too. Many old fishermen were just as present, less successful, consequently less friction for a line to pass over, and guides made of wire will enable any one to make longer and better casts than the flat guides. Finally, giving the silk whipping a coat of white shellac varnish, putting on a linen braided line for the hand-piece, and giving the rod two coats of coach varnish, my rod was finished; a not a rough piece in it, and good looking too. Finally, giving the silk whipping a coat of white shellac varnish, putting on a linen braided line for the hand-piece, and

and, with uplifted hands, in admiration and awe, gaze with dazed eyes from afar upon that forbidden land—that *terra incognita*—and then, having lived in vain, die and leave no sign.

It is then with a spirit of rank heresy in my heart; with smoked-glass spectacles on my nose to dim the glare and glamour of the transcendent shore; with the scales of justice across my shoulder—*M. salmoides* in one scoop and *M. pallidus* in the other—I pass the barriers and confines of the enchanted land and toss them into a stream that has been depopulated of even angling by the *delinquent* of salmon and trout fishes; for I would not, even here, put black bass in a stream inhabited by salmon or brook trout. While watching the plebeian interlopers sporting in an eddy, their bristling spines and emerald sides gleaming in the sunshine, I hear an awful voice from the adjacent rocks exclaiming: "Fools rush in where angels fear to tread!" Shade of Izaak Walton defend us! While appealing to father Izaak for protection, I quote his words: "Of which, if thou be a severe, sour complexioned man, then I desire thee to be a competent judge."

Seriously, most of our notions of game fish and fishing are derived from British writers; and as the salmon and the trout are the only fishes in Great Britain worthy of being called game fish, they, of course, form the themes of British writers on game fish. Americans, following the lead of our British cousins in this, as we were wont to do in all sporting matters, have endeavored to make the American game fish, the game fish of America, ignoring the fish equally good and game. While some claim for the striped bass a high niche in the list of game fish, I feel free to assert that, were the black bass a native of Great Britain, he would rank fully as high in the estimation of British anglers as either the trout or the salmon. I am borne out in this by the opinions of British sportsmen, whose statements have always been received without question. W. H. Herbert (Frank Forester) writing of the black bass, says: "This is one of the finest of the American fresh water fishes; it is surpassed by none in boldness of biting, in fiercer and violent resistance when hooked, and by a very few only in excellence upon the board." Parker Gilmore ("Ubique") says: "I fear it will be almost deemed heresy to place this fish (black bass) on a par with the trout; at least, some such idea I had when I first heard the two compared; but I am bold, and will go further. I consider he is the superior of the two, for he is equally cool as an article of food, and much stronger and unflinching in his efforts to escape when hooked." Mr. Gilmore again says: "Americans have reason to be proud of the black bass, for its game qualities endear it to the fisherman, and its nutty, sweet flavor to the gourmand."

Now, while salmon fishing may be the highest branch of piscatorial sport; and while trout fishing in Canada, Maine and the Lake Superior region justifies all the extravagant praise bestowed upon it, I am inclined to doubt the judgment and good taste of those anglers who snuff their fingers in contempt of black bass fishing, while they will wade a stream strewn with brush and logs, catch a few trout weighing six or eight to the pound, and call it the only artistic angling in the world! While they are certainly welcome to their opinion, I think their zeal is worthy of a better cause. The black bass is eminently an American fish, and has been so long represented in his characteristics by the faculty of asserting himself and making himself comfortable at home wherever placed. He is plucky, game, brave and unyielding to the last when hooked. He has the arrowy rush and vigor of a trout, the unflinching strength and bold leap of a salmon, while he has a system of fighting tactics peculiarly his own. He will rise to the artificial fly as readily as the salmon or the brook trout, under the same conditions; and will bite the live minnow or other bait, under any and all circumstances favorable to the taking of any other fish. I consider him, inch for inch and pound for pound, the gamest fish that swims. The royal salmon and the lordly trout must yield the palm to a black bass of equal weight. That he will eventually become the leading game fish of America is my oft-expressed opinion and firm belief. This result, I think, is inevitable, if for no other reasons, from a force of circumstance represented in his characteristics. The operation of immutable natural laws, such as the gradual drying up and dwindling away of the small trout streams, and the consequent decrease of brook trout both in quality and quantity; and by the introduction of predatory fish in the same waters with trout. Another prominent cause of the decline and fall of the brook trout is the erection of dams, saw-mills and factories upon trout streams, which, though to be deplored, cannot be prevented. The man who erects a dam, though his civilization cannot be stayed by the honest, though powerless protests of anglers. But, while the ultimate fate of the brook trout is sealed beyond peradventure, we have the satisfaction of knowing that in the black bass we have a fish equally worthy, both as to game and edible qualities, and which, at the same time, is able to withstand and defy many of the causes that will in the end effect the annihilation and extinction of the brook trout.

As I have stated long since in the *FOREST AND STREAM*, the black bass will exhibit game qualities that will at once convince and surprise the most skeptical salmon or trout fishers, if they will angle for him with as suitable and delicate tackle as they employ for his more favored congeners of the tribe *Salmonidae*. It is high time, then, that anglers and sporting writers should accept the situation; accord to the black bass his just due, and acknowledge him as the coming game fish of America.

Synthiana, Ky., Sept. 23, 1878.

[No doubt the Bass is the appointed successor of the Trout; not through heritage, nor selection, nor by interlopers; but by force-ordination, and for the reasons which our far-seeing correspondent advances. Truly it is sad to contemplate in the not distant future the extinction of a beautiful race of creatures whose attributes have been sung by all the poets, but we regard the inevitable with the same calm philosophy with which the astronomer watches the burning out of a world, knowing that it will be succeeded by a new creation. As we mark the soft vari-tinted flush of the trout disappear in the eventide, behold the sparkle of the coming bass as he leaps into the morning of his glory! we hardly know which to admire the most—the velvet livery and the charming graces of the departing courier, or the flash of the armor-plates on the advancing warrior. No doubt the bass will prove himself a worthy substitute for his predecessor, and a candidate for a full legacy of honors.

By the same fate which has predestinated the trout, the salmon may also be superseded; but there is no fish which has ever yet swum, that can be accounted his peer. His gigantic forces must be encountered with heavier weapons

than those we employ for the diminutive bass, and however much we may admire the subtle strategy and the fighting qualities of the latter, or estimate them by comparative value, they cannot be measured by the same scale. The manoeuvres of the bass are merely amusing; they are Lilliputian. But the efforts of the giants are all-absorbing. It is only after a man has captured a salmon that he feels as if he had conquered a world. The man who has landed six-pound bass, one after the other with a light bamboo rod, as we have done, greatly enjoyed the sport, but he never felt like Alexander.—Ed.]

The Kennel.

THE MINNESOTA FAIR AND FIELD TRIALS.

THE editor of this journal was favored in being able to attend the joint agricultural fair held last month at St. Paul and Minneapolis, in the great and prosperous State of Minnesota. Every courtesy was extended to him by the officers in charge of the exhibition, of which the bench show at St. Paul, already described at length in our columns, constituted so attractive a feature, especially to sportsmen. Of course there is a sameness of character in all fairs and industrial exhibitions, whether they be merely local and limited, or world's fairs and comprehensive; but there were so many features of this Western frontier display not found in stated shows of like character, and altogether novel to residents of older States, that we would have gladly described them at length weeks ago, when we wrote up the Bench Show and Field Trials, had there not been more legitimate demands upon our space. There were to be seen aboriginal Indians with their implements of industry and weapons of the chase; furs, robes and hides, with the rude tools used in dressing them; stuffed specimens of wild animals; great structures created of the products of grain, which now grows luxuriously on quondam buffalo ranges; wonderful implements of farm industry, doing the work of scores of men; steam threshers and self-binding harvesters, all showing the marvelous development of a very few years. Incidental and appropriate were the side shows, the team of elk in harness, the feats of wild horsesmen in the saddle; the marvellous execution with rifle and shotgun; the rough riders, fox running, and coursing of hares. Scattered through all the great space, indoors and out, were the motley costumes of frontiersmen, voyagers, trappers, stock-raisers, soldiers, scouts, surveyors, half-breeds and Indians, all typical of the Far West and its recent change to civilization. Fortunately, and very creditable to those enterprising publishers, the Harper Brothers, of New York, that firm sent an artist to the grounds—Young Rogers, noted for the force of his character sketches—who, by his own industry and some slight service rendered by Mr. Hallock, to whom he bore a letter of introduction, has preserved many strong points of the Exhibition in the engraving which we print to-day.

Even more faithful and characteristic is the sketch of the Field Trial Grounds and the camp, represented in the companion picture. It is the first delineation of such an event in America, and our thanks are due to the Messrs. Harpers for the privilege of printing it. [In parenthesis, we feel sorry for that fellow in the sketch who sleeps with his boots on and feet outside of his blanket.]

Just here our immediate reference to the subject gives us an opportunity to correct some errors which occurred by the transposition of figures in our score table for the All Ages Stakes in the Minnesota Field Trials, as printed in our last issue. Those using our paper for reference will please note this:

For Forest and Stream and Rod and Gun. A CHASE FOR THE BRUSH.

THERE are particular localities which seem to be enchanting to foxes. For forty years the Allen plantation, just across from Roanoke, opposite my own, has been the favorite resort of red foxes. From Cur's Hill to Gaston the cliffs and bluffs on the Roanoke are literally honeycombed with holes, into which the foxes retreat when too closely pressed by hounds for their comfort. In these dens, too, they raise their young with security, and if left alone for a few years the country would be overrun with them. They are never trapped, or hunted with gun; but the hunter, with practiced pack, begins upon them early in September, and by the close of the fall but few are left. I have been their chief enemy for nearly forty years, and have more than once during that period caught every one in that locality. This season I began upon them the 2d of September, which I have continued every other morning to the 18th, and with a success rivaling my

famous comrade, when I caught one twenty years ago in the same hunting ground, when I caught one put to earth twenty out of twenty-one on as many hunting mornings, the longest run being only ninety minutes. This season I took a servant with axe and spade, and closed every hole I knew, and, as I ran a fox into a new one, would close that the next day. In this way I closed the door upon them, and have fun now until it isn't fun. At this season the red fox cannot be run out of his range, which is in this locality some three miles up and down the Roanoke, and about one from it. The first chase was made after the old male. I had lured a O. H. dog, Jerry Newsome, and Nat Showers to join in the sport, and right readily did they respond, and brought in recruits of no ordinary promise. Our united forces amounted to some thirty hounds, and nearly all of them could boast of their lineal descent from old Byron, Leader, Rebel and Pilot. Three sent Gen. W. H. Jackson, of Bekmead, Tennessee, had brother and sister representatives. Comet and the peerless Vanity, the full brother and sister (to leader, though eight years older), displayed on this occasion their usual vim and courage. Winder, the full brother of Rebel, but her junior, distinguished himself for speed and dash, a fitting accompaniment of so much beauty. Young Watchman and Red Bird were not behind him in these qualities. I crossed the Roanoke on this occasion long before sunrise in a small canoe, and my pack took water and swam over. The stream here is some half mile wide, but the water being warm the hounds did not enter it. I was particularly teach my dogs to take water in the summer, and they will do so then at all seasons, regardless of the temperature of the water. Hardly had a horse at the opposite bank ready for me. His dogs were in full cry on a lively trail as I landed. I was just in time; the thing was artistically done, and the recruits went in without jar or confusion. Off they dashed up the Roanoke in as lively, merry and joyous a mood as ever pack in its opening chase displayed. The huntsmen, too, did not lack the enthusiasm the thundering of a full pack of hounds invariably inspires. For my part, quiet and steady was my philosophy, occasioned by being mounted on an old, stiff and spiritless nag greatly addicted to falling down when urged beyond the slowest of paces. Two tumbles in half a mile convinced me that her reputation for vaulting was deserved, and for the first time in my life my caution in a red-fox chase overruled my enthusiasm. But the old nag kept me out of the dew, and furnished a conveyance, if not so safe, a little better than foot. The fox kept up under the river hills for some distance at a time, when he would come up and out on the hills as in search of his food. This made the trail really splendid, and one mounted even as I was could witness it as the pack handsomely followed it around in all its tortuousness, bringing it back to the near point of its emerging from under the hills. This movement was repeated several times before the fox reached his cover on Cur's Hill, where he lay down and quietly at rest he lay, unsuspecting of danger. We were upon him before he was aware of it. He had no time to arrange his toilet or plan his escape. He was surprised, and like all surprises the result was dismay and confusion. He bolted pell-mell first in one and then in another direction, confronted in every move by a hound, but the undergrowth being dense the hound could only get away he flew like a falling star. The pack soon emerged from the thicket, and a full pack of male pursuit. But the pursuit was too hurried, breaks occurred, and the old red, panic stricken, took no time to listen to his pursuers. The morning, however, was suited to this condition of things, and in a few minutes the pursuit was renewed, and in earnest, too. With the advantage thus obtained the fox turned down the Roanoke much in the line of his trail to the hills. This movement was repeated several times, and the fox turned west to Cur's Hill. I met the pack on this turn, though the slowest of the huntsmen, saw this, the most magnificent press of the chase, alone. Rebel's brother, Winder, was in the lead, Logan and Watchman, Jr., were next the fox, barely out of view. But he stood this press without faltering, and as the cry gradually faded away in the distance there was no diminution of his jig-like character. The fox made for Cur's Hill, but he avoided the place of his surprise and took to earth near the mouth of Stonehouse, where he lay for another day.

T. G. T., of Gaston, N. C.

DOGS, SPORTING AND DOMESTIC.—Whether it is merely fashion or the result of a general increase of interest in the animal generally, certain it is that dogs are being adopted as pets and protectors to an extent hitherto unknown in this country. A few years ago pugs, or Yorkshire terriers, were rarities, kept and looked upon as curiosities; now, in every large city, and many smaller ones, they are so common as to scarcely excite remark. The same may be said of the mastiff and St. Bernard. We had but few, and of those many were mongrels; now they are bred on a large scale. In St. Bernard's, the kennels of Mr. Le Roy Z. Collins, Mr. Burdett Loomis, and others, will compare favorably with any in England, from whence, indeed, the choicest blood has been imported, and many gentlemen of this city and vicinity, and also of Boston, have fine kennels of mastiffs. While the dog used for sporting purposes will naturally always hold pre-eminence, yet the time has arrived when other breeds are entitled to recognition, from the fact that they are not only as valuable intrinsically, but are equally cherished by their owners, who may not be sportsmen. The fills to which all varieties are subject are almost identical, and we hold ourselves in readiness to howl lies in our power towards alleviating the sufferings, or adding to the well-being of one kind as well as another. With small dogs used as pets, in nine cases out of ten, sickness arises from over-feeding and it may be set down almost as a rule that a strict attention to diet, with cleanliness, is at once preventive and remedy. After all, it is by no means a difficult thing to keep dogs in health, setting aside, of course, that dreadful scourge, distemper, and its train of attendant evils. We shall endeavor in future issues to give some plain directions for the care of dogs, together with the simplest remedies for the more common disorders.

Very young dogs almost invariably point at sight. Puppies are often seen standing on chickens, or even on flies. It is always a capital sign, and almost a sure indication that the "hunting" instinct exists, and merely wants development with age, when the nose can be brought into play instead of the eyes. The powers of scent can be developed by allowing the puppy to trace a piece of meat or a fresh bone that has

been dragged in a zig-zag direction through grass or over the ground.

CATS AND DOGS IN FLORIDA.—*Editor Forest and Stream:* Mr. Hamerton, in one of his "Chapters on Animals," remarks that one great difficulty in the intercourse between the dog and his master is the shortness of the dog's life, which comes to an end just when they begin to understand each other. If this is the case in England, where the dog leads a life comparatively safe, how much more is it the case in Florida, where he has many dangerous foes. Lakes, rivers and swamps there abound, and in them lurks the cunning and ferocious alligator, whose favorite repast is dog meat, and sooner or later the hound or pointer goes down that yawning throat. I have heard of a wise old foxhound who used to baffle the enemy by attracting him with his voice to a certain part of the river, which he wished to cross, and then running at full speed to another part, where he crossed before the brute could reach him.

The same story is told in ancient history of the dogs living on the Nile, and I have heard it told as a trait of the instinct of the dogs of South America, where the cayman, or alligator, whose dangerous aquariness must be some foundation for a tale which comes from so many quarters. Old Buck, the Florida hound, was once overtaken by an alligator in the river, when he turned and showed fight. The reptile being cowardly, and not used to resistance, drew back and hesitated, which gave the dog the chance of escape. But some time after, having been left behind by his master, who had gone across Halifax Inlet in a boat, Buck decided to swim across, and was devoured by a shark. The panther is also fond of dog meat, and has often been known to carry off the house-dog in the night. Many dogs die from the bite of rattlesnakes and moccasins also. Besides these enemies, the dog in this climate is subject to many fatal diseases, and seldom lives out all his days. I have never, however, heard of a case of canine madness in Florida, though dogs are abundant.

Cats, not like dogs, are not afraid to escape the maw of the alligator, and seldom are snake-biters. I have heard of a big gopher-snake who used to carry off kittens; but he came once too often, for he met the enraged parents, who set upon and killed him, although he measured seven feet or more. The great and dangerous enemy of the cat in Florida is the wildcat (*Felis rufus*), very abundant in the woods and swamps, which prowls about for poultry and young pigs, and which scrupulously avoids man and his domesticated dog. A chance. Sitting once late at night on the piazza of my hotel at New Smyrna, I heard a great outcry among the "harmless, necessary cats," which the landlord explained by saying that a wildcat was after them; and sure enough, all that remained next morning of our sleek and handsome Thomas were a few bunches of hair at the edge of the scrub. At another house where I was staying a favorite Maltese dog disappeared in the same way, notwithstanding the efforts of the dogs, which rushed to the rescue. The robber was too quick for them.

S. C. O.

DOG MANAGEMENT.—We take the following from *Lidstone* on "The Dog, with Simple Directions for its Treatment":

Drawing-room pets are peculiarly liable to phtiora, and there is but one remedy—starvation. With over-high condition, skin disease comes as a matter of course. In this wretched state the skin becomes thick, ribbed, and irritable, and low diet, physic, and dressing, all fail unless the dressing is severe, and as I think barbarous. No house dog in a moderate-sized family requires any feeding. He can supply himself if he is unrestrained, and plates of meat, thin bread and butter, and cake, are cruelties. I think, however, that no dog should be altogether a free agent. He should be chained up at times, or he will be indifferent to any exertion, and capricious as to following his master or staying at home. He will be most sensible and useful if he is the servant of one person, and if no one else has anything to do with him, and personally loosen his chain. The dog always has a very marked preference for that individual who unbuckles his collar first when he has been taken to a new home, and he never forgets this hour's liberty.

In regard to drawing-room pets, in many of the cases of malady reported to us the cause as designated by *Lidstone* has been surfeit. There is the story often repeated of the famous dog doctor in London, whose specialty it was to cure dog-dog's dogs. His system was as simple as possible. The dog was tied to a tree and given nothing to eat for three days, and was then returned perfectly cured. The charge for treatment was two guineas. Sometimes, when we have advised anxious inquirers about their pets not to feed them at all for a day or so, and then but sparingly, when such counsel has been taken the best results have followed. If a dog is really hungry he will eat plain, good food, which, when pampered, he refuses.

DOGS FOR SHOOTING IN NORWAY.—A writer in the *London Field*, telling of shooting vipers—a species of ptarmigan found in Norway—brings the colors of the dog somewhat in prominence, as follows:

The best dogs to take for this kind of sport are setters, trained to retrieve. I like the lemon-and-white-colored English variety best myself; they are more conspicuous when among the birch and willow bushes than the red Irish or black-and-tan Gordon. Even if the sportsman visits the country alone, two dogs at least are absolutely necessary, as a single dog is so liable, if continually worked, especially over rough ground, to become tired and in that case the sportsman would be unable to go out, while, if he has two dogs, should one unfortunately fall lame, the poor brute can have a day or two's rest, while the sportsman makes shift with the other.

WORMS IN DOGS.—An article, written by our correspondent, "S," having been used by our excellent contemporary, *The Live Stock Journal*, in which the origin of *Entozoa* in animals is traced, we find the following in the "Comptes Rendus" for 1876:

In some researches on *Filicaria hematica*, M. M. Gatch and Pourquier found these worms in the blood of the fetus of a bitch, whose heart was filled with them, but they do not explain how they traversed the double wall of the placenta, in order to pass from parent to offspring.

The round of life in *Entozoa* is most curious, and has yet to be solved. The proposition of our correspondent is un-

doubtedly the only one which will hold, which is, "that the worms bore their way into the blood vessels of the intestinal canals," or may be floated there in the blood, and that, these turned loose into the milk of the mother, are again taken up by the offspring.

DOG POINTING A STONE.—A correspondent, writing from Salem, Mass., sends us the following:

Coming up Cherry street, recently, my dog, a young setter, stopped short on a point, quite stiff. Investigation proved him to be standing on a small stone, which he evidently mistook for a house-sparrow, that are very numerous in our neighborhood. One thing this proves to me, *i. e.*, young dogs will very often point at sight, I think quite as often as at scent—at least until shot over.

WHEELS.—*Lake City, Minn., Sept. 24.*—S. B. Dilly's Dolly, dam of Royal Fan and Rattler, has whelped seven by champion Ranger.

PSYCHE.—Mr. H. N. Morris' lemon-and-white pointer bitch Psyche, winner of the first and special prizes at the second annual N. Y. Bench Show, has just whelped five fine puppies by the champion Sensation, all lemon-and-white—four dogs and one bitch.

SPRINT.—The Morse Brothers, of West Medford, Mass., have lost their fine English setter Spout, which was killed by a railroad train. She was a fine hunter and the mother of many good dogs.

VERY SUPERIOR STOCK.—We call particular attention to an advertisement in our columns, which offers for sale a remarkably able lot of pointers and setters. As all these dogs, their pedigrees and performances, are familiar to us, we can assure those wanting good animals that a better opportunity of securing choice animals has rarely been presented. In the pointer puppies, any one wanting to start a kennel with the best and bluest blood, would do well to secure the entire lot. We will be glad to give full information in regard to these animals. [See ad.]

In assuming, or rather resuming, charge of the Kennel Department of this paper, the writer would assure the readers of *FOREST AND STREAM* AND *DOG AND GUN* that no effort will be spared on his part to make it thoroughly interesting and valuable. Since his former connection with the paper, and during his editorship of *The Country*, he has given kennel matters the closest attention and study, and therefore approaches the task with confidence. Everything of interest relating to the dog, both at home and abroad, will be carefully noted and commented upon.

ATLANTIC YACHT CLUB PENNANT MATCH.

THERE is no nonsense about the Atlantic Yacht Club.

When its members want to sail a match they sail it, and when they want to go on a cruise they go. Twelve yachts to start or no sail is something they know nothing of, for they never intend to make a hippodrome display of the club's affairs, but follow up the sport for the love of it and for the enjoyment to be derived from its zealous and resolute pursuit. When, therefore, the date for the annual pennant match of the club was made public it was a foregone conclusion that the race would be a fine one, and in this we were not disappointed, for the meet of Thursday, Sept. 26, could not have been surpassed in interest, the close struggle, fine seamanship and abundance of pluck displayed, stamping the club as one of the first in the land in point of seamanship and able craft.

The arrangements for the race were thorough, and the printed programmes gave all the information needed to the skippers. The classification of yachts adopted by this club is a judicious one, and does away to a large degree with the failures attending upon the crude attempts of some regatta committees to sail big and little alike in one and the same class and trust to the deceptions of time-of-allowance tables to make good the difference. In this respect we are far behind our English cousins, who have reached such a system in their regattas that time-of-allowance is fast becoming obsolete, all yachts being built to class up to a certain figure and meeting others at the line of the same size only, rendering a race worth of going on the records as meaning something more than first home by a fluke or a streak of good luck, no one knows how. But as long as we have a fleet of yachts widely divergent in size, and as time-of-allowance must still come into the account, the Atlantic Yacht Club has struck the fairest course in adopting a diversified classification which shall, as far as possible, mitigate the short-comings of time-of-allowance, and hence its regattas are looked forward to with interest by the general yachting public quite as much as by the club members themselves. The courses selected were judicious, the omission of rounding the southwest Spit upon the return home being a satisfactory feature, cutting out very tedious portion of the course without materially reducing its length. The smallest class went around the spit only and then made for home. Two of the rules call for passing notice, and other clubs may adopt them to advantage. In one it was stipulated that there should be no limit to the time of the race, a very sound provision, for nothing is more harassing than a resail, and in

the other the obnoxious clause of "so many to start or no race" was repealed. When an owner goes to the trouble and expense of getting his craft in racing trim and comes to the line with the bona fide intentions of fighting for the cup, it is manifestly poor policy to send him back to his moorings in consideration of all the pains he has put himself to. "Two to start or no race" has often been the means of frightening off intending racers, doubtful whether a second yacht would come to the line, and thus the entries have been skinned of some of the best upon more than one occasion. While the entries for the match in question might have been more numerous, those that did host racing colors were among the best in the fleet, and the race turned out a well contested one from beginning to end.

During the run out a moderate breeze prevailed, in which *Agnes* showed to remarkable advantage among the schooners, holding a good wind and fairly beating *Triton* and *Peerless*. The latter did better when the sea outside was struck, as her deep body began to tell, but she gave the Lightship a very wide berth in rounding, and lost much of what she had gained, by keeping too full and running down to leeward of the mark and then tacking for it. Off the wind *Triton* put in some better work, and we were rather surprised to find *Peerless* actually overhauled by both the other schooners. During the squall they gave her a most unmistakable beating, though it is but fair to mention that *Peerless* seemed a little short-handed, or else Mr. Maxwell, finding he could not make his time on the smaller ones, concluded to do nothing hasty, but keep on the safe side of things during the terrific squall from the westward, in which the race finished up. Among the sloops, *Nimbus*, though hideously ugly, showed that she had speed in her of no mean quality, and what with smart handling managed to give those of the larger class the go-by, with any amount of time to spare. The judges were Messrs. Peet, R. C. Field and G. M. McNulty, and followed the racers in the *Cyclone* over the course.

Schooners were classed over and under 750, on water line, sloops over 450, 350 and 300, and 250 and 200. To get an extra whistle to get away the sloops, who did not seem to understand the directions. With numerous entries this little piece of charity on the part of the committee might have led to protests from those that did get away at the proper time; but fortunately no such trouble arose this time. However, it is well not to be too indulgent, for surely skippers could not take the simplest instructions of those of the printed circular. The wind at the time was moderate, but it was a little running full and the fleet, which had been standing off and on, finally bore up and made a dash for the line. *Dolphin*, taking advantage of a puff, went across at a good pace, and *Triton* followed. The rest were very tardy and slower or later some of them will be heavily handicapped for lagging and sailing over the bay when they should be near the start, especially when the breeze is light and apt to leave some of them in the lurch at the critical moment. *Sadie* followed 4 mile astern, with a big club topsail aloft and a whacking mainsail, on account of her mast being in her eyes, making her rig a good deal like that of a huge cat-bow. Then followed *Agnes*, and pot-leaked *Peerless* not far astern. The times were taken as under:

Name	CLASS	B-SCHOONERS.	H. M. S.

	CLASS E—GABIN SLOOPS.		
<i>Nimbus</i>	L. H. Bigelow.....	11. 04. 05	

The schooner *Atlantida* and the sloop *Orion* went out with their crews, but *Orion* was not a party that was not entered the lists, for in *Sadie* she had a very opponent, both of them being noted jaegers, and a fight between the two would have materially added to the interest of the match. That *Dolphin*, an old-timer, could have done so well and come so near making her time on *Sadie* is one of the marvels of the day, and shows what good tooling will do as a make-up for lack in form, for in the excellent manner in which the craft of young men handled her, it was evident that the close push she gave Herreshoff's turn-out. All hands kept pinned in to do their best, stood along the Long Island shore till they were headed and had to make a board or two to fetch through the Narrows. *Agnes* did well from the word go and showed well to windward, when she went about abreast of Fort Wadsworth. As the wind freshened and the *Cyclone* passed the *Orion*, the latter just laid her rail in and was sailing in the fine style, with her helm down and her Commodore Cooper, casting a weather-eye aloft every now and then at his gear and relishing the slashing pace of his pet craft, for *Cyclone* had to wag her screw pretty lively to cut across his bows. By the time Hoffman Island bore South, *Agnes* had spun out a fine lead, with *Dolphin* to leeward of her and *Peerless* not far astern, with *Sadie* on her weather quarter, standing like the proverbial sailing ship, *Triton* about a quarter of a mile in *Peerless*' wake. Then there was a long break, with the other sloops strung out all the way up to the Narrows, *Nimbus* having a decided lead among them. The wind now veered to the southward, and the fleet was compelled to make long and short legs of it to fetch the spindle on the spit.

Off Dix's Island *Dolphin* had regained her lead, and *Peerless* was making up. Then *Dolphin* went to the south, *Triton* a longer, the rest of them working in shorter boards down the channel. The two sloops held a better wind than the schooners, for they all crossed under their sterns upon coming about, *Agnes*, however, working out to windward in quite wonderful style. Her canvas is a beautifully setting lot of muslin, and she does not lose many points on account of bagginess of her duets, that is certain. When *Dolphin* had the lead, *Peerless* was working in close, but she could lay her canvas to the spindle with something to spare, so she was first in the lot to set a jib-topsail. When *Sadie*, on the short leg, bore down again she crossed under Mr. Cooper's stern, and it was evident *Dolphin* had gained by standing to the southward so long. *Atlantida* had beat down with the fleet, and about held her own, always giving way and keeping to leeward of the racers, which course, we hope, was appreciated by some of the smaller ones, whom she had many opportunities of blanketing. Light duets were now being got ready, preparatory to the round. *Dolphin* doused her small jib-topsail and set a big balloonier instead, not, steering west of the mark, allowed *Peerless* to squeeze around the Southwest Spit in the lead. The rest followed at close intervals: *Peerless*, 12h. 36m. 20s.; *Dolphin*, 12h. 36m. 80s.; *Agnes*, 12h. 37m.; *Sadie*, 12h. 37m.

55s.; *Triton*, 12h. 38m. 4s. Among the smaller sloops, *Nimbus* went around with a very long lead, set light sails and was off for home, followed a quarter of an hour later by *Winsome* and *Genia*. The big fellows now had a drift of it in out to the look, with the first of the flood just beginning to make. Balloon mastmasts staysails were in order, but when the flood was rounded, all hands had to trim all again, as the wind backed more to the east. In the light swell outside, *Peerless* took the lead, but *Dolphin* and *Sadie* hung well on to her and kept a better wind. *Orion* was either not driven or was not up to her usual form, for she was dropped by the whole fleet on the run to the ship without trouble. *Sadie* forged ahead and *Triton* seemed to be doing better in the light wind. Barring the occasional slip of sail nothing transpired till the light ship was reached. *Triton* was first to haul around at 2h. 2m. *Sadie* next, at 2h. 2m. 42s.; *Dolphin* third, at 2h. 4m. 5s., and *Peerless* having gone about some distance to leeward came down with full headway, rounding the red painted ship close under her stern, squeezing in between her and *Agnes*, her time being taken at 2h. 4m. 35s., with *Agnes* 5s. later. *Comet* and *Atlantis* soon followed, and *Orion* later. With the flood tide and a freshening breeze a rapid run home was made. *Winsome* was dropped by the flood, but was not very long, for the wind again chopped to the S. and it was once more jam on the wind, *Dolphin* alone holding on to her big jibtopsail, which set in excellent form, by the way, and stood her in good stead. Down to the *Romer* *Triton* led the way—she was evidently better with sheets lifted than when trimmed in flat. All the yachts, however, kept pretty well together, the schooners a short distance ahead of the sloops. When the *Romer* was dropped they could keep up a little more, and light canvas again came into play. *Triton* bore away to the northward to get into the flood coming through the East Channel, but she ran out of the wind, and *Peerless* and *Agnes* went to the front. The small sloops were now overtaken, *Winsome* with a good lead.

A violent squall had been brewing on the Western horizon, and was rapidly drawing close, an immense lead-black cloud overhanging it, the upper bay. It came along with tremendous velocity, and it was a lucky thing that the yachts saw the fishermen and working craft under bear poles speeding before it. Had they delayed a moment longer we should have had to record some terrible spar breaking and capsize. As it was the escape was a close one, but excellent seamanship seemed to distinguish every yacht in the fleet during the trying moments. *Peerless* was first to take in kites and settle away foretell. She paid broad off and received all the gust blows on her bow, but hardly storage way. But her canvas was nearly handed and she was out of danger. *Agnes* was handled with rapidly likewise and escaped the worst of it. *Triton*'s skipper managed his craft with consummate skill that deserves all praise. During the excitement he kept his wits about him, kept his craft a good full, so that when struck she should have way on; then he settled away his fore halliards and hauled down the jib. When the wind struck her she was luffed into it, payed off and luffed again, until the worst was over, when she at once commenced to beat up the bay, for the wind had come out in very wicked blasts from the N. W. She was not long in getting foretell on her again, and worked up to the line with leg gangway awash all the time. We have never seen a racing craft under full canvas put through such a terrific squall in a more ship-shape fashion than was *Triton* on this memorable day. She was not long in settling away a long way ahead in good trim, without a rope-yarn drift. Nor should we fail to mete out justice to *Agnes*, for she, too, was thoroughly well toiled through the most of it, and, though a little slower in getting on her course again, she managed to save her time, and crossed a winner by 25s., after a race in which she and her crew did themselves much credit. *Winsome* received the brunt of the blast with her club topsail aloft, and her good sailing jib was blown over to it down to her skylights. There she lay a moment, with her crew up to windward, apparently taking things very easy, when slowly she came back, and, after minutes of suspense, righted, none the worse for her knock-down. She made sail again and worked up home in the pluckiest manner. Had she not been a deep craft she would never have come back, but would have shared *Mohawk*'s fate. There is no time for finding out the value of a model as when it blows great guns, and *Winsome*'s crew will have a good deal more faith in depth than heretofore. The match was finished as under:

Name.	Start.				Elapsed Time.				Corrected Time.

The pennants were awarded to *Agnes*, *Sadie*, *Winsome* and *Nimbus*.

PROVIDENCE YACHT CLUB.—In the annual regatta of this club, held off Rocky Point, R. I., September 24, *Wanderer*, Mr. Ben Davis, beat *Lucille*, *Genevieve* and *Peck & Dixon* in 2h. 30m. 55s.

BAYVIEW YACHT CLUB.—In a fifteen-mile race of this club, held on the Bay River September 26, for the Dredger challenge cup, the *Brothers* won in 3h. 25m. 40s., beating *Eynna D.*, who capsized, *Conet*, *Mary D.* and *Hogan*. The latter carried away some gear and gave up.

MONTREAL YACHT CLUB.—The second annual regatta of this club was sailed on the St. Lawrence September 21. Course, twelve miles. *Wanderer* carried away her tiller, and the others shipped a good deal of water. Won by *Maude*, Mr. Brewster, M. D., in 2h. 7m. 55s.; *Waterwitch*, Mr. J. C. Jenkins, second, in 2h. 9m. 30s., beating *Stranger*, *Sappho*, *Bu-rology*, *Lotie*, *Wanderer*, *Peerless* and *Joan*.

ORAR AND PADDLE.

EXETER BOAT CLUB.—The regatta of this club took place Sept. 24 on the Passaic, at Paterson. Course, one mile and return. Weather unfavorable. Single sculls won by Harry Lister in 19m. 45s., beating R. Cooby. Working boats won by John Lister in 20m. 25s., beating J. C. Zutterkirch. Second heat, J. H. Gall beat J. O. Hinchman in 19m. 37s. Third heat, Harry Lister beat J. H. Harring in 20m. 20s. Six race sail to M. L. Ward and J. Foul. Single sculls, W. Laverock beat C. Post in 20m. 45s.

ALABAMA BOAT CLUB.—The regatta of this club was held Saturday, Sept. 1, off Bay Ridge, L. I. Six-oared rigs—*entries*; *The Blonde*—C. H. Talmage, bow, W. O. Field, C.

E. Wilmot, T. H. Terry, C. H. Grant, H. G. Field, stroke, and C. S. Whitney, coxswain. The *Brundell*—W. B. Pinto, bow, T. Drew Bunnell, E. M. Gridley, A. N. Waterhouse, J. J. Aalton, Harvey Hewitt, stroke, and A. A. Read, coxswain. *Brundell* got away first, but the *Blondes* overhauled them with their long swing and won in 8m. 10s. Course, mile and a half. Four-oared gigs—*entries*; *The Fly*—R. H. Bunker, bow, Sidney Green, M. P. Christensen, Louis Saubier, stroke. The *Coyote*—W. T. Sharpe, bow, T. G. Wells, P. T. Lawrence, W. C. Howard, stroke. Won by *Piert* in 7m. 48s. Pair-oared shells—*entries*; *Curlew*—Daniel Chauncey, Jr., and H. W. Maxwell. *Petrel*—H. C. Duval and William Arnold. This was a close race all over the course until *Petrel*'s stroke caught a crab, when *Curlew* won in 4m. Distance, one mile.

UPPER HUDSON REGATTA.—This regatta at Albany was brought to a close the first day—Wednesday, Sept. 25—instead of spreading the races over two, as intended. Four-oared shells, Mutuels of Albany, beat Olympics in 8m. 54s., one mile and a half straightaway. Double sculls won by Olympics in 9m. 51s.; Mutuels second. Senior single sculls won by Lathrop, of the Mutual Club, in 10m. 11s.; Fuller, of the Mohawk Club, second and Higgins, of the Cohoes Club, third. Junior single sculls won by Grant, of the Olympics, in 10m. 51s.; Sheehy, of the Olympics, second, Hoffman, of the Mutuels, third. Pair-oared rigs, Olympics had a walk-over. Six-oared gigs—Olympics kept the lead till near the close, when Mutuels spurred and won a well-contested race.

QUINCY ROWING ASSOCIATION.—This is the name of a new organization started at Quincy, Mass., with the following officers: President, James McGrath; Vice-President, William D. Webb; Secretary, John Avery; Treasurer, William Cawthorn. Directors—James Sullivan and John Harkins.

CHALLENGE BY ELLIS WARD.—Ellis Ward, of Philadelphia, has issued a challenge for a two, three or five mile working-boat race for \$1,000 a side. As he was recently badly beaten by Myers, his challenge seems a little rash.

AMERICAN BOAT RACE.—Members of this club pulled a double-oared racing scull Sept. 22, for the Helen and East river. Distance, eight miles. Won in 1h. 30m., by William and Edward Allen, beating Morris Powers and Maurice Allen by three minutes.

HARD-WEATHER YACHTS.

NEW YORK, Sept. 19, 1878.

EDITOR FOREST AND STREAM:

You do not, in my judgment, give the New York sloop credit for the sea-going capabilities she really possesses. Consider, for instance, the oyster boats of the *Commodore* and *Admiral* type. These vessels run the beach from here in Virginia steadily throughout the season, and certainly this side of the North Atlantic after November is not a calm sea, yet we never hear of one of them coming to grief. Again, how few, comparatively, of the small trading sloops and schooners which ply between North Carolina and the east end of the ground are lost by stress of any weather that they encounter? Yet these vessels are, almost without exception, centreboards, and in point of gear not exceptionally well found. Personally, I have nearly come to the conclusion, after some experience with cutters and a good deal with sloops, that while the heavily weighted cutter is a *sine qua non* to the short, high seas and rapid tide rips of British waters, it will be found that the modified centreboard—not the extreme skimming dish—will encounter the comparatively long, easy swells of our side of the Atlantic with practically equal safety with the cutter, while for first-class speed under ordinary circumstances, handiness of rig with a small crew, dryness when hove to, owing to her drifting off instead of holding on, the modified centreboard sloop has a decided pull over the keel type. Of course, in advocating the sloop rig I allude to vessels under 55ft. water line; over that I should have my canvas on two sticks.

The English and American types of small craft are a product of their respective environment, and as such, each one is best suited to its own water. It is true that the centreboard well does cut up a small ship badly; but, after all, there is very little room in any kind of a small craft, and the best of them are very uncomfortable for a voyage of many days.

The bearing of all the communications received touching heavy-weather yachts seems to point in one and the same direction. Our correspondents are ready, one and all, to acknowledge that the ordinary skimming dish can be improved upon by verging more towards a "medium model," one which shall be deeper, heavier and somewhat narrower than the present type. If they will follow out their propositions a little more in detail they will find themselves landed aboard the little more in detail they will find themselves landed aboard the little more in detail they will find themselves landed aboard the changes they grant as beneficial will evidently lead, if their reasoning be followed to an end. The sloop can be improved upon, they acknowledge; by a little more displacement; very well. Also a little less beam perhaps (point number two); possibly a shallow keel, some add. Put all these confessions in one and what do they amount to after all, nothing short of the cutter model. "G. M." prefers the centre board, but with what aim in view? If oystermen and fishermen have to do their work on banks and flats, the board may be a necessity; but for a sea-going yacht its claims cannot be considered equal to the advantages of a keel, which are many and very essential, though our correspondent has overlooked them. With less beam there will be a lack of stability; this must be made up by a low centre of gravity. In no way can it be so readily and effectually done as by splicing some thirty to fifty per cent. of the ballast into the keel amidships. In fact this step becomes a matter of necessity and is not open to choice. The keel boat, moreover, is very much more reliable in stays at sea, she is easier on her helm, will not yaw when off the wind, nor broach to, and will hold her own when hove to. "G. M." very truly makes the point that the centreboard is easier in a sea-way, with headsheets to windward, because she drifts down the wind; but an uncongenial proximity to a rocky shore under the lee has led us to prefer an occasional resort to a continual scanning of the breakers in hopes of finding some soft rocks to bring up on. So much concerning model

for the present. If we pass on to the rig, there can be little doubt that closer inquiry will convince our correspondent of the superiority of the cutter for cruising. A more clumsy, unhandy rig than that of the sloop would be difficult to conceive. The cutter-rig is the very reverse, as the following points will serve to show. To be well adapted for cruising no one will venture to dispute as absolutely essential: first, safety; second, handiness; third, efficiency. With regard to the first demand, the cutter's sails are smaller as a whole and individually, therefore under better control; her sticks are less lofty, and therefore stronger; her bowsprit reefs and is less liable to be snapped off in a jump; weight aloft is reduced by sending the topmast on deck. It will not do to point to the smacks about the coast. In them everything is sacrificed to low first cost, and their little stub and bowsprits, though ample for the purposes intended, have to be discarded in the yacht and a long slender stick substituted. While the stub does not dip in a sea, or if it does can stand a good deal, the longer and lighter stick of the yacht would be in danger, or at least would interfere with the boat's sailing by dodging into the swell.

We have seen one of our largest sloops ignominiously turn tail in a seven-knot breeze, unable to make any weather of it in a very moderate swell, for she would at every dive bring up a bobbed jib full of water, and finally was compelled to up helm and run for home, in weather that would have been the glory of a little ten-ton cutter. If men had been sent out on her head booms they would have been washed off, certainly they could have done no work. The handiness of the cutter rig can be easily enough discerned upon a little reflection.

The mast steps nearly amidships and, with the lesser area of canvas required, reduces the size of the mainmast by twenty-five per cent. The head sail is cut in two, each portion more easily sheeted aft, hoisted and stowed, and shifting a jib for a smaller one from the forecastle is a safer, easier and more seamanship job by far than the lubberly "bobbing," or taking off a bonnet in the sloop. Finally, concerning efficiency, there is little to choose between the two styles. For smooth water racing the sloop is a little the better, but for outside work the cutter's head sails have the advantage of being more quickly shifted to suit the breeze, while reefing the bowsprit, thereby keeping it clear of the sea, will more than compensate what bends belongs to having the canvas more in one. In making and taking in sail, reefing and shaking out again, in every respect, in short, with the sole exception of racing in smooth water, the cutter is so vastly superior to the sloop that we fail to see why it should not be universally adopted by all whose aim is something else than potting mugs in fair weather and smooth water. The racing man who cares for nothing but racing, and that in land-locked water, may retain the sloop, for he will sacrifice anything and everything to his desire for silverware; but the cruiser, or the yachtsman who likes to race and cruise as his tastes incline, or opportunities offer, can there be any justifiable grounds for his tenaciously clinging to the clumsiest of all rigs?

With our correspondent we agree that the dish model may be exchanged with material gain for one less beamy and of greater displacement. The keel follows as a matter of requirement and will improve sea-going qualities. The rig recommends itself. And, pray, what else have we then but the cutter?

KEEL AND CENTREBOARD.

LYNN, Mass., Sept. 26, 1878.

EDITOR FOREST AND STREAM:

I would like to say a few words about yachts, especially the much maligned centreboard boat. Now, I don't much wonder at sailors calling the average New York model a sandwich, if what I have seen from there are fair specimens. Don't condemn the centreboard on account of a faulty model, but lay the fault where it belongs. My experience, covering nearly a score of years of boating, is that, other things being equal, the centreboard yacht is the ablest and fastest.

The great trouble with yachtsmen is that the draught of boat is taken from the bottom of the keel, or shoe, as the depth of the boat. Now, a keel boat may be drawing six feet of water, and a centreboard of the same dimensions on deck may draw but, say five feet, and yet be the deeper boat, because that draught does not include two or more feet of keel. While the body of the centreboard is nearly as deep as her draught, I am inclined to think that any one will find that the deep keel boats you hear of, with the keel—or that part below the garboards—was cut off, and that it is the keel that makes the draught, and not the body of the boat, in a great many cases. Of course, I do not wish to refer this statement to the extreme English model, as I don't think many of our American yachts are built on such extreme lines as regards depth.

My experience leads me to the belief that of two boats, one keel and one centreboard, built from the same model, the centreboard will be both abler and faster, will work handier, and be better in every way except steering. She will stand harder than the keel boat, because she will answer her helm quicker. And I am forced to the conviction, exactly opposite to the general opinion, that the centreboard is poorest off the wind and best on the wind, as compared with the keel. We have on the Eastern coast a considerable number of deep centreboard yachts, and the cases where they are beaten on any point by keel boats are exceedingly rare. My own idea of a comfortable cruising yacht would be: Length, from 40 to 50 ft.; beam, from 12 to 15 ft.; draught, from 5 to 6½ ft.; rather high freeboard, with a moderate sized centreboard; no false keel, and cutter rigged. A boat of that size as safe as a 300-tonner, can be handled almost anywhere or at any time by four men, and would have accommodations for twice that number. A yacht of these or similar dimensions, with cutter rig (sail not too large), would be able to go anywhere that any vessel could, I believe in the cutter rig, notwithstanding its ungainly appear-

ance, for it does what no other rig renders possible. When you have to shorten sail on a cutter, it brings the sail more and more, as you rest down, toward the centre of the boat and lower down, and consequently the boat works easier, and sails faster in a breeze than a sloop with a bob-jib fifteen feet ahead of her, and a close reefed mainsail that she won't work under alone.

I am at present in possession of a cat-rigged boat, 20ft. long on deck, 7ft. 10in. beam, and drawing 3ft. of water, with counterboard. She carries about 3500 lb. of ballast, has 54 yds. of 30in. deck in her mainsail, and is the ablest open boat I ever saw of her size. I never had a boat so close to the wind than I could, or saw a cat-rigged boat that would steer so easy running off. Cuts of the saucer kind will beat her in a little light breeze, but I can go along comfortably with her can hardly get along at all.

GRAPES.

The experiences of "Grampus" so entirely coincide with our own that his letter calls for few remarks. The value of a more moderate form and of the cutter-rig he is ready to accede to and can plead his own actual experience in their support. For our part we should add the keel in place of the board, unless limited in draught, and if our mooring ground was on a mud bank, with no more than a few feet of water, we would see to it that a new anchorage was found, even if we had to take the cars to get there. We prefer the keel for reasons set forth in these columns before: greater stability, greater strength of structure, and greater ease in a scaway. Our correspondent "Kedge," in our last number made mention of his setting a smaller jib "flying," keeping the tack about half way out on the bowsprit in place of reefing or bobbing jib. His plan shows the natural tendency among practical sailors toward something more satisfactory in heavy weather than the sloop-rig, for his substitute is nothing else than an actual application of the cutter principles in preference to those of the sloop—his operation being akin to "shifting jibs." We think that such testimony, virtually involuntarily, or unintentionally, given in support of the cutter, should carry weight with those who are apt to point to the prevalence of the sloop as proof sufficient of the popularity of its snugness and adaptability to all purposes.

CANOEING ON THE DELAWARE.

EAST ORANGE, N. J., Sept. 27, 1878.

EDITOR FOREST AND STREAM:

The redundancy of correspondence elicited by the narrative of the running of Great Foul Rift by the East Orange canoeists had led me to decide against participating in the controversy. But now, that Mr. A. H. Siegfried has awakened old and pleasant recollections by his mention of Wells' Falls, and more particularly as he has credited me, my party—for I was one of the "New Yorkers" who preceded him, "part in canoes and part in rowing boats"—with the very lobby proceeding of courting a capsize by attempting to lower a boat down Wells' Falls with a line—I, feeling that my honor as a canoeist must be vindicated, request room for this little narrative.

The facts are these: One beautiful June evening in '76, the "Qui Vive" canoes *Delaware* and *Qui Vive*, from Newark, N. J., en route for the Centennial Exhibition, met, at an appointed rendezvous, Musconetcong, ten miles below Easton, the Adirondack boat *Saranac* and the canoe *Dragon*, one day from Water Gap. Greeting and supper over, the voyage of the day was discussed, and although Great Foul Rift was mentioned as an ugly place to run, the navigators did not appear to consider it particularly dangerous. Several visitors at our camp warned us to beware of Wells' Falls, and one old raftsmen dubiously remarked that it was the "worst place on the river," and advised us to "carry round." Its height—with proverbial rustic versatility—was variously estimated at from six to eighteen feet.

About ten o'clock in the forenoon on the second day after leaving Musconetcong, the arrow-like Long Lake boat *Saranac* and her three canoeists debarked their crews on the Jersey wing of the dam that converges the river at Lambertville. Describo Wells' Falls I cannot. A sharp decline—a bold plunge—a huge white foamier extending off down stream a hundred yards or more, and miles of broken, white rift below—this was what we saw. The captain of the *Passee* Canoe Club and commander of the *Dragon* immediately, putting his mouth close to the mate's ear, decided in favor of "slaking." The respective paddlers of the *Delaware* and *Qui Vive* at once followed suit.

The men who composed the crew of the *Saranac* were no novices at rapid running. Together they had shot many a fall, and navigated scores of miles of quick water. Each had perfect confidence in his own individual coolness, nerve and circumspection, in the other, and in their boat. I mention these things to demonstrate that no tyro's inexperience can be called to account for the catastrophe that followed. The water was very low, the current powerful, and the accident well-nigh unavoidable.

The man with the paddle in his hand exchanged glances with his companion, said something which the roar of the falls drowned, pulled his gray slouched hat over his brows, knocked back the brim, and started in the direction of his boat, followed, somewhat reluctantly, by his comrade.

The *Saranac* was not our "provision and supply boat." Each canoe carried her owner's stores and effects. She was not lowered by a line; on the contrary, the usual precaution of letting down stern first with the oars was disregarded. The men took their places, pushed off, swept down the decline, and shot over the fall, while we on the dam cheered lustily. But, scarcely had they made fifty yards of their rapid way down channel when we could see the boat, in spite of the sterner's frantic endeavors, begin to turn. A wild wave of the paddle-blade in the air—a signal that all hope was gone—a shock, and they were over—overboard in a boiling, seething mass of angry, rushing water, in whose grasp they were powerless as infants, their very lives at its mercy. What wonder that our hearts leaped to our throats, that our breath came gasping, and that we were spell-bound for an instant.

But inactivity could not long remain with men of our training. From the moment of capsize we had lost all sight of boat and men alike. Little use of gazing open-mouthed down such a rock-

studded stretch in hope of glimpses of boat or swimmer. In Indian file we sped away up the dam to where a bateau, in which two men had come down to see us run the falls, was hauled up. This we lifted from the water, and launched below the dam with three men to the rescue.

Far down the rift, behind a sheltering, rocky island, waist deep in whirling water, clinging to boat and effects as best they might, we found the undaunted boatmen. Taking them aboard, the bateau, with the wrecked *Saranac* in tow, made the best of its way to *terra firma*. Do you wonder that the canoeists dodged Wells' Falls? For five feet the port side of the *Saranac* was crushed in as one might crush an eggshell. Every rib from stem to stern was cracked or broken. The whole boat was awreck. It took five hours to patch her up with tin, white lead and putty, and then she was only a mockery of her former self. Her beauty was lost forever on Wells' Falls.

Not without great difficulty the cargo of the wrecked boat—save two canvas flaps used in rigging, with the inverted *Saranac* as roof, a light camp at night; an oat, a coffee pot and a cap—was rescued from the water. These tent flaps were the "tarpsulins" which Mr. Barnes found at the foot of the rift.

The canoees which so ignominiously "shirked" might, perhaps, have attempted the running of Wells' Falls had the *Saranac's* venture proved successful. That there are many rifts and falls on this river below Easton fierce and high enough to tax the nerve of the canoeist, any one familiar with the stream will not deny. All of these were safely threaded by the canvas canoees and their frail consort.

The statement made by "F. P. and E. P. D." concerning the speed with which they ran Great Foul Rift is evidently an error, as is the one stating that their canoees were the first to navigate that perplexing water. Being personally acquainted with these gentlemen, and having talked the matter over with them, I am entirely at a loss to understand how they can be, seemingly, so thoroughly convinced of the fact that they really accomplished the obviously impossible feat of running a canoe among rocks two and a half miles in three minutes. Their convictions are so strong that I am forced to believe that their time-piece must, in some unaccountable way, have failed to record several very important minutes. However, I am anticipating a canoe trip this fall, during which I shall run this much-abused rift, and if possible, take the time with accuracy.

MAGAZ.

Rational Pastimes.

THE AUSTRALIAN CRICKETERS.

The great event in athletic circles just now is the long-talked-of visit of the Australian cricketers. These players from the antipodes had met with such good fortune in England, the home of the game, that their proposed matches with American clubs was talked of much as an exhibition of scientific play rather than a contest in which the home clubs would have much chance of victory. How unfounded such expectation was has already been determined by the excellent games of Tuesday and Wednesday.

The strength of the Australians and the feature of their playing, which has won for them their victories over English clubs, is the excellence of their fielding. Their theory—and a correct one it is, too—is that a run scored for their opponents is run gained for themselves. For this superior fielding the English players were wholly unprepared, and were defeated by it rather than by any phenomenal batting.

The Australian eleven consists of six players of New South Wales, C. and A. Bannerman, Gregory, Spofforth, Garrett and Murdoch; four of Victoria, Blackham, Boyle, Allan and Horan; and one of Tasmania, Bailey. Besides these, there are some substitute players. Judging from the English record and home reputation, Boyle, Spofforth and Garrett are wonderfully effective bowlers, while Allan, Horan and others have achieved laurels in bowling. Murdoch and Blackham are the two best wicket keepers. C. Bannerman is a famous batsman, provoking great admiration in England, where his batting average was over 23, while A. Bannerman, Bailey, Murdoch, Spofforth, Horan and Blackham have recorded fine scores at the bat.

The eleven arrived in New York last Monday, on the City of Berlin, and devoted Monday to some practice on the City of Berlin's Ground, and to working off their "sea-legs." The Hoboken grounds had been most thoroughly prepared for the occasion, and the wicket was one not often surpassed. The New York eighteen are well known in the vicinity for their skill in the game. They were Souther, Cross, Marsh, Giles, Frazer, Moeran, Bance, Sleigh, Allen, Conover, Bailey, Horan, the St. George's Club, Harvey, Moore, Sprague and Stevens, of the Staten Island; Brewster, Greig and Rogan, of the Manhattan, with Eyre and Ronaldson, of the Staten Island, substitutes. They met the Australians without having had any previous team practice. They were all old cricketers, however. Some had played before in international matches, and the team were not disposed to be awed by the brilliant record of their opponents and accept defeat as a foregone conclusion.

The two teams met for the opening game on the St. George's grounds at eleven o'clock last Tuesday. There was a vast throng of spectators, among them many ladies. The turf and grounds were in excellent condition, and the day a perfect one. The Australians having won the toss sent the New York team to the bat and themselves took the field, assisted as follows: Spofforth, bowler; Blackham, wicket keeper; Horan, long stop; Gregory, slip; Bailey, long slip; C. Bannerman, square leg; Garrett, cover point; A. Bannerman, long off; Allan, point leg; Boyle, mid on, and Murdoch, long on. It will be observed that the omitting altogether of the long leg and the other disposition of the players was peculiar. Squire leg stands close in and well forward, and two men stand respectively at short mid on and short mid off. Clearly all their men are kept in front of the wickets, and the few runs made in the slips showed that this disposition was successful.

Bance and Moore, of the New Yorkers, went to the bat to the bowling of Spofforth and Garrett. So effective was the bowling and fielding that the tenth wicket fell with only thirty-two runs: Bance, 15; Marsh, 8; and Moeran, 9. Cushman ran up thirteen, making one hit for four. There was from the first excellent playing all about the field, assisted as the last wicket fell the score was only sixty-three. The sides were then changed, the New York eighteen taking the field, and the Bannerman brothers went to the bat. The peculiar bowling of Sprague, the base-ball pitcher, proved very annoying, as it was novel to the Australians, and they assumed the defensive. The first occasion of surprise for the specta-

tors was when the champion bat of the team, Charles Bannerman, hit a sharp line ball to Sleigh at mid off, who held it and sent the batter out with a single. Horan, another fine bat, took his place at the wicket and maiden over after maiden over followed until Horan was bowled out by Brewster with only six to his score. A Bannerman was caught out by a splendid play of Conover, and Giles took a long life all from Spofforth, the score meanwhile reaching seventeen. The play following was careful, thorough work on both sides. The New York team's fielding was a constant surprise, the Australians confessing that they had not seen it equalled by any English eighteen. When the last two men were in and twenty-seven runs were yet to be made before the score equaled that of the New York boys, the latter saw fit to change bowlers. This proved a help to the visitors, and they closed the innings with a score of 70. Brewster's bowling in this innings was five wickets for twenty-four runs and twenty-seven maidens bowled over. Sprague took one wicket and bowled twenty maidens over. In the beginning of the second innings, the first three wickets went down with but five runs, but before the fourth fell thirty-four had been put down, and when the stump was drawn at 5:30 p. m. there was a total of thirty-six, with the loss of four wickets.

Umpires—Messrs. Frank Crocket for Australia and James Smith for New York.

We go to press before the match was concluded.

PENINSULA CRICKET CLUB.—The Peninsula Cricket Club of Detroit, who play the Australian Cricketers the 11th and 12th insts., have a very good record of success in the past. From 1867 to 1878 inclusive they have played sixty-four games, of which they have won fifty-one. Their last game was with the London, Ont. Club, September 23, the score standing in their favor, 112 in one innings to 81 in two innings.

CRICKET.—The return match between the Belmonts, of Philadelphia, and the Manhattan, of New York, was well played, resulting in favor of the latter by a score of 107 to 103.

POTTSVILLE ATHLETIC ASSOCIATION.—Editor *Forest and Stream*: An athletic association was permanently organized on the 25th ult., christened the Pottsville Athletic Association, and these officers elected for the ensuing year: President, T. B. Fielders; Vice-President, Col. J. M. Wetherill; Secretary, W. C. Price; Treasurer, S. H. Kærcher; Board of Directors, B. B. McCool, D. C. Henning and Frank Roseberry. The object of the association is for the development and improvement of the physical powers of its members by the use of such appliances as constitute a well-appointed gymnasium, and by athletic sports. The list of membership, already numbering about one hundred, is composed of leading citizens, both old and young. DOM PEDRO.

Pottsville, Pa., Oct. 1, 1878.

STATEN ISLAND ATHLETIC CLUB.—The fall meeting of this club was held at West New Brighton last Saturday. The programme and performances were as follows:

The one hundred yards dash was won by B. L. Lamontagne, H. A. C., in 10s.; running 107 yards; J. Lafon, Myette B. C., second; Saporita 107.

Hammer Throwing.—William B. Curtis, N. Y. A. C., made the cast of 62ft. 11in.; J. O. Querebrough, Scottish-American A. C., 51ft. 2in.; F. Larken, Princeton College, 77ft. 9in. Mr. Curtis' throw became a record, the hammer was about one pound under regulation weight, and only used on the occasion because a proper one was not to be obtained.

W. J. Duffy, Harlem A. C., landed the one mile run very creditably in 5m. 45s. He defeated Frank Richardson, Manhattan.

In the running high jump W. B. Boers, F. T. A. C., and LL E. Ficken, N. Y. A. C., tied at 5ft. 5in. In jumping off Ficken won.

Twenty-five ran in trial heats for the quarter-mile handicap, H. B. Moritz, Scottish-American A. C. (24 yards) won the final heat in 52.3-64; W. Wheatley, New York (30 yards) second.

The three mile handicap walk had seven starters. B. H. West Adelpi B. B. O., with 2m. 5s. start, won in 24m. 24s. actual time. W. C. Rowland, Staten Island (3m. 55s.), was second in 26m. 33s.-4s., and W. H. Parly, Greenpoint A. C. (scratch), finished third in 23m. 19s.

The Scottish-American A. C. representative, John Britton, whose form is familiar on the Broadway police, put the shot 35ft. 6m., F. Larkin, Princeton College, being second, with 31ft. 7in. Three other entries.

The running broad jump fell to W. T. Livingston, Harlem A. C., with 18ft. 11in. H. Iman, Short Hills A. C. reached 18ft. 6m., W. C. Rowland, Staten Island (3m. 55s.), was second in 26m. 33s.-4s., and W. H. Parly, Greenpoint A. C. (scratch), finished third in 23m. 19s.

Of Fabronio, Scottish-American A. C., had a "walk-over" for the pole vaulting.

The Scottish-American A. C. team beat the New York A. C. team in the tug of war, beat two in three pulls. Winning team—E. Arnold, J. Dunning, C. J. Quakerbaker, A. Thompson. Losing team—William B. Curtis, J. G. Trux, C. H. Trux, G. M. Smith. Times, 45s., 2m. 49s.

The half-mile handicap was won by William Rinaldo. A lad of fifteen, member of the Short Hills A. C. He started with 68 yards, beating twelve others, in 2m. 2-5s. J. Lynch (58 yards) was second.

The Boers won the club hurdle race, one-sixth mile, with five yards start, in 44 seconds. His opponent was C. L. Thorp, same start.

The club quarter-mile run handicap fell to J. H. Rimmer, who went from the scratch, in 55.3-5s.

ARCHERY BOWS.—*Titusville, Pa. Sept. 24.*—*Editor Forest and Stream:* Archery has superseded croquet, and the small urchin to the old gentleman is only happy when in possession of his little bow and arrow.

We have two clubs in our city, with an average attendance of twenty-five members, and as yet have confined our shooting to short ranges of thirty and forty yards, and hope by another season archery will have developed itself as a universal pastime, and some very fine shooting may be expected. So great a call was made for cheaper bows that a party went to manufacturing ash bows. They were nicely made, stained of a yellowish hue, leather handled, and in all made a very showy bow; but time and use have shown to us that they become brittle, lose elasticity, and break when string is located. I, for one, have broken four, one self lancewood included.

Although the cost of the ash bows was not large, it was aggravating enough, for when once accustomed to a bow a change naturally alters the shooting. I have made experiments with our woods, in hopes of finding something durable. After testing the qualities of hickory, ash, cedar, spicewood, ironwood, sassafras, I find the last two much in favor for toughness and elasticity, and the bow going back when string is located. I have now in my possession a 5 feet 3 inches sassafras bow with which I am well pleased. As winter with its other pleasures will soon close the archery season, we will study new ideas, ready for next season. One main point to be determined is a wood for our bows superior to the self lancewood and at a much less cost. We desire to learn the experience of other archers. Arrows with two or three feathers are best.

TEN-MILE WALK.—A ten-mile walk between C. A. Davenport and Leonard Fosdick, for the championship of the New York Life Insurance Company, on the Manhattan Club grounds, last Saturday, was won by the latter in 1h. 31m. 38s.

AMERICAN ATHLETIC CLUB.—*New York, Sept. 28.*—The games were held on the St. George Cricket Club grounds. The seventy-five yard run was won by G. G. Bolding, time, 8 1/4s., and the one-mile walk was won by M. H. Johnson (23s. start), time, 7m. 48s. In the running high jump A. H. Oakes cleared 5ft. 4in. L. E. Gowen was victorious in the two-mile run, time, 12m. 14s. The mile run for the championship of the club was won by J. Magee, time, 5m. 18s.

BROOKLYN ATHLETICS. The games at the Capitoline grounds last Saturday were well attended, the total receipts, about \$300, being devoted to the yellow fever fund. The exercises consisted of running and walking matches, jumping, throwing the stone, lacrosse and baseball. In the high jump J. West cleared 5ft. 6in., against 5ft. for J. Slight. In the three-quarter mile run G. W. Wheatley was first and H. Wilkinson second. J. Campbell was the winner in the 100 yard foot race. The running broad jump was well contested, and Slight was the winner. The prize for the four-mile walk was carried off by Benjamin J. Smith.

EQUESTRIANISM.—This is the very long name of Mr. W. C. Coup's exhibition of trained horses, goats, dogs, etc. These are the horses whose wonderful intelligence and training attracted so much attention at the Aquarium not long ago, and they are as well worth seeing. The Equestrianism is now in this city.

HUGHES AND O'LEARY.—At 2:45 yesterday O'Leary had walked 211 miles and Hughes 190.

—The reopening of the Knickerbocker Cottage billiard rooms, Sixth avenue, this city, last evening, was the occasion for a very pleasant reunion. The club rooms and other apartments of the Cottage have been refitted throughout.

Answers to Correspondents

No Notice Taken of Anonymous Communications.

J. W. P., Chillicothe.—We could not advise you as to a gun. See our advertisements.

RANA PIPERIS.—You spell the name correctly. The frog is *Rana pipiens*, not *Rana pipera*.

B. P., Pittsford, Pa.—My setter, kept chained, has very poor appetite. Ans. Needs more exercise.

W. C. F., Monroe, N. C.—Are the Remington shot-guns full choke-bore or partly so? Ans. Partly so.

Omio.—See our game tables, published Sept. 5. All the game laws for thirty-eight States are there given.

F. O. DeL., New York.—Kerosene is not injurious to dogs unless used too often, or left on too long at a time.

R. W. H., Foxcroft.—Know nothing about the firm nor their guns. We have declined to take their advertisement.

C. A. B., Atlanta, Ga.—The Secretary of the National Sportsman's Association is B. F. Dorrance, Wilkesbarre, Pa.

F. B., New York.—Robin shooting is never permitted upon Staten Island, nor in any other part of New York State.

S. H. L., Bridgeport, Conn.—The "Rine Practice" \$1.50 "Perry's Second Book" costs \$1. We can send them to you.

JARRET, Framingham.—For excellent map of Cnrituck and vicinity address A. Dinden Kohl, publisher, Washington, D. C.

C. F. B., New York.—When was Barnum's Museum burned down near Spring st. or Prince st. Ans. In February, 1867.

RICHARDSON.—No name on a gun; every dealer uses it. Generally a second-class arm. It is a common property to all makers.

YOUNG SNAPPER.—Which is the best country for trapping all kind of fur we want? Ans. Colorado. Arkansas is also a good State.

W. A. G., Long Island.—To break up unlawful fishing give the proper information to your magistrate, and bring the offender to trial.

A. F., Philadelphia.—Wild pigeons migrate in search of food. Their appearance, as you report them, flying south over Philadelphia is nothing unusual.

C. H. B., Philadelphia.—My pup three months old has worms and is as thin as a rat. Nose and appetite good. What shall I give? Ans. Try area nut, followed by castor oil.

H. M. R., New York.—British racing canters are decidedly good sea boats; better, in fact, than their cruisers. It is a popular error to suppose them incapable of keeping the sea.

L. W. S., Hammonctown, N. J.—The symptoms detailed by you—low spirits, inactivity and dull coat—are those of the early stages of distemper. He should be treated accordingly.

ENGLISHMAN, Isle of Man.—What hails my British setter? 'E shakes 'is hears? Ans. You hall him yourself when you holler at him. He shakes 'is ears because he doesn't hear you.

F. N. T., Bridgeport, Conn., and F. P. M., New York.—For game laws of all the States see F. & S., Sept. 5. Good bluefishing at Barnegat; see our fishing reports for the past month.

G. E. A., Boston.—For a few Roy canoes write to Rusbout, Canton, N. Y., and mention our name. Canoe complete will cost \$65 to \$75. His work is first-class in every respect. See advertisement.

W. E., Hackettstown.—You had better address the party for the information directly, as we never use the apparatus. See answer to a correspondent on the same subject you ask for in this issue.

A. N., Philadelphia.—My setter bitch, in heat, had to-day the most violent fit I ever saw in a dog. Ans. The probability is that the fit was induced mainly by her physiological condition; feed low and give a mild purge.

INQUIRE, New York.—Follow our yachting columns, and you will get a clear idea of what the cutter rig is, and its advantages. We consider it very handy for small cruising yachts, fully as much so for large craft.

V. V. X., Washington, D. C.—You will find the game you are question of in Colorado. Do you not read the very instructive letters of our staff correspondent who is now in that region? See his sixth contribution in this issue of FOREST AND STREAM.

E. M. A., Cheesapeake Creek.—The bird you send us is the Florida gallinule. It is generally found in the South Atlantic and Gulf States. Sometimes, but not very common, in this latitude. Has been seen in Massachusetts. Yours is a young bird.

T. L., Jr., St. Paul.—For a varnish such as is used for percussion caps dissolve 1 lb. best gun shellac in 1 qt. rectified alcohol containing 95 deg. of pure spirit. The solution is best made at a temperature of 120 deg. As the alcohol evaporates use a small additional quantity in working.

A. R. C., Providence, R. I.—Your request for the mention of "good hunting grounds" is too indefinite. If you have read our paper you will have seen the mention of scores of good hunting grounds. Hunting fields with "a good market near by" are generally pretty well occupied by professional hunters.

H. S., Salt Lake City, Utah.—The pocket aneroid barometer is shaped very much like a watch, only that with its case it is about twice as large. A good one costs from \$15 to \$25. It is a very good thing to have with you on your mountain trips. Send to the opticians or dealers in sportsmen's goods who advertise with us.

J. R. T., Philadelphia.—You will find good hunting and fishing in the region described in the article "In the Wilds," F. & S., August 2, 1876; page 45. Address the men there designated. If a party is going, carry both rifles and shotguns. There are game laws in Maine, which are published in our issue of Sept. 5.

SPANIEL, Philadelphia.—I have an old English gun that has the name of Aubrey stamped upon it. Could you tell me anything of his ability as a gunmaker? 2. Can you tell me of any person in this city that has spaniel pups for sale? Ans. 1. Such a maker is known to have made good guns forty years ago. 2. Do not know.

E. S. T., Brooklyn.—Patent locks are those having anti-friction arrangements in the centre blocks, which hold the pin of the shackle. They generally consist of a series of composition rollers about the pin, and which, in revolving around the latter, remove the friction produced by the sliding of the shackle over the centre pin in the common block.

READER, Indianapolis.—I have a young pointer that I wish to train for the field. Can you mention a book, or several, if convenient, that will give me some hints regarding it. Ans. "Dog Braking," by W. N. Hutchinson; "Dog Talks to Success," "Youat on the Dog," "Stonehenge on the Dog," etc. Hall's "Sportsman's Gazetteer" is very thorough, practical and simple.

L. S. M., Boston.—Can you send the name of some good locality in this country, within seventy-five miles of this city, where I shall be likely to meet with good partridge and gray squirrel shooting, etc. Ans. No place nearly so good as Barnstable County on Cape Cod. Take Old Colony Railroad to Sandwich. For fullest information, see "Hallow's Gazetteer."

X. Y. Z., New York.—Official time in Brooklyn regatta, June 12, 1877, for *Comet* and *Yacht* is as follows: *Arrow*, start, 1h. 30m., 34s.; arrived, 6h. 43m., 16s.; elapsed time, 6h. 6m., 43s.; corrected time, 6h. 1m., 59s. *Schooner Comet*, start, 1h. 31m., 52s.; arrived, 6h. 50m., 59s.; elapsed time, 6m., 12m., 68s.; corrected time, 6h. 13m., 15s. *Arrow* therefore beat *Comet* by 1m., 25s.

G. B. T., Barnegat.—Please give me composition of red and green fires for boat signals. Ans. Red fire: 32 parts strontian nitrate, 9 of sulphur, 5 of potassium chlorate, and 3 of lamp-black. Green fire: 18 parts of barium nitrate, 8 of sulphur, 4 of potassium chlorate, and 1 of lamp-black. Parts are by weight. Keep dry in bottle. If composition turns slowly rounded rosin will help combustion.

B. B., Philadelphia.—Please give me the charge for single-barrel breech-loading gun, 9 1/2 lbs., 8 bore. The recoil is heavy at 2 oz. Would like to shoot so much or 2 1/2? Should a shell be as long as the chamber? Do brass shells give most penetration? Ans. 1. 5 lbs.

pointer and 1 1/2 oz. shot (ought to be your load, and no more. You would not do so well with more shot. 2. No difference in penetration with paper or metal.

J. H., Hayslope, Mass.—Pointer dog; eyes, a thick yellowish discharge; coat looks rough, and there is quite a scale coming off under his coat; tongue white; lips dry. He rolled in the water a great deal while out hunting. I have given him two doses of castor oil. Ans. Probably has taken cold, and may have inflammation of the lungs. Keep him warm and dry and feed him no meat. Give warm broth, and a little sulphur once a day.

J. W. T., New Britain, Ct.—Do good shooting Greenes recommends to fill up the space in the cartridge on the top of the shot with hot tallow, and when the weather is not to mix wax with the grease. What kind of wax is referred to and what preparation should be used? Has this method been tested in this country and with what success? Ans. We suppose beeswax is meant. We have heard of a drop of oil put in shot, or some tar. It has a tendency to ball shot.

F. L., Santa Rosa, California.—We can recommend the following books as coming nearest to what you want. They are all English works, as nothing of that class has been published in America: "Kemp's Manual of Yacht and Boat Sailing," price \$10; "Vanderdecken's Yacht Sailing," \$3 50; "Vanderdecken's Yachts and Yachting," \$3 50. For building small boats see book numbers of this paper. "Falkland's Sailing Boat," \$10. Can get either of the above for you upon receipt of price.

G. C. P., New York.—Where can I find the best squirrel hunting in Pennsylvania? In what part of Wisconsin is the best general shooting? Ans. For squirrel hunting to the vicinity of Clearfield, or any town in that region. You will find the most ducks, prairie fowl, ruffed grouse (called pheasants), rabbits, plover, etc. In Central Wisconsin, reached by Chicago and Northwestern, and Chicago and Milwaukee and connecting railroads. For larger game go to the northern part of the State, reached by the Wisconsin Central.

J., Baltimore.—1. Will it hurt a pug bitch, which was lined two weeks ago, and which now has mange, to give Fowler's Solution and rub with sulphur ointment? 2. Also, what shall I do for a four-months-old pug puppy pug bitch, which, whenever frightened or excited seems unable to hold its water? Besides, it urinates perhaps thirty times a day. Ans. 1. Would not advise the use of the arsenical ointment. Give slight dose of oil before applying the sulphur ointment, and reduce food a little. 2. Your four-months' puppy will get all over the trouble you mention in time. Would have no solicitude about her.

W. H. S., Philadelphia.—I have a shepherd dog, has a very ugly sore on one of his ears on the outside, close to the head. Discharges a white, pussy looking substance; has been there for about five months; had other sores on his back and a couple on the inside of the ear, but these are all well; have been putting coal oil on them. It cured the others, but does not seem to have any effect on this one. The ear seems thick and swollen, and the dog was very fat. He is not so now. Ans. The dog probably has cancer of the ear. The external sore may need opening; consult a surgeon; if not, then cleanse it and dress it with diluted lead water.

W. E. W., Newark, N. J.—My metal shells swell when I load them. I do not fancy entering or taking out a tight shell when harried, and I do not wish to know where it could be prevented. Would it hurt matters to load them in a block of their own size, or load them in the gun, and then take out ready for use? Would shells of twice the usual thickness of metal lessen the swell if No. 10 wads were used in No. 12 shells? Ans. We do not think any method of loading would help you, nor kind of shell. Possibly it is the gun which is at fault, being a trifle larger than the shells, and the shells in exploding swell to the size of the barrel. You could not force a 10 wad in a 12 shell.

DOCTOR, New York City.—Go to any part of Virginia for quail. You cannot go astray. In parts of the State a shot-gun cannot be found. For ducks, quail, snipe, woodcock, geese, rabbits and small game, go to Accomac and Northampton counties, including Chincoteague, Sinepuxent, Marbath, etc. Reached at little expense by Old Dominion steamer and railroad connections. For deer, bear, wild turkeys, and excellent fishing, go to Kanawha Falls, on Chesapeake and Ohio R. R. For deer and turkeys go to Greenbrier, Brunswick and Augusta counties. Excellent shooting also within a few miles of Norfolk. You can reach most anywhere within twenty-four hours' ride of New York. Would recommend Virginia to any other State just now.

G. A. S., Westfield, Mass.—I have a pointer pup. About a month back the distemper, which I cured by using the salt remedy. A week ago I noticed his eyes twitch, and the head seemed to draw toward the left side, and he would raise his foot at the same time. This would stop him short for a second, and then he would go on all right for a few rods, when the same thing would occur again. This kept growing worse. On the second day he seemed weak in the hind legs, and he staggered and fell in the morning, and foamed at the mouth a little; was up in a minute, apparently all right but for the twitching. The same noon, as I was taking him to a tree in the yard to chain him, he suddenly commenced to yelp and look behind him as though he saw something coming after him. The least noise or harsh words will set him going. It takes a minute or two for him to get over this. He has had two of these turns. The twitching about the eyes and side of the face are kept up all the time. He howls and whines with every breath, as though he was in great pain. Ans. The dog is suffering from nervous disorder, the result of distemper, likely to terminate in St. Vitus' dance. Sometimes quinine (1 to 2 grs.) and nuxvomica (1/4 to 1/2 grs.) will do good.

W. S. R., Danville, Ill.—I have an imported pointer bitch. About six weeks ago she whelped with seven puppies. Five were taken from her and two remained. Puppies apparently well until a recent date, when the bitch came to my bedside, looked at me, and then, whining, fell into a fit. On recovering she went to her puppies. I called a doctor, who pronounced the case to be rabies. One of the puppies died in half an hour, the other in three-quarters of an hour, both in convulsions, froth and blood coming from the mouth of one of them. The bitch had convulsions, putting and expiring in spasms. After noticing her puppies she seemed to grow more and more restless. At length she uttered some at times to grow better, but is still and has no appetite; is very nervous, and gives out a peculiar howl. The Doctor has made an examination of the puppy who died, and found the stomach filled with hair, straw, undigested food and some worms. The cost of the stomach was red and inflamed, as were the lungs. The brain was white and bloodless, the liver, spleen, pancreas and kidney, plural cavity, containing a large amount of bloody serum. I now keep the bitch under surveillance. Please give me your advice. By this time the nature of the disease in the bitch will have fully 1/2 're manifested itself. Some of the symptoms certainly indicate rabies, although highly bred bitches are often liable to a variety of its during the period of suckling. The youngsters no doubt died from the effects of the poisoned milk, the result of the mother's condition. Of course the diagnosis of the physician must be accorded weight, and he should observe the progress of the disease in the bitch until fully demonstrated, when, if rabid, she should be killed. We will be gratified to learn from you the further history of the case.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 3, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Western Manager.

AMERICAN SPORTING TERRITORY.—It is the pride of the Englishman that he may hunt his game the world over and remain all the time on English possessions. The territory open to Americans in their own country is scarcely less in extent or more limited in variety. When a man has thoroughly tested the sport afforded by the widely differing fields to be found in this broad land of ours, from the swamps of Florida to the glens of Washington Territory, he will be either too satiated with the pleasure or too advanced in years to carry the war into Africa or any other exotic hunting region. Indeed, on the contrary, we find the great hunters of Africa, among them Gordon Cummings, as well as the other sportsmen of France and Germany and England, count the cycle of their field days incomplete if they cannot reckon in them some weeks or months devoted to the game of America. When a man considers himself an expert lion slayer it is next in order to him to "tackle" a grizzly. The bear may show him some things not dreamed of in the lion hunter's philosophy.

OUR KENNEL DEPARTMENT.—We are glad that the Kennel Department of FOREST AND STREAM is likely to be the gainer by the recent demise of that eminently respectable paper, the COUNTRY, which lived to so fair an age under the management of our quondam and much esteemed editor, Wm. M. Tilston, Esq. This gentleman has now engaged to serve us in the capacity of Kennel Editor, and will endeavor to draw his lines in the interest of gentlemen sportsmen and fanciers of dogs, as he has always done. We consider him a much desired acquisition, for there is no department of a sportsman's paper which requires so much tact, discernment, discretion and intelligent knowledge of the matters which come within its scope.

—These October days invite us to long tramps over the hills and to rambles through the woods. The wise man will yield to the beguiling influences of the hazy atmosphere and the falling leaf, and go forth to find health for body and spirit.

LONG ISLAND DEPLETED OF GAME.

WHATEVER various causes may have conspired to drive and keep wild fowl and bay birds from the shores of Long Island, the fact that those shores are almost utterly deserted at present is as patent as it is lamentable. Last week four thoroughbred gentlemen sportsmen, of whom we may say ex-Gov. Dix was one, spent several days near Southampton, and scarcely saw a feather, where four years ago there was an abundance of game. Other trustworthy parties bring like reports from various localities. We have not had an opportunity to investigate causes of dearth in many well-known resorts; and it may be that absence of shore birds this fall is due to caprice more than to radical causes, and that the desertion of the great bays by wild fowl during the past and previous years was but incidental and temporary. Of one section, however, we do have positive knowledge, and we regret to say that the causes of dearth are so deep-rooted and positive that no wild fowl will ever appear there again until they are removed. It may be that investigation will result in revelations of like character elsewhere.

Half way down toward the end of that long and picturesque peninsula known by the Indian name of Moutank, and which terminates the southeastern extremity of Long Island, is a sheet of water called Great Pond. It is three miles long and half a mile wide. Ten years ago it was out of reach of tide-water, and grown up all along its edges with a luxuriant morass of the sweet vegetation upon which water fowl love to feed. Then two or three gunners could kill fifty geese on a pleasant day during the season of their migration, and all sorts of ducks were present in thousands. We knew of one party of three men killing 350 broadbills in five days, and this was only eight years ago. About that time, however, some men who had not the fear of being ridden by the ghost of Nimrod before their eyes, cut out the passage-way between the ocean and the pond, so as to allow every tide to sweep in and take possession of the inland lake. Their idea was the cultivation of eels. The result, of course, was that the salt water killed all the sweet sedges and aquatic plants upon which the wild fowl lived; and this fond supply gone, the honking hosts which were wont to stop and linger at their repast in the reedy environs of Great Pond now only whirled once or twice in disappointment above their accustomed haven and then continued on their way. The gunners, therefore, like the geese, have departed, and no more does the sound of the double-barrel echo along far Napeague, or vie with the ever-booming surf.

This is an unfortunate state of affairs for all parties concerned, unless possibly we may except the wild fowl. The people who live in the neighborhood no doubt obtain a small profit by the increased catch of eels, for which they have provided so ample a harbor; but, granting that as an eel-pond Great Pond is serviceable, we are confident that as a game preserve it would be more so. There was a time when large numbers of sportsmen were in the habit of "going on Moutank" to shoot wild geese and ducks, sure of good sport there. These sportsmen left money behind them, and where one went ten years ago five gunners would go now, and as a matter of course, the farmers of the vicinity, transformed for the nonce into hosts, would find five times as much money in their pockets. Now, however, no sportsman except plover and woodcock shooters go there, for wild fowl no longer flock at the pond. It would certainly be good policy for the proprietors to sacrifice their eels, shut out the salt water, and pray that the duck-weed and sweet flag make haste to grow again. Then they will have an attraction to advertise worth considering, and will reap a good harvest of both money and gratitude.

If the Moutankers won't take our hint, then we advise some dozen or so of gentlemen interested in the sport to obtain the title to the spot, which could probably be had very cheaply—since, as we are informed, only \$50 a year is paid by the eel culturists—and restore it to its pristine condition. Two or three years would suffice. The original outlay would be small, and the annual expense only sufficient to pay a watchman to keep the natives from tearing down the dam and making a public eel pond of it again. We honestly believe that the subsequent sport and the sale of shooting privileges would not only satisfy the stockholders for their investment, but afford a handsome profit.

A MISCONSTRUCTION OF SPORT.

THE *London Spectator*, in a recent issue, decanting on the death of Mr. George Payne, the Master of the Pichley Hunt, goes very much out of the way to decry sport in general, and to throw opprobrium on the leading sporting journal of the world, the *London Field*. The *Spectator* says, noting the drift of popular taste, "that every year the space devoted in the political journals to sport increases, while the demand for it advances, till proprietors are compelled to use type which is almost too small to read, and the 'latest betting' crowds out the latest debate." * * * Also, that there is "a thirst, apparent in all grades of society, for pleasure; better, no doubt, in some respects, than the pleasure provided by the music hall, but at least as destructive of steady devotion to work of all kinds, the industry and the self sacrifice, which have made England great."

Persons familiar with that crabbedness of the *Spectator*, which dictates so many articles of an acerbic character, are not at all astonished at such expressions. Between the person of the late Mr. George Payne and the general subject

the English reviewer writes about, there is by no means as perfect a connection as the author of the article indicates. It is true, Mr. Payne was a sportsman, as England once understood it. Inheriting a vast fortune, he soon left his handsome estates at the Derby and Epsom and Crookford's. To run horses, to frequent races, to follow the hounds, to be master of the greatest fox hunting club in England, was Mr. Payne's chiefest ambition. Thanks to just such an intrinsically great journal as is the *London Field* and its influence, that sole horsy element, which might have been the only one in the time of the regency which was cared for by the sportsman, has had substituted for it other and more ennobling objects. It may be said, in honor of all the leading English sporting journals, that the sports of the forest and the stream have drawn men from the race course and betting stand, and taught them how to find health and recreation in more wholesome fields. These journals have done more than this. Thanks to them, a man, after the toil and trouble of work, has gained new life—fresh pleasures in the absolute study of the animals, birds and fish which the Almighty has placed on this earth. This appreciation of all the forms of nature tempers his amusements. Sporting journals of the higher class all show the elevating tendency, and are no longer simple records of horse racing or boxing, but have educated vast audiences to other and higher aims. A crusade against sport, such as the *Spectator* makes, shows an utter ignorance of what true sport is; for the author never could have taken the time to read what was best in English journalism on the subject he treats about. If clerks are devoted to athletics, what on earth can be better for them? When the brain is fagged out with poring over ledgers, the body cramped, the lungs suffocated by the close air of counting-rooms, shall not the jaded man find recreation and health in the fields? It is not given to many like, perhaps, to the *Spectator* writer, to take his horse and ride, in order to recover the vim he may have lost in inditing the very article he has so acrimoniously compiled.

We may be thankful that articles of the character we have commented on are so much ink and paper wasted. As long as God has made man, the man will and must find recreation. Mind and body seek relaxation, and the morals of the general public, both in England and America, have been improved, and will continue to improve if they seek even to a greater degree, in honest ways, that recuperation of the vital energy which true rational sport only can give. The whist player or the racing man is not to our taste any more than to the writer in the *Spectator*; but the idea that the vital life of a nation is impaired by reason of its fondness for athletic amusements is simply absurd. The most perfect man is he who can read in his study his Greek tragedy, or clearly understand a dry digest of international law, and then, dropping the dusty tomes on the green-sward, run his mill, or on the lawn stand hat in hand before the stumps, or on the cool river handle the oars. We all must seek for that counterpoise between brain and brawn, and the *Spectator* may snarl for years to come about the coachman who said of the gentleman, "He was a gentleman! He never did nothing, and he'd such lots of horses!"—and still the world will do what it can to amuse itself, for amusement brings with it a better life, and even the forebode of future happiness.

Evidently the source of the *Spectator's* information must have been derived from "Tom and Jerry." Thackeray tells in his "Roundabout Papers" how, tempted by curiosity, he went to the British Museum to look over this old book of Pierce Egan's. The style of writing, he was compelled to own, was not pleasing; it was even vulgar; and a description of sports and amusements of London and of England in the ancient times, hardly more than fifty years ago, were to him more curious than amusing.

MIDSUMMER JAUNTS OUT WEST.

BY THE EDITOR.

JAUNT THE FIFTH.

ASHLAND, Wisconsin, Sept. 1878.

K. BROTHEN EDITORS:

My Ashland letter should have been written and forwarded to you six weeks ago, while yet it was midsummer; but now, as I write, an early frost has touched the maples with crimson, and the ash with yellow, and the guests who could then scarcely keep cool, even in these northern latitudes, have scattered to their respective homes. The friends who fished with me in Fish Creek, Sioux River, Whittell's Brook and over at the "Rocks," on the West side of Chequamegon Bay, have departed, and the few who remain here for the fall shooting find a merry crackle and genial warmth in the camp-fires.

Over the bay at Green's farm, when I was there, the deer used to run with the cattle on the meadows, and I doubt not some sportsman has made good venison of them by this time. All around Ashland is excellent deer shooting. The woods are full of swamps, and bears find ample shelter in the thick jungle. A good bag of woodcock can be made in season at the head of the bay, and mallards, teal and geese give excellent sport throughout the present month.

I have always regretted that fashion seems to have set the limit to the rural hotel season. The heats of the summer are simply to be endured, but the crisp, vivifying atmosphere of autumn is to be enjoyed. Those who rusticize usually experience about as few of the delights of country life as the attendants on a camp meeting do of the joys of heaven. They swelter through the dusts and heat of summer under the

shade and shelter of a piazza, and go home to the dust and heat of town just so soon as the temperature becomes tolerable, and the forests put on their golden garbure. They know as little of the charms of the country as those who visit Florida in midwinter and return before the orchids empy the bare limbs of the trees, or the roses and jasmynes enrich the earth with their bloom and fragrance. There is no portion of the year so delectable to the sportsman and the lover of nature as the months of September and October in Wisconsin and her sister States adjacent. Still, my recollections of my summer saunterings on Lake Superior are quite unalloyed, and whether they take me back to the river channel which courses through the tangled woods, or among the verdure-clad and verdure-crowned rocks of the Apostle Islands, the hues which I recall are all either rose-tinted or cerulean. I remember only the bright sunshine which made the day happy, and the blue bosom of the broad lake where its sparkles glinted and flashed. If the mid-day were torrid, we took a siesta in the thick woods, as the deer do, or pushed our skiff into one of the cool caverns which honeycomb the sandstone cliffs along the Superior shore. I wrote you of these cliffs in my last year's letter, and told you how the year of time and the elements had beaten and chiselled the soft rocks into all sorts of fantastic shapes, so that the cliffs look like battresses and ramparts, and the caves like gateways to ancient castles. Well, the big trout which are caught here lie in the shadows of the arches, like liveried flunkies in waiting, and so we anglers, knowing their foibles, paddle up cautiously, with our rods and light tackle, and quietly give them the "tip," as they say in England; and the joke of it is, we take a rise out of them every time. Of course it is an imposition upon their credulity, but it scores one to our basket, and that is where the laugh and the fish come in together. In some places masses of rock which have been split off by the frost from the ledges above have tumbled into the water below, and around these there is always good fishing. Fly-fishing is the approved mode, and there can be nothing more comfortable to the angler than to sit in his skiff and cast, regardless of his back line, which has the whole bay for scope, in toward shore, and when he has hooked a fish, be allowed the whole of Lake Superior to play him in. But bait-fishing is not a tabooed art by any means, and the man who can toss his minnow straight into a crack or under a beelling ledge is not to be despised. He will take fish where the other fails. The most expert local fisherman, with bait or fly, is Jim Chapman, of Bayfield. He is a merchant, and as he never allows his business to interfere with pleasure, one generally finds his store closed and himself down at the rocks. This year the rock-fishing was poor, owing to the absence of minnow, which is the natural food of the trout and the best bait for them; so, after a test or two, Jim devoted his attention to the streams which flow into the lake for forty miles or so along shore. He has a pretty steam launch with which he can reach them easily, and parties can usually charter this craft and Jim's services and put in a few days most profitably. The past season two parties, one composed of the Hon. Henry M. Rice, of Minnesota, and friends, and the other of lawyer Bowman, *et al*, of St. Louis, made most notable catches on Sand and Sioux rivers, their takes counting several hundreds. One fishing party was composed entirely of clergymen, from various States, eleven in all. Their vacation extended over several weeks, with enviable good fortune to themselves and credit to the reputation which has always attached to the cloth since the days when the Apostle Peter went fishing with a hook. In one single day no less a number than forty persons left Bayfield with outfits for extended cruises, some to the outer islands, and others to the rivers along the lake coast.

These rivers are for the most part clear and very cold, winding through unbroken forests, and much obstructed by fallen trees and drift, requiring frequent use of the axe to clear a passage. Boats ascend several miles, however, with no great difficulty, and the comparative immunity from flies and mosquitoes makes camping delightful, and enhances the enjoyment of those in search of rest as well as recreation. The principal streams within thirty miles are the Upper White River, the Long Lake Branch and the South Branch of the White River, Fish Creek, Whittlesley's Creek, Vandewent's Creek, Sioux River, Onion River, Trout Brook, Brunsweiler, Marengo, Silver Creek, Sand River, Raspberry and Pike's Creek, all accessible by boat or railroad. I, as well as Messrs. Munson, Pratt, Prince, and others, have sent to you, from time to time, brief notes and longer descriptions of many of them. To describe here would be simply to repeat the narrative of the toilsome ascent of rapids, the carries around obstructions, the sacking over shoals, the chopping away of logs and drift, hauling over cross-timbers, dodging under sweepers, paddling or rowing over stretches of still water, and pushing or poling when the stream is turbid. To make a long story and a long journey short, the best fishing is at headwaters, and he who can inveigle the fish most successfully by poking his bait and sinker among roots, logs and brush, will capture the heaviest fish and make the biggest trout. Success depends less upon faith than on strength of tackle. There are, to be sure, many long stretches of river which afford good fly-casting, and taken all together there is sufficient diversity to make the excursions pleasant. Besides the trout streams there are numerous bass, pike and muskellunge lakes, accessible by the Wisconsin Central Railroad, which has opened up the wilderness regions of Northern Wisconsin to the lumberman and sportsman. The best known of these are Lake Harriet, Dryden's Lake and Butternut. This whole section is interspersed with large and small lakes, swamps, sloughs and

marshes, all in their primitive state and constituting the source of the St. Croix, Chippewa, Rush, Wisconsin, Menominee, and minor rivers, with their tributaries. Until the Central Wisconsin Railroad was built last year these wilderness streams were the only thoroughfares for getting the logs and lumber to market, but with the railroad as accessory, much of the wilderness is made available which could not be reached before. All along the line, from Stevens Point, which lies nearly in the centre of the State, to Ashland, on Lake Superior, steam saw mills have been erected and villages have sprung up around them, some of which have already expanded into very considerable towns. Each mill is the centre of a great industry, which is fed and kept in activity by rude tramways of logs extended far into the pines, over which the timber harvests of the logging swamps are transported by horse power or steam. These tramways are the quaintest imaginable, laid without much regard to grade or direct lines; and a very novel and amusing sight it is to watch the strings of trucks, each laden with from 1,500 to 2,000 feet of logs, rumbling and jolting over the roughnesses of the road, as they wind through and emerge from the deep recesses of the forest. Very absurd, too, to look at, are the little engines which are used. Upon the rear end of a platform car is perched an upright boiler six feet high by four feet in diameter, crowned by a smoke-pipe leading from the fireplace underneath. In front is a water tank, three feet in diameter by five feet high. The driving gear with the driver at the lever, stands between the boiler and the tank. The motor consists of two 6x9 cylinders with link motion, placed on an upright stand and connected with a pair of drivers by two heavy Evert chains running over spur wheels, while the two axles are likewise connected by the same kind of chain, thus making all the wheels drivers. There is a light housing over all, consisting of a tin roof upon uprights of inch gas-pipe. Each engine is of 50-horse power, and will draw from six to eight loaded trucks. Its cost is only \$1,400, and its weight about 800 pounds. With these contrivances, the whole system of lumbering is likely to be revolutionized. Instead of depending upon winter snows for hauling, and the caprices of uncertain streams for driving, lumbering will be carried on chiefly in summer, and uninterruptedly all the year round; and regions remote from water courses will be just as available as those penetrated by rivers. When one section is exhausted, the tramways may be taken up and relaid in other directions, and thus we shall sooner and more easily reach the end of our timber supply, which, we are told, is so nearly exhausted that in a few years more we shall realize, as fully as those who dwell on the treeless prairies, the inconvenience and absolute distress occasioned by a scarcity of wood.

In following the route of the Wisconsin Central Railroad from Milwaukee to Ashland, I wrote you last year that all that portion south of Stevens Point was long since settled and improved. Stevens Point was the outpost and distributing point for the almost unexplored wilderness beyond, until the road was extended and completed fifteen months ago. Aside from the lumber interest and the growth of settlements along the line which it is interesting to watch and compare from time to time, there is little to engage the attention of the tourist or break the monotony of continuous forest for 160 miles after leaving Stevens Point. Probably in no other part of the United States can such a stretch of uninterrupted wilderness be traversed. To conductors and trainmen who pass it almost daily the year round, the journey must be irksome, but to me there is something entrancing in the complete isolation and sublime solitude. I can study the grandeur of the towering pines and contemplate the impenetrable swamp and the far-reaching morass with an interest which kindness we advance. For miles together we see no living creature. If there be tenants which people the forest, they lie close in cover while we pass. No birds are on the wing. Occasionally we see wigwams of Indians, half hidden in the underbrush, but the occupants are invisible. While we move, the thunder of the engine wakes the echoes; when we stop, all is silent. The hiss of the escaping steam has a hollow sound. When the sun shines the lights and shadows are cheerful, but when night falls the solitude is felt. Then the glow of the headlight flashes out in a bright ray far in advance, and we trace the parallel lines of steel which lead us by a fixed and certain pathway to our desired haven. Behind us the track is just as positive, and he who does not deviate therefrom will not be lost. But let us imagine ourselves set down in the selfsame spot, dropped into the wilderness, as it was before this road was built; how helpless we should be in our solitude! How slight our chances of escape! Then, indeed, would we realize the vastness of this 160 miles of unbroken wilderness. The experience would be different from our midsummer jaunt in parlor cars, surrounded with all the luxuries of travel, with ice in the water-cooler, cigars for refreshment, and the inevitable train boy to tempt us with apples, peanuts and the latest pictorial and dime novel.

Thirty-five miles before reaching Ashland, the road crosses the Penoka iron range at a height of 1,000 feet above Lake Superior, and after passing the summit, touches the Bad River, a boisterous, dashing stream, whirling through rocks, rapines and broken landscapes, crossing it some dozen times in seven miles. Next it jumps Silver Creek, over an iron bridge ninety feet high and 600 feet long, and then, in a few miles more, another iron bridge, 102 feet high and 1,560 feet in length, which is said to be the largest of its kind in the world, with one exception. From the car window the traveler looks down upon the tops of the largest pines which line the river bottom for miles above and below the bridge, and

fill the valley with a dense foliage, through which the sparkling river can be seen at intervals.

Six miles further on the pretty village of Ashland lies stretched along the shore of Chequamegon Bay in two parallel streets which extend for two miles or more. It is perched on a high bluff, which is broken at a half dozen regular intervals by ravines, or cooleys, and these being bridged, give a picturesque diversity to what would otherwise be a continuous level. An unbroken forest lies directly in the background. The only pretentious buildings are the new court house and the hotel, which has now become noted as one of the most commodious and desirable summer resorts in the Northwest. The site is charming. The broad bay in front is five miles wide, flanked by high hills and red sandstone cliffs, and it extends for eighteen miles, broken at intervals by projecting points of land and the inflow of several rivers. In the farthest distance at the mouth of the bay can be seen, when the sun is shining, the white houses of Bayfield on the one side, and of La Pointe opposite, with the rounded outlines of the Apostle Islands between; to which places an excursion by sail yacht or steamer is one of the favorite pastimes of summer sojourners. Six miles east, along the shore where the Bad River empties, is an Indian reservation which affords an interesting visit to strangers. The natives come almost daily to the hotel to sell berries and trinkets. There is usually a summer camp at the head of the Bay, three miles distant, near the mouth of Fish Creek; and here the phenomenal tides of Lake Superior can be observed at best advantage, for there is a bar across the creek which at times prevents the passage of a skiff, while at others it allows a draft of two feet of water. The interval between the ebb and flow is often less than half an hour, but the tides occur at irregular and uncertain intervals. I have often made my boat fast at the edge of the water on a shelving beach and afterward found it high and dry, twenty feet away. Two miles from Bayfield is another Indian reservation, and a few miles farther west the headquarters of the Agency, comprising a dock, barns and several large buildings neatly painted.

Bayfield and Ashland are rivals. Bayfield is by long odds the most picturesque. It occupies a slope at the foot of a mountain, and is flanked by a wood cliff on the east. On the top of the mountain is a lake whose waters, conducted into the village by pipes, fill the pretty yards with sparkling fountains and the houses with comfort. Outlying islands enrich the landscape, and afford abundant sport to the angler. Delectable trout streams are accessible, and the track of the great lake steamers lies at the door. The cool southwest wind modifies the summer heat and drives the mosquitoes back into the woods behind. But Ashland has that which Bayfield has not, namely, a first-class hotel, and so, while Bayfield may captivate the anglers who rough it, Ashland enjoys the cream of the summer patronage. There is talk of building a grand hotel, and an apparent demand for it seems to warrant success to the enterprise. This season there has been a marked increase of visitors, who have congregated from all parts of the United States. Certainly, the attractions are greater than can be found at most inland resorts.

When I left this cosy nook on Lake Superior to plunge again into the 186 miles of wilderness of which I have written, I turned my back upon one of the most favored spots on earth. I shall ever remember the gorgeous sunsets, the cool evenings and the lingering twilights, which did not wholly fade until after the hour of nine o'clock. So, happily, may be the departure of all our lives—radiant at the close, like the candle which flashes and is then snuffed out, or the autumn foliage which crimsones ere it falls.

HALLOCK.

[FROM A STAFF CORRESPONDENT.]

ROCKY MOUNTAIN WANDERINGS. No. 8.

MY last letter to you was dated "In Camp on the Wagon Hound." Leaving that gameless country on the morning of Saturday, we reached Medicine Bow early in the afternoon of that day, and as Como, a small station seven miles from the former place, was our objective point we determined to push on and make our port before night. We stopped long enough at the Bow for Tommy to feed and water his mules, and started in a drizzling rain. The seven miles was accomplished in the surprisingly short time of three hours, and this amid the lamentations of Tom who complained of the rough road, which was in fact very good, as roads go here, wet weather, and so forth. He was not much to blame, however, as the return trip to the Bow must be made by him before night, and the rain from a drizzle had developed into a first-class storm. Arrived at Como the unpacking of our mull, various goods occupied some time, but finally Tom was ready to start back, and with a parting good-bye, and the remark that he would take it slow going home (which evoked audible smiles from the party), he bellowed his team and crawled out of sight over the bluff.

Two years ago the population of Como, resident I mean, was fourteen, but this it must be confessed included eight dogs and a cat. The census of 1878 makes the resident population nine, including men, woman, children, dog and cat. Children and cats are running up the count in a surprising manner, and we predict a large increase before the next census.

Como was not, before the railroad, and is now only to the extent of the station, whose genial and efficient young manager, Mr. W. E. Carlin, is now sitting near me, and the section-house, containing all the female population, covered by one capacious calico wrapper-like garment, her faithful spouse and

the brood of offspring, whose exact number I have not yet determined.

Como is a namesake of the beautiful and picturesque Italian town, and though not daring to rival it in grandeur of surroundings is yet appropriately named. Lake Como in Wyoming is a clear crystal sheet of water, slightly alkaline, blue as the sky it reflects, with several bays and indentations, and stretching from close by the railway line about two miles to the north-east. Its shores are diversified by alternate overhanging bushes, white sandstone cliffs twenty feet in height, and prairie lands sloping to the water's edge. Its depth varies from three to twelve feet, and the sole denizens of its opaque waters are the curious *Sireon Uchenoides*, changing into the lizard-like *Amblystoma* of terrestrial habits, a few water beetles (*Hydrobius* and *Hydrophilus*), and this year for the first time, frogs and the transitional tadpole. The bed of the lake is in most parts covered with a beautiful vein-like growth of moss, with spaces between of clear white clay, the whole having a very attractive and fishy look. The surface, though, to a sportsman's eye, presents the keenest attractions. Groups of ducks float at all seasons lightly on its ripples, and in the fall days the golden October sun looks down upon its surface literally covered with water fowl. Mallards, gadwalls, shovellers, sprigalls, the three varieties of teal, *Carolinensis discors* and *cyanoptera*, with occasional flocks of canvas backs, red heads, scaups and a few geese, mostly *Canadensis*.

The country about Como is rich in geological treasures, and its beds of fossil remains are yet but slightly worked. The rock exposures are wholly of Mesozoic age, and fine sections from the middle Cretaceous down to the base of the Triassic can be found in the vicinity. From the Jurassic beds have been obtained, by parties in the employ of Professor Marsh of Yale College, some of the most remarkable forms of fossil animals yet known from this country. Gigantic dinosaurs of the most diverse descriptions, others very small and with thin and bird-like bones, fishes, turtles, crocodiles and a single mammal make up the strange list of Como's ancient Jurassic life. Some of the larger saurians must, when alive, have weighed many tons.

Sunday following our arrival here we spent in rest and recuperation, cleaning and oiling our guns and rifles, which were something the worse for the weather, writing our letters, and so on. On Monday we repair to the shores of the lake to investigate its resources. By direction of Mr. Carlin, who *en passant* is a first-rate gun shot, I make a circuit and place myself on the extreme point of a neck of land which juts out into the lake and incloses quite an extensive bay, on whose glassy waters I can, from my concealment, descry numerous groups of teal and mallard peacefully feeding. Carlin I can see crawling slowly toward them, lizard-like on all fours, at the point where the bow attains its greatest curvature. Now he has gained the rushes which furnish an admirable blind, and still the ducks, innocent and unsuspecting, chatter together, sip the water, nearly fresh at this place, and pursue their various avocations. Numerous single birds and pairs float by me as I wait, and with the moving waters reflecting the clouds and bordering landscape it looks most like the moving slides of the kaleidoscope. As Carlin rises, the ducks, with a roar of wings, take to flight, and simultaneously the puff of smoke is seen and the double detonation rolls from shore to shore. A half dozen birds drop to the water, and now my turn is coming, and the birds, broken into smaller bunches, are bearing down upon me. You all know without an attempted description how the birds look, as with outstretched necks they sail steadily down toward the bush or brush house, intent only on the dreadful enemy in their rear; how their wings quiver in the sunlight and their anxious heads turn this way and that seeking a haven of rest and security. And you all know the feelings thrilling the breast of the hunter lying in wait for the surely-approaching quarry, how he tightly grasps his gunstock and barrels, and with flashing eye takes his measures and singles out his birds; perhaps two are about to cross, or closely huddled offer a triple shot. So I calculate my chances, and my dear old gun speaks volumes; first to right, then to left, and three birds close their wings and, splashing on the water, lie still. The lovely panorama, a moment before delighting my eyes from this water-mirror, is now utterly obliterated, and the tiny wavelets circling wider and wider from the centre soon efface all semblance of land and sky and leave but a conglomerate of blue, green and gray. "Bitters" (an intelligent Newfoundland dog) is soon retrieving the birds one by one, and one bag from the lake at this point numbers eight birds, five mallards, two gadwalls and a green-winged teal.

Now we cross the ridge and betake ourselves to the extensive marshes, formed by the overflow of a small fresh-water creek which runs into the lake and by numerous fresh springs which here abound. Tall rushes cover its whole expanse with their thick green stalks, and progress is necessarily slow, made more so, too, by the constant falls as the mallards, or teal, sprung by ones and twos from the spring holes and creek sides, fall here and there to the constant bang-bang of the guns. The walking is tedious in the extreme, deep holes abound at every step, and being covered with the long grass and dead reeds form admirable pitfalls for the luckless sportsman. This ill, however, is more than compensated by the abundance of birds. Marsh hawks are seen on every hand, but so bold are they that often one will descend to snatch a dead or wounded teal before we can bring it to bag; but the bird of prey pays the penalty of his life in more than one instance for his daring robbery.

This sport, even with its inconveniences, is admirable. It is exciting to a degree, and when one is fortunate enough to

make a double shot, as a pair of mallards spring quacking from their ready home, the feeling is one akin to triumph. Wilson's snipe, too, are in season, very plenty here, but we are a trifle too early, though a few are flushed in the open spots of the marsh. The buckskin cord suspended across our shoulders grows more and more weighty, and before we have traversed a half of the ground we are fain to confess that we have had enough sport of the kind for one day and, loaded with eighteen fine fat ducks in prime condition, we retrace our steps to the station and arrive in time to enjoy a hearty lunch with the balance of the population, resident and moving.

Toward evening we are again on the war trail, this time to "try a whiff" at the sage grouse. The sage grouse, *Centrocercus urophasianus*, is a poor table bird, excepting when young, say three-quarters grown; and even then the bird must be dressed soon after being killed. The reason for this, as many of your readers are aware, is that their almost exclusive, or very general diet of sage seeds and leaves permeates the flesh, causing a strong, sometimes pungent odor and taste. This fact, to my mind, detracts much from the sport, for who enjoys the killing of game merely for the sake of killing, and with no after benefit to accrue? Still, off we start, hoping to fall in with a brood of young birds. No dog is obtainable, so we do the next best thing, go without. A flock is soon found, and the birds, great things as large as a hen-turkey, are walked up. Instead of crouching down and attempting to hide they stalk slowly in front of us until two or three of their number, taking wing, are easily dropped, when the whole flock clumsily rise, fly three or four hundred yards and drop again. The killed and wounded are left on the field and we proceed in search of birds of more tender flesh and age. Luckily we find an old cock and hen with seven pretty well-grown young, the latter lie well, and of the seven that we almost kick from the sage brush we bag six. They are about the size of a hen and, being dressed and cooked, made fair food. Our flat-baring been pronounced against sage grouse shooting as a sport, and they, when cooked, having been stigmatized as "a poor dish," we clean our guns of the powder expended in their pursuit and make ready for our next turn with the ducks.

So the days of our stay at Como glide by, days filled with pleasant out-door work and nights filled with restful, dreamless sleep. Occasionally the monotony of grouse and duck shooting is varied by a tramp to Rock Creek for deer, or an antelope hunt fills out the measure of another day. As the hour for my departure draws near I cannot but take a retrospect of the weeks spent near this locality, the pleasant friendships and acquaintances formed with the generous, open-hearted plainmen and mountaineers.

The tedious days' climbing, the return to camp and supper of choicest viands, then around the camp fire the thrilling story of border life, the rollicking, reckless song and the silly night beside the dying embers and beneath the starry and moonlit canopy of heaven; all this, *manet alta in mente repositum*; *olim et hac meminisse iuvabit*.
Como, Wyoming.

ORTYX VIRGINIANUS.—In Particular.—The people of Virginia are waking up to the importance of game preservation in that State, and the heaven of conservatism is even working strongly in the mountains; thanks to the efforts of the Fish Commissioners, the State Game Protective Society, and those earnest and time honored papers, the *Richmond Dispatch* and *Richmond Whig*. Fortunately, the State of Virginia comprises at this time one of the best game preserves in America. In some sections the quail are as numerous as the multitude sent into the famishing camp of the Israelites in their journey to the Red Sea and beyond. Verily, the Virginian Cannan is like unto the Canaan of Caleb and Joshua, those stout henchmen of the patriarch Moses, who stayed the hands of the great leader and explorer uplifted in surprise at the fruitfulness of a land overflowing with quail, good grapes, peach and honey. If there is any gentleman in the State capable of testifying to the actual facts as herein stated, it is the senior editor of the *Richmond Dispatch*, whose palate, though long exercised, has not lost its nicety of perception, nor his knife and fork their cunning. By long study of the anatomy of the bird, and careful dissection of its edible parts, assisted by such gentlemen of the cloth as Messrs. Ott, Palmer and Zettell, of Richmond, he has become perfectly familiar with the natural history of the *Ortyx virginianus*, and can give full information as to its habitat, where it incubates and where it alights when full-fed. We hope that the present abundant supply of this most succulent and edible bird may continue as long as he lives.

DER DEUTSCHE JAGDZEITUNG.—Mr. Franz Von Ivernois, of Eilenburg, Prussia, has sold his popular paper, the *Jagdzeitung*, to Col. Otto v. Corvin, of Leipzig, and turned his attention more to practical sport.

Von Ivernois made an excellent sporting journal, and his enterprise in securing material for its columns was not limited to the area of his own Germany. He made his readers acquainted with sport and leading sportsmen all over the world. But Von Ivernois is a young man, of abundant means to enjoy leisure, tired of editorship (which is apt to be drudgery, if not a "dog's life"), and panting for more active duty. So he pulls up stakes for Homburg, where he expects to have a better opportunity to satisfy his passion for hunting than in Eilenburg. His successor is a veteran of sixty-six years, who started the first sporting paper in Germany forty years ago. It was a daily paper called the *Jäger*, which lived for a few

years until the revolution of 1848-9. Corvin has had enough of life's vicissitudes and is now ready to drop into a routine. So both parties are satisfied.

The Colonel is so well known in America and England, and his career has been one of such varied and exciting character that we are tempted here to furnish a brief biography elicited from his own pen two months ago. We quote extracts from a letter dated

LEIPZIG, July 6, 1878, 73d Hauptmannstr. 1.
Dear Sir—I commanded 1849 in Baden, defended Badstadt against the Prussians, was condemned to be shot, was graced with six years confinement, etc., etc. After that I was banished, and went, 1856, to England, and in 1861, to America as Special Correspondent to the *London Times* and the *Augsburg Allgemeine Zeitung*. When the *Times* became inimical against the Union, I gave up my connection with that paper, became a citizen of the District of Washington, entered American service, etc., etc. My family is well known in the United States. Tom Corvin was a son of my father's brother, who emigrated to America as early as about 1750. In 1861 I returned to Germany as special to the *New York Times* (under Mr. Raymond). I have written about a dozen English books, published by my friend Put. Bentley, in London; been a contributor to Dickens' "All the Year Round" these 20 years, etc. At present I am occupied with publishing a new edition of my great Universal History, illustrated. I have been a sportsman as long as I can think. Though I am 65 years old, I am not yet lame, or tilted, or bald. They say I am made of India rubber and steel. Thus I may last yet a couple of years—accidents excepted.

Col. Corvin adds:—

I hope, dear sir, that we will continue to entertain the same good relation existing between your paper and Mr. v. Ivernois. What I can do to serve you I shall do with the utmost pleasure. Though I published also—40 years ago—a hippological paper—the *Marshall* (monthly)—and advertised all about horses, etc., I do not care now for the turf, and my paper is devoted mostly to what the Germans call "Jagd," though I do not exclude fishing and other sports, if specially interesting. I shall draw freely from your interesting columns, and wish you might find it worth the while to do the same from mine. If you would accept my offer I would with pleasure acknowledge your contributions. Now and then something might turn up which might interest you.

CORVIN.
We feel much complimented by these expressions of interest by our German confrere, and shall certainly be pleased to reciprocate not only his sentiments of friendship but tangible evidences of active good will.

GAME PROTECTION.

ACRON.—The first thing in oratory, according to the reply of Demosthenes, is action, the second thing is action, the third thing is action. We all read that in the reading book emphasis exercises when we were school boys. It is also our reply to the correspondents who are continually asking "How can we stop the violation of the game laws?" Stop it by action. When men are seen to break other laws they are usually apprehended and punished. If the game laws are just and worthy of being observed, their observation demands also an active interest in every law-abiding citizen. Do not write to us. Give us your information to the magistrate, and insist upon an enforcement of the statute.

MASSACHUSETTS.—The Massachusetts Kennel Club, holding that it is the object of their organization to promote improvement in the breeding and management of dogs, and that without game several of the most prominent breeds of dogs cannot be brought to their highest perfection, have appointed a committee to take measures for a more thorough enforcing of the game laws of the State. The committee are: John Fottler, Jr., Chairman; Edward P. Brown, J. Nelson Boelard, Francis B. Greenough and George Delano. This is a most commendable and common-sense move. In undertaking such fundamental work as this the Massachusetts Club have set a praiseworthy example for other kennel clubs.

CENTRAL NEW JERSEY SOCIETY.—The Central New Jersey Game and Fish Protective Association of Plainfield, N. J., has a rapidly-increasing membership. The association was organized last March, with the following officers: President, William H. Sterling; Vice-Presidents, Dr. Charles A. Hart, Wilson Young and John L. Holly; Secretary, W. L. Force; Treasurer, George Squier; Counsel, George P. Suydam; Directors, E. P. Thorn, Percy C. O'Neil, William H. Sterling, Isaac Brokaw, Martin Schenck, John Ball, Thomas Acken, Thomas De Heusey, Rinaldo S. Little.

WEST JERSEY GAME PROTECTIVE SOCIETY.—The sportsmen of New Jersey are exhibiting a most commendable zeal in the better enforcement of the State game protective laws. The West Jersey Society are as thoroughly systematic in their work as any existing organization of a similar character in the country, and at the annual meeting in Camden the other day the reports showing the progress of the Society and the work accomplished during the past year was a gratifying exhibit. Besides a very efficient police service, there are premiums offered for the destruction of hawks and foxes. The past year more than 800 hawks have been killed and more than 100 foxes. The society will distribute 150,000 of the 300,000 salmon eggs, recently received from California by the State Fish Commissioners, and 2,000 black salmon. As Directors to serve for the ensuing year the following gentlemen were chosen: Camden County, Henry Vanuxem; Gloucester, J. O. Richmond; Cumberland, Major Thomas W. Walker; Cape May, William B. Brown; Atlantic, John H. Becker; Philadelphia, Frank Furness. As questions have arisen concerning the extent of the power of game clubs in New Jersey and the legality of certain actions, we publish the following enactment of April 4, 1878:

"1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That from and after the passage of this act no person or persons nor residents of this State shall kill, destroy, hunt or take any doe, buck, fawn, or any sort of deer whatsoever, or shall kill, destroy, hunt or take any partridge, moor fowl, ruffed grouse, quail, woodcock, Wilson or gray snipe, red bird, rail bird or rabbit, at any time, or shall catch any speckled brook trout, or speckled river trout, black bass or salmon, at any time in this State, without complying

850.....	5 5 5 5 5	5 5 5 4 5 5 4 6 5-73
900.....	5 5 4 3 3 5	5 5 5 4 4 4 5 5 5 5-67
1,000.....	0	
800 yards.	900 yards.	1,000 yards.

It was an unfortunate ending to so brilliant a promise, for had the weather been even reasonably fair it was evident that the big scores of 1877 would have been left behind; as it was with 18 shots to go, a total of 1,576 was reached, better than the entire effort of the victorious American team on the same day. The 1878 team, however, was not to have the advantage of a shooting breeze. The match is in nowise to be styled a fiasco. Considered in all its phases of weather and men, it shows that in rifles, in shooting ability, there has been no retrogression nor even fixedness, but a positive gain. The mistake was in supposing that as it was a walk-over match it could be dispensed with as a slothful, perfunctory matter. It was trivial while attempting, it was worth while doing well. No doubt the storm was responsible for the summary finish of the contest, but under the prompt, ready management which should attend a match of such consequence a corner of that kind should not have been possible. The influence learned from this stormy, perfunctory match, that it was trivial, no competition can be carried through; and a victory, promptly won, is a double victory. On the second day the match could have been finished ere the equal broke had extraordinary diligence been exercised, but enough was done to show the team as an extra strong one, and if, as some feared, the team of 1878 were to be the victors, it would show their strength, there should the team of 1878 put them in a proper way.

To permit ready comparison with previous efforts for the Centennial trophy are given :

THE MASSACHUSETTS MILITIA RIFLE TEAM AT CREEDMOOR
—We take the following from a letter of a member of the
Massachusetts Rifle Team, which we find in a Boston paper
of Sunday. We have no doubt that some of the complaints
made are quite just :

People look on things differently here than in Massachusetts, and a spirit to get any small advantages they could, by use of their wits, as well as by good shooting, was occasionally manifested by individuals. A New York lieutenant told me that his men could cock a piece so it would stand six pounds, and then, by a slight change in cocking, would go off at one pound. And the officer who told me did not seem to think this trick reprehensible, but smart, though he was speaking at the time of individual rivalry in competition, and would doubtless have thought differently on a team. The same feeling is seen in the making of a prize, a money-making concern as a circus with its side shows to attract, it seems to us, have been very graciously waived to visiting teams. We know other teams shared this opinion, and we should all have felt pretty cheap had the New York team come to our range to compete, and been charged a quarter for admission. We also feel assured that, on arriving at Framingham, some little attention would have been paid them, and that it would not be left to another visiting team to do the honors for us. Furthermore, should they have been accompanied by the Adjutant-General of the State of New York, we are sure they would have been met with the same recognition of their facts, and extended some official courtesy. As for this year, to do anything, it seems that there should be appointed, by the State, an expert rifleman as Inspector of Rifle Practice; that notice of competition should be given early; that every man should have the chance, and those who promise well be urged to compete; that the team be selected far ahead, that they may be disciplined as a team, and not by one, but by several competitions (half a dozen at least), held, if possible, under the titelage of the inspector; that our rifles and ammunition should be of the most perfect pattern allowable for their special purpose, regarding anything else; and that their arms and accoutrements be kept in the best condition only, and in each individual's charge; and, finally, that a system of honors or promotions be adopted for good shooting, or some of the handsome medals that are distributed so liberally in other States be offered here. I am assured that these little seeds would bear golden fruit for another year.

WALNUT HILL.—Sept. 28.—The return of the Boston riflemen to the range, after they had so notably distinguished themselves at Creedmoor, drew together a concourse of spectators. The match was "The Amateur Series," 200 yards. Mr. J. A. Lowell's 48 is a possible 50, is very fine. It has only been made once at the range, and then by Mr. L. L. Hubbard, but Mr. Lowell's score is better, as he has five's for the eighth and ninth shots, while Mr. Hubbard's score shows two contris.

CREEDMOOR—Sept. 28.—Gildersleeve medal. Conditions Open to all members of the National Guard in uniform, and to the National Rifle Association; distances, 200 and 500 yards; five shots at each distance; prize, a gold medal to be

awarded to the competitor who, at the close of the season of 1878, has won the greatest number of times. The scores of the winner, and those who have qualified as marksmen were as follows, the highest attainable number being 50 points:

C W Linton	45	J M McFarland	31
C H Eargle	43	S S Clark	30
J L Bonville	41	W D Stony	29
J A Van Hensen	40	W D Barnett	28
H R May	39	H B Thompson	27
C W Fisher	37	M Ames	26
H T Lockwood	36	C F McQuivry	26

AT CHENEY, WASH., PROGRAMME FOR OCTOBER.—Saturday, 5th.—At 10:45 A. M., Match for the "Sharps" Prize" of \$250 in gold, at 800, 900 and 1,000 yards, and at 3 P. M. the thirteenth competition for the "Turf, Field and Farm Challenge" badge, at 200 yards. Wednesday, 9th.—At 3 P. M., the "Amateur Rifle Club" match. Saturday, 12th.—At 2:30 P. M., the "Soldier's" match, at 800, 900 and 1,000 yards, and volley, and upon conclusion of the preceding, the nineteenth competition for the "Champion Marksman's Badge," under conditions similar to those of the competitions for the State Badge. Wednesday, 16th.—At 2:30 P. M., the "Appleton" match, at 200 and 300 yards. Saturday, 19th.—At 10:45 A. M., the match for \$300 in gold, at 900 and 1,000 yards. Wednesday, 23d.—At 2:30 P. M., the "Long" match at 200 yards. Saturday, 26th.—At 2:30 P. M., "Running Deer" match. Wednesday, 30th.—At 2:30, fourth competition for the "Gildersleeve" medal; conditions similar to those of the State "Marksman's Badge" competitions. The Amateur Rifle Club will shoot their "Mid Range Match" at 200, 300 and 900 yards, and the "Short Range Match" at 200, Wednesday, 23d, and the "Long" match at 900, 1,100 and 1,200 yards, Saturday, 26th. The Washington Gray Troop Club will shoot on the 6th and 23d.

CONLIN'S GALLERY—Sept. 28.—Fifth competition for Marksman's Badges :

L V Sone.....	48	J F Murch.....	42
S W Libby.....	37	W MacDonal.....	11
A J Howett.....	46	J H Meeker.....	40
P F Dackworth.....	46	M M Maithy.....	49
J G Fullgraf.....	45	E P Davies.....	33
N O'Donnell.....	45	J A Ward.....	39
P Fitz.....	45	W R Hewett.....	31

The two leading scores—48 and 47 in a possible 50—is fine shooting.

Third competition for the Winchester rifle :

S W Libbey, first.....	3 15-16	E P Davis,.....	6 14-16
E G Fullgraf,.....	5 12-16	N O Bonnell,.....	7 6-16
Paul J Cullman, second.....	6 6-16	M M Maltby,.....	7 14-16
Fred Kessier,.....	6 9-16	A J Howlett,.....	7 15-16
W H Danlap, third.....	6 10-16	C E Overbaugh,.....	S 8-16
J F Duckworth,.....	6 13-16		

There were several other competitors

The New York Rifle Club will meet on this Thursday evening at Conlin's Gallery, when an effort will be made, we trust, to do something for the Yellow Fever Fund.

NATIONAL RIFLE ASSOCIATION.—The Board of Directors held their monthly meeting on the 1st of October. If what the secretary reported be correct—that all trains between the city and Creedmoor are discontinued—the condition of affairs is quite unfortunate. As it is, the president was authorized to make a special appeal to the members to run special trains for the accommodation of riflemen. The net profits of the Fall Meeting were reported to be \$1,485.18. Captain Story recommended that matches for teams of twelve, representing the National Guard and the regulars, be arranged at distances of 200, 300, 500 and 600 yards. General Wingate was elected president for the coming year, and General Winchester as his successor. General Wingate's resignation was accepted, but the election of directors was postponed.

SCORE'S ASSOCIATION.—This match took place Tuesday. All the military organizations contributed handsomely. There were two matches. The first at 100, 150, 300, 400, 500 and 500 yards. Five shots at each range. Winners, with their scores, were as follows:

E J Smith, 117; C H Brown, 113; W T Miller, 114; J W Hale, 113; J McNeill, 113; W Myers, 112; J W Cary, 109; P J Sullivan, 102; T Kelly, 98; F A Gunther, 91; J J Barnes, 91; J Myers, 91; S F Glover, 93; J H Slack, 92; J W Sweeney, 84; D Wilson, 81; J T Gulliver, 79; S K Glover, 64; T H Stevens, 53; W L Franz, 27.

The second match was contested at 200 and 500 yards, seven shots at each distance :

P J Sullivan, 54; J W Dale, 51; J W Sweeney, 48; E J Smith, 45; W Myers, 44; C H Brown, 43; J McNevin, 42; W F Miller, 40; J H Slack, 40; F A Gunther, 39; J J Barnes, 39; J Myers, 36; J W Cary, 35; S F Glover, 33; T Kelly, 30; J J Murray, 22; J T Gulliver, 21; S K Glover, 20.

The prizes will be presented at Creedmoor on Oct. 10.

The return match will take place at the Bay View range, in Buffalo, early this month.

Poughkeepsie, Sept. 27.—Fifth Division Match.—Teams entered from the 31st: Sixteenth Troop E, Seventh Brigade Twenty-fourth Separate Company, with Twenty-seventh Regiment. Distances, 200 and 500 yards: Twenty-first Regiment, 309; Twentieth Battalion, 385; Sixteenth Battalion, 304; Twenty-fourth Separate Company, 296; Troop E, Seventh Brigade, 195; Twenty-seventh Regiment, 293. The prize contested for was a piece of bronze, valued at \$200.

Prizes Meet at BRUNTON RANGE.—The first annual prize meeting of the New Jersey State Rifle Association will take place at Brunton Range, Elizabeth, N. J., beginning on Tuesday, October 8, and closing on the 5th. Tuesday, Oct. 8—Short range; open to all comers; distance, 200 yards; fifteen shots; ten prizes. This match will be duplicated. Wednesday, Oct. 9, 10 A. M.—Military Team Match; open to all members of the regular rifle clubs; distances, 200, 300, 400 and 500 yards; five shots at each distance; prize, bronze trophy, valued at \$200. "Hayes' Long-range Match; open to all comers; distances, 900, 1,000 and 1,100 yards; fifteen shots at each distance; Three prizes. Thursday, Oct. 10, 9-30 A. M.—Champion Match; open only to the First Brigade, New Jersey National Guard; distances, 200 and 500 yards; one gold badge, presented by Major J. J. Ward, Inspector of Rifle Practice of that brigade, and a division of the entrance money. Same day, at 1 P. M.—Short-range Team Match; open to teams of four from any club or association; distances, 200 and 200 yards; ten shots at each distance; three prizes. Friday, Oct. 11.—"Headquarters" Match; open to all members of the New Jersey National Guard; distances, 200 and 500 yards; one gold badge, presented by the adjutant general, and a gold badge, *Spirit of the Times* Long-range Match; open to all comers; distances, 1,000, 1,100 and 1,200 yards; fifteen shots at each distance; prizes, fourteen in number, aggregate value, \$200. "Sterling" Badge Match; open to the New Jersey National Guard; distances, 200 and 500 yards; four prizes. "Beginners' Match; a gold medal presented by W. H. Sterling, General Inspector of Rifle Practice of that State; open to military teams of eight from any organization in New Jersey; distances, 200 and 500 yards; ten shots at each range; prize, a silver cup. "Beginners' Match; open to all members of the New Jersey Rifle Association who have never won a prize; distance, 500 yards; ten shots. Gov. Charles F. Smith will be present, and will be making the highest aggregate score in the "Headquarters" and "Sterling" matches.

NEW RIFLE GALLERY AT JERSEY CITY.—M. Babser, of 45 Newark avenue, Jersey City, in connection with his gun and fishing tackle store, has just opened a rifle gallery, 100 feet range, with all of the latest improvements. Mr. Babser gives the gold medal to be shot for to the person making the highest score during the week ending Monday evening next, October 7th. Conditions, open to residents of Hudson County, New Jersey, ten shots, Creedmoor target, reduced from 100 feet: entrance, 25 cents, as often as he please. Highest score to take the badge.

PORTRAITS OF DR. CARVER.—Every one who has known Dr. Carver personally, or has seen his remarkable exploits with the rifle, will be glad to possess a correct likeness of him; for both his character and his skill do him honor. Mr. Charles A. Zimmerman, one of the best field shots and photographers in America, has just sent us specimens of cabinet-size photographs, which are certainly very life-like and expressive, especially the characteristic one where the doctor appears in his broad-brim felt sombrero. One of these days these portraits, like those of other celebrities, will be much valued as souvenirs, and as the price is but 40 cents there is no reason why friend Zimmerman should not be kept busy stamping until at least every subscriber whom we have on our lists is supplied. Brother sportsmen, send in your orders.

Zimmerman also sells two very striking water-colors, entitled, "Trying for a Double," and "The Tight Shell." Price per pair, \$3.50.

A NEW GUN SIGHT.—Mr. William Lyman, of Middlefield, Conn., is the maker of a rear sight for sporting and target rifles, which seems to us to possess quite a number of advantages. With the Lyman sight an almost instantaneous aim can be taken, the object being sighted quite as quickly as if only the front sight were used. It certainly has undoubted excellence for moving objects, as both eyes can be used. Mr. Lyman says that with this sight on a rifle any good shot with a fowling piece can get into the knack of breaking glass balls with a rifle. (See advertisement).

EXPLOSIVE SHELLS.

EDITOR FOREST AND STREAM:
In view of the fact that explosive bullets are much talked
of in this country at present, I will contribute my mite in
their behalf.

Whatever the theory regarding explosive bullets may be, one has but to try them on game to become fully convinced of their efficacy. That one may sometimes be disappointed at the results of a killing shot with an explosive bullet, when the game is secured, and when compared, shot for shot, with the solid bullet, they will be found vastly more destructive and to possess much more knock-down force, which after all is what is most desirable in bagging game. I make these assertions after several years' experience, founded entirely upon the results of my own shooting, and the experience of others, of various kinds, from the South American ostrich, deer, puma and guanaco; and in this country on elk, buffalo, antelope and deer. Last summer, while with the 7th U. S. Cavalry, I killed with a Winchester bullet, model 1875, over forty antelope with explosive bullets which, after the first shot, were hit in the body or neck, and the second shot to bring it down, when hit in the body or neck; although of course they were not always killed outright. At all events they were stopped, and that is the grand desideratum, especially when in hunting deer through thick underbrush in early fall, when there is no snow on the ground.

The Winchester explosive bullet will not go through an antelope as a general thing; that naturally depends when and where the ball first strikes a bone; if, for instance, the shoulder bone on the near side is hit, what with the expansion of the bone from explosion and that from striking a bone, the bullet will go through the body and strike a lodge somewhere in the opposite shoulder (according to the angle at which it is fired), or perhaps split between the

flesh and hide on the off side. But if, on the contrary, it only strikes meat, it may, and generally will, go completely through. With heavier charges of powder and ball, of course the results are different, but I am now speaking of the forty grain powder cartridge. Of one thing I can vouch, viz., that after I gave up my Winchester, I used a 45-100 calibre regulation Springfield rifle, 70 grains powder and 400 grains lead, and that with this gun, which was infinitely a stronger shooter than the Winchester, I lost many an antelope, shot clean through (perhaps a little too far behind the shoulders), when I felt satisfied I would have bagged him with my smaller but explosive bullet, which did not weigh half as much, nor would it have had one quarter the penetration.

This summer I am using a Sharps', calibre .45, 110 grains powder, and an explosive ball which weighs about 370 grains. The effect of this on an antelope is fearfully demoralizing—it is absolutely floor-floer. On my last hunt, on the Belle Fourche, near Bear Butte, Black Hills, where we camped this summer, I killed four antelope in five consecutive shots, all over 200 yards; the only reason I did not kill the fifth was that I overestimated the distance and overshoot. On this same hunt I killed several other antelope, and never failed to "call them in" at one shot with these bullets. The objection to an explosive bullet in shooting in timber is that it may strike a branch and explode before reaching the object aimed at. I have experimented on that, shooting with my Sharps' through a three-inch stick of cottonwood, after which the ball went straight enough to strike a deer's body for over thirty yards; in fact, when the centre of the stick was hit, the ball went as true as a solid bullet would go under same circumstances, so that if, by misfortune, one does hit a branch, in either case the chances are that a miss will be the result. I make my bullet, having had the mould made by the Winchester Rifle Company, at the moderate charge of \$2. I place in the cavity a long cavity 23-100 rim fire shells, and have found them in every way entirely satisfactory. They do not compare with an English Express rifle ball, principally because the rifles themselves are grooved differently; also in the matter of trajectory are they somewhat different, from same cause.

I entirely agree with Van Dyke. His ideas are precisely like mine, for although a fair shot myself, I never count on an antelope over 250 yards, and even under that distance they frequently show me their "white shields" and skip.

It would not do, however, to expect to kill buffalo with a Winchester, calibre .44, with explosive bullets. I have seen that tried repeatedly, and know beyond a doubt that the solid ball in that gun is far better, as there is not penetration enough in so light a shell; but with a heavier load the other still comes down as gracefully as the antelope, for nothing can stand before a shell, if of sufficient weight and driven by, say 120 grains powder—I mean no game on this continent.

For deer shooting I cannot imagine a better gun than the new model Winchester, if properly built; as they make them now, the stocks are so straight that I cannot handle them at all; but by ordering one that can be remedied, such a gun, with explosive shells, is about perfection.

Game Bag and Gun.

GAME IN SEASON FOR OCTOBER.

Moose, *Alces macrotis*.
Caribou, *Tarandus rangifer*.
Elk or reindeer, *Cervus canadensis*.
Hinds or Va. deer, *C. virginianus*.
Squirrels, red, black and gray.
Hares, brown and gray.
Held or rice bird, *Dolichonyx oryzivorus*.
Willow ptarmigan, *Melospiza gallopavo*.
Pinnated grouse or prairie chicken, *Cyrtonyx cupido*.
Ruffed grouse or pheasant, *Bonasa umbellata*.
Quail or partridge, *Oreortyx virginianus*.

Black-bellied plover, *oxyechus*, *Synalaxis helix*.
Rufous plover, *Actitis semipalmata*.
Squab, or long-shanks, *Himantopus*.
Woodcock, *Philohela minor*.
Indigo-breasted sapsucker, or downy woodpecker, *Geothlypis trichas*.
Red-necked sandpiper, or ox-bird, *Tringa americana*.
Yellow-bellied gowit, or martin, *Lanius borealis*.
Willow, *Totanus semipalmatus*.
Tadpole, *Tringa macularia*.
Yellow-shanks, *Totanus flavipes*.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets, etc., coming under the group *Linnæus* or Shore Birds.

IV This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

GAME IN MARKET.—Pinnated grouse (prairie chickens), \$1.25 per pair; partridge (ruffed grouse), \$1.25 to \$1.50 per pair; mallard ducks, 75 cents to \$1 per pair; black do., 75 cents per pair; wildgeon do., 60 cents per pair; broad bill do., 50 cents per pair; teal do., 50 to 75 cents per pair; Wilson snipe, 50 cents to \$1.00; rails, \$1 to \$1.25 cents per doz.; reed birds, 75 cents to \$1.00 per doz.; Philadelphia squabs, \$2 to \$3 per doz.

Poultry.—Philadelphia and Bucks County dry picked chickens, 18 to 22 cents per pound; do. fowls, 16 to 18 cents; do. turkeys, 18 to 20 cents; do. ducks, 18 to 20 cents; do. geese, 16 to 18 cents; State and Western chickens, 16 to 18 cents; do. turkeys, 16 to 18 cents; do. fowls, 15 to 16 cents; do. ducks, 13 to 15 cents; do. geese, 10 to 12 cents.

CANADA.—Grasshopper, Sept. 23.—The first deer brought into the village this season had an extra horn, which had grown out of the one on the right side of the head, about an inch above the base of the skull, was nearly as large as either of the other two. It had three antlers, the others four each. The deer was in prime condition, weighing 175 pounds when dressed. He was shot near the village. J. S.

Deer's horns are subject to all eccentricities of shape. German illustrated sporting papers very frequently contain cuts of misspangled antlers. We have in our office a single horn, once worn as a distinguishing ornament by a doe.

MASSACHUSETTS.—New Bedford, Sept. 28.—The Pasquo and Cuttyhunk Club fishing house close their doors next week. Some few striped bass taken the past week. Mr. Chas. S. Randall caught one Monday of large size, but the fishermen are waiting for the fall run of Menhaden as to be bringing the striped bass in shore again.

CONOA.

NEW JERSEY.—Hamontown, Sept. 21.—On Mulberry River, some thirteen miles from here, we have good shooting when the rail birds do come. I can kill more birds on a hundred acres of meadow than I could on a mile along the Delaware River. Have been down twice this year; tides were good, but no birds, they not yet having made their appearance. The

wild oats being green and net ripe probably was the cause; I have shot rail for twenty-five years, and never yet have I seen as many birds as I did last fall. Quail and pheasants promise to be unusually abundant this fall, and I calculate on having grand sport.

L. W. S.

KINSEY'S Ashley House, September 22.—Black ducks and sprigails are coming in in large numbers. Yesterday the flats between High Bar and the Clam Island was covered with them. The season opens October 15.

SNIPE AT FORKED RIVER.—Freehold, N. J., Sept. 26.—Last Saturday morning we came to anchor off Burgett Light, jumped into our yawls and went over on to the flats. The birds flew thick for about three hours, red marlins, ring-tail marlins and beach snipe. The two shots of the party, J. A. Ward, of Freehold, and Capt. Foreman Matthews, bagged over seventy birds. The season is just opening, birds are swarming, are in prime condition, and all the conditions for successful and satisfactory sport at Forked River most complete.

FOX.

PENNSYLVANIA.—Philadelphia, Sept. 30.—Last Monday a flock of quail their appearance here right in my neighborhood. Twenty-eight on Mount Vernon streets. Thursday morning, 26th, a large flock of wild pigeons flying to the south. Two of us bagged in Chester County, ten gray squirrels; 9th, in Gloucester County, N. J., we bagged fourteen gray squirrels.

R. F.

BLAIRVILLE, Sept. 27.—The Blairville Forest Club has just returned from their annual club hunt on the banks of Blacklick Creek, in the Chestnut Ridge, and a rare time they had of it. The camp was a complete success, as their gatherings always are. During the camp the club elected the following officers to serve for ensuing year: C. B. Street, Pres.; Robt. Spencer, Vice-Pres.; W. G. Tice, Sec.; T. D. Cunningham, Treas. The club are anxious to look forward to next year, and each year finds more members, who spend a week in the grand old woods.

W. G. T.

SQUIREL HUNTERS.—The squirrel hunters of Tionesta, Pa., mustered last week for a side hunt, under Capt. D. M. McCauley. There were twenty-one armed men, and an equal number upheld the banner of Capt. E. A. Leary. Leary's score was: 22 black, 18 gray, and 374 pine squirrels; total number of points earned, 1,937. McCauley's side scored 23 black, 12 gray, and 328 pine squirrels; the total count of points being 1,702.

A squirrel hunt at Clearfield, Pa., the previous Saturday, resulted in a very good record, the biggest squirrel killed turned out to be a bear.

KENTUCKY.—Ashbyburg, September 23.—Small game is abundant, such as squirrels, quail and rabbits. A party driving for deer last week saw two, but the whole party failed in getting a shot. The dogs also ran out two turkeys, which were killed. We have no pointers here, and they have been doing dogs, but deer and fawn-hounds, and they have been doing the decline for some time. Hunters here use the old-fashioned muzzle-loader. I have the only breech-loading firearm in this part of the country. The majority of shot-guns here are single-barrel of the old-time sort, small bore, and from 36 to 42-inch barrel. People here hunt quail very little, and then only when there is snow on the ground, and they can find them in the fields so as to kill several at a shot. There are no wing shots, and when one happens to accidentally kill a very anything running or flying he thinks he has done something remarkable; a thing to be remembered and blown about on every occasion.

PADDY O'LEARY.

ILLINOIS.—Charleston, Sept. 24.—C. and J. Hughes, seven miles southeast from here in the hickory flats, killed fifteen squirrels the other day. Good bags are there made. Wild pigeons are getting plenty on the flats. Mast is scarce and they do not stay long. Quail are here in good number.

J. B. D.

Lake City, Sept. 24.—The ducks are coming in, and the shooting on the Zambro bottoms good. Quails are very plenty and afford good sport.

D.

MINNESOTA.—Owatonna, September 24.—A pelican was shot near this city one day last week, the first one heard of in this vicinity. Are they found far from the coast as a general thing?

J. P. E.

Pelicans are common in northern Minnesota. The *Pelicanus* are found in nearly all temperate and tropical countries, and are not confined to the coast. In the West the white variety is common; the brown is strictly maritime.

COLORADO.—Hot Sulphur Springs, Sept. 22.—The fall hunting season is fairly opened; elk, deer and antelope are plentiful and in fine condition. The first is most sought after just now. Almost every day wagon pass here loaded with elk meat, bound for Georgetown, where there is a ready market for local consumption and for shipment by rail to Denver and other points. At least twenty men are now engaged in elk hunting for market in Middle and North parks. Incidentally many deer and antelope are also killed. Gordon Cummings, the celebrated African hunter, is here, making his place his base of operations, but at present in the North Park. Several other parties from Europe and from Eastern States are in the neighborhood hunting.

W. N. B.

WILD PIGEONS.—Will our correspondents throughout the country kindly give us full and immediate information in regard to the flight of wild pigeons in their respective sections, from which point of the compass they came and, if alighting, how long they have remained, in what direction they have gone.

WHAT IS COBB.—The expenses of a day's fun with the birds are now so light that we rarely hear any complaint on this score. A well known professional gentleman of Nevada City, Cal., went out for a whole day's hunt recently, and this is all it cost him: Gun and ammunition, \$4; spirits fermented for sun burn, \$1.50; horse and carriage \$5; ruined boots and pants, \$3; lost ring, \$6; lost pocket-knife, \$1.50; total, \$51. He killed three birds.

—Mr. F. J. Abbey, of the firm of F. J. Abbey & Co., of Chicago, died in that city on the 23d ult. The firm was among the oldest gun dealers in the United States, and Mr. Abbey was widely known among the sportsmen of the East and West.

LOUIS CHARGES.—Editor Forest and Stream: I never load my No. 10, 10 gauge Scott & Son breech-loader, nine and a half pounds, with over four and one-quarter drachms of powder. "Canvas-Back" I think, avoids the issue. I simply assert that my gun will burn more powder than that above named—and that it will make better penetration or pattern with over that amount of powder. "Canvas-Back" advances a theory that it will not burn more than four drachms. I stated what I considered facts to prove that it would, one of which—collecting the unexploded grains and firing them again—"Canvas-Back" ignores. I doubt also if many will coincide with his explanation, that the extra powder gives the extra recoil without being burned in the barrel. It is pleasant, however, to dispute the question with so amiable a correspondent as "Canvas-Back" evidently is. I should like a day's sport with him in spite of his theory, to which, I cannot subscribe.

Boston, Sept. 23, 1878.

FUSEE.

The discussion between our two correspondents I great interest, because within the last week the question of how much powder a rifle would burn was brought up before a court in a criminal case now exciting marked attention in the State. Why do not some of our readers try this experiment? Lay a number of sheets of white paper on the ground, say ten or fifteen feet along from the muzzle of the gun, and then, having a determined load, fire it, and so catch the grains of unconsumed powder on the paper. Such experiments would be useful and interesting. We may state that the general tendency of sportsmen is to overload.

A MODEL CAMP STOVE.—Prof. G. H. Roney, the musical sportsman of East Saginaw, Michigan, who divides his affections between Beethoven and Nimrod, has lately contrived a portable camp stove which certainly does great credit to his inventive genius, and it most nearly fills the requirements of a permanent camp of any stove which we have ever seen. Its height is 20 inches; depth, from front to back, 26 in.; breadth, 24 in.; oven, 24x21 in., 13 in. high at back and 9 in. high under fire box. Stove is built of best No. 18 charcoal (sheet) iron, and weighs, empty, 128 pounds, packed ready for carriage, 155 pounds. The stove is 7 feet of telescopic stove pipe, four stove legs and lid fit it, while in the oven is packed the following list of stove and table ware.

One doz. 9-inch tin plates, 1 doz. half-pint tin cups, 1 doz. pint tin basins, 1 doz. tea spoons, 1 doz. knives, 1 doz. forks, 4 doz. table spoons, 3 bread plates, 4 pie tins, 2 large iron spoons, 1 carver and fork, 1 bread knife, 1 two-quant tea dipper, 1 six-quant pan, 1 one-quant pan, 1 six-quant coffee pot, 1 gridiron 12x18 inches, 1 eight-quant tea kettle, 1 ten-quant iron kettle, 1 twelve-quant tin pal, 4 pepper and salt, 2 vinegar bottles, 1 cooking fork, 1 griddle, 1 stove rim, 1 grate 14x24 inches. Total 111 articles.

R. M. KILBY'S CATALOGUE.—For the convenience of his patrons, Mr. R. M. Kilby, of Montreal, has published an exhaustive catalogue of all varieties of sporting goods. In it may be found prices of gunpowders, shot and cartridges, guns, fishing rods, lines, and an extensive list of all the leading English and American articles. Mr. Kilby being a *courreur des bois*, is thoroughly conversant with all camp furniture and the best outfit. No department has been overlooked, and as Mr. Kilby is agent for all the leading manufacturers anything worth buying can be most expeditiously obtained. Any orders given to Mr. Kilby are under his personal supervision. To our American friends who call on Mr. Kilby, of Montreal, and make their purchases at his establishment.

AUCTION SALE OF BREECH-LOADING GUNS.—To-morrow and Saturday Messrs. Barker & Co. will sell by auction an assortment of English and American breech and muzzle-loading sporting guns, also several long and short range rifles. We were present at the sale last week, and although the prices realized were low, it was pronounced successful. The spaciousness of the sale was conducted and the bidding, especially when their prices were much above the market, was quite spirited. The present display is said to be much more important to the one of last week, and therefore should awake deeper interest. Every facility is afforded to examine the guns thoroughly before purchasing, and for this purpose catalogues are issued and guns placed on exhibition two or three days before the sale. The firm of Barker & Co. are well known, and what they say as fact is generally considered correct.—[See ads.]

MR. IRA A. PAINE.—This renowned shot has just finished a most successful engagement at the St. James Theatre. Mr. Paine goes to Pittsburgh, where he will open at the Academy of Music. In the City of Smoke he will make a first appearance, and the spectators will be able to discriminate between the various schools of Paine, Bogardus or Carver. It is Mr. Paine's first appearance in Pittsburgh.

For Forest and Stream and Rod and Gun OCTOBER SPORT IN VIRGINIA.

IF there is a profession which is more overworked and underpaid than the newspaper business, it is not known to mortal man. There is some rest for the weary, the hymn-book says, but for the searcher after news, the seeker after truth, and the hopeless collector after unpaid subscriptions, there is no rest this side of Jordan, except now and then when the printer's devil learns how to read proof and takes the reporter's place.

The acme of happiness for one of the "fraternity" is to have a railroad pass in his hat, and a free invitation to the Springs in his pocket, and, like Mr. Dick Swiveller, he can sing that song, "Begone dull care." The true Bohemian never thinks of the future, he is essentially a truly imprudent, and, like a soldier, he lives in the present, he is the best of comrades, for only the scribe cultivates that *amour fraternel* by which he makes friends and items as he goes along in the world; he is imaginative, for by stretching that positive virtue, he lives and thrives; in fact, to sum it all up, he is what the French call "Ye bon sieg."

The outlook in Virginia for sporting this fall is an unusually good one. Game of all kinds is more abundant than I ever knew of before, and the sportsman will have his hand

From the same publishers, "Marrying Off a Daughter," by Henry Greville. Price 75 cents.

Winners, at the Great St. Louis Bench Show and Exhibition of Sportsmen's Goods, of the only two Gold Medals given—"For the Best Gun of Any Make," and "For the Best Gun of American Make"—fourteen foreign competitors and seven American, sustaining our assertion of making the best gun in the world.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 22, 28, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, Nos. 22 and 28, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P. O. Box 715 NEW HAVEN, CONN.

221. "OLD RELIABLE" 221. STILL TRIUMPHANT.

In Fall Meeting of N. R. A., at Creedmoor, Sharps Rifles were entered in sixteen matches; took first prize in twelve of them, and good prizes in the other four. Among them the

Inter-state Military Match.

The New York State team, using the Sharps Military Rifle, won with a score of 974. Best score by any other rifle, 960.

The International Military Match.

New York State Team, with Sharps Military rifle, 1,044. Best by any other rifle, 903.

The Inter-state Long-Range Match.

Average per man with Sharps Rifles, 213. Other rifles used averaged respectively 193 and 197. The WINCHELTON CUP, won by Mr. Frank Hyde with a Sharps Rifle with a score of 143 out of a possible 150 at 1,000 yards. THE JERICH CUP, won at Spring Meeting with a score of 205. Best other rifle, 197. For the Grand Aggregate Prize at Fall Meeting, three competitors each, with Sharps Rifles—Mr. Frank Hyde, Col. W. H. Clark and Capt. W. H. Jackson—tied on a score of 310 points. THE LONG-RANGE MILITARY CHAMPIONSHIP, won by Capt. J. S. Barton, with a Sharps Military Rifle. All prizes in this match were won with Sharps Rifles. AMERICAN TEAM WALK-OVER (First Day).—J. S. Barton made, with a Sharps Long-Range Rifle, the extraordinary score of 221 points out of a possible 223 at 500, 500 and 1,000 yards.

W. & C. SCOTT & SON'S FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS NEW FINE TRIPLEX 12-GAUGE BREECH-LOADER, RECENTLY MADE BY W. & C. SCOTT & SON.

[From CAPT. A. H. BOGARDUS.]

W. & C. Scott & Son:
Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with extra 12-bore barrels; also a light 12 and 20 to 25 of all your make, which cannot be excelled in the shooting qualities, and impossible to beat in the solidity and power of your patent Triplex Action. I used your gun in my two recent matches with Mr. Pennell, June 23 and July 23, at which time I scored 10 and 71 in each match, winning by two birds; also in my match with Capt. Shelley, July 29, at which time I scored 34, "the highest score on record," and in the International Match with Aubrey Coventry, Esq., at Brighton, Aug. 6, for £1,000, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 50 yards fire. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is still in good condition.
Believe me, yours very truly,
A. H. BOGARDUS, Champion Wing Shot of the World.

[From COL. JOHN BODINE, New York.]

W. & C. Scott & Son:
Gentlemen—Have received the Premier quality choke-bore gun, No. 6,606, in good order, with Messrs. Schuyler, Hartley & Graham, and am pleased to say that its performance exceeds my expectations, while its symmetry and finish is all that the most fastidious could desire. It fully comes up to specifications of order, both in finish and shooting qualities. I have disposed of my two guns by other makers.

IRA A. PAINE'S

FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords balls with accuracy. In case barrel containing 240 balls, is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball weighed and examined, then packed with the greatest care, in barrels of 240.

Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL—No. 2—price far below the smooth ball at that time.

Balls and Traps can be ordered through all Gun Dealers. Liberal discount to the Trade.
MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price 98¢. 6 style. 6 style. 6 style. 6 style. 6 style. 6 style. Parties buying glass balls will receive, in case barrel containing 240 balls, score book and rules for glass ball shooting, containing 40 pages.

Volume 11.—No. 10.
(No. 111 Fulton St., N. Y.)

SUNSET ON THE BEARCAMP.

SLOW fades the vision of the sky,
The golden water pale,
And over all the valley-land
A gray-winged vapor falls.
I go the common way of all;
The sunset feet will burn,
The flowers will blow, the river flow,
When I no more return.
No whisper from the mountain pine
Nor lapsing stream shall tell
The stranger, treading where I tread,
Of him who loved them well.
But beauty seen is never lost,
God's colors are all fast;
The glory of this sunset heaven
Into my soul has passed—
A sense of gladness unconfined
To mortal date or clime;
As the soul liveth, it shall live
Beyond the years of time.
Beside the mystic aspens
Shall bloom the home-born flowers,
And new horizons flush and glow
With sunset hues of ours.
Farewell! these smiling hills must wear
Too soon their wintry frown,
And snow-cold winds from off them shake
The maple's red leaves down.
But I shall see a summer sun
Still settling broad and low;
The mountain slopes shall blush and bloom,
The golden water flow.
A lover's claim is mine on all
I see to have and hold—
The race-track of perpetual hills,
And sunsets never cold.

—From Whittier's New Volume.

For Forest and Stream and Rod and Gun. Islay Island.

GREAT SODUS BAY.

HAVE you ever watched some old painting, realizing new beauties each moment, the small, unlooked-for things as they steal out, hidden tints, beautiful thoughts expressed on the canvas? Or a beautiful gem in a plain setting, with the scintillations of color—golden, emerald, ruby and crimson; or, the peer of all, the bright, sparkling, dazzling diamond? If so, and you love the beautiful in nature as well as in art and precious gems, come to our "Little Island," now robed in her summer and autumn dress.

Over to the west, Sand Point (now dotted over with the white tents of campers) like an index finger, stretches out three-fourths of a mile toward the island. To the north and west stands Charles Point, sentinel of the harbor, while the "bar," a long, narrow beach between the bay and the lake, runs away for a mile to the east, till it joins the mainland on the eastern shore of the "Bluff."

Shooting ducks over decoys (or "coys," as they are here called) presents the very extremes of disgust and satisfaction. One moment you are thoroughly disgusted, for have you not waited for hours with patience and forbearance, in a cramped position, while the rain pelt and a stiff nor'wester chills you through and through, carefully scanning every point of the compass for the longed-for flight of ducks, while your decoys float and nod to one another, yet not a duck to be seen. But, presto! change! perhaps the gale brought them. We know not; neither do we care; there they are, hovering over the decoys—heads thrown forward, wings "tipped" and extended, fifteen or twenty red heads, all in a bunch—what a sight! Does not the blood go coursing to the extremities like a mill-race? One moment, now, like Roderick Dhu, in Troasch Glen, every day business life. See them "come to," like a vessel in the gale, "head to the wind." Now two guns—four barrels—to the right and left belch forth fire and No. 4 and 6 shot. See them tumble—some go heels over head, and strike water spout; others shy and spibe, and when they reach the water dive to escape. There a proud-crested drake comes down with an air of disdain, as though he was alighting for feed, nods to the decoys, turns on his back and paddles in the air. This is but an introduction to the fun, and what had been a cold, dreary beach, with the sullen roar of Ontario's surf at our back, becomes the most enticing place imaginable, as one flight after another comes down to the decoys.

The "Bluff," whose precipitous sides rise one hundred and fifty feet above the water of the lake, gives an extended and delightful view of lake and bay. Here, each year, large camp meetings are held, and usually after the discontinuance of the meetings the ground is occupied by those who come here to "camp out," and enjoy primitive life in tents.

With a grove of noble old maple sand beeches above and around them; the ever-changing panorama of the lake dotted with sails and steamers; the waters of the bay, with Islay, Arran and Bute nestled on its bosom; the pure, dry bracing air, as it steals softly among the trees, brings pleasure to the strong, and both pleasure and strength to the feeble. Great Sodus Bay is five miles in length from north and west to south and east, about three miles in width, with undulating shores. To the west lies the little sleepy, dreamy hamlet of Sodus Point, with the great stone light-house on the hill; south and east a farm now and then dots the landscape, but it is mostly clothed with chestnut groves, except Thornton's Point and Briscoe's Cove, where the fragrance of pine and hemlock is wafted far out on the waters of the bay. This is somewhat of the setting, but the gem itself consists of but twenty-two acres covered with beech, maple, and here and there a pine or hemlock. What a few years ago was a dense wood, an unbroken forest, to-day is a charming grove, where lake or land breeze is felt from one shore of the Isle to the other, while the fierce rays of a July sun are shut out by the green canopy overhead.

The west bank is bold and steep and bluff, extending but a cold welcome to the water twenty or thirty feet below.

The north point is covered with rocks and boulders, and both bank and point would savor of aristocratic and exclusive owners were it not for the friendly landings running out into the water, and the easy flights of steps leading down to the water's edge. The east shore, with gentle slope, extending in a semicircle, holds within its embrace a small, sheltered bay, and here at early dawn the gray clouds change their tints to amber, to crimson, to rosy red, to flaming liquid gold as the east flashes brighter and brighter, until at length the summer sun rushes up over the east shore of the bay, driving away the thin mists that enshrouded Arran and Bute.

The great bald eagle is already soaring away in circles toward the sun, but with eye as keen for game as that of any other sportsman, for his cry is in a great dry oak at Chinney Bluff. The sea-gulls are also on the wing. Some are of dazzling whiteness, while others are white with wings of the most delicate lilac. A great night-heron has shaken the dew from his wings and seeks to escape the light of day, finding shelter in some swamp far inland.

All along the shore are evidences of the employment of the dwellers on the island. A "minnow car" anchored a little way from shore, trolling-lines stretched out to dry, poles of all descriptions, and landing-nets, while in the morning sun you catch the sparkle of brass, silver or gold spoon-hook as it is suspended from some limb ready for the owners use. The small yacht *Islay*, sloop-nigged but without jib or staysail, rides at anchor a cable length from shore, her white sides and red wale gleaming in the sunshine; while a dozen rods away a long, rakish-looking craft, with its great white mainsail, stay-sail and jib already hoisted, its boom lashed to the stern and ballard speak, above the cross-trees a top-sail also shaken out, lies the *Red Hot*, chafing under the little breeze that comes over the tree tops.

From the main shore, from bluff and island, fishing boats are putting out, some to troll for pike, pickerel or bass, with spoons or gangs; others to "still-fish" from anchored boat with "rod and reel," with minnow or other bait. Here is a boat in charge of an experienced carman, filled with young children, five or six of them, all trying to fish, all shouting, all filled with joy and gladness. There is another with three ladies in it, one rowing, the others trolling. This morning exercise, the tonic of the lake breeze tinges their cheeks with a healthy color, and if you catch the sparkle of their eyes you will not want evidence of their enjoyment. Yonder is the boat of an old sportsman (sportsman in the higher and nobler sense of the word, for from just such scenes as these he is filled with the best of inspiration) who, with wife and carman, is intent on making a catch that will supply their table. Intelligently he goes to work. Already he has selected a good spoon, the day being bright, and his boatman with a slow, steady, even pull at his oars that keeps the spoon revolving at just the right depth, takes a course just outside that long bank of weeds. Full well does he know the nature and habits of the fish for which he "goes a-fishing." The pickerel builds for himself a home or rather a hiding-place, where, secluded and sheltered by the weeds, he waits about him, he waits for his prey. When it comes along, be it frog, snake, toad, mouse, spoon-hook or minnow, with a spring he darts upon it. If he misses he may strike a second time, but generally returns to his old lair.

It is not hard to tell the "luck" of the neat boat passing now. The spoon drags the top of the water not more than twenty-five feet from the boat; the oars, lifted from the water, seem waiting to catch what will supply their table. Fishing? No. An artist would draw the picture, with the trolling-line and spoon left out and one seated beside the other, slowly floating down the stream—yes, "floating for dear."

To the north and west of Islay is the channel, coming in between the pier to the harbor and out to the open bay. The channel is deep and its sides abrupt, and along these

banks at the right time are many boats having royal sport. Black bass in large numbers inhabit these grounds, and here you will meet with all the incidents and excitement attending the capture of these, among the most "gamy" fish. Some persons fish with live minnows, others with fly-pole and flies, while others, with a long trolling-line, gut leader, three fair-sized "white millers" and a "red ibis," drop from a heavy trolling-pole. But, like speckled trout, black bass are variable in their moods; sometimes a good basket is the result of the sportsman's labors, sometimes otherwise.

Thronged as Great Sodus Bay is in summer with those who fish, hunt, row or sail, singular incidents sometimes happen; seldom an accident, but often ludicrous scenes in the extreme. One evening perhaps thirty boats were on the water, the occupants intent on their several diversions. The evening sun just setting in a great bank of crimson and gold, the lake covered with a mist tinged with the rays of the setting sun; the vessels on the lake, scarcely discernible, looking like phantom masts, spars and sails, when all were startled by screams and yells, loud and prolonged, coming from one of the boats containing three ladies. Of course every boat within hearing hurried forward to offer assistance. The ladies had been quietly fishing, unattended by gentlemen, as they often do here. Now, an auburn-haired girl stood on the stern seat, hands extended as if appealing for help, face the picture of fear and dread, while a handsome brunette, with sable plume and gipsy hat, her face blanched with fear, stands balancing herself on the narrow bow, as if she had always been a professional rope-walker. Amid the boat is a lady of more mature years, who is perhaps the mother of the dark-eyed girl at the bow. She, too, is standing erect on the middle seat, desperation marked on her countenance, while with a viselike grip she gathers her skirts about her.

In the bottom of the boat, squirming, wriggling, twisting, rushing from one end of the boat to the other, with the line attached, is a huge eel, the unconscious cause of all this consternation among the trio. Of course there was a gallant rush to the rescue, and the young man slew the eel as royally as Perseus rescued Andromeda.

Again, it is very singular what some fish live upon. Last year an old sportsman (not in years, but in deeds)—one who loves the rod and reel, who, from the sand-bars of Florida to the rugged banks of Anticosti, from the south shore of the great lake to the valley of the Yosemite, has cast the fly and pulled the trigger—came to the island for rest and recreation. At last his usual good luck seemed to have deserted him, and day in and day out but moderate success attended his best efforts. At length upon the last day of his stay an enormous pickerel was safely landed and exhibited to his admiring friends; but he presented an unusual appearance of having gorged himself with some hard, indigestible substance. And sure enough, in dressing, the boatman took from the fish a stone weighing a pound or two.

Islay Island is owned by five gentlemen, three of whom have erected cottages of ample and convenient proportions and pleasing architectural design, with all the surroundings to make their summer sojourn here comfortable and delightful. The other two owners, while they have as attractive surroundings, content themselves for the present with large wall tents, spread over a permanent foundation and divided into convenient apartments.

Some of these gentlemen their friends are under obligations of no small amount, for they have been the recipients of their hospitality in the hunting and fishing seasons. You can scarcely imagine a place more comfortable, or a better locality for duck shooting in the spring and fall.

By the side of one of these cottages stands a giant oak, so tall that it towers above all the surrounding forest, a landmark for the country; but its base is charred by fire and part of the immense trunk burned away. Old residents say there is a legend of a beautiful Indian maiden and the death of her lover connected with this scar on the old oak. Some time we will try to tell the story as told to us by one who had it from his guide, a Chippewa Indian, on the shore of Lake Superior.

For Forest and Stream and Rod and Gun. MARIONING.—No. 2.

IN your issue of Sept. 25th, under the heading of "Sport in Louisiana," you remark, "Before many weeks have passed scores of sportsmen will have turned their faces southward, some who have 'done' Florida to seek new fields of conquests. Now I would like to meet the man who has 'done' Florida. I admit that some sportsmen have done the St. John and Indian Rivers and Homosassa; but how many, if any, have visited the southern portion of the State, where man's foot has not been heard since the last Indian war, where game exists in unlimited quantity? In the southern portion of the State to the eastward of the Choctawhatchee, west of the Atlantic and south of Lake Okechobee, there exists an extensive and interesting section, well supplied with game, and which is totally unknown to sportsmen, and which I shall briefly refer to.

Some months since I commenced the preparation of several brief articles regarding that terra incognita, between Cape Sable and Punta Rassa, Florida. My first communication was published in your columns (Vol. X, p. 133), but sickness in family, and afterward sickness of self, prevented me from con-

sects, heed not the carping sparrow-hawks, we will protect thee, and, moreover, give thee all the grain thy plucky little body needs to keep up thy great soul in thy little person. Thou art indeed the friend of man.

ROBERT B. ROOSEVELT.

RARE FISH.—Editor Forest and Stream: Within the last week I have carefully examined a specimen of one of our rare fishes, taken on this coast, which was received for the Provincial Museum by its vigilant curator, Professor Honeyman. It proves to be the *Aspidoplorodes monopterygus* of Cuv. and Val. Its total length is four inches and two lines; diameter of its body at its widest part, the origin of the pectorals, 4½ lines. Hardly anything appears to be known of the habits of this fish, and even the recorded descriptions of American authors appear to have been made from mutilated specimens. De Kay, who copies from Storer, mentions the existence of a smaller spino posterior to the two nasal ones, which is absent in our Halifax specimen. Gunther (Cat. of Fishes Vol. II, p. 210) grants two spines only to the isolated species he describes from Greenland, and he also gives six anal rays, which our specimen possesses, while the Massachusetts specimen appears to have, according to Storer, four, and De Kay, five. I am inclined to believe that a specific difference exists between the Massachusetts and Greenland specimens.

Halifax, N. S.

J. MATTHEW JONES.

THREE-LEGGED BIRDS.—We noticed some weeks ago a three-legged bird, received at a popular restaurant in this city. The London Field has just seen a three-legged chicken, and a three-legged goose has been exhibited in a London market. These malformations, which are not of extreme rarity, are accounted for upon the theory that they come from double-yolked eggs. One yolk is perfectly developed and the other only partially so. It's rather rough on the undeveloped bird.

—At a late Agricultural Union Fair, held at Lake City, Minn., Dr. D. C. Estes, a naturalist and sportsman of that city, was awarded ten first premiums for the following exhibitions: Taxidermy, Indian relics, conchology and entomology. Also for fine aquarium with specimens of Lake Pepin fish, an exhibition of split bamboo fishing-rods, and a large collection of artificial flies.

BROOKLYN ENTOMOLOGICAL SOCIETY.—This society was organized in 1872 with only five members, the same number to-day, to play over thirty active coleopterists and lepidopterists. The society has acquired a fine cabinet containing about two thousand accurately determined beetles (*Coleoptera*) from all parts of the United States and Canada, and a valuable collection of entomological publications. The meetings of the Society are at No. 9 Broadway, Brooklyn, E. D., on the first Saturday of every month. The Society publishes a monthly Bulletin, the first number of which appeared in May, this year. The contents of the Bulletin are: 1. Practical hints for Collecting Insects; 2. Raising the Larvæ of Beetles in Breeding Cages; 3. Raising Larvæ of Butterflies; 4. A List Announcing the New Publications of the American Entomological Society of Philadelphia; 5. Synoptic Tables of Genera and Species made by Dr. Horn, of Philadelphia.

NESTING OF COUCOONS.—Editor Forest and Stream: A pair of black-billed coucoons (*Coccyzus erythrophthalmus*) nested on the banks of the Northwest Arm this summer, and the eggs were taken by W. G. Morrow. This is the first instance known of the nidification of this species in the neighborhood of Halifax.

J. MATTHEW JONES.

THE WHITE ELEPHANT OF SIAM.—That White Elephant of Siam has just died again. A procession of thirty vessels, etc., etc. Long live the white elephant of Siam.

ANIMALS RECEIVED AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR THE WINTER EXHIBITION.—*Canis familiaris*, *Canis lupus*, *Canis vulpes*, one garter-snake, *Eutania striata parvulus*; one opossum, *Didelphis virginiana*; two gray lizards, *Sceloporus undulatus*; one black snake, *Basiliscus constrictor*; one water snake, *Tropidonotus rhomboides*; one quail, *Oryzopsis virginiana*; one milk snake, *Coluber obsoletus confinis*; two land tortoises, *Testudo labialis*; one gray squirrel, *Sciurus carolinensis*, all presented. One brindled gnu, *Capreolus gorgon*; two whooping cranes, *Grus americana*; two sandhill cranes, *Grus canadensis*; one weeper capuchin, *Cebus capucinus*; one red cat, *Nasua narica*; one pair hoopoes, *Upupa epops*; one jacamar, *Galbula ruficauda*, all purchased. Two elk, *Cervus canadensis*, born in the garden.

The Kennel.

RETRIEVERS.

The retriever proper, that is, the land retriever, is a dog almost unknown in this country, for the reason that our setters and pointers are broken to perform the duty of fetching game as well as pointing it. So many changes of late, however, come over the spirit of the sportsman's dream that it is not impossible that we may yet adopt the retriever as a portion of the field equipage. There are times and seasons when he is undoubtedly of value. For instance, we have shot snipe (abroad, to be sure), when they were so abundant that a setter was not only useless but rather in the way, while the little curly-coated retriever who kept at heel until a bird was grased was invaluable. The question as to whether the fact of retrieving dead game affects a dog's nose is an admitting of too much discussion to be entered into here, although we are of the opinion that the quality of the dogs used in shooting in this country, and which are almost invariably taught to retrieve, effectually disposes of the question. Still, we expect to some day see the retriever come into fashion. He makes a splendid companion on an excursion of any kind. As to his qualifications, Mr. Colquhoun, in his capital book, "The Moor and the Loch," says that they combine a very soft mouth, unflinching courage in water, perseverance on

land "never to lay down game, however heavy or far to carry, and mild, tractable temper." A dog gifted with these requisites must be trained entirely by kindness. This rule should never be forgotten. Severely may sometimes be needed to restrain an impetuous, headstrong pointer or setter, but so much depends on a retriever's own will and willingness that any dog requiring harsh breaking had better be at once dismissed. Some time ago, Mr. Colquhoun remarks, a hasty gamekeeper near Edinburgh got a practical lesson from his dog, which he would remember better than the soundest scolding his master could have given. He dropped a partridge with his first barrel, wounding another, which fell out of bounds, with his second. The dog retrieved the first bird, but not having perceived that the other was hit too, only wagged his tail with an expressive look at the dead partridge when ordered to fetch its neighbor. The keeper losing patience, gave him a flogging. For weeks, although most willing and efficient in collecting the dead or wounded for any one else, the sagacious creature obstinately refused to receive game killed by one who so rewarded his efforts. The keeper, fully aware of his mistake, tried his utmost by kindness to regain the dog's confidence, but whether or not he succeeded we are not informed.

A writer in a recent issue of the London *Ranchers' Gazette* gives the following hints as to how a retriever should be trained:

First of all make your dog know you as his friend as well as his master; and I may here repeat what has often been remarked before, and what everybody, I dare say, knows, that there is nothing you can do for a dog that goes to his heart so soon as giving it liberty. Always unchain him yourself, and he will always look up to you as his greatest benefactor. I have not space to enter at any length into the whole subject of the education of the dog, my object is rather to give hints with the hope that they may be found capable of being put into practical execution. There is a great deal to be done before you should take your dog into the field with the gun. And hence the question naturally presents itself, when he is ready to enter into the "field" into the "house" to which he is obedient; when he will "seek" when told to do so, and readily bring the object of his search; and when he will at all times, and under all circumstances, "down charge" directly the hand is held up. This is very important, as it acts as a check upon too high spirits, and is a means of steady-ly the dog when apt to get wild. You must be very strict in your training, and you must be consistent. When he gets up after being told to "down charge," take him back to the place he came from as many times as he moves from it, until he lies still, and is told to do otherwise.

In your lessons take care never to weary the dog; it must be a pleasure, and not a toil. Never play with him, or allow him to play with anything while you are instructing him, or he will make but an indifferent retriever. Always, by hiding a glove, or dropping lessons for him you do not wish to develop as far as you can those faculties with which the dog is so largely endowed, "instinct" or "reason," so called, but which we would prefer to call "memory." And now having made your dog obedient, take him into the "field" alone by yourself, and be very careful with him, for much will depend upon this day. You must meet with severity such flagrant faults as chasing a pig, or running up and down a long fence, or game, the latter you should never give him the chance of doing. When you kill a bird, walk quietly up to the spot where you think the bird fell, and when within a few yards of it, let the dog search for it, steadily and quietly. When he has found the bird, call him and walk away, he is sure to follow you, take the bird from him, bag it, and caress him. Never play with him by throwing the bird for him to bring again, for this is a bad habit, and you do not wish his play is sheer nonsense. Be quiet and steady yourself, for excitability is catching, and quickly reciprocated by the dog. When you have a winged bird down, be careful never to hurry your dog. The bird will not run far before it hides somewhere. I have noticed—and I may speak on this subject with every claim to be heard—that when "runners" are lost in turning dogs will find them, and when a dog is found when the field is walked through again, and frequently called to the spot where they were lost—the loss being owing to the dog being hurried, and lifted and helped. If the bird is not where he was known to have fallen, then let the dog hunt in circles, widening them gradually; this he will soon learn to do of his accord. When he hits off the trail, and settles down to it, be quiet, and watch him. If he does not "settle" to it, walk on again, for the direction he appears to "wind" the bird, which has probably gained the fence if there is one near. You had, however, much better not take that for granted. When your dog is hunting for a winged bird, after a few casts of his own, he frequently gets invigorated by his fancied liberty, and turns wild. Here I can offer a hint which is simple, and its after effects never lost. As soon as he shows any symptoms of wildness, throw at him a stone, stick, clod, or anything that comes to hand (not viciously, but as a reminder), this will bring him to his senses in no time, for there is nothing that the dog dreads so much as a stone. The utility of this method is twofold.

1st. It has the desired effect of bringing him to his senses.

2d. It has the effect of making the dog keep his eyes upon his master, a habit he will maintain throughout life, and a valuable one too, for when he becomes old and deaf, he will be able to work by signs instead of sounds, which is of course the perfection of the art.

Always make your dog find wounded game if possible, however much patience it may require on your part. Always shoot for the sake of the dog, and not for the bag; the reason why keepers seldom train dogs perfectly is that they always shoot for the bag, and never for the dog. They always forget that the dog is more valuable than the wounded bird or wounded hare, and even then they are more likely to get if they do not hurry the dog. Never overlook a fault; always be patient. Always treat your dog consistently, reproving faults, praising good deeds. Never send him after crippled ground game until out of sight; and keep him from trespassing as far as you can, always remembering as your motto that a good dog is one that does what he is told to do, and does not do anything that he is not told to do.

—The concluding paragraph of a short article in our last issue, entitled "Dogs, Sporting and Domestic," should properly have been placed after another headed, "Dog Pointing a Stone."

For Forest and Stream and Rod and Gun.

AY-AB, AN ARAB DOG.

I WAS convalescent in Cairo in 1876. My time of anxiety was gone. No longer kind friends were solicitous about my health. My backing cough, my feebleness, my exhaustion had passed away. The delightful Cairene winter had given me new strength and hope. I was told that I had been saved from the jaws of death. My first ride in a close carriage, propped up with cushions, gave me the foretaste of a new life. There are many good Maltese servants in Cairo and Jacomo was a typical Cairene. I fancy he had been early in service in Malta, in some English family, as he had all the ways and manners of an intelligent English groom. From his former English master, who was an officer of rank as I afterward learned, he had absorbed some idea of what was a good dog. "When my old master got shooting in Malta he always take me. Oh! miss, such fine *setters* and *pointers*. De dog of Cairo not worth powder and shot to kill him. What for good Cairo dog? Only to eat bone. Miss say she want Cairo dog? *mauwis cheta*. Have much fun, hang his tail between his leg, no come when you call him. Say you find dog, nobody buy dog in Cairo; what you do with him, miss? You ashamed to carry him away with you, for everybody point finger at dog and say 'What for that lady do with ugly beast?' and you shame yourself; and miss, they say I know my business to advise you to have such poor brute. Do nothing Cairo dog but bite and snap and show him teeth."

While Jacomo was with us he had always on his English stop. Sometimes as a philologist, Jacomo's organ was attuned to French, Italian, German, Arabic or Lingua Franca, as the necessity presented itself.

I had expressed my determination to our coachman to have an Egyptian dog, a pet of some kind, and Jacomo objected to it. He said he would have a dog, but not a dog of the owner of this scraggy and poor puppy.

"If miss," said Jacomo, "make up her mind to have dog, I get miss leetle dog before he know bad tracks. If miss want Maltese dog, pug dog, spaniel, I get him. Plenty vice dog in Cairo, dog of gentleman and lady, not mean, poor street dog."

But it was the poor, much abused street dog I wanted. Ay-ab was brought me in a basket of plaited reeds, like a little Moses, when he was four months old, a true Arab dog of low degree. True to his instinct when I first ventured to be familiar with him, though not inclined to be snappish, he would have nothing to do with me. In fact, the want of sympathy between man and dog, as shown in Egypt, was quite positive in Ay-ab. It was some time before he even ventured to wag his tail with contentment and pleasure. Once started in this way, however, he was not easily deterred. He was the education of his better faculties, Ay-ab's improvement was rapid. Determined that he should love me and obey me, I never allowed any one, for quite a long time, to feed him. If I have stated that Ay-ab's improvement was rapid, I must acknowledge that, with a woman's prevailing jealousy, I was pleased to see that the dog's liking was for me alone. Any one who could bear on his own face, and any brother he despised. With some of the native servants was different. He would allow them to care for him, but he absolutely repulsed their caresses. Ay-ab, in the presence of those he disliked, was an abject cur. He would slouch into some corner, with his head toward his aversion, and generally howl; he never barked. This howling was terribly car-splitting and annoying, likely to burst out at any time. Until he was a year old, I seemed to Ay-ab to be his dog, and he was very fond of me. He would keep him away from me. In time I got him to be quite friendly and affectionate, and by degrees his animosity toward human beings was only individual, and not general. But for his own kind he indulged in a special hatred. Even when a puppy, seated at my low window, when a brother of his passed, the hair on his back would stand on end, and, curling his lips, he would show his mangled fangs. Toward as he was with human beings, he was bravely itself with his own kind, unless secured by a chain he never went out without a fight. Now, there are two kinds of dogs in Cairo, the larger one resembling the Constantinople breed, and the smaller peculiar to Egypt. Between the pictures of the dog as found on the old monuments and the present race, those who have studied the forms of animals declare there is a great difference. The animal of Cairo is of a coarser type, and with sharper ears and a heavier body. Mariette Bey has promised my father to make a critical examination made of a mummy dog, in order to compare it anatomically with the animal of to-day.

But to return to Ay-ab. It was a long time before he took to civilized ways, and more than once I had a hard time in fighting for him. A dozen times it was decided on that he should be turned into the street and I was to declare that there was no such animal in the world as he. He was a quite different dog, had so docile and intelligent a creature. When I left Egypt for the United States Ay-ab came with us. Should the editor of the FOREST AND STREAM ever come to our country, to a certain quiet old homestead, as he opens the gate to the avenue he will see a good-sized dog, recalling no canine type he ever saw, watching him closely from the veranda. Ay-ab will not bark at him, but will give two or three prolonged yelps. Should you endeavor to pat him, as you are a dog, he will evade you. He is not familiar, and will not be propitiated. When you are fairly at the door he will jump through the window and bolt straight to me, and inform me as plain as can be that some one he has never seen before is about to pay me a visit. His loyalty to me is immense. Ay-ab takes to colored people more readily than he does to white. Once we took Ay-ab into the woods about ten miles from the house, and he found a deer. In an instant the dog was on the trail, and some lazy friends who are familiar with hunting declared that he ran as swift as a deer-bound, but made no noise. As I am writing this Ay-ab has come in. I have a letter from Cairo just received by the last mail. It shows it to Ay-ab, and say in my best Arabic, "Good dog; you would not last so long, and show him the Pyramids and the Sphinx. He has lost his appreciation of the language of the dog, however, by putting his paws on the table, looking at me with his dark eyes, and whining piteously, his manner of showing affection for me."

Near Danville, Va.

MARY J.

THE PROPER FOOD FOR DOGS.—We are of the opinion that the noses of a very large number of dogs are spoiled by feeding them too much meat, particularly when young. "Stone-henge," and other authorities, strongly advocate the most sparing use of meat, and then only in the shape of broth, in which meal or biscuit should be boiled. When young dogs once become accustomed to meat it is exceedingly difficult to get them to eat anything else, and the only course to pursue

their performances, which, like some others—notably the peculiar impression that a broad and shallow boat sails more on her bottom than the narrow craft—have got abroad, owing to the superficial reasoning which has hitherto characterized most investigations connected with yacht sailing and design, in which the blind too often have been found leading the blind. If, for example, we were to make the statement that the broader and shallower the keel the less she will sail on her bottom, and that the narrower and deeper she is the more will she sail on her bottom, we face the exclamations of astonishment that will escape from many a hasty reader, and his ready challenge of an intimation so at variance with the common acceptations of “a long floor to sail on.” “A broad bottom to stand up on,” “a yacht should have beam to sail on her bottom and not on her side,” and the hundred and one other plausible and ready-made phrases which have found their way into many a mouth, through the lack of knowledge and insight into the actual condition of matters still prevailing among practical builders of limited acquirements, and who unfortunately are too often accepted as infallible guides for a want of better authority to turn to. With the close of the regatta season we will be more at liberty to dilate upon the subject of naval design, and without taking sides ourselves, merely laying before the reader the facts and experiences, letting him weigh for himself the evidence adduced for and against, after placing him in possession of all that is necessary to found judgment upon.

NOVA SCOTIA YACHT SQUADRON.

The handicap race for the R. A. and R. E. prizes, postponed by the sailing committee on account of stormy weather, was successfully sailed on Saturday, 21st. The breeze was at first very light and paltry from S. W., but it freshened up with squalls, and the heavy swell met the outside did not fail to improve speed, the boats pitching and plunging and the green sea pouring over the decks. *Hebe*, as usual, ran clean away from every rival, making a capital start and planting herself well to windward from the outset. She carried gafftopsail and a small flying jib, which lifted her to the seas. *Spray* sailed a splendid race throughout. She carried no gafftopsail until she rounded Mark Rock, when she piled on the canvas, that being the time when the yacht *Muta* was admirably sailed away, and the crew enjoyed the pleasure of the bath without having to leave her decks. This was the case on *Spray* and *Mystery* too, and little *Lily* pluckily went the whole course. *Hebe* was first away, followed by *Spray* and *Mystery*, *Psyche* and *Muta* shortly after, then *Seafan* striding along steadily as a church and bidding her time, knowing her size would tell in the seaway.

Name.	Owner.	H. M. S.
<i>Hebe</i>	R. B. B. B.	17 4
<i>Spray</i>	H. S. G. Twining	22 0
<i>Mystery</i>	P. C. Smith	22 19
<i>Psyche</i>	L. C. C. C.	24 02
<i>Muta</i>	L. C. C. C.	42 52
<i>Seafan</i>	Capt. Larcen, R. A.	42 45
<i>Lily</i>	N. H. Wicks, M. D.	45 19

The whole fleet stood down on the starboard tack. *Psyche* crawled up on *Mystery's* weather, and blanketed her off Point Pleasant. *Seafan* and *Muta* being still astern, *Spray* hauling out ahead, but to leeward, and *Hebe* industriously spinning out her lead. *Mystery* tacked to port and made a board inshore. *Seafan* was first to come about off Horse-shoe Shoal buoy, and was followed by *Spray*, further out, and *Muta*. Favored by the southing of the wind, they were able to lay clean across, and the three cut *Mystery* by a long piece. *Psyche* rather foolishly elected to stand on starboard tack across the shoal water of Meagher's Beach, and made the acquaintance of some heavy rollers, which pretty well shook the wind out of her sails, and when she did finally go about she was well astern of *Mystery*. *Hebe* also stood too, and when she was forced to tack and made Sandwich, she became suddenly aware of the close proximity of *Spray*, which, carrying a splendid breeze along the western shore, was looking dangerous. Another board and the lot got round Mark's Rock, leaving *Mystery* and *Psyche* to enjoy a little match of their own, in which the former came off best. The time here was: *Hebe*, 2h. 47m. 48s.; *Spray*, 2h. 53m. 20s.; *Seafan*, 3h. 55m. 3s.; *Muta*, 2h. 59m. 25s. The jibs at *Turkey* safely off, and the fleet was again in line. *Psyche* here cut out *Mystery*, being quicker on her helm, but immediately after *Mystery* luffed across her stern and covered her, and, had not *Psyche* heeled herself off the wind, would have kept her pinned under her lee. Balloon jibs and jib topsails were set on every yacht except *Muta*, whose balloon jib and jibboom had been carried away as soon as set off Mark's Rock, and the run home was nothing but a special interest, save that *Hebe* continued to draw away and came in nearly a quarter of an hour ahead of *Seafan*, second boat. As *Hebe* was abreast of Meagher's Beach Light, on the run home, she was struck by a very heavy squall and had to let all her sheets fly. The timing at the finish was: *Hebe*, 3h. 51m. 26s.; *Seafan*, 4h. 5m.; *Spray*, 4h. 12m. 58s.; *Muta*, 4h. 16m.; *Psyche*, 4h. 17m. 28s.; *Mystery*, 4h. 21m.; *Lily*, 4h. 42m. 23s.

The sealed handicap having been opened, it was found that *Hebe* had to allow *Seafan* 5m., *Psyche* and *Muta* 12, *Mystery* and *Spray* 20, *Lily* 40, the time between any other yachts being obtained by taking the difference of the times allowed each of them by *Hebe*. The order of the yachts in the winning list is therefore: 1, *Hebe*; 2, *Spray*; 3, *Seafan*; 4, *Lily*; 5, *Mystery*; 6, *Muta*; 7, *Psyche*; *Hebe* taking first prize, and *Spray* second.

This race closed the programme of the Nova Scotia Yacht Squadron for this season, as far as racing is concerned, but it is probable the yachts will assemble for a closing cruise under orders before the end of the season. Mr. F. C. Sumichrast, Hon. Secretary of the Squadron, has been elected a member of the Yacht Club de France.

YACHTING NEWS

BAY OF QUINCY YACHT CLUB.—Belleville, Oct. 4.—Although but little yacht racing has been indulged in for these waters for some time back, our yachtsmen have not been altogether idle, as is evidenced by the fact that two new 10-tonners, both modeled and built by local amateurs, have been added to the Bay of Quinte Yacht Club's fleet within a few weeks past. The first of these which I will mention is the *Sylvia*, a standing keel craft, constructed by Mr. W. M. Pike. She is decidedly out of the common, being without a single hollow line about her, except a slight hollowing of the bows. She is long, light, and carries an immense press of canvas. Her mainsail has a luff of 100 ft., 34 ft. on the boom and 18 ft. on the gaff, with jib in proportion. Her length is 44 ft.; beam, 9 ft.; draught of water aft, 4 ft. 9 in.; forward, 3 ft. 6 in. The other craft has been turned out by Mr. R. M. Roy. She is a centreboarder, measuring 25 ft. 8 in. keel and 11 ft. 5 in. beam. Her canvas is rather smaller than that of *Sylvia*,

and she carries it well and has proved herself a fast sailer. The annual regatta of the Bay of Quinte Yacht Club came off on Monday last, the prizes offered being for second and third-class yachts only, as the bigger ones were not in racing trim. The second-class race received five entries, namely, the *Katie Gray*, *Kathleen*, *Sylvia* and *Gracie*, of Belleville, and the *Emma*, of Kingston. The course was 20 miles, three circuits being required to complete it. There was but a slight breeze, the yachts being able to carry gaff and jib topsails, and although not racing machines, which you so justly condemn, the leading yacht was able to sail the race in 3h. 20m., a performance which it would be difficult to excel. The *Katie Gray* won by 6m. 53s.; *Kathleen* second; *Gracie* third, 11m. behind her; *Emma* fourth and *Sylvia* last. In justice to the *Sylvia* it must be said that her topmast carried away and insured her defeat, while the *Gracie* set nothing most of the way except fore and aft canvas, she being without a topmast, so that she did very well under the circumstances. The third-class race also had five entries, namely, the *Mystery*, of Kingston; *Minnie A.*, *Mabel* and *Whisper*, of Belleville; and *Ina* B., of Picton. The *Mystery* won a very closely contested race by 1m. 23s. *Minnie A.* second, *Ina* B. third, and *Mabel* fourth. On the whole the regatta was a great success. Outbirth has put a new stern on the *Ellis*, of Oswego, which vastly improves her appearance and it is thought will also add to her speed. The season is advancing rapidly, and very soon most of the yachts will go into winter quarters.

SWEETSTAKES MATCH OFF NABANT.—Editor Forest and Stream: There has been much rivalry here this summer among the fast cat-boats, and a short time ago it was determined to have a sweetstakes race to settle the question of superiority. The conditions of the race were that the course must be dead to windward, as near five miles as possible, and return. Boats to be allowed mainsail only, and no shifting ballast. Any cat-boat under 20 feet water line could enter by paying five dollars to one of the judges; each boat to appoint a judge. It was decided to have the race at Nabant as the fairest place for a steady wind and a square trial of speed. Six boats, all “cracks” in the cat-boat category, entered, and the day of the race was one more, the *Josie*, appeared, and, though contrary to rule, was allowed to enter, as no one protested. The wind was light northeast, and the boats were sent off to leeward with a flying start, three minutes being allowed to cross the line. The *Scamp* was first away, with the rest close behind. On the run before the wind the *Fancy* gained considerable on all the others, and rounded the buoy for the beat to windward with a great lead. The wind, however, had been hauling to the southeast, and it was found, unfortunately, that the boats could lay their course for home without beating. The *Water Witch* and *Josie*, though not knowing exactly where the stake boat was placed, stood much too far to windward, and would have lost a great deal, but they were lucky enough to get more breeze, and on the whole were probably benefited by the operation, and on that day the *Fancy* took the heat and the *Josie* lead. The *Josie* would have won the prize on time allowance had not the judges decided that it was no race because there was no beat to windward. The boats came in as follows: *Fancy*, *Josie*, *Water Witch*, *Scamp*, *Mirage*, *Psyche*, *Sea Men*. The failure of this race was a disappointment to many who were interested, and each boat went away feeling sure that had there been a beat to windward she would have won. The boats cannot probably be expected to meet again this season.

Boston, Sept. 30.
DORCHESTER REGATTA.—Saturday, Sept. 28, the Dorchester Yacht Club offered five prizes for cat-boats under 21 ft., in hopes of bringing together the boats which raced at Nabant. Five of them appeared, and also several slow boats, induced to come in by the number of prizes. Fortunately there were more boats than prizes, and at about one o'clock the gun was fired for the start. The race was a most exciting one, and when near the windward buoy the *Josie* caught a puff of wind which put her ahead of several others who had beaten her up to that time. She held her lead to the end and won easily. The course is a miserable one. It is almost entirely land-locked, and the winds are very unsteady. The tides run hard, the water is shoal and the tides are many, giving a stranger a hard chance. Following is a summary:

Name.	H. M. S.
<i>Josie</i>	1 47 55
<i>Water Witch</i>	2 03 10
<i>Rockets</i>	2 03 10
<i>Valerich</i>	2 03 10
<i>Psyche</i>	2 04 06
<i>Clara B.</i>	2 04 06
<i>Widder</i>	2 13 18
<i>Sea Men</i>	2 17 16
<i>Heads</i>	2 27 04

The *Josie* is a new cat-boat, which had a tremendous reputation for speed before she was built. She has been to three races, each time without a beat, and has won every race. She got a very light wind in every race. She has a long bow and no sheer, and is certainly not hand-some. She sails wonderfully well to windward in a light air, but perhaps having no ballast and no floor boards helped her. In any event, she has yet to earn a reputation for speed.

CATAMARANS.—In consequence of the continued demand made upon us to furnish parties with plans and instructions for building catamarans, we have made arrangements whereby we are enabled to send to any address a full set of drawings and specifications for building a double-hulled boat upon receipt of price, \$4. Orders should be addressed to the Yachting Editor, FOREST AND STREAM.

CRESCENT CITY YACHT CLUB.—By the sale of *La Belle* to a member of this New Orleans club, recently effected by Mr. Thos. Manning, yacht agent, a valuable addition to the fleet on Lake Pontchartrain is made.

AMERICAN MODEL YACHT CLUB.—The Clark Cup presented by Mr. Clark, owner of the Boston cutter *Saxon*, was won by *Garric* (Mr. Bennett) in a race on Prospect Park Lake, Brooklyn, Sept. 23, beating *Ezzie*, *Jennett*, *Cornelia* and *Colo*.

NEWPORT YACHT CLUB.—The match for the cup presented by Mr. Henry Jones, of Staten Island, N. Y., was sailed off Newport, R. I., Sept. 23, and proved only partially successful owing to the lack of wind. Course from Long Wharf around Brenton Reef lightship and return, eighteen miles. Wind light and baffling. *Allan*, *Belvyn* and *Twilight* gave up. *Hebe*, Mr. J. Jourman's, was the only one to go over the course, and the cup was awarded her.

CENTRAL HUDSON YACHT CLUB.—For the fall Corinthian regatta of this club four yachts were entered, but owing to a lack of wind only one went over the course. Wind fresh from N. W. at start, and a fine day's racing was promised, but it fell calm later on. *Gracie*, Mr. H. E. Belcher, third-class, made the race in the stipulated time and takes the prize in her class. Time, 3h. 17m. 25s. *Shadow* and *Fly-away* not finishing.

HUDSON RIVER YACHT CLUB.—The fourth annual regatta of this club was sailed Sept. 29, in conjunction with the Pavonia Yacht Club. Course for first and second-class from Seventieth st., North River, around stakeboat off Fort Lee, thence around one off Weehawken and return to club-house—sail twice over; third-class, return from Fort Lee stakeboat on second round. Start flying. Wind light from N. E., but shifted to fresh breeze from S. W. latter part of race. Won in first-class by *Clara S.*, 4h. 43m. 00s.; *Annie Gaid*, 4h. 54m. 33s.; *Irone*, 4h. 59m. 13s. *Mechanics* withdrew. Second-class—*Geo. B. Deane*, 4h. 43m. 45s.; *H. H. Holmes*, 4h. 57m. 50s.; *Lydia T.*, 4h. 4m. 48s.; *O. K.* and *Rough and Tough*, not timed; *Annie L.* and *Rosy H.* withdrew. Third-class—*Butler*, 4h. 42m. 20s.; *Gusnie* and *Nellie Shaw* not timed. Special prize for cat-rigged boats taken by *O. K.*

TRUSTON YACHT CLUB.—This club sailed a match on the Delaware River before Truston, Sept. 30. Course about six miles. Won in first-class by *Minerva*, 4h. 10m.; *Ida*, second, 4h. 21m. Second-class—*Bella* and *Hippie* sailed a dead heat in 3h. 3m., afterward sailed off in favor of *Hippie*, J. S. Mount, third. In the third class, *Ramble* won in 3h. 18m., *Susie* second. The entries were very numerous. Prizes consisted of challenge pennants.

GLOUCESTER YACHT CLUB.—The first regatta of this new club was sailed Sept. 26, off Pavilion Beach, Mass. First-class, from 10 to 25 ft. water-line, second-class under 10 ft. First-class sailed around a mark two miles outside of Eastern Point Ledge buoy and flag boat off Norman's Woe. Judges, Capt. Chas. Babson, Bennett Griffin and Councilman Wm. Thompson. Mr. Joseph J. Burns was timekeeper. *Judith* won in first-class, 1h. 40m. 45s., *Adels* second. *Hard Times* won in second-class, 1h. 35s., *Zip* second. *Zannie* carried away her bowsprit. The new club is full of life, and promises to enter upon an active season next year.

A LONG CRUISE.—The schooner yacht *Okorotin*, of Cleveland, Ohio, Capt. F. W. Edmunds, arrived at this port from the South, after a very extended cruise. The schooner is 32 ft. long and 9 ft. beam. She left Cleveland Oct. 17, 1877, sailed down the Mississippi through the Gulf to Cedar Keys, Fla., in search of a place to “locate.” At Pass Christian she was blown high and dry on the mud by a squall, and it occupied several days to launch her again. By taking the inland reaches along the coast, Philadelphia was safely reached, and she was on her way for New York via Cape Hatteras. He proposes to sail for Troy, thence to Buffalo, via Erie Canal, and by the lakes home again to Cleveland, where he hopes to arrive about the 20th inst.

NEW CITY HOUSES.—The San Francisco Yacht Club has inaugurated their handsome new house at Sausalito, Cal., with appropriate ceremonies, and the Dorchester Yacht Club, of Dorchester, Mass., is about to take action looking to the building of new quarters likewise.

MARON OFF.—Unless *Intrepid* can be brought to the line, there does not seem any likelihood of *Amundsen* being accompanied with a match this season, as *Dreadnaught* has gone into winter quarters.

GAEL-SUNBEAM MATCH.—The match off Boston Light between these two little clippers, before noticed in these columns, was started, Oct. 2, in a fresh breeze of wind, which, however, died out just in time to prevent making the race in the stipulated time. *Gael* had a lead of a few lengths. The match will probably be rescheduled at a future date.

BORNS SOUTHERN.—The schooner *Ida* O., Capt. J. H. McQuillan, of Cambridge, Mass., is fitting out for a trip to Jacksonville, Fla. Her owner proposes to sail the ship in company with the *Queen*, which will be yanked, as the yacht is only 32 ft. long. Such an undertaking should be encouraged, and the captain has our best wishes; but if *Ida* O. is of the ordinary wide and shallow style, we trust he is well aware of the dangers of putting out to sea in fall weather in a smooth water model.

SASS SOCIETY Y. C.—The annual regatta of this club was sailed at Lansingburgh, N. Y., on the Hudson, Sept. 26, course, twelve miles; wind strong from N. W., shifting to N. W. Won in first class, by *Aurifer*, *Lodge*, of Albany, 3h. 19m. 7s.; *Sassa* second, second class, by *Albion*, in 3h. 48m. 25s.; *Nina* second. In third class by *Addie* in 3h. 48m. 17s., *Annie* second.

CLEVELAND YACHT CLUB.—A new organization has been formed at Cleveland, Ohio, under the above title. Officers have been elected as follows: President, F. H. Smead; Vice-President, W. P. Francis; Secretary, P. Smith; Treasurer, H. G. Phelps.

QUINCY YACHT CLUB.—This club held their fall regatta September 20th, off Quincy, Mass., wind steady from S. W. Course from Judges' boat to red buoy, off Quincy, and return, six miles. Won in first-class by *Vision*, B. F. Curtis, 38m. 24s., *Folly* second. It was claimed that *Folly* had “crowded” *Vision* a whole mile out of the race, and that this action was unfair. Our friends in Quincy are evidently poorly posted in the rules of yacht sailing, and may follow our columns to advantage; from them they will glean that “crowding,” in place of being unlawful or unfair, is, on the contrary, perfectly legitimate, and a lulling match between two crafts is one of the most interesting trials of quality that can be witnessed in a sailing match. *Folly's* skipper has probably toiled a craft longer, and took advantage of his better knowledge of handling a boat than his opponent, who found it so troublesome to shake him. In the second-class, *Thobe* (W. H. Littlefield) won in 37m. 20s., *Nattie* second, in third, *W. D. Daniel* (J. Q. Adams) won in 42m. 57s., *Imp* second.

CLEVELAND REGATTA.—The match, sailed under the auspices of the Cleveland Yachting Association, September 19th, brought nine yachts to the line. Course on Lake Erie, three miles out and home, rounding the crib on the return. Won by *Unique* in 1h. and 16m., beating *Chimes*, *Sliver*, *Spray*, *Gipsy*, *Stranger* and *Tylo*.

THE MAGIC.—This famous schooner, well known as the winner of the “America Cup,” in the international match against *Cambria* (Albany, N. Y.), has been purchased by Mr. Francis M. Weld, and will in future sail under New Bedford. We will probably hear the colors of the N. B. Y. C.

OAR AND PADDLE.

THE SCULLERS' CHAMPIONSHIP.

After postponing the race from Oct. 2 to the next day, the water was found smooth enough for a shell to live in, and rather than disappoint the multitude it was decided to send both the contestants to the start. Owing to the lack of practice on the part of Courtney, his chances had been waning ever since his arrival, and to the knowledge that he was a pretty clear case for the Canadian, especially as more or less

New Bedford, Oct. 2.—The past week has been marked by the arrival of several distinguished visitors from the South, in the shape of two turpans, one weighing 108 pounds, and a baracuda, over 100 inches in length, caught in St. Thomas' Trap, a few miles from the city, and a green turtle caught in the lower part of our harbor. Striped bass plenty, but rather small, averaging five to ten pounds each; eels, tautog, scup, squetague, etc., plenty.

MOVEMENTS OF THE FISHING FLEET.—Shore mackerel have been in good receipt the past week, the arrivals numbering 20, with 5,550 barrels. The number of Bay arrivals have been 8, and the receipts 1,340 barrels. The Bank fishermen continue to arrive from the long trip, with moderate fares of codfish; the number of arrivals since our last report has been 8; and the receipts 1,200,000 pounds. Bank halibut continue in light receipt, the number of arrivals for the week being 3, bringing 130,000 pounds. The number of Georges arrivals has been 20, and the receipts 320,000 pounds codfish. Whole number of fishing arrivals for the week, 71.—*Cape Ann Advertiser, Oct. 4.*

CONNECTICUT—Windsor Locks, Sept. 5.—Black bass anglers fill the river here, and especially at Terry's Island, less than a mile above the railroad bridge. This island has become famous, as the spot selected by Terry, the Millerite, who, with his band, chose the highest point upon it as the "jumping off place" some years ago, when they were awaiting the end of the world. They nearly froze to death, and the world did not go to pieces either. Miller has since built a house on the island, and still lives there awaiting the crack of doom. His friends have a standing invitation to come and fish, and the bass, all unconscious of the Millennium coming, bite voraciously. Messrs. C. A. Birge and Leopold Egner, of this town, took seven-sixty pounds of fish there the other day, the bass averaging from one-half to three and one-half pounds each.

NEW YORK—Shelter Island, Oct. 6.—The bunker fishing for week ending the 5th has not been as good as for several past weeks. The fish have not been in Gardiner and Peconic bays, which is bad for the sailing fleet; but the steamers have done better, being able to pursue them off Montauk, and along the southern shores of Long Island.

NEW JERSEY—Kinney's Ashley House, Barnegat Inlet, Sept. 28.—Fishing poor during past week, owing to easterly winds. Nothing biting except blackfish and sea bass, and the latter thick as they can be.

Forked River, Oct. 7.—Sea bass and gamy black fish still biting, but not so freely as last week. The best catch this week was fifty-two by Mr. and Mrs. W. M. Leslie and a Miss A. Brown, in the yacht Belle. Bluefish have not yet made their appearance in any large quantities, and, owing to heavy easterly winds, it has been impossible for our yachts to go outside.

PENNSYLVANIA—Wolf Run, Oct. 5.—Some very fine strings of bass are being taken from the Susquehanna. They were first put into this stream by John Bowman, Harry Petrik and James D. Brewer, about seven years ago; that is in Lycoming County. They are very plenty, and in a very few years the Susquehanna will compare favorably with any of the bass streams.

Greenville, Oct. 1.—Hon. A. McDermitt caught to-day several black bass in the Shenango, at this place.

VIRGINIA—Leahurst, Oct. 4.—Bass have been taken for the last ten days in strings of from ten to twenty-six, averaging two pounds, some as high as three and a half pounds. Potomac and Goose Creek both clear.

SOUTH CAROLINA—Port Royal, Oct. 3.—Quite a number of spot-bass were taken in the river last month. October and November are the best months for bass, sheephead and weakfish. I have taken quite a number of hickory shad (bone herrings) from my little wharf this summer; also, plenty of skip jacks, yellow-tails, weakfish, etc., fourteen different kinds, in great plenty. I never knew there was such a great abundance of fish in the creeks.

ALABAMA—Athens, Sept. 30.—The fall fishing will not be very good, owing to the drought that has prevailed here for the past two or three months. The streams are low and sluggish, making fish unfit to eat, and killing them in some places. There are several very fine streams that abound in fish when the water is high. Near this city, and twelve miles south, we have Swan Lake, that affords the angler a great deal of sport as well as fish.

WISCONSIN—Pewaukee Lake, Sept. 28.—Pickrel, pike, bass, perch and other fish are yet taking the hook, and the fall fishing may be said to be fine.

A RARE FISH.—At Mr. Blackford's we saw some specimens of what is really a rare fish, the *Alburna condrhyus*, or lady fish. Professor Baird states that one or two have been captured at Martha's Vineyard, but none before from the shores of New Jersey. The fish is a handsome one, with red, closely-set scales. It will measure about 18 inches long, and has a sharp head with a flat top. As a food fish it cannot be recommended, its flavor being a trifle rank and its flesh coarse.

HAVING EYES THEY SEE NOT.—The intelligent sporting editor of the Germantown *Telegraph* must have been napping when this item was put into his paper:

"A story is told by a writer in *FOREST AND STREAM* of large trout inhabiting the Kennebec River, several miles from its source, in a deep pool, which are so watchful for the sportsman, as to rise up to the surface of the water, with their eyes above the surface, swinging round slowly to see whether the fisher is thrown into the water mere by human agency! This, indeed, was a common occurrence! But this little story may be put to rest by the simple fact that fish cannot see out of the water—only through the water. Hence, coming to the surface to take a survey of outside objects would be like blind-folding them. Next!

We are next ourselves, and we boldly affirm, from all our experience, that fish do see in the water, through the water and out of the water. Just waggle your finger around a shark's eyes, and "this little story may be put to rest." We don't know about a dried herring or the blind side of a flounder; but most other fish can see. There are scales over somebody's eyes here. Next!

THE OCTOPUS AS A FOOD FISH.—We do not eat horses in New York. They do in Paris. Some day, who King

Rumanka's besieging forces shall invest Manhattan Island the hungry inhabitants may turn them with good grace to their horses, and so follow the Parisian mode in food as they now do dress. It is more than probable, too, that long before the navy of the African monarch shall appear in New York waters, the devil fish will have become a familiar denizen of our harbor; and when at length the siege comes, the daring fishermen of Fulton Market, braving the guns of darksome warships, may possibly open a new avenue of income if he shall capture the once fabulous monster and retail choice bits of his shiny folds for the Friday morning repast of the much-fasting citizens. But the tawny conqueror may never dispatch his armament, and the merits of the still mythical devil fish as an article of food has not yet engaged the attention of restaurants. But the octopus we have with us, and it is not at all improbable that the price of that now neglected dainty may yet be quoted in our market reports. Some day possibly the octopus may displace the delicacies of to-day, and soft words of love may be whispered into the ear of the fair one with telling effect when her palate has been tickled with a choice bit of octopus arm served *a la St. Heller*. At least such may, we believe, be the approved mode of courtship in vogue in the Isle of Jersey. There are better, as well as bigger, fish in the sea than were ever caught out of it. The Jersey folks and the dwellers of the Mediterranean have at least shown that the octopus is susceptible of very satisfactory culinary treatment. The St. Heller fish market daily receives, in the season, huge basket after basket filled with slimy, hideous and repulsive masses of arms, eyes and bodies, which, by the continual jolting, become transformed into one indistinguishable gelatinous mass. Octopus fishers simply turn over stones and rocks at low tide with iron hooks, dislodge them from beneath the boulders, or with a few crabs and a piece of twine, allure the prey to the surface of the water and gather them in with a scoop net. Many rare and savory dishes are made, and octopus, boiled, stewed or fried, is deservedly a favorite article of diet.

—The guests of Mr. John Sutherland, the caterer, have been interested in this week in viewing a great stuffed huge, weighing forty pounds. The fact that it took one of Abby & Imbrie's dented trolling spoons may be taken in evidence that it is the only fish of that size which are taken with those spoons—or it may not.

Rational Pastimes.

THE AUSTRALIAN CRICKETERS.

PLAY in the match of the Australian Eleven and the New York Eighteen was resumed Wednesday morning, Spofforth going on again and the innings being completed with 98. The bat of the day was made by Marsh, lifting Garret over the Australian quarters for six.

At 1:30 the brothers Bannerman opened the second inning for the Australians, maidens and singles being the rule for some time. The play was concluded without remarkable feats on either side, the Australians winning the game by a score of 163 to 161, with five wickets.

The Australians went to Philadelphia Thursday, and the game with the eleven of that city began at 12:30. The Philadelphians selected were J. Hargreaves, T. Hargreaves, Brewster, D. Newhall, O. Newhall, H. Newhall, G. Newhall, Caldwell, Hopkinson, Comfort, Meade and Allen. The Australians went into the field, and Messrs. John Hargreaves and Brewster going to the bat, opened with singles, then played more freely and ran the score up to 28, when Hargreaves returned a ball to Spofforth and retired. Charley Newhall, succeeding him, was soon followed by Robert Newhall, whose remarkable inning was the feature of the day. Being soon joined by George Newhall, the two ran the score up to 73. Caldwell and Hopkinson succeeded Robert Newhall, making the score 119. Dan Newhall then joined his brother, and for some time the two held the bat. Bob Newhall, having maintained his inning for over two hours, finally retired with a score of 84. The further progress of the game will be seen from the scores subjoined.

The game was resumed at 11 o'clock the following day, and the American team displayed the same excellent playing in the field they did in the last. Bannerman, the Grace of Australia, was soon disposed of, Spofforth shortly afterward following and going out on a ball from C. Newhall into R. Newhall's hands, the third wicket falling with a score of 17. The excitement among the spectators culminated when, with Captain Gregory at the bat, the fourth wicket went down for only 20 runs. Murdoch and A. Bannerman did good work, keeping their posts from 12:15 to 1:45, running up the score to 47. When the fourth wicket was down, and the two men, Boyle and Allen, went to the bat, two runs were yet to be made to save the Australians from following their wicket.

The concluding day of the match was a notable one in American cricket annals. Never before had such a throng of people gathered to witness a game in this country, nor has a game been attended with such universal interest. The play was marked by excellent fielding on the part of the Australians, who at one point in the game, not accepting the umpire's decision, retired from the field. Not only was this in violation of all cricket rules, but the action had a most depressing influence upon the Americans, and poor batting followed. The fourth wicket had fallen for 19 only, when Dan Newhall had opened with a leg hit, and he had Caldwell for a partner, when in playing forward to a ball from Allan, the ball went into Blackham's hands, and the bats were lifted. Dan put his bat down. It was a question for the umpire, and he only to decide, and he gave Dan in; but Blackham assumed the duties of umpire and decided him out, and as Braun would not coincide, the Australians became indignant, and after a brief consultation, they, at the call of Mr. Conway, withdrew from the field and refused to play unless the American umpire was withdrawn. An hour and an hour and an hour of discussion went on as to the merits of the case, pro and con, but few regarding the occurrence other than with feelings of painful regret and as very bad precedent for cricket in this country. The two captains had "a talk" over the matter, and Mr. Newhall's ultimatum was that if the Australians withdrew

Mr. Freeman, who had given just as questionable a decision as Mr. Braun in a similar stumping case, they would withdraw Mr. Braun, not otherwise. This was put to a vote of the team, and through Mr. Spofforth's influence it was decided by a majority vote to take the field with the same umpire. The subsequent progress of the game will be seen in the subjoined score:

THE SIX DAYS' WALK.—The six days' walk for the long-distance championship between Daniel O'Leary and John Hughes, at Gilmore's Garden, this city, was concluded Saturday evening at 11 p. m. The result was an easily earned victory for O'Leary. The career of his rival was a checked one. His movements were decidedly erratic, there was no display of the first characteristics of a lasting pedestrian, and as a contest of skill the whole exhibition was a miserable failure. Hughes began the contest by running, and the subsequent progress made by him was the result of a series of when opposed to the determined method of O'Leary. The latter had behind his walk the abiding strength of moral stamina, and the "piston-like" movement of his stride was sure to bring him out ahead of his clumsy, slouching competitor. During the concluding hours of the walk the vast throng of spectators kept up a continual cheering, which reached its height when O'Leary was presented with a medal, and finally made a triumphal march about the Garden through the lanes formed by the crowd. Hughes made sporadic spurts during the evening, finally retiring before ten o'clock. There was from the first a very large attendance of sight-seers, the receipts for the week amounting to more than \$15,000. The following is a summary of the walking done by the men in each twenty-four hours:

	O'Leary.	Hughes.
First twenty-four hours.....	103	89
Second twenty-four hours.....	72	59
Third twenty-four hours.....	69	59
Fourth twenty-four hours.....	76	71
Fifth twenty-four hours.....	59	28
Sixth twenty-four hours.....	31	7
Total.....	403	310

ROBIN HOODS VS. WILLIAM TELLS.—*Titusville, Pa., Oct. 7.*—Match for the championship; 40 yards; 30 arrows each.

Robin Hood.		William Tells.

Orlo Marsh.....	89	August Eastland.....	57
George Farrell.....	50	Dyron Porter.....	75
Total.....	226	Total.....	223

ARCHERY AT THE INDIANA STATE FAIR.—At the late State fair at Indianapolis, Ind., a novelty among the features of the fair was an archery contest. The Kokomo Archers and the Wabash Archers were represented by skillful members. The shooting was at a regulation target with nine inch gold, counting nine; a four and a half inch red ring, counting seven; a four and a half inch white ring, counting five; a four and a half inch black ring, counting three; and an

outer white ring, four and a half inches, counting one, making the target forty-five inches in diameter. The first match, thirty arrows at each distance, was as follows:

	60 yds.	50 yds.	40 yds.	Total.
Will Ganso.....	65	108	150	323
John A. Boos.....	90	101	242	433
Charles Leach.....	74	118	176	368
Will Brewer.....	93	149	159	401
C. A. Jay.....	105	113	165	383
Theo McMecham.....	85	123	187	395
W. A. Russell.....	66	135	121	325
Will H. Thompson.....	121	204	214	539

Will H. Thompson won the first prize, a fine gold medal; John A. Boos the second prize, a fine silver medal; Will Brewer the third prize, a silver cup; Theo McMecham the fourth prize, a fine set of arrows. After this there was a splendid contest between the "Kokomo Archers" and the "Wabash Merry Bowmen," which was won by the latter club by the following score, each archer shooting 30 arrows at 40 yards.

KOKOMO ARCHERS.	
Will Gause.....	142
Charles Leech.....	150
C A Jay.....	157
W A Russell.....	176
Total.....	625

This prize was a magnificent gold badge valued at \$50, offered by Mr. Pfingst, of the Grand Hotel, to the best club in the country, open to all. At the close of the shooting a superb bow of rosewood, backed with fancy wood, was presented to Mr. Thompson, because of the unparalleled score made by him at the 50 yard range. Immediately upon the close of the shooting the Kokomo Archers challenged the Merry Bowmen for a second contest, to take place by the 26th, Will H. Thompson to be barred, which was promptly accepted by the Crawfordville club.

SCOTT HILLS ATHLETIC CLUB.—The opening games of this club were held at Milburn, N. J., last Saturday. There were a goodly number of contestants and spectators, and the programme passed off most successfully. The contests were as follows:

One hundred yards handicap.—Nineteen entries; won by E. H. Reynolds, 7 yards in 10s.

One mile handicap walk.—Six entries; J. J. Calbertson and J. Gibbons, who finished first and second, were ruled out under rule of cautions, and C. S. Lewis, 55s., was pronounced the winner, 7:56 actual time, P. Noel second.

One mile run.—Three entries; T. H. Smith won in 4m. 49 1-5s.; C. H. Rowland second.

Running high jump.—Won by W. R. Deers, 6ft. 1in.

Two hundred and twenty yards handicap.—Won by P. O. Farley. In the 150 yards dash W. C. Wilmer, Short Hills, A. C.; F. C. B. Bortas, Harlem A. C., and J. B. Vaino, Elizabeth, contended. Won by Wilmer in 15:2-5s.

Half-mile handicap.—Thirteen entries; won by Pierre Noel, 45 yards.

Running broad jump.—W. C. Wilmer won with 10ft. 5in.; H. Inman second.

Four hundred and forty yards hurdle handicap.—Nine entries: W. Vinkey, Jr., won in 1m. 1-5s.; E. J. Haigh second.

Tug of War.—Scottish-American A. C. team defeated the New York A. C. team.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

J. H. D., East Chester, N. Y.—See our game columns.

J. A. D., Warsaw, Ill.—Thanks for your communication.

C. L. R. W., Bedford, N. Y.—Write to Charles Prior, Provincetown, Mass.

F. C. A., Buffalo.—Cost of advertisement for four months, \$30; for one year, \$60.

E. A. M., Broadhead, Wis.—Have answered your question in full in issue of Sept. 26.

H. N. T., Abilene, Kan.—See answer in our last, stating that pelican are not confined to the sea shore.

G. N. B., Delphos, Kan.—The best thing for carrying wads is a belt which allows the heads to go down into it.

CARIBOU, Montreal.—We are assured that our correspondent did not intentionally disregard the game statutes.

J. W., Houston, Texas.—The gunmakers you inquire about can turn out as good work as Grant, and finer than Boss.

J. B. T., Atlanta, Ga.—Articles on boat building are not yet published in book form, but probably will be this winter.

G. L. F., New Orleans, La.—For the "Tight Shell" and companion chromo address Chas. Zimmerman, St. Paul, Minnesota.

ROBIN HOOD, Tusculum, Pa.—For a 30 yds. archery target the bull's-eye, or "gold," should be 4in. diameter, and for a 100yds. target 9in.

J. W. R., Georgetown, D. C.—The cheaper guns of the firm you mention are reliable. You will find an 8½ or 9½ lbs. weight a very good one.

G. N., Philadelphia.—We think you will find satisfactory quail shooting about Port Jervis, N. Y. See our answer last week recommending Virginia.

NIRSY, Troutman, N. C.—According to the copy of the laws of your State, which is now before us, the law referred to by you does not apply to your country.

S. K., Jr., Yarmouth, N. S.—Renforth died in his boat while pulling against the St. John crew for the world's championship on the Kuncas, beccasis, not at Halifax, as reported.

G. S. P., Lynn, Mass.—Good quail shooting in Western New England will be found about Waterville, and Watbury, Conn., among the Berkshire Hills, and around Pittsfield, Mass.

G. W. M., Augusta, Me.—The best special work on fish culture is Livingston Stone on trout raising. General information had better be derived from U. S. Commissioner's Reports.

E. A. M., Broadhead, Wis.—Must for a boat 16x3½ ft. should be about 1½ ft. long and 1½ in. in diameter at thwart. Sail should be of light drilling, and contain 90 sq. ft. See our other answers on this head.

OLD SPORT.—The house of Turner & Rose, of Boston, are not known to us except by advertising agents, and we have declined their advertisement.

elements. We know nothing of their responsibility or quality of the guns they offer.

E. L. F., Histon House, La.—Would not advise you to use a Spencer, when, for repeating, you can get a Winchester for \$50 much better. Buy a .45 cal. People in Pittsburgh like reliable. Your subscription ended May 5, of this year.

COLLIER B., Princeton, N. J.—In addition to supplying fish ponds with minnows and the like, fish-culturists plant these grasses and weeds upon which larvae are bred, and so increase a deficient supply of food as well as of oxygen.

CUTTER, Oswego.—The iron cutter *Index* was built at Chester, Pa. in 1877, by Reaney, Son & Archbold. She was not in commission this season. The *Poland* has three and a half beams to her length. She is 40x12ft. Has lead on her keel.

D. T., Baltimore, Md.—James Everson, of 488 First st., Brooklyn, E. T., is the only builder of *Rhodes* canoes. Write to him, and mention our name. For outfit for canoeing and camping address W. Holberton & Co., 117 Fulton st., New York.

GREENONE, Brooklyn.—My 10 bore, 5¼ lbs., gun puts in from 210 to 220 No. 8 shot in a 30in. circle, 40yds, 8½ ds. powder, 11-16 oz. shot. Shall I choke it? Ans. The gun gives good execution; we would advise you to let well enough alone.

M., New Rochelle, N. Y.—The bird is a cheviot, otherwise called marsh robin and towhee bunting. It is common in Eastern United States, and inhabits thickets, underbrush and briars, and spends much of its time scratching among the leaves on the ground. It is migratory.

KEE WEST, Manchester, N. H.—What is the killing or effective range of a good 12 gauge, 23in. barrel, double-barreled breech-loader, with Nos. 10, 5 and 4 shot respectively; 8½ ds. powder, 1½ oz. shot? Ans. 35 yds. for No. 10, 50 yds. for 8, and thirty yds. for 4. Load heavier for heavier shot.

A. P. V., New York.—What is the proper quantity of Spratt's Dog Biscuit to feed my setter while not in use, feeding once a day? Ans. Three biscuits at the outside, fed dry; but we should vary the diet at least twice with a mess of boiled food, containing vegetables, meat and meat.

PADDY O'LEARY, Ashbyesburg, Ky.—Paper shells are the most convenient; metallic the most economical. Shells should be full length of gun chamber. Your gun is reliable for small charges. Toreload brass shells you will need a loader, block, extractor and recapper. They may be had of our advertisers.

G. F. A., Fishkill.—I have a —breach-loading gun, 12 gauge, 27 in. barrel, cylinder bore. With 1½ oz. No. 9 shot can put from 270 to 294 pellets in a 30 in. circle at 40 yds. Is not that a fair target, and is this make a good one? Ans. A wonderful target if your figures are correct; gun in good repute.

L. N. B., Honesdale, Pa.—My setter bitch is lined by a cur. Will come in about two weeks. Will it injure her to drown the pups as soon as born? What shall I do? Ans. Rubbing, and drawing the milk, if necessary, prevents caking. Castor oil should be given, and may also be used externally on the teats.

J. R. T., Philadelphia.—I use a 12 gauge Moore, of London, 30in. barrels. Have thought of charging one barrel with ball and the other with shot. Is this good for anything? If so, what size ball should I use. Ans. Use a No. 10 ball, and load heavier than for shot. The idea is not novel. You may get fair results.

J. J. A., Lawrence, Mass.—Your dog is suffering from impoverished blood and general reduction of the system. Give him ten drops of Fowler's Solution of Arsenic morning and evening, and each day a pill containing two grains each of quinine and citrate of iron. Give him plenty of nourishing food, but very little meat.

R., Pittsburg.—Is not the —about the best for a Stephen's breech-loading shotgun? What is the right charge of powder to kill rabbits, quail and pheasants from said gun? Will Eaton's Rust Preventer take rust from a gun after it is once on. Ans. 1. Excellent, 2. 3 grs. powder, 1 oz. shot, 3. No, but it will prevent rust increasing.

J. B. W., Wilmington, O.—You will find De La Plaine, Greene Co., a first-rate centre for sport in Arkansas. It is reached via the St. Louis, Iron Mountain and Southern Railway. You can hardly go amiss in the State. Knapp and Van Nostrand are reliable game dealers in New York. Fine grained powder burns quicker than coarse grained.

A. B. P., Norristown.—What is the proper charge, powder, shot and wads, for a 11-gauge, 30-inch muzzle-loading gun for rabbits and partridges, and what would be a good pattern at 40 yards, 30in. circle, for such a gun? Ans. 3½ ds. powder, 1½ ozs. No. 8 shot, one pink edge wad over powder, and one pasteboard wad over shot; 180 pellets would be a good pattern.

SLUGS, Marquette, Mich.—You cannot shoot shot from a rifle with any satisfactory result, as the shot will catch the riding and go off in all directions. We use the globe and peep sights to feign through; some people might use them to load with. Your gun fair; out of the market now. For slugs, .44 cal., use 70 grs. powder.

M. N., New York.—I intend going to Indian Territory next June and July for a couple of months' shooting. Is that a good time of the year? What game is to be found there? What part of the Territory is the best? Ans. The best time for hunting is in Feb. 1. For best localities see Hallowell's "Sportsman's Gazetteer," 900 pages, \$3. Deer, turkeys and prairie chickens.

C. T. J., Jr., Leverington, Pa.—The name you mention is not that of a maker; it is simply a trade-mark. Allot the genuine Greener guns have "W. W. Greener" stamped on the locks, and "W. W. Greener, St. Mary's Works, Birmingham, England," on the barrels. The guns purporting to be Greener guns, marked simply "Greener," or otherwise than as mentioned above, are frauds.

NON-RESIDENCY, New York.—It is my desire to get a few days' quail shooting in Monmouth Co., N. J., some time during the month of November. Not being a resident of that State I would like to know what steps to take in order to procure a license to shoot under the new law covering such cases. Ans. Address Richard T. Miller, Sec. West Jersey Game Protective Society, 160 Market st., Camden, N. J.

YIMMINAN, Norfolk.—The best system for measuring cat-boats for time allowance is on the water line, from forward side of stem to after side of sternpost; or, if the boat has an immersed counter or portion of the hull abaft the post in the water, measure to point of intersection of such part with the water. Plumb up the two points, and measure the distance between them with a tape-line or piece of acousting.

W. G., Ithaca, N. Y.—Dixon Kemp's "Yacht Designing" costs \$35; "Yacht and Boat Sailing," by same author, \$10. Can procure either for you on receipt of order. 800p-yacht. *Yazoo*, formerly owned by Mr. Livingston, of Staten Island, was modeled by Bob Fish, built by Amberton Bros. in Philadelphia, 1871; sails by J. M. Sawyer, of New York. Length over all, 51ft. 1in.; water line, 44ft. 11in.; beam, 16ft. depth, 5ft. 6in.; draught, 4ft. 4in.; with centreboard, 1 ft. 6in.

I. C. J., Tusculum, Ill.—My Gordon setter pup, four months old, appears to be in great distress at times. Vomits large quantities of worms. Is she coming down with distemper. What shall I do for her? Ans. For worms give one grain castor oil for three successive days, followed by a tablespoonful of castor oil. Give the puppy also a Dover's Powder night and morning. Careful nursing and warmth may pull her through the distemper if the Dover's powders are given at once.

C. H. C., Newark.—In a race where both judges and referee are appointed, the latter decides upon any disagreement between the judges. If these, however, are unanimous in their decision, the contestants cannot appeal to the referee. Only in the event of the judges disagreeing can the referee give a final verdict. Custom has established this; there is no written law or authority in its support, but in the appointment of both judges and referee a tacit understanding exists to this effect.

PORT TACK, Belleville, Ont.—Write to Mr. Thos. Dean, Secretary Boston Y. C., Boston, Mass, and state your capacity. He will, no doubt, comply with your request for a club book. Time allowance is based upon the size or dimensions of yachts, and no difference is made on account of their having cables or not. You will find excellent time tables in the club book referred to. Such tables have been brought to much greater perfection among our Eastern yachtsmen than in New York waters.

W. S. B., New York.—I have a rifle, .44 cal., 95 grs. powder, 355-gr. ball. I wish to use it as an off-hand gun, but the recoil is too great for my nerves to be comfortable, and cork or wads are a nuisance. I have thought that if I could procure a clean powder, and much weaker than the Fg. rifle powder, I might be able to all my shells and avoid this trouble. Ans. We could not give you any powder that was less effective. Instead of loading with 90 grs., use 65 grs., mixing your powder with dry sawdust to get the bulk in the shell.

B. H. T., Helena, Mont.—In the rifle match, of which the score is given in another column, the first prize should have been awarded to Bash, because he had no losers; the second to Allen, because of best score in inverse order of shots; third to Hewin, because of fewer losers than Oldham, who took fourth. This award is made in accordance with rules of N. R. A., which are published in another answer to-day. Had the shooting been "class shooting," those who made scores of 41 would have divided or shot off for first prize; those making 40 second; 39 third, etc.

J. T. N., Baltimore.—1. For a dog troubled with fleas would you prefer the use of flea powder such as advertised in your paper, or the copious use of good and pure carbolic soap? 2. What is the best bedding for a dog this season and later? Ans. 1. The copious use of carbolic soap is about as bad for a dog as anything well could be. An occasional washing is well enough. The flea powder is better, followed by a good washing with any kind of soap, squeezing the soap to dry on, and subsequently washing in white oil soap, and so on to dry. 2. Pine shavings or clean wheat straw, to be changed once a week.

L. C. G., Homosassa, Fla.—If your yacht rolls very badly before the wind, "wing" her ballast as much as possible—that is, stow it out to the sides. The fault lies in her construction, and the only advice we can give you is to experiment with her ballast. It is a difficult matter to remedy a roller. Scrub sail with fresh water or soap, then scrub over with soap and sprinkle or rub whitening on it; allow it to dry and bleach in the sun, and repeat, if necessary. Treat both sides. Do not use chloride of lime or caustics or acids, as they rot the canvas. If you use chloride of lime only the clear liquor should be allowed to touch the sail, then rinse well.

H. H. R., Rockford, Ill.—My setter has a disposition to sleep, and will drop down the moment I stop to speak to a person, or stop for any reason. Very little running will cause him to pant very hard. When walking spreads his legs far apart, and curves his back up. His seams in pretty good spirits, and eats well. Ans. Your dog has inflammation of the bladder, probably the result of high feeding. Reduce his food, and give him cooling food with plenty of food of boiled vegetables. Give him twice a week, ¼ oz. sulphate of magnesia and 10 grains nitre as sufficient water to dissolve. If this treatment does not cure him give him each day one or two capsules containing balsam of copalva.

J. W., Cleveland, Ohio.—If you propose using the "skip-jack" for sailing altogether or chiefly, would advise greatest beam, say 16ft. long and 6ft. beam. She will require either a centerboard or keel, not both. For ballast use old iron—grate-bars and castings. Stow it as low down on the bottom as possible, and secure it so that it cannot shift. The amount will be governed by the depth you wish your boat to draw, and is best obtained by experiment when launched. For a cat-rig make sail 1½ ft. on foot, 10ft. hoist, 5ft. gaff, and 15ft. on leach; mast 1½ ft. above rail, 5in. thick at deck, and stepped 1ft. from bow; centerboard, 4ft. 9in. long, 2ft. wide f'ward, 2½ ft. aft; or a keel, 6in. deep aft, and 4½ ft. forward. Round off the forward end or forefoot.

R. K. J., Jr.—1. I want to get a gun for glass-ball shooting, partridge, duck, squirrel, etc. What bore (choke or modified), gauge and length of barrels should I get? I want an 8½ in. gun. What shells 1-15 in. shorter than chamber of gun impair shooting? 3. What is the price of Dittmar powder? 4. What is the price of Eaton's Rust Preventer, and from where can I get it by mail? 5. What color is tan? 6. Is the tan as good as any other for the same price? Ans. A No. 12, 28 to 1in.; left barrel moderate choke for glass balls, the other plain. 2. Yes impair shooting, though very slightly. Shells ought to fit exact. 3. \$1 per pound. 4. 25, 60 and 75 cents. Cannot be sent by mail. 5. Color of tan, bark. 6. Yes.

A. S., Battery E., San Antonio, Texas.—Can you give me any information about the Ottawa or Grand River, Canada? I would like to know the length of the river, how far it could be navigated with a wooden boat, or whether it would take a canoe on account of portages. Also, what kind of fur game is there in the country? Where can I get map or any book describing the country? Ans. For map of Ottawa River address James Campbell & Sons, Toronto, Canada. The river is possibly 800 miles long, but trappers and sportsmen seldom go above Round Lake near Eganville, 116 miles from its mouth. It is navigable for canoe to its headwaters. For special information see Hallowell's "Gazetteer," published at this office, price \$3, postage paid. For game in great variety.

A. B. P., Norristown, Pa.—In an annual report of the matches at Creedmoor, under the N. R. A. rules, I find two scores that are tie in points: A, 4 4 5 4 3 4 4 5 4—41; B, 4 4 4 4 4 5 4—41. Is there not a mistake in point of order of merit? Which of these two scores is best under the circumstances? C, 4 4 4 5 4 4 5 4—43; D, 3 5 4 4 4 4 5 4—43. Ans. These scores are a tie in total number of points, and in number of bull's-eyes, centres and inners. The top score, counting inner-eyes, is the best. In the second series, the first score is the best because it has no inner. The N. R. A. rules: "The shall be decided as follows: 1. When the firing takes place at the same time, distance, by the score made at the longest distance, and if still a tie, and there be three distances in the competition, by the score at the second distance; 2. by the fewest misses; 3. by the fewest errors; 4. by the fewest inners; 5. if still a tie, by inverse order of shots, counting singly from the last to the first; 6. by string single shots at the longest range."

THE FUTURE OF THE PALMA.

NOW that the walk-over match has been gone through with and the fact demonstrated that there has been no retrogression in the ability of our small-bore experts, it is time to look at the question of the International match in all its bearings, and consider whether something should not be done if the series of matches is to continue. Under date of Sept. 21 John Rigby writes from Dublin and takes bold, reasonable ground in speaking of this very topic, and when this leader of the enthusiastic Irish marksmen says, "I must confess that I see no stirrings among our riflemen to indicate an intention to face the burning sun and puzzling fish-tails of Creedmoor in 1879," it should be taken as the warning note to the managers of the Palma on this side of the water. When the enthusiastic inaugurators of the series of international matches grow so despondent in face of the conditions which have been tacked on to the Centennial trophy the idea may strike the Directors of the National Rifle Association that a few more reconsiderations of the conditions may be of service. The Directors in question have been most generously treated by the public at large, but a few more blunders in the long chapter of them in the history of this trophy and the Directors may find themselves called to account for all. When the popular subscription placed this fine trophy in the hands of the N. R. A. it was with the understanding that the trust was to be intelligently executed. It certainly will not be so carried out if after a couple of gallant attempts on the part of our British and Colonial cousins to wrest the honors from us, the whole affair should be permitted to fall into a decaying neglect. Sir Henry Holford echoes the opinions of "the Irish Bodine," and he speaks as the accredited representative of the National Rifle Association of Great Britain. These opinions were written before the walk-over of the 25th and 26th ult. was performed, and that when known abroad in its significance and in its figures can only add the more point to their objections to tempt defeat again at Creedmoor. The Palma was intended to be a popular badge of battle, and the public stand ready to give a generous support to anything approaching a real test of skill and strength, but to such tame affairs as a walk-over the experience of the past fortnight shows that nothing but neglect can be expected. A few more such pantomimes and the life will be crushed out of the Palma.

The Directors have quietly taken the trophy entirely under their wing, and the Boston team who went through the dumb show of September will find they have only acquired the right to put the bauble on show in a Boston shop-window, or stow it away in a Boston safe-deposit vault. This move was, seemingly, a very clever one, but it remains to see whether it was a politic one. What is needed is not restriction, but freedom. In place of narrowing down the conditions they should be amplified, and made so broad and liberal that each year should see a match fought through with the keenest zest. It is a ridiculous notion to suppose that the range at Creedmoor will sink into insignificance if the Palma match is not contested there; whereas, the prospect now is that one will go down with the other. John Rigby strikes the "best possible cartoon" on the matter when he says: "To insure an annual contest, and to make the Palma a truly international and not merely a Creedmoor trophy, it is only necessary to revise the rules with a view to locating the match in Europe on alternate years." This is a confession of weakness on the part of the Irish riflemen by their great leader, and as such must be highly flattering to the American riflemen. Mr. Rigby may put the ground of his plaint on the expense and difficulty of sending a team across, but if that team, picked from among thousands of rifle users, were the experts they conceived themselves to be the Palma would not now be resting in possession of the country which first offered it. The British riflemen had for years given the world to understand that as riflemen they were invincible. They were taken at their word by the rest of the world, and before America had fired a long-range shot she was taunted to a test, stood it successfully, and now when the best efforts to overcome her have failed, those who had been champions when there were none to oppose now beg for more favorable terms. The question now is can America afford to give these terms. Surely if the action of the Directors in amending one portion of the conditions is legal they possess the power to go further and make the amendment which Mr. Rigby suggests. It would be in every respect politic, for it would revive interest, where now it is dying out, and rouse the popular feeling to the points seen in '75, '76 and '77, when the struggles were real and not simulated. We have yet to find an American rifleman who is willing to express a fear that in a fair field and an equal fight, in America or abroad soil, they would suffer defeat. Putting the matter then on the low ground of seeking to preserve an undue advantage, there is nothing to dread in going upon any range the world over and proving our ability to hold the Palma against all comers. We have a right to be boastful, for should defeat be in store for us what has been done is enough to stamp our marksmen the equals of any. If we are to suffer a break in our series of victories we have at least the satisfaction of knowing that in men and rifles, system and position we are far in advance of what the British champions of five years ago ever dreamed of. America can afford to be generous in this matter. She can do more and be just. She can meet every demand which the British riflemen, smarting under defeat, can make upon her, and then, when the new line of victories shall be ours it will be time enough to cast about and meet the fresh difficulties which may then arise.

Now is the time to fix upon the course to be taken for 1879

and succeeding years. It must be patent to all that the contest is to be one for years to come between Great Britain and America. A conference between the representative riflemen of those two countries could now, in the light of past experience, draw up a model code of procedure for the matches of the future. Do it at once and 1879 will witness another great battle of the butts. Neglect it and another walk-over, even tamer than the last, will come, while the present eagerness of the transatlantic shots may be turned to apathy and years pass by before the subject be revived.

THE CHAMPION SCULLER OF AMERICA.

THE great race has been rowed, and to Hanlan, of Toronto, falls the title of "Champion of America." Those of our readers who followed closely the columns of the *FOREST AND STREAM* will have no cause for regret at the issue, so far as they are personally concerned, however much their laudable patriotism might make them wish for a different ending to the match at Lachine. Courtney, of Union Springs, is a powerful sculler; it takes a good man to hang as he did to the like of Hanlan, but it is equally certain that the latter had a large reserve to draw upon and that he rowed, for his own purposes, a "waiting race." He pulled hard, but never did his best. It is one of the characteristics of this quiet, unassuming Canadian, that he holds back and does not show what he can do unless there is need of it. In none of his former races with much lighter timber than Courtney has he done his utmost. "Hold your man, near the close give him a twist," that seems to have been his maxim in all the many races he has pulled during the season. The plan worked well, for while "Charley" was industriously pulling races in the daily papers, challenging everybody and meeting only rustics of the Dempsey stripe, defeating Hanlan over and over again with very much confidence on paper, if reported interviews with him are to be credited, the wiry Canadian was filling his backers' and his own pocket with shekels and coins gathered industriously from all comers in the United States and across the border. A good sculler he was, every one granted; few suspected the full extent of his powers, for he found it policy to keep them shady and bide his time. Bide it he did. His friends caught Courtney and his backers over-confident, wheeled them into a race on rough, strange waters, over a tideway, put the whole pot on the winner, and kept their man in the dark. A willier game, legitimate though it was, has seldom been played. Courtney's wonderful confidence held well on paper to the last minute and, after hardly half a dozen spins over the course, he found himself face to face at the start with a man of whose real capability he and his friends knew nothing at all. Hanlan, in a very business-like way, disposed of his adversary and can do so over again any day and on any water you may select. It is certain that the rough sea affected Courtney somewhat, but it is equally as certain that the Toronto lad had plenty of wind and muscle to spare, and if Courtney's backers are blind enough not to see this they will find their man pulling a stern chase again. To be beaten by such a sculler as Hanlan has shown himself to be is no disgrace; to hang to him as Courtney did is an honor few or none can claim.

A great deal of noise has been made, by those too ready to judge others by themselves, over the presumed dishonesty of one of the contestants. At this day, when the race is a week old, not a single particle of tangible evidence of any dishonest action has come to light. Insinuations, plausible generalities, plenty; but nothing that would stand as evidence in court. These rumors can be traced to the gambling fraternity in the first place, the sensation and gossip mongers in the second, and finally to those in whose eyes dishonesty seems more readily borne than defeat. The race was beyond doubt an honest one and well fought from beginning to end. Whatever we may say in mitigation of Courtney's defeat we are not blind to the fact that he was actually overpowered by Hanlan and that the latter had him well in hand throughout the course. The championship has gone to the best man in America, and we opine it will be a long while ere any one wrests it from his safekeeping.

THE GLADIATORIAL SHOWS IN NEW YORK.

THE result of the O'Leary-Hughes walk at Gilmore's Garden was from the first a foregone conclusion. It was a hopeless struggle of over-weening confidence, brute endurance and senseless expenditure of strength pitted against intelligent and scientific effort. Nothing save certain defeat could have been predicted for the man who began a six days' contest by running like a deer for the first few hours, drinking immoderately at first of milk, and later in the contest, evading the vigilant eye of his trainer, swallowing his champagne and tumbling into a drunken snore from which he sullenly refused to return to the track. Such escapades would be fatal to a cast-iron "pedestrian's" record, even when offset by the strange enmity displayed by Hughes toward his rival and the loudly-vaunted resolution to "hate that O'Leary or die on the track." It was something worth while to see the methodical, systematic work of O'Leary. Every stride had the regularity and precision of a machine. We do not wonder at the plaudits showered upon the champion as he went on and on around the track, nor at the ovation he received when his task was completed.

But we protest that the spectacle of his opponent was painful; it was disgraceful. Had a galled and jaded horse been urged by blows about the ring in Gilmore's Garden the agent

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 9332.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the *FOREST AND STREAM* for one year.

NEW YORK, THURSDAY, OCTOBER 10, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the *FOREST AND STREAM PUBLISHING COMPANY*. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Western Manager.

THE AMERICAN CRICKETERS.—The typical American is not given to under-rating his ability in any contests of skill with foreign competitors. But there was a curious lack of confidence displayed in our cricketers who had been selected to meet the Australians. However commendable such a modest estimate of the prowess of America at the wicket, the results of the New York and Philadelphia games have done much to reassure the faint-hearted. The Philadelphians surprised themselves, their friends and the Australians, and drew from their opponents words of well merited praise. The Germantown grounds were the centre of intense interest last week. We look for a greater popularity of this admirable gentleman's game.

THE WALK-OVER.—A correspondent asks whether the work of the American team of 1878 was really a walk-over. The conditions require that a team of eight men shall fire over the 800, 900 and 1,000 yard ranges, thirty shots at each range, equally divided over two days. This would make a total of 720 shots, whereas but 703 were actually fired, whence our correspondent concludes that as the course was not covered it was not a walk-over. Perhaps some member of the team of 1877 may find an argument upon this when called upon to surrender the Palma.

THE NEW HAVEN STEAMBOAT LINE.—The great steamboat *C. H. Northam*, recently restored, and two weeks ago replaced upon the New Haven Line, is probably the staunchest and best appointed steamboat in the world. Her accommodations are most luxurious, and hundreds daily make the round trip from this city to New Haven simply to enjoy the delightful experience. She leaves at 3 p. m. of any given day, and is back to her New York wharf by 5 o'clock the next morning, giving three or four hours' visit in New Haven. Capt. Bowmes commands, and Horace Clark is the clerk. Both gentlemen have been steadily on this route for several centuries, or at least as long ago as we can remember.

of Mr. Bergh would promptly have interfered and public sentiment would have sanctioned the interference. The only difference in this case is that here was a reasoning being, who, as such, of his own free will and for the sake of cheap notoriety and more substantial greenbacks chose to inflict the torture upon himself, and people chose to go and witness the exhibition, and cheer as the old Romans cheered their gladiators. And a sorry figure he cut, as with blistered feet, and sore, stiffened and rheumatic joints, he went limping around the track like the hero of the nursery rhyme,

—My son John,
One shoe off, the other shoe on,
every movement of his body accompanied by a grimace of pain.

We fail to distinguish between brutality in pedestrianism and brutality in prize-fighting. The "mill" is the disreputable, recognized test, not of skill, but of endurance. The man who has the most bull-dog in his make-up, and can stand the most pounding, gouging and biting, is the winner of the belt and the plaudits of the ring. The performance of "The Lepper," as his friends dub him—and we take this performance as Gilmore's only as an example of many similar "shows"—was little more elevated or elevating. It was a test simply and solely of how much punishment the so-styled pedestrian could endure. There was a difference in degree only, not in kind, from the old-time gladiatorial exhibitions where the brute and human performers in the arena edified the effeminate youth of the Roman Capital. It belongs to the category of cock-fights, dog-fights, bull-fights and prize-fights. There is about these contests none of the ennobling influences attaching to the generous rivalry of true sport; they are, on the contrary, unmanly, debasing and reprehensible in the extreme.

A "Society for the Prevention of Self-Inflicted Cruelty to Idiots" would be a most useful organization; its initials would be as numerous as those of the S. F. P. C. A. and its field equally extensive.

APPLES AND ORANGES.

IT WAS not a difficult feat for Ali Baba, with his *Esamee*, to gain admittance into the cave of the Forty Thieves; nor is it hard for a man or woman to find their way into the columns of a newspaper, provided their communication bears with it the magic *Esamee* of sterling good sense. The subjoined bit of reflection from an observant lady will answer the inquiries of a host of young men who are constantly writing to newspaper editors to know whether or not they shall emigrate to the South, or the West. "Would you advise a young man to go to Florida?" "Shall I go into the orange business?" These are the oft-repeated queries, and our reply may be found substantially expressed in the following letter. If a young man goes to Florida because he is too lazy to care for a farm at the North, he will, in all probability, come back in as sad a plight as did the man who gained some notoriety among the paragraphers last winter because he returned from that sunnycime on foot, clad in a hat, shirt, pair of pants and one suspender. The conditions of success in any part of the world in these days, are—barring the golden spoon—honest, faithful work. If a man lack these essentials, energy and thrift, at the North, he most certainly will not find them in the climate of Florida. To the kid-glove dreamer of dreams it is a suggestive fact that orange trees have thorns.

The apple of the North and the orange of the South are *par excellence* the two fruits of America. Their merits have been sung in verse and told in story. Prossic statistics tell us that the apple crop of last year in the United States was valued at \$50,000,000, while there were 22,000,000 oranges gathered. Orange culture is yet in its incipency. The Florida fruit commands the highest prices in our markets and the demand is ever greater than the supply. As the trade increases we may look for more intelligent care of the groves and better facilities of transportation. That more fortunes than one are to be made in Florida is no secret, but fortunes do not make themselves there any more than in other parts of the Union. One who has not himself fought the unequal battle can have little conception of the myriad forms of animal and vegetable life everywhere infesting the earth, air and water. Eternal vigilance against things flying, hopping, creeping, crawling, burrowing and boring is the price of immunity from their deadly ravages. The *dolce far niente* in the hammock is all well enough in poetry, but even a more practical man than a poet might be staggered to reconcile his *otum cum dig*, with a neglected Florida orange grove. This is what our correspondent writes from the Catskills :

Being a woman, I do not know whether I ought to speak; but a glance at your title-page emboldens me to defend the lives of the apple-trees. I think some one ought to speak for the apple-tree in some way.

Frequent drives of late through the Counties of Albany and Green have afforded us an excellent opportunity to notice the orchards of fruit, which are numerous in this vicinity. In Florida a man does not expect to succeed in the orange culture unless he is on the alert for every enemy to his pet trees. Not only is the ground hard and the soil enriched, but the trees are protected from frost by covering them with straw being taken to keep them clean, and the manner in which they show their appreciation of this fondling, and their expression of gratitude, are rich enough rewards to the faithful orange-grower. The owners of some of these apple orchards that I have seen lately may be brothers to those orange-growers. The trees were in good shape (how often an apple tree is in such a sorry state) and the fruit was as good as well, I won't attempt to describe that so rich and so tempting. But there were many orchards that harbored great worm-eaters. Almost every wild cherry tree was literally stripped of its foliage by these rapacious vermin, which only foretold

the fate of its neighbor, the apple-tree. And is there anything more aggravating to the cook or to the one that's eating it than to find secreted in a royal apple one of these horrid worms? Let the farmers be persuaded to take a little more care of their orchards. Were this done—the trees pruned and shaped, all the small holes filled up, every worm-trail annihilated (heaven forbid that a small boy should be allowed to play in an orchard saturated with kerosene, could burn them out), we should not see so many adventures coming to Florida, only to have their high hopes of orange fortunes blasted. There is money in the orange, but it comes at the expense of great care and watchfulness. I know a man who allows worm-nests to disfigure his apple or cherry trees ever think he can find money hanging on orange trees.

A DAILY EDITION.—An importunate North Carolina subscriber complains that to receive one copy of this journal only once a week does not satisfy him. Well, some people never would be satisfied. We assure this newspaper Oliver Twist that he shall have "more" in due time. Sport in the United States is as yet in its infancy, though it must be confessed it is now pretty vigorous infant, and by-and-by, as the field enlarges and our ever-increasing circulation warrants the "more," we shall issue the FOREST and STREAM every day and have a Sunday double number besides. There's a good time coming.

ADVERTISEMENTS.—All transient advertisements sent to us must be accompanied by the money to pay for their insertion. This rule is sensible, business-like, imperative and absolute. We cannot and do not receive advertisements upon any other terms. Our rates are plainly set forth in our prospectus.

GAME PROTECTION.

NUMBER FOUR ASSOCIATION.—We learn from the secretary, Mr. Frank Bolles, Windsor, Conn., that the Number Four Association, the objects of which have already been set forth in these columns, has a very creditable number of members among those who annually visit the Adirondacks. We regard it as a happy token that Adirondack game protection is engaging the attention of a larger and more powerful class than the dwellers in the woods. It is peculiarly appropriate that those who derive so much pleasure from the pursuit of the game and fish should take measures to preserve them as well, and so be not only destroyers but protectors and preservers.

DEBELIOT OFFICIALS IN ORANGE AND ROCKLAND COUNTIES.
—An indignant friend of game protection sends us this query:

Is there no way of stopping the trapping of the birds? I know of two counties in this State—Orange and Rockland where partridge are caught every year by the thousands. The constables know about it, the landowners know about it; but they do not interfere, or, rather, they say they dare not interfere. The only way, as I understand the law, to have the trappers punished is to catch them in the act of taking the birds. I have known a few trappers to do a very different sort of work. Last week a friend of mine saw a party of fox-hunters trapped partridges shipped on a railroad car. He notified at once the squire and the constable to have them stopped, but the only answer he could get out of these two officials was that they could not do anything. There is a regular gang of those trappers in the above-named counties known to everybody, and they defy anybody openly to have them fined. I know of a party of trappers in the State of New York who are said to have shipped last year over two thousand weight of trapped partridges. What is the remedy?

The only remedy we can suggest is to oust the officials who display such apathy, and put in their places men who will use proper exertion to enforce the law.' The section of Chapter 721, applying to trapping and netting, reads:

No person shall, at any time or place within this State, take or kill any ruffed grouse, commonly called partridge, any pileated grouse, commonly called prairie chicken, or spruce grouse, commonly called Canada partridge, or any quail, with any net, trap or snare, nor set any such net, trap or snare, for the purpose of taking or killing any of said birds; nor shall any person sell or expose for sale or have in.....possession any of the said birds after the same shall have been so taken or killed, under a penalty of \$10 for each bird. And it shall be lawful.....to take and destroy any such nets, traps or snares whenever found set.

If there is no healthy public feeling on the subject there can, of course, be no remedy. Half a dozen sportsmen, united to see the law enforced, may by judicious action bring the offenders to trial and conviction. It is not an enviable condition of affairs when any chapter or section of the State laws can be thus wantonly defied.

POTATO BUGS, PARIS GREEN AND FISH.—The supposed death of fish caused by the Paris green used to destroy potato bugs is still a vexed question. Below we publish a letter from which it will be seen that the Entomological Division of the Government Department of Agriculture are about to scientifically investigate the subject. The importance of this matter is such that it should engage the attention of all interested in the preservation of our fish and game birds:

DEPARTMENT OF AGRICULTURE, DIVISION OF ENTOMOLOGY, }
WASHINGTON, D. C., October 3, 1818. }

Prof. Spencer F. Ward, Secretary Smithsonian Institution:
 DEAR Sir—I notice in various papers statements referring to the death of fish and fowl in different parts of the country, caused by Paris green which is used to destroy the potato-beetle. It is important to decide whether or not these statements are true. I hope that you will use your influence to get specimens of fish or fowl said to be poisoned by Paris green, so that we may have this question definitely settled by chemical analysis. Yours truly,
 C. V. RILEY,

QUEBEC—*Montreal, Sept. 24.*—*Editor Forest and Stream.* The open season for deer and cariboo extends from September 1 to February 1. Strenuous efforts are now being made to curtail this period, so as to close the open season on January 1, as subsequent to that date the game in question is in poor condition; the does are bearing the burden of maternity; and it

is, moreover, considered a violation of the pure instincts of sportsman to slaughter an animal at a time when all are against it. Those who, knowingly and willfully, set out at defiance are handled in an unceremonious manner.

FLUSHING BAY.—We are advised that the fish laws are being grossly violated in Flushing Bay, Long Island. For the benefit of those who plead ignorance of the law, we call attention to the section which provides that it shall be unlawful at any time in the year to draw any seine net in Flushing Bay or its branches. Fyke nets set in any of the waters surrounding Long Island, Staten Island, and the bays and salt water estuaries and rivers approaching thereto must be not less than four-and-one-half fathoms in size.

The Rifle.

ONE LESS THAN A FULL SCORE.—Our attention has been called to a wonderful score made by Mr. James Partello, of Washington City, to wit: 224 out of a possible 225. It is to be regretted that this superb sequence of bull's-eyes was not made in a public match, still the score is authentic enough to be recorded. The distances were, if we are rightly informed, 800, 900 and 1,000 yards. The arm was the Remington Creedmoor. It may be remembered that Mr. Partello shot at Creedmoor, making a tie with Mr. Hyde. Mr. Partello is a young gentleman of twenty-five, with dark eyes. He believes himself capable of making a full score. The shooting took place in the presence of the President of the Columbia Rifle Club. A man who can make 44 bull's-eyes out of 45 may well be considered as a remarkable shot.

VERMONT—*Burlington, Oct. 3.*—Match between Burlington and Saratoga rifle clubs. Fifteen shots each man, at 800, 900 and 1,000 yards:

Wilmington...5 5 3 5 5 5 4 4 5 5—48

FALL MEETING OF THE MASSACHUSETTS RIFLE ASSOCIATION.—The meeting opened October 2 under the most favorable auspices. There was a large attendance, many ladies being present, and real enthusiasm was taken in the match. Rifle shooting has been so thoroughly and systematically carried on in Boston, that it has taken such a rapid development, that we are forced to turn our eyes to the other side of the Hango for the best work. The grand form the Boston marksmen take when with us, their sterling qualities as gentlemen and marksmen, gained them universal applause. May we not say that the prestige New York riflemen and New York teams once possessed in this country, may never be again? Boston is much more enthusiastic about rifle practice than any other city in this present fall meeting is considered as one of the leading events. The wind was moderate, coming from the west; about a nine o'clock wind. The first match was the State team match, which was opened by a number of live from all organized rifle associations in Massachusetts. The prize was a silver entrance fee, \$5 per team. The prize is a trophy of the full value of the entire amount of entry fees, and was won by the Lawrence Rifle Club team on a total score of 211 out of a possible 250, the Abington Club following closely with 209, and the Springfield team with 207. The prize was then given to the place with 201. The last-mentioned organization had two teams in the field, the rules governing the match allowing of the entry of more than one team from the same association;

Ten close, nevertheless. You thought you had a good enough aim, but it was in fact a careless one. The deer looked too big, and you didn't draw your front sight down as fine as you would have done in shooting at a target. You undoubtedly overshot him, so remember that a deer may be lost by a trifling neglect of care, even when close enough to hit with a stone.

We soon come in sight of another, feeding in a little hollow, while we are just peering over a ridge. How small it looks! "Two hundred yards," you say to yourself, as you pull up your 200-yard sight.

Stop! Put down that sight! A deer in the woods is very different from one on a powder can, in a market, stall or show case of a museum. They often look small when tolerably close. That deer is not over 100 yards off; shoot with perfectly level sight, and hold on the middle of the shoulder, or just behind.

You put down the sight; but so sure are you that it is at least 150 yards that you take a coarse front sight and fire. Away it goes for about fifty yards and stops. "Now he is two hundred yards, anyhow," you think, as you throw up the 200-yard sight again, and fire. On it goes a few jumps and stops again. You now drop behind a log, and, resting the rifle over it, take a good sight and shoot. You see the dirt fly from the center of a target about six inches over his back, and you think you have done him. You find, farwell with his tail, as he clears the crest of the next ridge.

"Pshaw! Why, that last shot wasn't over 150 yards, and the first wasn't over 90," you exclaim, as you now take a good look over the ground.

Correct! You have made the common mistake of over-estimating distance. The tendency to do this is amazing. With two exceptions you will do it five times out of six, unless very cautious. These exceptions are game across water, smooth, clean snow, and from one high hill to another, where the intervening valley has a broad bottom, in which cases you will be more apt to underestimate. If the valley is V shaped, or if shooting up hill, down hill, across brush, or where you do not see the intervening ground, you will be likely to over-estimate. Hence take this as a rule of the first importance: use a rifle having the flattest possible trajectory up to 150 yards, and, never, never, never, raise sights. Take the coarse front sight, or hold high on the range, using the very certain of its necessity, and if there is any doubt on this point d-dive always in favor of the level sight. I believe that with an Express rifle it would be a safe rule never to raise sights when shooting in timber. You would miss less in the long run.

If not very familiar with the trajectory of long-range rifles, you will be apt to shoot a deer from 100 to 140 or 150 yards by holding a level sight on them, and having the ball drop under. And after you do know their trajectory, you will be extremely liable to under-shoot in trying to avoid the danger of over-estimating distance, and to over-shoot the next one, perhaps, in trying to avoid the previous error. Paradoxical as it may seem, the longer the range of a rifle the worse it is for hitting game from 90 up to 200 yards; a point I cannot now take time to explain.

Your next mistake is to shoot about 80 yards away, and, taking what you consider a very deliberate and accurate aim, you see the ball tear the dirt just over him. The tendency to over-shoot, downhill, is one of the inexplicable things about shooting. It is, however, easily remedied, but will be very apt to deceive you at first, unless you are careful.

On a very long shot down a very steep hill (say from 600 to 1,000 feet, or over), you will be more apt to under-shoot. Whether this is from the effect of the distance, or from the co-operation of the attraction of gravitation with the downward motion of the ball increases the ratio of its drop; I cannot say, but it is probably due to both causes. Such shots are very deceptive, even when you know pretty closely the altitude of the hill. The rule given by a correspondent of FOREST AND STREAM some time since (to measure your distance from a point level with your station on a perpendicular line, erected over the game), though correct for slight distances, or slight slopes, will not do for a very long plunging shot, and is at all events very difficult to apply.

As I always work for down-hill or level shots, and always where possible get above deer, I have not had enough long up-hill shots to form any reliable judgment upon them. I never have had any trouble with short shots; but have found a tendency to over-estimate distance on long ones. For such shots the rule I have referred to is undoubtedly correct.

Long range shooting on game I have quite discussed in a former article. The beginner should avoid every attempt of the kind. There is no more captivating delusion in the world, and the expert target shooter is more apt to fall into it than any one else. And this trouble cannot be removed by any arrangement of sights or artificial point blank, as it is the liability to mistake in judging distance that makes it, and it is the distance and not the slide that makes it. Have a rifle that will hit a deer at 140 yards, when held just as you would hold it to hit one at 40 yards; for 170 yards use the same sight as fine as before, but hold for the top of the shoulder; for 200 yards take full front sight, but still hold on the deer; for 250 have a leaf sight, or scale elevator, on the back sight, and never, never, except occasionally on the plains, or unless game is scarce and has taken the alarm, shoot beyond that, but try to get closer, and in timber never raise your sights for the first year. You will, of course, lose game by this, but in the long run not half as much as you otherwise would, and will have far fewer cripples. When your first shots fall on a long shot do not try to shift the sights if your ball strikes within a foot or two, but hold the front sight higher or lower next time. If your sight is easily shifted you may risk it, and if your ball is much astray.

Another mistake you will be apt to make is to shoot at the middle of your game. A deer hit anywhere from three inches back of the shoulder to the hip, unless the back-bone or kidneys are touched, can run for miles, unless shot with an extra large ball, and often even then unless the ball is expansive. In such case let it alone until it lies down and sickens, and don't go after it, even then, if you can possibly get around or above it for another shot. In or just behind the shoulder, about one-third the way up, is the best place to shoot, if you can get a chance; but you will have to take such shots just where you can get them, especially on the run.

You may find other troubles in your way. The ball may be deflected by unseen twigs of trees. The sun may light up the lower part of the back of the front sight, so that you may mistake it for the top, and thus shoot too high. This is more common than you are aware of, especially in the morning, and for this reason only the tip of the sight should be kept bright, and the rest dulled with acid. For hunting over bare ground, ivory or white agate is the best for the front sight. The sun may also shine on one side of the

front sight in such a way as to make you shoot a little to the other side. It may so strike the back sight as to make you mistake the center or bottom of the notch; or it may glimmer on your barrels, so as to make a mirage of your front sight. All these things should be attended to before going to the field, and you should be accustomed to hit the center with open sights with the sun in any direction.

But the great point is to never be in a hurry, but shoot just as you would at a target. Place no dependence upon rapidity of fire, but no matter how fast you can shoot, fire every shot with as much care as if it were your last ball. Speed of fire is a great thing, but tends to carelessness at first. There is a vast amount of space outside of game, and the love of a ball for the empty space is marvellous. Be self-reliant, but not over-confident, and never chuckle "My merit" until you've got its throat out. Don't try to be smart about shooting the instant the rifle comes to a level, as you read about in novels, but let it level how long enough, and sure it is right. Don't be ashamed of taking a rest, when you can just as well get it as not, especially on long shots. If your hand trembles from crawling, running or climbing, wait a moment or two; but if it trembles from excitement it will only be apt to get worse. In the latter case, take a rest, if you can, either on some tree or rock, or your knee, and if the gun still wiggles let it wiggle, but when it wiggles on the right place still. Nothing can take the place of experience, but by observing these few hints you will save much time, game and vexation.

Game Bag and Gun.

GAME IN SEASON FOR OCTOBER.

Moose, <i>Alces walchii</i> .	Black-bellied plover, ox-eye, <i>Squatarola helvetica</i> .
Caribou, <i>Tarandus rangifer</i> .	Ring plover, <i>Spizella semipalmata</i> .
Elk or wapiti, <i>Cervus canadensis</i> .	Red, or long-shanks, <i>Himantopus nigricollis</i> .
Antelope or Va. deer, <i>C. virginicus</i> .	Red-bellied snipe, <i>Phalaropus lobatus</i> .
Squirrels, red, black and gray.	Red-breasted snipe, or dowitcher, <i>Macrorhamphus griseus</i> .
Hares, brown and gray.	Red-capped snipe, or ox-bird, <i>Tringa americana</i> .
Wolf or river bird, <i>Canis lupus</i> .	Great marbled godwit, or ox-bird, <i>Limosa</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Willow-shanks, <i>Zonotrichia leucophrys</i> .
Partridge, grouse or prairie chicken, <i>Cathartes aura</i> .	Willow-shanks, <i>Zonotrichia leucophrys</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Willow-shanks, <i>Zonotrichia leucophrys</i> .
Partridge, grouse or prairie chicken, <i>Cathartes aura</i> .	Willow-shanks, <i>Zonotrichia leucophrys</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Willow-shanks, <i>Zonotrichia leucophrys</i> .
Partridge, grouse or prairie chicken, <i>Cathartes aura</i> .	Willow-shanks, <i>Zonotrichia leucophrys</i> .

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limosa* or Shore Birds.

This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

GAME IN MARKET.—Pinnated grouse (prairie chickens), \$1.25 per pair; partridge (ruffed grouse), \$1.00 per pair; mallard ducks, 75 cents per pair; black do, 75 cents per pair; wiggon do., 60 cents per pair; broad bill do., 60 cents per pair; teal do., 50 cents per pair; Wilson snipe, \$2.50 per doz.; plover, \$3.50 per doz.; bay birds, large, \$3.00 per doz.; do. small, 30 cents per doz.; rails, \$1.25 per doz.; reed birds, \$1.00 per doz.; wild pigeons, stall fed, \$3.00 per doz.; Philadelphia squabs, \$3.00 per doz.

Poultry.—Philadelphia and Bucks County dry picked chickens, 20 to 22 cents per pound; do. fowls, 16 to 18 cents; do. turkeys, 16 to 20 cents; do. ducks, 16 to 20 cents; do. geese, 15 to 18 cents; State and Western chickens, 15 to 18 cents; do. turkeys, 15 to 18 cents; do. fowls, 13 to 16 cents; do. ducks, 13 to 16 cents; do. geese, 10 to 12 cents.

MASSACHUSETTS.—Spencer, Oct. 5.—The annual hunt of the Sportsman's Club took place on Thursday with thirteen men on an aide. E. M. Bliss and L. M. French were captains. Chas. Allen was umpire. The game counted as follows: Fox, 20; and mink, 10; a point each; partridge, 20; woodcock, 10; duck, 50 points each; rabbit, woodchuck, gray squirrel, muskrat, crow, weasel, pigeon, hawk, owl, kingfisher, Garfield woodpecker, 25 points each; pigeon hawk, 10 points; red squirrel, jay and crow blackbird, 5 points. The hunters returned home at 7 o'clock and the game was counted in the Town Hall. Captain French's side secured 2 woodcocks, 12 gray squirrels, 63 red squirrels, 1 crow, 1 partridge, 1 pigeon and 3 jays, making a total of 910 points. Captain Bliss' side brought in 10 gray squirrels, 1 rabbit, 53 red squirrels, 3 woodpeckers and 6 jays, making a total of 815 points; Captain French winning the match by 85 points. After the count the hunters with their ladies sat down to well filled tables at the expense of the losing side.

Waltham, Oct. 5.—I have noticed quite a number of wild pigeons, in flocks from two to fifteen (generally in pairs), flying from the northeast to the southwest. The fall flight of woodcock has fairly set in, and fine large birds they are.

Partridge shooting in Massachusetts has been ruined by wood ticks. These worms attack the birds, especially about the head and front of the neck, and are found on a single partridge. Out of seventy-six birds examined by our informant only one was found free from the ticks. This pest seems to have extended into Connecticut also, as of six birds on a Hartford game dealer's hook one morning last week, not one was found free from the burrowing vermin. The quail shooting is reported as excellent. This is something unusual for Massachusetts, and shot-gun owners are jubilant.

NEW YORK.—Hornellsville, Oct. 7.—Nothing shot lately but squirrels, black, gray, red and flying. It is not uncommon for one gun to get 20 black and gray a day. One black shot here weighed 2 lbs. 7 oz. Another shot must have been a cross between a gray and a fox squirrel, gray on back, fox color on belly and breast; weighed over 2 lbs.; one black with a white tail.

Buffalo, Oct. 5.—A party of Buffalo sportsmen, consisting of Sam Winans and Frank Luck, of Batavia, Charles Morris, of Chicago, and myself, went hunting October 3, and made the following good bag: 23 woodcock, 2 partridge and 1 rabbit. We call this good sport for this part of the country.

SOUTH BROOKLYN SPORTSMAN'S CLUB.—At a meeting in the club rooms at the Orchard House, corner Thirty-fifth street and Third avenue, the following officers were elected: Fred Scheffer, Pres.; John Marney, Vice-Pres.; Paul Bassinger, Sec.; Gustave Boyesen, Treas.

Shatter Island, Oct. 6.—The cool within a few days have begun to appear in the marshes, but they do not yet begin to work up the bays in sufficient numbers to make sport. The worthless curmudgeons and loons, however, have had a good flight last week. I do not hear that the brant and broad-bills are yet plenty in Shinnecock and South bays. The weather has been too warm for them to be on their migratory flight.

ISAAC McLELLAN.

ROBIN.—The shooting of robins in New York State is permitted during the months of September, October, November and December, except in the counties of Kings, Queens, Putnam and Suffolk, where the time is limited to the last three months.

NEW JERSEY.—Forked River, Sept. 30.—We have had some fine bay bird shooting. Capt. Mathews, with Mr. Tom Ward, of Freehold, shot 92 large ones a few days since. Mr. O. Cashman, of New York, also had some fine shooting last week, having killed one day over 80 birds. The prospects for duck shooting look well, as the birds are already beginning to make their appearance in large numbers. ARTHUR.

Barrenet Inlet, Oct. 1.—Black ducks and sprig tails plenty. For the past few days large flocks can be seen daily on the flats near the Clam Island and High Bar.

PENNSYLVANIA.—Wolf Run, Oct. 4.—Woodcock shooting is a failure this season in Lycoming County. They have never been known to be so scarce, although we have some very choice grouse. Quails are plentier than they have been for years; grouse also plenty, owing to a very mild winter.

NIXON.

Greenville, Oct. 4.—Pheasant shooting began the 1st inst. Birds are plenty and sport good.

West Chester, Oct. 3.—Messrs. John T. Ingram, Isaac Darlington and Thomas Darlington, of West Chester, Pa., went on a short fishing excursion to Fite's Eddy, on the Susquehanna River, a few days ago. As the result of their combined labors, they returned home with 140 black bass, weighing from two to four pounds each, and report that 325 were caught in one day by themselves. Such extraordinary good luck is unprecedented in the history of bass fishing at Fite's Eddy.

Me. Veighton, Oct. 7.—Deer, I hear, are pretty numerous in Licking Creek Mountains, a short distance from this town, three being shot on the first day of the season, October 1. Turkeys and rabbits are exceedingly plenty, but cannot be legally shot until the 15th inst. Squirrels this year are somewhat scarce. Pheasants are unexceptionally plenty. Partridges, ducks and other small game are reasonably plenty.

E. J. S.

BLOOMING GROVE PARK.—In reply to recent inquiries relative to the present condition of Blooming Grove Park and the game to be found there we are pleased to feel at liberty to lay the following informal letter before our readers. It is written by the President of the Association. This Park is rapidly meeting the expectations of its original projectors, who designed to make it the leading game preserve in the world. Its financial affairs are very flourishing:

OFFICE OF THE BLOOMING GROVE PARK ASSOC., 37 Park Row }
New York, October 3, 1878.
There were twenty persons at the Park last Sunday, most of whom have been there since July. The summer visitors are leaving, but the sportsmen remain for grouse shooting and deer hunting. A great deal has been done this season in the way of improvements, both at the club house and grounds. The new road from Millville is a great success. It is thoroughly made and drained, and the Club team makes the trip in about one hour to the station. The wild turkeys from Judge Caton hatched two broods, but, through an accident, they were exposed to rain, and the young chicks all died—a great disappointment. The Club-house has been in charge of Mr. Hyland, as Superintendent, who gives satisfaction to all by his constant attention, and exercises good judgment. The black bass fishing at Lake Laara has been excellent. There is a shanty for fishing parties, fitted up with bunks, and a gamekeeper in attendance, there. Bats have been placed at Lake Laara and Beaver Lake, where there is a landing for those who like to pick a perch before the game. The gamekeeper at the breeding park reports that he has seen several buzzards outside the fence, and they will probably enter through the traps, attracted by the herd inside. Ruffed grouse are very plenty. A day's report that while sketching I saw several broods, and was started by their rustling. The prospects for deer hunting in November are good. Several have been seen in the vicinity of the Knob. It is proposed to have a ladies' archery match near this city soon.

JOHN AVERY.

VIRGINIA.—Leesburg, Oct. 4.—Some few pigeons have been killed near this place.

T. W.

NORTH CAROLINA.—Monroe, Oct. 2.—Quail have been scarce here since December, 1876. A large snout at that time, which remained on the ground for four weeks, came near destroying all of them, and in some localities they were entirely killed out. Very few have been killed since that time, the farmers especially using every means to protect them. This season has been unusually favorable for their rearing; the spring was very dry. The prospects for winter sport are now good, as quantities of quail can be found within one or two miles' walk from town. Three coveys wandered into town, and, becoming bewildered and scattered, took shelter in trees along the streets, on top of houses and under wood-piles, and I think at least a dozen were killed with rocks and sticks to-day. We have no close season here, but no one thinks of killing quail before the first of October. I went out yesterday, and found several coveys, but most of them were not over half grown, so I have decided not to go again before the 15th of this month or 1st of November. There are only about three men in the county who keep pointers or setters, so we have all we can do to keep our engagements with our good farmers, who invite us to see them and hunt for two or three days at a time.

AVERY.

SOUTH CAROLINA.—Port Royal, Oct. 3.—I notice Jack curlew, willets, large and small, white egrets, sandpipers, etc., every day on the marshes and flats, but not in large numbers.

G. C. K.

ALABAMA.—Athens, Sept. 30.—Quail shooting has opened briskly. There seems to be an unusual amount of them in the surrounding country. Two or three coveys have made their appearance on the streets; several were caught in the street. The citizens of this place are very fortunate in this respect: a few months ago, a deer that was chased by logs ran through town, jumping over obstacles in his way, among which was a gentleman sitting in front of his store reading a

MY WINTER GARDEN.

I prefer to any glass roof which Sir Joseph Paxton ever planned, that dome above my head some three miles high, of soft dappled gray and yellow cloud, through the soft lattice work whereof the blue sky peeps, and sheds down tender gleams on yellow bogs, and softly rounded heather knolls, and pale chalk ranges gleaming far away. But, above all, I glory in my evergreens. What winter garden can compare for them with mine? True, I have but four kinds—Scottish fir, holly, furze, and the heath; and, by way of relief to them, only brows of brown fern, shoots of yellow box, and here and there a leaden birch, whose purple tresses are even more lovely to my eye than those fragrant green ones which she puts on in spring. Well, in painting, as in music, what effects are more grand than those produced by the scientific combination, in endless new variety, of a few simple elements? Enough for me is the one purple birch, the bright red heath, and its stem sparkling with scarlet beads, the furze-patch, rich with its lacework of interwoven light and shade, tipped here and there with a golden bud; the deep, soft heather carpet, which invites you to lie down and dream for hours; and, behind all, the wall of red fir-stems, and the dark fir roof with its jagged edges a mile long, against the soft blue sky. An ugly, straight-edged monotonous fir plantation? Well, I like it, outside and inside. I need no saw-edge of mountain peaks to stir up my imagination with the sense of the sublime, while I can watch the saw-edge of those fir peaks against the red sunset. They are my Alps—little ones it may be; but, after all, as I asked before, what is a Alps?—a phantom of our brain, an optical delusion. Grandeur, if you will consider wisely, consists in form, not in size; and to the eye of the philosopher the curve drawn on a paper two inches long is just as magnificent, just as symbolic of divine mysteries and melodies as when embodied in the span of some cathedral roof. Have you eyes to see? The lie down on the grass and look near enough to see something more of what is to be seen, and you will find tropic jungles in every square foot of turf, mountain cliffs and *dolomites* at the mouth of every rabbit burrow, dark strips, tremendous cataraacts, "deep glooms and sudden glories," in every foot-broad rill which wanders through the turf. All is there for you to see, if you will but rid yourself of "that idol of space," and Nature, as every one will tell you who has seen an insect dissected under the microscope, is grand and graceful in her smallest as in her hugest forms. The March breeze is chilly, but I can be always warm if I like in my winter garden. I turn my horse's head to the red wall of fir-stems, and leap over the furze-grown bank into my cathedral, wherein if there be no essents there are likewise no priestcraft and no idols; but endless vistas of smooth, red green-veined shafts holding up the warm, dark roof, lessening away into endless gloom, paved with rich brown fir-needles—a carpet at which Nature has been at work for forty years. Red shafts, green roof, and here and there a pane of blue sky—neither Owen Jones nor Willemet can improve upon that ecclesiastical ornamentation; while for incense I have the fresh, healthy turpentine fragrance. There is not a breath of air within; but the breeze sighs over the roof above, and you can feel it with your eyes and listen. Surely that is the murmur of the summer sea upon the summer sands in Devon far away. I hear the innumerable wavelets spend themselves gently upon the shore, and die away to rise again. And with the innumerable wave-sighs come innumerable memories, and faces which I shall never see again upon this earth. I will not tell you of that, old friend. It has two notes, two keys rather, that Eolian harp of fir-needles above my head; according as the wind is east or west, the needles dry or wet. This easterly key of to-day is shriller, more cheerful, warmer in sound, though the day itself be colder; but grander still, as well as softer, the sad soaring key which the south-west wind rings on, rain-laden, over the forest, and calls me forth—a minute philosopher—to catch trout in the nearest chalk stream. The breeze is gone awhile, and I am in perfect silence—a silence which may be heard. Not a sound, and not a moving object, save the falling of a needle, and the fall of a leaf is solemn—none. That ingore, who was cooing half a mile away, has hushed his moan; that flock of long-tailed titmice, which were swinging and pecking about the fir cones a few minutes since, are gone; and now there is not even a quiver in the slant surrings. Did a spider run over these cone-leaves, I almost fancy I could hear its footfall. The creaking of the saddle, the soft step of the mare upon the fir-needle, stir my ears. I seem alone in a dead world. A dead world, and yet so full of life, if I had eyes to see! Above my head every fir-needle is breathing—breathing fit ever; currents unnumbered circulate in every bough, and by some undiscovered miracle, around me every fir-stem is distilling strange juices, which no laboratory of man can make; and where my dull eye sees only death, the eye of God sees boundless life and motion, health and use.—"Prose Idylls," by Charles Kingsley (Macmillan).

MIND AND MORALE.—The gate receipts at Gilmore's Garden last week were \$16,000. Of this \$7,500 goes to the management, to O'Leary between \$5,000 and \$6,000, and Hughes about \$1,800. Who is foolish enough to develop his brain when leg work is at such a premium?

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewellery, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. **UNION SQUARE, NEW YORK.**

APOLLINARIS NATURAL Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the *Académie de Médecine* of France, and its sale in France authorized by special order of the French Government.
Recommended by the highest Medical Authorities in New York as
"A great relief for seasickness."
"A delightful beverage. Mildly antacid, most grateful and refreshing."
"A superior Fizzy, Seltzer, or any other."
"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against carbon and artificially aerated waters."
"Incorporated only with its own gas."
"Healthful and well suited for Dyspepsia and cases of acute disease, and where there is a gouty diathesis."
"By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach or Bladder, and in Gout."
"Not only a luxury, but a necessity."
To be had of all Wine, Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and wholesale of

WEBLEY'S TREBLE WEDGE GUNS.

WITHOUT A RIVAL.

Messrs. P. WEBLEY & SONS, Birmingham and London, at vast expense, have secured the most perfect machinery for gun making ever set up in any one factory in England. The result is that they can now turn out guns, perfectly uniform in excellence, and in such increased quantity as to greatly reduce the cost. Their specialties this year are their Treble Wedge Guns, Nos. 1 and 2, of which the above cut will give a tolerably fair idea. Every gun has fine Damascus or laminated steel barrels, reboiling gas locks, pistol grip, extension rib, lever for port and treble bolt, and is bored after Webley's system, which has produced such marvellous results, and yet all this at a price so low as to place the guns within the reach of almost any one. This is what machinery can do. It is a new thing to be able to buy a fine breech loader, with every possible appliance which can contribute to its beauty, or enhance its excellence, in shooting light or heavy game, at greatly reduced prices. They are all bored after the Webley's system, and will shoot just as well as the Treble Wedge Guns. Many of them are from 24 to 11 pounds weight, and are splendid guns for duck shooting, or for killing all large game at long range. We also have Webley's celebrated Double Action Revolvers, the Pug, British Bull Dog, etc., etc., at our little over half last year's prices.

PATENTS

In connection with the publication of the *Scientific American*, we continue to act as Solicitors for Patents, Caveats, Trade-Marks, Copyrights, etc., for the United States, Canada, Cuba, England, France, Germany, etc. In this line of business we have had thirty-three years' experience.

Patents obtained through us are noticed in the *Scientific American*. This paper is splendidly illustrated weekly paper shows the current progress of Science, is very interesting, and has an enormous circulation. Subscriptions \$2.50 a year, postpaid; single copies 10 cents. Ad at all Book-stores and News-stands.

How to Obtain a Patent? The quickest and best way to obtain a satisfactory answer, without expense, is to write to us (Munn & Co.), describing the invention, with a small sketch. All we need is to get the idea. We will immediately answer, and give the necessary instructions. For this advice we make no charge. We also send free our Hand Book about the Patent Laws, Patents, Caveats, Trade-Marks, their costs, and inventions. Address MUNN & CO., Publishers of the *Scientific American*, 37 Park Row, New York.

Leesbrook Academy.

grip. For further particulars address M. A.
BOSWORTH, North Brookfield, Mass. oct10 21

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and
can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can
not get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a
breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will
fit any standard make of gun of 10 or 12-gauge—calibre of rifle 32, 35, or 44, as desired. Length of
barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s
cartridges, No. 32 and 35, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P. O. Box 715 NEW HAVEN, CONN.

(TRADE MARK.)
STILL TRIUMPHANT.

In Fall Meeting of N. R. A., at Creedmoor, Sharps Rifles were entered in sixteen matches; took first
prize in twelve of them, and good prizes in the other four. Among them the

Inter-state Military Match.

The New York State team, using the Sharps Military Rifle, won with a score of 974. Best score by any
other rifle, 960.

The International Military Match.

New York State Team, with Sharps Military rifle, 1,044. Best by any other rifle, 903.

The Inter-state Long-Range Match.

Average per man with Sharps Rifles, 213. Other rifles used averaged respectively 193 and 197.
The WINSTEDDON CUP, won by Mr. Frank Hyde with a Sharps Rifle with a score of 143 out of a
possible 150 at 1,000 yards. THE LEBEY CUP, won at Spring Meeting with a score of 2403. Best
other rifle, 197. For the Grand Aggregate Prize at Fall Meeting, three competitors each, with Sharps Rifles—
Mr. Frank Hyde, Col. W. H. Clark and Capt. W. H. Jackson—led on a score of 34.0 points.

THE LONG-RANGE MILITARY CHAMPIONSHIP, won by Capt. J. S. Barton, with a Sharps
Military Rifle. All prizes in this match were won with Sharps Rifles.

AMERICAN TEAM WALK-OVER (First Day).—J. S. Skinner made, with a Sharps Long-Range
Rifle, the extraordinary score of 241 points out of a possible 225 at 600, 900 and 1,000 yards.

W. & C. SCOTT & SON'S
FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS
FINE TRIPLEX 12-GAUGE BREECH-LOADER, MADE BY

W. & C. SCOTT & SON.

[From CAPT. A. H. BOGARDUS.]

W. & C. Scott & Son:
Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction
in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with
extra 12-bore barrel; also a light 12 and 20 bore; all of you make, which cannot be excelled in the
shooting qualities, and impossible to beat in the solidity and power of your patent Triplex Action. I used
your gun in my two recent matches with Mr. Penell, June 24 and July 2, at which time I scored 70 and 71
in each match, winning by two birds; also in my match with Capt. Shiley, July 9, at which time I scored
84, "the highest score on record;" and in the International Match with Aubrey Coventry, Esq., at Brighton,
Aug. 6, for £1,000, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 50
yards fire. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is
still in good condition.

Believe me, yours very truly, A. H. BOGARDUS, Champion Wing shot of the World.

[From COL. JOHN BODINE, New York.]

W. & C. Scott & Son:
Gentlemen—I have received the Premier quality choke-bore gun, No. 8,666, in good order, and am
pleased to say that its performance exceeds my expectations, while its symmetry and finish is all that
the most fastidious could desire. It fully comes up to specifications of order, both in finish and shooting qual-
ities. I have disposed of my two guns by other makers.

SILVER MEDAL AWARDED PARIS EXHIBITION, 1878.

ESTABLISHED, 1811.

TATHAM'S
IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot. Equally well adapted to
choke-bore, modified choke and cylinders.

Our chilled shot will be found free from shrinkage, more spherical, more uniform in size,
harder, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St.,
NEW YORK.

Also, manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COM-
pressed BUCK SHOT, more uniform than the ordinary moulded shot.

For Sale.

FOR SALE—One very fine Remington double
barrel gun; Damascus barrel; 12-gauge; pistol-
grip, weight 8 pounds, in mole leather case, with very
complete set of tool, masks, pouches, etc.; also, 45
nickel-plated shells and 300 paper shells, etc. etc.
Cost \$200; price \$135. A very complete outfit, and
in perfect order. W. HOLBERTON & CO., 117

Gunpowder.

THE

HAZARD POWDER CO
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 6 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6½ lb. kegs. A fine grain, quick and clean, for
upland prairie shooting. Well adapted to shot-
guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 6 (coarse). In 1 and 6½ lb. canisters
and 6½ and 12½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting, it
rivals any other brand, and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25,
12½ and 6½ lbs., and cans of 5 lbs. of FFG is also
packed in kegs of 1½ lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting, and the "Sea Shooting" FG is
the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER;
ALSO, SPECIAL GRADES OR EXPORT OF
ANY REQUIRED GRAIN OR PROOF, MANU-
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-
pany's Agents in every prominent city, or wholesale
at our office.

88 WALL STREET, NEW YORK.

Lafin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of
Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed
1 lb. canisters. Higher numbers specially are recom-
mended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in
metal kegs, 6½ lbs. each, and canisters of 1 and 6
lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes.
Sizes, FFG, FFG and FFG, the best being the finest.
Packed in wood and metal kegs of 25 lbs., 12½ lb.
and 6½ lbs., and in canisters of 1 lb. and 6½ lb.

All of the above give high velocities and less
residue than any other brands made, and are re-
commended and used by Capt. A. H. BOGARDUS,
the "Champion Wing shot of the World."

ERASING POWDER and ELECTRICAL BLAST-
ING POWDERS, MI TARY POWDER

FOREST AND STREAM & ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.—
Ten Cents a Copy.

NEW YORK THURSDAY, OCTOBER 17, 1878.

Volume 11.—No. 11.
(No. 111 Fulton St., N. Y.)

For Forest and Stream and Rod and Gun. BUBO'S CONUNDRUM.

AS silent as a graven stone
A solemn owl sat long hours through;
His great round eyes with wisdom shone,
And told of wonders that he knew—
Wonders he could not keep alone,
And as he said to me, "Too-hoo!—
While winking and blinking
I keep up thinking,
As wise men do, too-hoo, too-hoo!

"Now draw you near and let me tell
In language you may understand."
The old bird said, "there is a spell
That hangs o'er owls in every land,
That makes mankind conclude full well
That owls the wisest brains command,
For winking and blinking,
We keep up a thinking,
And that is true, too-hoo, too-hoo!

"The spell—now move you not a peg
Nor twirl me as a wise old fowl!—
A problem is, which now I beg
You hear, and then go large, or growl!
Was the first owl hatched from an egg,
Or the first egg laid by an owl?
And winking and blinking
Of that we are thinking,
Too-hoo, too-hoo, we never get through!"

—J. C. BURNETT.

For Forest and Stream and Rod and Gun. The Great Red Pipe Stone.

AMONG all the traditions of the North American Indians, few are more interesting than those which relate to the Great Red Pipe Stone. As the Indian is rapidly disappearing, it would seem to be wise to preserve his traditions, so far as is possible, that they may pass into the history of this people. The Red Pipe Stone Quarry is situated near the southwestern corner of the State of Minnesota, about six miles east of the Dakota line, and not far from twenty-five miles north of the boundary line between the States of Minnesota and Iowa. When this portion of the State was ceded by the Indians to the General Government, a section of land on which the quarry was located was reserved and is still the property of the Indians. One reason of this reservation was owing to a recognition on the part of the Indians who made the treaty of the common ownership of the Pipe Stone by all of the Indian nations. This fact, together with a peculiar value which they attached to the spot, which will be readily understood upon a reading of their traditions, caused them to withhold it at the time of the transfer. Since that time many of the tribes which had through generations made annual pilgrimages to this spot to obtain stone, out of which to manufacture pipes, have been removed to the Indian Territory. But there still remain tribes along the Missouri River who adhere to the practice of their fathers, and regularly visit this spot to secure a supply of stone.

When first taken from the ground the stone is of a pale flesh color and quite soft. With exposure its color deepens to a rich, dark flesh color, and it becomes very much harder. Save in color, it closely resembles slate, being flaky as it is quarried, about as hard, and works very much the same. Within the past few years a few visionary white men have conceived the idea that a quarry of such a stone must possess great value as a building stone, and several attempts have been made to "jump" the Indian's claim. But so far no one has amassed a fortune out of the speculation; neither is any one likely to, for it does not exist in sufficient quantities to be valuable for such a purpose. To white men it is worthless. To the Indian it possessed a value far exceeding the most auriferous region on the continent.

So far as the observation of the writer goes, traditions relating to the origin of this stone exist among all of the tribes and nations of the Northwest. The wandering Sioux of the plains, by whom the Red Pipe Stone is held in great esteem, have a tradition that "before the creation of man the Great Spirit, whose tracks are yet to be seen on the stones at the Red Stone, in the form of the footprints of a large bird, used to slay buffalo and eat them on the ledge of the Red Rock, on the top of the high prairie, and their blood running over

the rocks turned them red. One day, when a large snake had crawled into the nest of the bird to eat his eggs, one of the eggs hatched out in a clap of thunder, and the Great Spirit, catching hold of a piece of the stone, moulded it into a man and threw it at the snake, who was not hurt. The man's feet grew fast in the ground, where he stood for many ages, like a great tree, and therefore he grew very old. He was older than an hundred men of the present day. At last another tree grew up by the side of him, when the snake ate them both off at the roots, and they wandered away together. From these have sprung all the people that now inhabit the earth."

The Upper Wisconsin Indians have a tradition which points to the flood and connects the relationship between the red men and the pipe stone to that date. The tradition is as follows:

"In the time of the great freshet, which took place many generations ago and destroyed all the nations of the earth, all the tribes of the red men assembled on the high prairie to get out of the way of the waters. After they had all gathered from all parts of the earth, the water continued to rise until at last it covered them all in a mass, and their flesh was converted into red pipe stone. Therefore it has always been considered neutral ground, as it belonged to all the tribes alike, and all were allowed to get it and smoke it together. While they were all drowning in a mass together, a young woman, K-wap-tah-wa (a virgin) caught hold of the foot of a very large bird that was flying over and was carried to the top of a high cliff that was above the top of the water. Here she had twins, and their father was the war eagle, and her people have since peopled the earth. The pipe stone, which is the flesh of their ancestors, is smoked by them as the symbol of peace, and the eagle's quill decorates the head of the brave."

The Chippewas of the Upper Mississippi River, although the traditional foes of the Sioux, possessed a common interest in the pipe stone, and frequently visited the spot to secure stones for their pipes. Their tradition differs somewhat from that of the Sioux:

"Many ages after the red men were made, when all the different tribes were at war, the Great Spirit sent runners and called them all together at the red stone. He stood on top of the rocks and the red people were assembled in great numbers below. He took out of the rock a piece of the red stone and made a large pipe and smoked it over them all. He told them that it was part of their flesh; that, though they were at war, they must meet at this place as friends; that it belonged to them all; that they must make their calumets from it and spoke them to him whenever they wished to appease him or get his good will. The smoke from his big pipe rolled over them all, and he disappeared in its clouds. At the last whiff of his pipe a blaze of fire rolled over the rocks and melted their surface. At that moment two squaws went in a blaze of fire under two medicine rocks, where they remain to this day, and must be consulted and propitiated whenever the pipe stone is to be taken away."

Among the Iowa Indians a tradition existed almost identical with the foregoing, the only difference being such as would naturally occur in the transmission of the same tradition through different lines:

"Here," according to their version, "occurred the mysterious birth of the red pipe, soon after the creation of the red man, which has blown its fumes of peace and war to the remotest corners of the earth; which has visited every warrior, and passed through such an irrevocable oath of war and desolation. And here, also, the peace-breathing calumet was born and fringed with eagle's quills, which has shed its thrilling fumes over the land and soothed the fury of the relentless savage. Here, at an ancient period, the Great Spirit called the Indian nation together, and, standing on the precipice of the red rock, broke from its wall a piece and made a huge pipe by turning it in his hand, which he smoked over them. The North, the South, the East and the West, and told them that this stone was red as their flesh; that they must use it for their pipe of peace; that it belonged to them all, and that the war club and scalping knife must not be raised on its ground. At the last whiff of his pipe his head went into a great cloud and the whole surface of the rock was melted and glazed, two great ovens were opened beneath, and two women—guardian spirits of the place—entered them in a blaze of fire, and they are heard there yet (Tso-mec-coe-lee and Tso-mec-coe-lee) answering to the invocations of the medicine men, who consult them whenever they visit this sacred place. Near this spot, also, is the Thunder's Nest, where a very small bird sits upon her eggs during fair weather and the skies are rent with bolts of thunder at the approach of a storm, which is occasioned by the hatching of her brood. This bird is eternal and incapable of reproducing her own species. She has often been seen by the medicine men, and is about as large as the end of the little finger. Her mate is a serpent whose fiery tongue destroys the young ones as soon as they are hatched, and the fiery noise darts through the skies."

In these rude legends the reference to the Great Spirit and the serpent race, the time of the creation of man, as also the subsequent destruction of the race by flood, are in singular harmony with the Mosaic record, and open a field for unlimited speculation as to the origin of these people. But the reader can theorize at his will. The writer's mission is ended with the simple furnishing of facts.

M. Gore.

For Forest and Stream and Rod and Gun. THE OLD SPORTSMAN.

THAT a moderate indulgence in field sports is conducive to longevity is patent to all observing men. We find upon looking over the list of our venerable friends who have run the race of life for three-score years or more, that those who take their yearly vacation with rod and gun are by far the best preserved in body and mind. And what is there, when the heyday of life is passed, that so sweetens declining years, making man renew his youth and find peace and comfort after the turmoil and strife of vigorous manhood, as do field sports?

There are many expert shots among the older members of the guild—those whose eyes are not dimmed nor natural force abated, who "fag" through a hard day's shooting as well as the youngsters. But they are not numerous. Angling is *par excellence* the old man's sport; for although the sight may not be keen enough to cover with fowling-piece the swift-flying quail or hurtling grouse, still the supple wrist and exquisite sense of feeling in the hand is left. So the old man grasps the plant rod, and along the trout and salmon streams nerves his youth while plying the "grille art."

It is a fact that some of our most expert anglers are old men, and their aptitude is owing in a great measure to the many years they have given to the science. And still, it would seem a good angler, like a good shot, is born, not made. The passion for this sport, instead of dying out with age, seems to grow stronger as the years roll on, and a veteran of seventy, at the close of the fishing season, unjoins his rod and reels in his line with a sigh, and settles down to a patient waiting for the reopening of the season next year, hoping that terrible rheumatism has been fought so successfully of late won't get hold of him, or that dimness of vision that he has noticed coming on for years won't settle into a permanent weakness, or, worst of all, that terrible autocat, Death, in view of the expiration of the allotted three-score years and ten, won't step in and claim his own.

He seems to live in an atmosphere of hope and expectation, and when the good time does come no boy of ten let out of school for a fortnight's vacation is happier or more free from care than our veteran. His troubles are over now. The hurry and bustle of preparation is past, everything is in order, and the old man seans his guide-book through his gold-rimmed spectacles with all the complacency imaginable, because to-morrow morning he is off for a four-weeks' trip through Maine and Canada, to fish those waters that for thirty-five years have yielded tribute to his skill.

Ah! what solid comfort he takes during those long summer days, whipping the bright waters; with what pride he returns to camp at night and displays to the eyes of his comrades his well-filled creel, and that big 'un that wouldn't go into the basket. How he forgets his years as he recounts his exciting passages in the day's sport, emphasizing this "rush" and that "break" with hearty gestures.

Happy the fishing or shooting party that counts among its numbers a representative "old sportsman," one who has tried it many years and found by actual experience how pleasant are the paths of nature when followed understandingly. What a fund of anecdote he possesses—tales of "Auld Lang Syne," of monster trout and giant antlered-bucks, of moving accidents by flood and field. What valuable hints he is constantly throwing out from the depths of his experience to the detestation and knowledge of the youngsters; what savory dishes he concocts from that which youth and inexperience would cast away as worthless. And then the restraining influence of gray hairs and good example on the young is sadly prevalent among a majority of shooting and fishing parties; and as the old man from his seat at the head of the bark table beams benignantly on "the boys," all tendencies to evil die out, and all are attention, listening to the stories he tells, while the smoke of his meerschaum curls lazily upward.

Blessings on the old sportsman; may he live yet many years to indulge his favorite pastime; may the balsamic health-giving pine woods diffuse new life in him; may the healthy diet and perfect freedom from care, and the cabin in the wilderness, lengthen and sweeten his closing years, making them the happiest of his life; may his wise counsels and virtuous ways show to those who have just entered the arena that it pays to study nature and indulge in her sylvan delights soberly and moderately.

There is no reason why a fairly sound body cannot be made to wear for scores of years with all its functions unimpaired, providing that body contains a soul in love with nature. This is a very beautiful world of ours, even to a casual observer; but when one becomes a student and delves into the minutiae, what vast fields open up for investigation, and what infinite comfort can be derived from such research.

Health and field sports go hand in hand, one naturally following the other, and he who goes forth thankfully and understandingly among the forests and along the streams in response to those natural instincts we call the love of his heart, will surely find health, happiness and fulness of years.

H. W. D. L.

Fish Culture.

SALMON EGGS FOR EUROPE.—Nearly a half million eggs of the California salmon went out in the steamship *Oder*, of the North German Lloyd's, for different parts of Europe. They are sent by Prof. Spencer F. Baird, U. S. Commissioner of Fish and Fisheries, to the different countries, they paying the cost of transportation. They are on trays in refrigerating boxes, and will be accompanied by Mr. Fred Mather, the fish-culturist, who will attend to keeping them at the proper temperature. They are to be distributed as follows: Germany, 250,000; France, 100,000; Holland, 100,000; England, 15,000. The eggs were obtained at the U. S. Salmon Breeding Station on the St. Cloud River, Cal., and were packed in moss and placed in a refrigerating car with five millions others for the different States, which were distributed from Chicago. Mr. Mather, it will be remembered, took over some last year, the young from which are now in the Rhine.

MCCLOUD RIVER HATCHERY.—Table of Distribution of Salmon Eggs From the United States Salmon Breeding Station, McCLOUD RIVER, CALIFORNIA, During the Season of 1878:—California—Consignee, B. B. Redding; Number asked, assigned and forwarded 2,500,000; tributaries of Sacramento River, Illinois—Dr. W. A. Prate; 100,000; Elgin, Illinois—W. K. Fairbank; 100,000; Chicago, Illinois—Samuel Preston; 200,000; Mt. Carroll, Iowa—B. F. Shaw; 250,000; Anamosa, Iowa—W. A. Myster; 50,000; Council Bluffs, Kansas—B. F. Shaw; 100,000; Cedar Rapids, Iowa, Maine—Lorenzo Baird; 5,000; Kennebunk, Maryland—S. B. Ferguson; 1,000,000; Baltimore, Massachusetts—A. H. Powers, 100,000, and E. A. Brackett, 100,000; 200,000; Plymouth, N. H., and Winchester, Mass. Michigan—Frank N. Clark; 250,000; Northville, Michigan—Geo. H. Jerome; 200,000; Niles, Minnesota—Dr. R. O. Sweeney, 1,000,000; St. Paul, Missouri—B. F. Shaw; 200,000; Anamosa, Iowa, Nebraska—J. C. Lemme; 100,000; South Bend, Nevada—H. G. Parker; 250,000; Carson City, New Hampshire—H. Powers; 250,000; Plymouth, State Hatching House, New Jersey—Mrs. J. H. Slack; 450,000; Bloomsbury, New Jersey—Mrs. J. H. Slack, 300,000; West Jersey Game Protective Society, 150,000. New York—Seth Green; 100,000; Caledonia, New York—Abram S. Hewitt, 25,000. North Carolina—G. W. Worth; 350,000; Henry's Station, Ohio—W. G. Gates for Castalia Springs Association; 50,000; Cleveland, Pennsylvania—James W. Smith; 250,000, and Seth Weeks, 150,000; 400,000; Marietta and Corry, Erie County, Rhode Island—C. T. Reed; 20,000; Reedsburg, Utah—R. P. Hockwood; 50,000; Salt Lake City, Virginia—Prof. M. McDonald; 300,000; Lynchburg, West Virginia—C. S. White; 500,000; Romney, Wisconsin—R. J. Sawyer; 15,000; Melrose, Wisconsin—W. M. Welch; 100,000; Madison, State Hatching House, Wisconsin—A. E. Lytle; 200,000; Geneva Lake, New Zealand—Care Hugh Craig, San Francisco, Cal., 200,000. Canada—Samuel Wilmot; 500,000; New Castle, Ontario, England, care Fred Mather, 10,000; France, care Fred Mather, 100,000; Holland, care Fred Mather, 100,000; Germany, care Fred Mather, 250,000.

ELS ONCE MORE.—As to the breeding habits of the eel, a resident of West Hampton, Long Island, contributes the following information to the *Evening Post*:

"In the east end of the Great South Bay thousands of dozens of eels are annually culled and skinned, and sent to market. About thirty-five years ago it was part of my occupation to catch eels in the spring of the year, say from the middle of April to the last of June. In the process of skinning and preparing for market a large number of very small eels were seen in the offal. On close inspection they were found to be inclosed in a water-sack separate from the paunch. They were alive while in the sack, about the size of a darning needle—say two and a half inches long—of a lighter color than those we find in the fresh creeks and mill flumes. I was then convinced that the eels breed their young alive after their kind, and am of the same opinion still. How long the time of gestation continues I am not able to say."

A COMPLIMENT TO MR. BLACKFORD.—We take the following extract from a Report on the American Fisheries to the Norwegian Department of the Interior by Frederik M. Wallem, *Cand. Jur.*

Christiana, 1878.—The fish merchant to whom we were introduced, Mr. Eugene G. Blackford, was not only a capable business man, but also a highly accomplished gentleman; he was able to give us not only information on all things concerning the fish traffic, but also scientifically-founded communications on the natural history of fishes. As one of the officers of that great society—the American Fish Culturists' Association—he was identified with all the prominent scientific men in that branch, and with the large staff of fishery commissioners in all parts of the United States. We could not have been introduced to any one who was better fitted to be our *clerone* and our living lexicon. A great portion of the information which I acquired on the fresh fish trade I owe to his kindness and intelligence.

THE GIANT LILY OF NORTH AMERICA.—What our valued correspondent, Dr. Sterling, of Ohio, has written of this most beautiful and interesting aquatic plant has attracted much attention from readers of our columns. He adds further:

"Charles Binnetts, of the Home's Point Club (post-office address, Fremont, Ohio), has secured the seed and roots of the *Nelumbium luteum* packed in frog-bit (*Amblystichum nemorosum*), of which Dr. Estes says: 'A pond or stream can hardly be overstocked with fish where this plant abounds.'"

Our old friend Dr. T. Garlick, of Bedford, Ohio, whose physical sufferings do not quench his interest in science, has also contributed the following information as to planting the seeds:

BEDFORD, Ohio, Oct. 6, 1878.

Mr. Editor.—I have read Dr. Sterling's article in the last *Forest and Stream* with much interest. In my duck shooting in Maumee Bay I have seen acres of *Nelumbium luteum*. I wish to write a short article for your readers, giving the reasons why this plant is not easily made to grow in places where they are not natives, but I am too sick to-day, and will only say now that there is no difficulty in making the seeds of

any of the different species of the Lotus family grow where the conditions are suitable. The seeds of all varieties, having been gathered and becoming perfectly dry, will not germinate, even if planted in a marsh. Several other kinds of seeds will not germinate either when perfectly dry, the shells being impervious to moisture, which prevents germination. By taking a sharp, fine file, and filing partly through the hard shell in two or three places, so that the moisture can penetrate, they will germinate readily. I have done this with the *Nelumbium* and several other kinds of these hard shell fellows. T. GARLICK.

The *Evening Post* has an article headed "The Great Eel Question." Yes; there has been a great deal said about it.

Natural History.

THE LAMPREY.—Last July, when the editor of this journal was fishing in Winnebago Lake, Wisconsin, a young daughter of Gen. Stager, Western Superintendent of the Union Telegraph Company, both of whom were of the party, caught a large bass with a parasite attached to its body just below the second dorsal fin. It resembled an eel, and measured some five inches in length. Upon attempting to remove it from the fish, it stuck so firmly that it not only lifted the body of the fish most easily, but almost taxed a person's main strength. When it let go it gave its body a flit and quick as a flash attached itself to the hand and clung. Its eyes were bead-like and snaky, and had a most intelligent and wicked look; and as it hung to its fastening, the victim felt like St. Paul at Malta when the viper leaped out of the fire and fastened on his hand. There was a pricking, burning, sucking sensation, such as the flesh feels under the cups of a surgeon, and he felt as if it was all up with him! As quickly as possible the vicious thing was detached and flung to the deck, where it flapped around quite lively. Presently a scientific grip was made on it, and it was placed under binocular and microscopic examination. As to its body, it was that of an eel; but instead of gills it had a row of seven holes on each side of its neck, behind the pectoral fins, as the lamprey has; and instead of a mouth the under part of the head was flat and oval, and almost wholly occupied with a circular cir or sucker, just like those on the tentacles of the cephalopods or cuttle fish, of which so much has been written of late. By this disk it attaches itself to objects. Directly in the centre of the same was a horny beak, just like that of the octopus, whose lance-like mandibles cut into the flesh and draw blood, and nourishment *ad libitum*. It fastened to fish on parts where it could not be rubbed off by the most vigorous efforts. These creatures are technically known as lampreys. They grow to a large size, quite capable of mastering or resisting human efforts; and we can scarcely imagine anything more horrible, be the victim man or fish—if fish have thoughts—than the doom of a victim thus destined to be slowly sucked to death.

None of the fishing party had ever seen a lamprey before, and it was deemed a rare curiosity. Unfortunately it was lost before the party landed. How rare these creatures are, in salt water or fresh, we do not know. That they are not in common in the West is quite certain, for very recently our Detroit correspondent, Mr. J. H. Whitman, called our attention to a specimen some ten inches long, which Peter Roney caught in the river there while fishing for bass. It was placed in the museum and examined. Through the intelligent observation of Dr. E. B. Ward, of Detroit, we are enabled to throw the following light on the subject, what we print having been published in the *Detroit Free Press*. The Doctor says:

"It evidently belongs to the order of fishes known as *Marsipobranchii* and to the class *Petromyzontida*. It is not the true lamprey, but the lamprey *Lampetra tatarica*, of the English, or *P. nigricans*, of American writers. Although the lamprey, like the lamprey, belongs to the tributaries of salt sea, the former is by far the greatest frequenter of deep water, only entering streams for the purpose of spawning; while the latter, being a ground-loving fish, rarely leaves rivers shallow river bed. The former is also much the larger of the two, measuring from two to four feet in length, while the latter rarely exceeds twelve or fourteen inches. There is also a marked difference in their respective colors, mouths, etc. In the British Isles, and on certain parts of the Continent, the lamprey is very highly prized as an article of diet, the so-called eels of London and elsewhere being often made of the flesh of this fish than that of the eel, and being considered much its superior in flavor and delicacy. On measuring this specimen I find it to be about ten inches in length. The most interesting question connected with this fish is, how came it here? for, although this variety ascends far up fresh streams, it is quite a conundrum as to how it came up over the falls."

THE SEA-SERPENT OFF CAPE RACE.—*Editor Forest and Stream:* *Argosy* of that portion of my letter to you from Gloucester, Mass., last week, which relates to the sea-serpent, the following is important evidence which cannot be well disputed nor explained away by any ridiculous hypothesis. I derive it from the commanding officer of the U. S. Coast Survey Schooner *Drift*, Master Robert Platt, of the Navy, who, in a five minutes' interview, gave me hasty details. Mr. Platt's long service in the responsible position has told him full evidence that he is an intelligent and reliable man. He told me that on the 23d day of August last, while the *Drift* was becalmed off Cape Race, all hands saw on the port side, about half a mile distant, some animal emerge from the water to a height of about fifteen feet, resembling at first a large spar projecting from the surface; but a small head, a tapering neck and waving motion were distinctly seen. At about two boat lengths (explained as about thirty feet) in rear there projected what seemed to be a huge pointed fin. The creature dove head first into the sea, its body forming a graceful arch, and soon after reappeared on the other side of the vessel. This time it emerged to a much greater height, and after a time dove again and disappeared. Capt. Platt says further that in appearance this creature resembled closely the description given to him by Capt. Frank Howe, of the

steamer *Lawrence*, who, in the same locality, saw, not long since, two such creatures. Is it possible that in this case any of the ordinary explanations will contradict the statement? Vary Ford, Washington, Oct. 12, 1878. PISCO.

THE LADY FISH.—*Mr. Editor:* A strange fish, new to the local fisherman, was taken lately at Narragansett Pier. Being submitted to Professor Putnam of Cambridge he pronounced it to be *Albula conorhynchus*—Bl. and Schu.—called sometimes lady fish, a Southern form. It differs, however, from the species known as lady fish on the coast of East Florida, which is perhaps *Elops saurus*—Linn.—a voracious and active game fish with larger mouth and teeth than the former. S. O. C.

WHEN DO DEER FEED?—*Twin Lakes, Fla., Oct. 7.*—*Editor Forest and Stream:* Some time ago I sent you a short communication on the subject of deer feeding, stating the almost, if not quite, universal belief of hunters in this State that deer feed four times each twenty-four hours, viz.: rising and setting of moon and when the moon is in the South, either above or beneath us. I wished to get an expression from hunters in other parts of the land on the subject, but it seems no hunters have an expression to make, which is somewhat singular, for not a word has been published. Did no one ever hear of the theory, or has the universal experience of hunters in other parts been so adverse to such theory as to induce contempt? If so, why not say so? If, on the other hand, they have had no experience or never heard of the theory, perhaps it would be interesting to themselves and readers of the *Forest and Stream* if they would get some experience and give their views. Certain it is that most successful deer hunters here time their hunts by the moon as above, saying that you will find deer on the move for about an hour more or less at the time specified above, unless it be in localities where they are much hunted, when they feed principally at night. I have heard hunters tell of sighting deer lying down, and watching them patiently until the moon was right, have seen them rise, stretch and go to feeding. I rather pool-pooled this theory when I first heard it broached, but I'm not so certain about its being a subject for ridicule now, knowing, as I do, men who have killed their hundreds of deer, who have as much faith in the theory as they have in their own existence. S.

We have long known of this Florida belief, but have never elsewhere found any one who entertained a like opinion. We have come to regard it as a Florida belief. Our columns are open for further discussion.

BREEDING SNOW-BIRDS.—*Editor Forest and Stream:* In paper of July 4 a correspondent in Williamsport, Pa., mentions having found the nest of a snow-bird, *Junco hyemalis*, thirty miles north of that city. I think it probable that they breed as far South as northern Georgia. I found them in considerable numbers in July of last year in the mountains of western North Carolina, and, though I did not and any nests myself, I can give the names of those who have frequently found them. This was at an elevation of over six thousand feet. I conclude from this that while *Junco hyemalis* certainly goes North to breed, he pays more attention to temperature and environment than to degrees of latitude. Camp Thomas, A. T., Sept. 13. GEO. H. MORAN, M. D.

WANTED, BLACK-TAILED DEER.—If any of our readers have specimens of black-tailed deer which are young, large, healthy and docile, they will confer a favor by communicating with us.

The Kennel.

FEVER IN DOGS.

IF "Stonechenge" and other authorities are to be relied upon in much of the so-called distemper, particularly in the cases of young dogs, is simply a fever which, if taken immediately, will readily yield to vigorous treatment. In fact, the treatment prescribed by "Stonechenge" for simple fevers is one that might in almost all cases be adopted when distemper is suspected, and will be described hereafter. The difference between fever and distemper appears to be that the latter is accompanied by a rapid loss of strength and flesh in proportion to the severity of the attack. The symptoms of fever are, first, a chilliness accompanied by an increase of surface heat, and quick respiration and pulse; then loss of appetite and diminished secretion of urine, with frequently costive bowels; also a tendency to congestion in the mucous membrane of the lungs or nostrils, producing cough, and running at the nose and eyes. The latter symptoms it will be seen are those usually indicating an attack of distemper. In the case of young puppies it has been our custom to administer night and morning a Dover's powder containing from one to two grains each of opium and ipecacuanha. This is in the nature of an expectorant, the effect of which is to excite, or promote a discharge of mucous, relieving inflammation and allaying cough. As further treatment, that suggested by "Stonechenge," viz., two to four grains of calomel, powdered jalap ten to fifteen grains, ginger one grain, should be given. The dose above being for a full grown dog, and to be graduated to one-half or one-quarter for a small dog or a puppy. When this has operated the dog should be fed on gruel and kept warm and dry. A tonic may be required afterward and nothing can be better than the gelatine-coated pills containing one grain each of quinine and citrate of iron.

MR. LORT IN AMERICA.

BREVORT HOGE, NEW YORK,
Oct. 14, 1878.

EDITOR FOREST AND STREAM:

Seeing in a contemporary sporting paper of the 11th of October an article entitled "Visitor or Servitor," bearing upon Mr. Lort's awards at the Bench Show of 1878, and on the correspondence arising therefrom, I ask you will insert for me these few lines. It would be in England a slight on Mr. Lort to defend him from criticisms such as these in question, above which his personal character and his judging capacity raise

him immorally, but in this country he is not so well known, and by many these unjust assertions might be believed. In our country Mr. Lort's judgment is final. He is considered the best judge we have, and his decision can be influenced by nothing but the quality of the animals before him. It would be absurd for Mr. Lort to defend himself from criticisms that can in no way affect him. The writer of the article in question uses the term "true type of American setter." May I ask if the American setter is originally imported or native? And may I further ask what a pure American setter is? The setters of this country are identical with those of England, subdivided, of course, into many types, but I believe all having to enter into the three recognized classes—Irish, English and Gordon. Every breeder has his pet style, and he will, no doubt, consider it the best; but that by no means proves that it is the best. Mr. Lort has had an experience equalled by no man in either country, and is therefore more competent to pronounce an opinion than other men. In all countries, however, disappointed exhibitors must have their say. Sportsmen should be gentlemen. Let them give their reasons for a difference of opinion, but not bring accusations of dishonest intentions, or only as prejudices. I can speak of Mr. Lort with some authority. My dogs have been both successful and unsuccessful under him, and I have always had to indorse his judgment.

I am, dear sir, faithfully yours,
ALFRED A. BROWN, Liverpool.

The writer of the above letter will be remembered as the gentleman who made such a handsome display of mastiffs—Norma, Vandal and others—at the New York Dog Show in 1877. Apropos of the article in our contemporary, entitled "Visitor or Servitor," in which it was stated that Mr. Lort was paid for his services as judge in the city last spring, we would say authoritatively that such was not the case. Mr. Lort came over here purely as a guest and at great expense and inconvenience to himself.

DOGS AT AUCTION.—A number of dogs were sold at auction in the old post-office building, in this city, on Saturday last. The prices were, in most cases, ridiculous, for which the owners have only to thank themselves and the auctioneers, for had this sale been properly advertised in the sporting papers, and intending purchasers afforded an opportunity for verifying the statements made regarding the dogs, the attendance would have been larger, and prices more in accordance with the value of the dogs. Most of the lots offered were puppies drafted from the "Windsor" Kennel of J. B. Miller, Esq., of Newburgh, N. Y., who will be remembered as a large exhibitor at the first New York dog show. The prices obtained would scarcely have paid the expenses of the animals from Newburgh, and we fancy Mr. Miller will hardly be likely to repeat the experiment. The first dog offered was a puppy three months old, said to be a cross between a bloodhound and Newfoundland. He was started at about his value, ten cents, and was finally knocked down for \$2. Henry, a fair bull terrier, eight months old, brought \$9. Pet, Princes and Chance, three Siberian bloodhound puppies, three months old, of good breeding, sold for \$1.50, \$1.75 and \$1, respectively. A Skye terrier bitch, Judy, one year old, said to be imported, brought only \$5.50. Another Siberian bloodhound puppy sold for \$1. Three bull-terrier puppies, for which the owner expected to realize \$50 to \$75 each, sold for \$2.25, \$4.25 and \$5.50. After these lots had been disposed of, two black-and-tan fox-hounds, or, rather, stag-hounds, six months old, bred from the pair presented to Gen. Custer by the Grand Duke Alexis, were offered and sold for \$5.50 and \$5.75. Following these, two red Irish setters, Sank and Sal, the property of John Taylor, the celebrated Jersey City pigeon shot, were sold. A guarantee as to their perfect field qualities and a week's trial went with each dog. Sank was a dog of fair color, with a good head, and was cheap at \$59. The bitch, not so good in any respect, brought \$70. Two Parker guns, belonging to Mr. Taylor, were also put up. One was bid in at \$80, and the other sold for \$40.

We are forcibly reminded by the above sale that persons who have dogs to be sold at auction seldom appear to think it necessary to advertise in anything but the local daily papers. We make this remark not because we are desirous of having the advertisements ourselves, but in the interests of our readers, whom we desire to keep posted as to such events. Not a week passes that we do not have inquiries for dogs of the various breeds sold on Saturday, and we venture to say that had we been advised in time to note the proposed sale in our issue of last week, that there would have been ten bidders present to where there was one.

DEERHOUNDS AND STAGHOUNDS.—A conversation which we overheard at the auction sale of dogs reported above brings to mind the fact that few persons in this country are really aware of the difference between a deerhound and a staghound. Many imagine that the latter is the rough-coated dog used in the Highlands of Scotland for chasing wounded deer. In point of fact the staghound is merely a large foxhound supposed to have been descended from the old Southern hound. His colors are identical with those of foxhounds, except in the case of the blue mottled, which color is now banished from all first-class packs of foxhounds as indicating a harrier cross. There are several packs of staghounds in England used generally for chasing a half-tamed deer which has been brought to the meet in a cart, and which is generally recaptured alive and uninjured. The deerhound is the rough-coated dog of the Highlands, in shape like the greyhound, the dog of Sir Walter Scott, and of Landseer the great painter. The latter has made us familiar with him in some of his finest works, such as the Stag at Bay. There are a number of fine deerhounds in this country; Mr. Gen. Fremont has a superb specimen and so has Mr. Paul

Dana. Mr. Thorne, of Thorneville, this State, has had a strain for some years. Mr. Medley, of London, brought two over with him from the Hampton Court Kennels, which were exhibited at the first New York dog show, and being ticketed at £10,000 each they attracted much attention. We considered them undersized, however, and not up to the work expected from a deerhound.

DOE LOST.—Mr. George B. Grinnell, of Milford, Conn., has had the misfortune to lose, or to have stolen from him, his fine setter dog Rock. Rock is a red dog, with breast, feet and tip of tail white, white blaze on face and white spot on neck; about three years old and of very friendly disposition. His collar bore his owner's name and address. We trust sportsmen will look out for him. By an advertisement in another column it will be seen that a reward of \$25 is offered for his return, and one of \$100 for the conviction of the thief.

A SMALL DOG.—If a puppy, whelped on the 2d instant from a black-and-tan terrier bitch, the property of Mr. E. B. Hartwell, of Louisiana, lives, its owner is sure of all the "smallest dog" prizes at dog shows for some time to come. The puppy in question weighs but three and a half ounces, and at last accounts was doing well. The mother weighs five and a half pounds.

A CURIOUS SUPERSTITION.—The *Pall Mall Gazette*, in referring to the fact that an impression widely prevails among certain classes that the danger arising from the bite of a dog suspected of being mad can only be averted by the death of the animal, states that dogs unaffected by rabies are no doubt often destroyed in accordance with this theory, leaving the person or persons they may have bitten in a state of suspense as to the risk incurred of an attack of hydrophobia. In Burma mad dogs and dogs supposed to be mad are not only killed, but eaten, the flesh of a mad dog being in the opinion of the Burmese not only the best antidote to the poison of the tooth, but a prophylactic against hydrophobia. A crowd the other day, according to a Rangoon paper, were seen in the streets of that city hacking a dog to pieces and scrambling for the morsels, which, when secured, were taken home and fried and eaten by their fortunate possessors. The dog was rabid, and had bitten several persons, some of whom have since died. It was ultimately chased and clubbed to death, and those who devoured its remains flatter themselves that they are now hydrophobia-proof forever.

NAMES CLAIMED.—Mr. James T. Walker, of Troy, N. Y., claims the following names for setter puppies by his Dash out of his Black Boss, whelped July 8, 1878: Brigadier for black and tan dog puppy; Fanchion and Cricket for black, white and tan bitches; also, the name of Black Prince for black setter dog puppy by his dash out of Bennett's Mab.

—In recording the names claimed for red Irish puppies in a recent issue, we gave the name of the owner of puppies as Mr. H. P. Dotch, of Goldsboro, N. C., when it should have been H. P. Dorch.

—Mr. Dodge, of Detroit, has sold the following named Ross-Leicester dog pups, viz: Cash, to J. E. Long; Remus, to J. H. Canfield, and Romulus to Fred. H. Stearns, all of that city.

—Mr. J. A. Wright, who purchased one of Mr. J. Addison Smith's Sensation-Lily lemon and white pointer puppies, announces his safe arrival at Austin, Nevada, after his journey of 3,000 miles. Mr. Wright expresses himself as much pleased with the puppy.

—It is reported that Mr. Chas. Lincoln, in connection with some of the sporting fraternity of Detroit, is making preparations for a mammoth dog show to be held in that city during the winter.

—Mr. William H. Pierce's (of Peekskill, N. Y.) fine Gordon bitch Wag, whelped Oct. 8, by Dr. S. Fleet Speirs' Gordon dog Gypsy, twelve black and tan puppies, all beautifully marked; but three are now living.

YACHTING NEWS.

YACHTING AT CHICAGO.—Editor *Forest and Stream*: During the past few weeks yachting news has been somewhat scarce, owing to the fact that we were having our equinoctial gales. They have blown fierce and strong enough to take the "sticks" clean out of our big three-masted lakers, so that no shallow skimmers could have lived in the big seas these strong winds caused. But on Saturday, October 5, the closing regatta of the season took place. The prizes were to be "pennants." Several yachts entered for the race, among them the *Cora* and *Greyhound*. The principal interest was drawn out by these two yachts, because it has been nip and tuck between them at different times for the pennant of the C. Y. O. The day was a fine one for racing—cool and clear, with a puffing breeze from S. W. W., veering at times to N. W., inclining at times to be strong. The stake-boat was anchored three miles distant from the starting point. The boats got away in good shape, and were soon carrying all the sails they could spread to stand up with. Each were provided with "ring-tails" and carried mainsail, jib, jib-top-sail and gaff-top-sail. The *Cora* first came around the stake-boat. Captain Prindville, after rounding his boat, took in those sails that

could be dispensed with while on this tack. Captain Bussey, of the *Cora*, neglected to do this, and it was soon seen the *Cora* was acting badly. With the first puff of wind she began to heel pretty badly, and was losing stowage-way. The "ring-tail" was dragged in the *Cora*'s wake, and a good deal of her progress. It was finally cut away, but no sail shortened. The wind freshened again and the *Cora* keeled over. It was evident nothing could be done to save her, and each puff added to her already critical position until she lay on the water like a log, with her sails submerged. Fortunately no lives were lost. The tug *Constitution*, a powerful boat, hove a line over and soon righted her. Now for the cause: The *Cora*, though a fine boat, is clumsy, awkward, and a good deal of water, but compares badly with a fine sea-going yacht. If I remember right, she has an iron bow, or keel, but in spite of this carries a large amount of ballast. To enable her to beat the *Greyhound*, they took out of her 3,000 pounds of ballast, thus making her cranky. Such, at least, are the reports among yachtsmen who witnessed the race. Yachting has created quite an excitement here this season. The C. Y. O. have done better this year than at any previous time, and is growing in strength and financially. There is strong talk of buying a first-class Canadian yacht that has cleaned out everything over the border, and bringing it here time enough to open another season with. But for this accident, Chicago yachtsmen feel jubilant over the season's work, and are looking forward hopefully to a strong club for 1879.

Chicago, Oct. 10, 1878.

EASTERN YACHT CLUB.—The schooner *Brenda*, Mr. Little, has been to Bath, Me., where her spars were cut down, her owner not wishing to carry such a heavy press, requiring too constant reefing. With less canvas it is expected she will do quite as well, and possibly better, than before. This schooner was always a fast one, but since copped this season we have the assurance of her owners that she showed a perceptible increase of speed. The *Poan*, Com. Boardman, was badly beaten by *Rebecca*, Mr. Joy, in a private match a short time since, even without the 20m. time the Commodore had to allow. *Rebecca* has not been in the harbor since she beat him. We have before us a photograph of *Brenda*, which shows the yacht to advantage, and from her looks we should take her to be a good heavy weather craft. In this connection we wish to call attention to the advisability of having yachts photographed "broadside on." An artist might prefer some shortened view; but since the only value of a yacht's photograph lies in the perfect display of her outline, it will be readily understood that covering her with the capability of arranging the camera for more than one focal distance, at the same view of a yacht other than in a broadside position will show her in distorted perspective, making that portion furthest from the camera unduly small, thereby failing to give any adequate idea of the yacht's appearance or proportions. We will be pleased to receive photographs of yachts of all kinds if our readers will send in a copy. It is to be hoped the custom of having craft photographed will be more generally adopted everywhere.

PORTLAND YACHT CLUB.—The fleet of the Portland Yacht Club now numbers 12 schooners, 18 sloops and 2 steamers, figures that indicate quite an access to the squadron during recent years. The club was organized in 1838, has been incorporated this year, and has on its book 145 members and 12 honorary members. Among the yachts flying its pennant—white, blue border, red diagonal cross and blue star—we notice the schooner *Ray*, one of Geo. Steers' renowned crafts, very much resembling *America* in her general form. As a sloop, *Ray* was equal to about anything afloat, especially in a sea, where her deep peg-top bottom would always tend to her gun. We should her owner, Mr. Geo. Steers, out to racing trim again, and try conclusions with the sloops on a long flat floor, so much affected during the late infatuation with beam, when nothing could be built that was too flat and wide.

SCAMP VS. FANCY.—Mr. Editor: A match race between the two cat-rigs, *Scamp* and *Fancy*, of the Nubasset Y. C., was sailed here this week, which resulted in favor of the *Fancy*. The match was best two in three, and no time allowance, although the *Scamp* is the smaller boat. The first race was won easily by the *Fancy* in a solid north-wester, both boats having all they wanted under close reef. The second race was won by the *Scamp*, with about ten seconds lead, and the third by the *Fancy*, with only a few seconds to spare, wind being moderate northeast and smooth water in both races.

Boston, Oct. 12.

HARLEM CHALLENGE CUP.—The last race of the season for this cup was sailed on the Harlem, Oct. 10, over the usual course, and was won on time by *Emma D.*, in 2h. 18m. 54s., beating *Brook*, *Scamp*, *Pie*, *Flint*, *Kate*, *Wilson* and *Comet* in the order named. Wind was fresh from N. W. *Emma D.* has won the cup three times and holds it till next season. When won five times by the same yacht it becomes personal property.

NORFOLK CAT-BOATS.—A race was sailed, Oct. 3, at Norfolk, Va., over a ten-mile course. Won by *Little Frank*, beating *Gracie*, *Lellu*, *Alist*, *Aldine*, *Cora*, *Campbell* and *Grover*.

OAR AND PADDLE.

THE SCULLING CHAMPIONSHIP.

That the opinions expressed in this paper concerning the Courtney-Hanlan race are entertained by disinterested witnesses of the match, the following extract from the letter of a gentleman resident in Montreal will serve to show: "I trust you are going to do the race justice and not join in the untruth and discreditible hue and cry against Courtney. One only could win the race, and surely no discredit could attach to him by being beaten by such a 'stayer' and such a skillful sculler as is Hanlan. I saw the race throughout, and from what I saw, coupled with the fact that Courtney made as good time as in any of his previous performances of which I have read. I am satisfied the race was a fair one, and that those who circulate the vile calumny that Courtney sold the race, only base greed upon themselves. Nothing whatever has been brought to light in the shape of anything worthy of the name of circumstantial evidence, much less proof, against the honesty of Courtney in his race with Hanlan. Because the backers failed to put up the stakes as large as first reported, and because some of Courtney's best friends put all they had on the Canadian, this is about all the 'chain of evidence' wound about the dishonorable sculler doomed to share the shaft of Banister Arnold, and all the other nonsensical trash that the disappointed scandal mongers have been foisting upon a surfeited public for some time past. There is, as we have said before, not the least tangible evidence warranting the stupid and baseless calumny of Courtney, and if many

of the rumor hucksters and would-be false witnesses only know how much serious harm they are inflicting upon the future prosperity of professional rowing in America. They would think twice before allowing such indefensible license to their tongues. Most of these persons are actuated by a desire for cheap notoriety in the public prints. The whole trouble arises from the fact that Courtney has been a good deal too much of a champion on paper and has been lifted up to the gaze of the people as the great invincible "I am," until the public began to believe it. He was as fairly beaten by Hannan as ever a sculler was, and he will let him severely alone for a long time to come. The attempt to defend opinions entertained previous to the great race by disparaging the honesty of one of the contestants, as is puerile as it is unworthy and prejudicial to the popularity of the sport in the future.

FAIRMOUNT ROWING ASSOCIATION.—The second annual regatta of this club took place October 5 on the Schuylkill, Philadelphia. Single sculls—won by Charles Hamilton in 14m. 11½s.; George Mitchell second, Thomas Lambert third. Single scull working boats—won by William France in 14m. 40½s.; John Schmar second, E. Connelly third. Double scull working boats—won by B. McCosker and T. Lambert in 12m. 37½s.; John McCosker and T. Brown second; William Tapper and C. Reitz third. Four-oared barges—barges Fairmount, A. Campbell (bow), T. Hopkins, William Ashman, S. Little (stroke), and T. Tillot (cox.), won in 14m. 11½s.; barge Wase, E. Connelly (bow), H. Faber, A. Doerr, Charles Schmitt (stroke), and J. Moore (cox.) second. Six-oared barges—barges Ethel, Thomas Lambert (stroke), John McCosker, Ed. Branon, W. Tapper, John Fowler, John O'Neill (bow), and Robert Bell (cox.), won in 10m. 43½s.; barge Washington, B. McCosker (stroke), Hugh Simpson, J. Farrell, J. Waters, Walter Poole, T. Reitz (bow), and Charles Moore (cox.) second.

POTOMAC BOAT CLUB.—The annual fall regatta of this club took place October 8 over the club course on the Potomac, Washington. Single sculls—Robert took the lead, but slipped his sliding seat. Barbara won in 8m. 42s.; Bailey second, Roberts third, Gadsby fourth, Stevens fifth. Double sculls—boat Orophey took the lead and won in 8m. 30s.; crew, Bester and Zeigler; boat Ecclesior second; crew, Wheeler and Bailey. Four-oared shells—Potomac crew, W. H. Gibson (bow), W. F. Roberts, J. S. Zeigler, N. Bester (stroke); four-oared shell Saratoga, crew, A. B. Brice (bow), C. Zappone, C. Zappone, F. J. Zeigler, E. B. Brice (stroke); crew, Phil, Dodge, crew, F. John (bow), L. Coe (stroke), J. Evans, W. Wheatley, J. D. Doyle, R. Morgan (stroke), and J. H. Gordon (cox.). Potomac took the lead and won in 6m. 50s., Saratoga 6m. 55s., and the 6m. 58s.

YALE FALL REGATTA.—The closing regatta of Yale was held, Oct. 12, on Lake Saltston, during bad weather and lumpy water. The course had been resurveyed recently and found to be 120 ft. short, which error was rectified. First race, for barges; distance, two miles; Seniors had the easiest run, the Juniors took the lead, with Sophomores in the middle. At the start the Juniors took the lead with a stroke of 42; Seniors second. Near the turn the leaders shipped a lot of water and were compelled to pull for the shore. The Seniors were the first to turn, and increased their lead on the run home, crossing the line in 15m. 58s.; Sophomores in 16m. 20½s.; The crews were as follows: Class '79—E. F. Livingston (bow), H. S. Crocker (stroke), O. D. Thompson, J. V. Farwell, E. E. Hyde (stroke), G. F. Aldrich (cox.). Class '80—F. O. Spencer (bow), Preston King, F. W. Keator, N. G. Osborn, H. W. Tat, W. R. Innis (stroke), E. W. Knevals (stroke). Class '81—J. F. Merrill (bow), W. E. K. Nixon, P. O. Fuller, Henry Ives, J. B. Collins, A. B. Beadle (stroke), H. N. Tuttle (cox.). Second race, for four-oared crews of the Durham Rowing Club, over a one-mile course. Red pulled 48 to Blue in 7m. Red won by a wide lead and won in 6m. 30½s.; Red followed in 7m. Crews as follows: Reds—J. E. Wilson (bow), T. Richmond, R. H. Mason, H. H. Donaldson (stroke), J. Bulky (cox.). Blues—P. Bigelow (bow), M. S. Wilson, L. M. Higginson, L. A. Stokes (stroke), J. J. Nairn (cox.). Third race, for six-oared barges, distance two miles, between the Academic and Scientific Freshmen. The Academics, with a long swing of 36, drew out ahead and sailed down to 30 on the return, winning easily in 15m. 53½s.; Scientifics, 16m. 20½s. Crews as follows: Academic '82—De W. Guyler (bow), H. H. Knapp, F. M. Eaton, C. B. Storrs, L. K. Hull, H. T. Folson (stroke), A. Fitzgerald (cox.). Scientific—A. D. Bevan (bow), M. Alcott, E. Bailey, C. M. Carpenter, J. I. Schiller, E. A. Hubbard (stroke), G. L. Sargent (cox.).

ANALOSTAN BOAT CLUB.—The regular fall regatta of this club was held Saturday, Oct. 12. Water smooth. Four-oared shells: America—Campbell, Marshall, Taylor and Bester. United States—H. H. Knapp, F. M. Eaton, C. B. Storrs, L. K. Hull, H. T. Folson (stroke), A. Fitzgerald (cox.). Kenney. Fraud—White, Pairo, Mosher and Page. Fraud won in 7m. Second race, for double working boats. Nellie—Jones and Hall, and Hazel, Page and Burdette; won by the latter in 8m. 9½s. Third race, for barges, Analostan and Palom. Won by Analostan. Course in all cases one mile.

ROWING AT ST. LOUIS.—The annual four-oared race for the championship of the Mississippi was rowed October 6. Distance, about five miles, most of it down stream; water rather lumpy, the mark boats drifting from their moorings. Modoc Rowing Club—J. Cummings (bow), D. W. Gindler, J. Stump, W. Keller (stroke), won in 32m. 30s. St. Louis Rowing Club—B. F. Brand (bow), L. Stocker, D. Newell, L. Edol (stroke), second, 33m. Western Rowing Club—J. Spires (bow), G. Hoffman, H. Sicken, T. Hilliker (stroke), third, 36m. Mississippi Rowing Club—J. Hamm (bow), E. Moses, L. Fenteberg, H. Clark (stroke), fourth, 36m. 40s. The boats did not start in style, some being out of the wind and the darkness caused much wild steering.

ROWING AT PORTSMOUTH, VA.—The Hope and Brisk four-oared crews pulled a race at Portsmouth, Va., October 2. Hope—M. Ellis (bow), William Miller, Julian Pace, S. Ballantine (stroke), and S. Hope (cox.), won in 12m. 13s. Brisk—Millard Brennan (bow), William Ridgewell, R. McClain, Geo. Gwin (stroke), and Ed. Summers (cox.), second.

DAVIS-REAGAN MATCH.—These two Boston oarsmen met on Silver Lake, near that city, Oct. 8. Reagan was the favorite, pulling in a new ship, by Elliott, of Greenpoint, L. I., 30ft. long, 11in. beam and 27½lb. weight. Davis was seated in a "down-east" shell, from the shop of Stevens, of Lynn, Mass., 29ft. long, 10in. beam and 27½lb. weight. The scales at the extremely light weight of 24½lb. At the start "Go," both men got away well together, at a stroke of about 33. Reagan showed to the front slightly, but when the half mile was reached Davis had the best of it by half a length. He then quickened his stroke and spun out his lead to a clear three lengths at the turn. Time, 13m. 14s., the best on record. On the pull home the Portland sculler put in more good

work, and finally passed the line with nine lengths to spare, making the four miles in 25m. 7½s. Davis thus has made the fastest four-mile time on record, and his victory, though unexpected, was received with satisfaction. We think Davis a particularly good man, and one who will show to the front more extensively than heretofore. Poor Reagan's defeat was the least of his misfortunes that day. He was killed through an accident to the train in which he was returning to Boston. Faulkner, his rowing partner, was wounded, and the latter's wife met with her death, together with Mrs. Blakey, wife of the Cambridge boat builder.

ROWING RIFPLES.

Plaisted and Evan Morris will pull, Oct. 18, over the Hulton course at Pittsburgh, two miles with a turn. Morris is the better man of the two. On the last time, Ellis Ward beat W. Myers, of Philadelphia, over a three-mile course on the Delaware. The amateur championship of Mystic River, Mass., was won by Mr. J. H. Houghton, Oct. 5, who had a walk-over. Andy Seibert beat J. Burnett, at Wheeling, Va., Oct. 5, over a three-mile course in 23m. 55s. Hosmer and Frency Johnson will arrange a match. All the sporting fraternity who lost money on the paper champion of America are sure now the Courtney-Hannan race was fraught with dishonesty. Hannan, champion of America, will row no more races this season, but will leave for England this winter to try his luck abroad. Dr. Driscoll beat Sullivan and Corbett in a single scull race on the Merimac, Oct. 5, winning the Merimac River B. A. medal the third time, making it his property. Courtney proposes to prosecute his libellers. Riley has done a good deal of practice work for his five mile race with Davis, of Pound, to come off October 19, on Oswego Lake. Pacific Life offers for competition among its subscribers a fine \$800 barge and outfit.

Game Bag and Gun.

GAME IN SEASON FOR OCTOBER.

MOOSE. *Tarandus vampifer*. Elk or wapiti, *Cervus canadensis*. Moose or elk, *Cervus americanus*. Deer or Va. deer, *C. virginianus*. Wild turkey, *Meleagris gallopavo*. Pinnated grouse or prairie chicken, *Tetrao canadensis*. Ruffed grouse or pheasant, *Bonasa umbellus*. Quail or partridge, *Ortyx virginianus*. Black-bellied plover, ox-eye, *Squatarola carolinensis*. Ring plover, *Agriolais semipalmatus*. Killdeer or Va. deer, *C. virginianus*. Sharp-shinned hawk, *Falco acuminatus*. Red-breasted sapsucker, *Sphyrapicus niger*. Woodcock, *Limosa melanotos*. Red-breasted snipe, or dowitcher, *Macrorhamphus griseus*. Red-backed sandpiper, or ox-bird, *Actitis macularia*. Greater yellowlegs, *Tringa melanoleuca*. Lesser yellowlegs, *Tringa melanoleuca*. Yellow-shanks, *Totanus fasciatus*.

"Bay birds" generally, including various species of plover, sand, snipe, quail, snipe-catcher, surf birds, *Actitis*, *Tringa*, etc., coming under the group *Lincoln* or Shore Birds.

This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

GAME IN MARKET.—Pinnated grouse (prairie chickens), \$1 to \$1.25 per pair; partridge (ruffed grouse), 90 cents to \$1 per pair; mallard ducks, 75 cents per pair; black do, 75 cents per pair; wildgeon do., 60 cents per pair; broad bill do., 60 cents per pair; teal do., 60 cents per pair; Wilson snipe, \$2.50 to \$3 per doz.; plover, \$3 per doz.; bay birds, large, \$3 per doz.; do. small, 60 cents per doz.; red birds, \$1 to \$1.25 per doz.; wild pigeons, stall fed, \$1.75 per doz.; Philadelphia squabs, \$3.25 per doz.

Poultry.—Philadelphia and Bucks County dry picked chickens, 18 to 22 cents per pound; do. fowls, 16 to 18 cents; do. turkeys, 16 to 20 cents; do. ducks, 16 to 20 cents; do. geese, 14 to 16 cents; State and Western chickens, 14 to 16 cents; do. turkeys, 14 to 16 cents; do. fowls, 13 to 15 cents; do. ducks, 12 to 15 cents; do. geese, 10 to 12 cents.

COOT SHOOTING AT SHELTER ISLAND.—Under date of Oct. 11, our correspondent, Mr. Isaac McLellan, writes from Shelter Island, L. I.:

There has been so far but few coots up this part of the bay, as they have been collecting in Gardiner's Bay, several miles below. But this rough northeasterly storm which is raging here to-day, will probably drive the birds around these shores. We have seen several flocks of them this morning flying along the shore, seeking a more sheltered place for rest and food. Last fall and winter, as you know, were remarkably mild and moderate, so the coots and old squaws were very plenty on the flats east of this island, and were easily killed by sailing on them or by battery. It is to be hoped they will be as plenty this season, and by the latter part of this month, or in November, they may afford good sport. In some years these fowls are very numerous here, but in others they are comparatively scarce. There was good coot shooting last fall and all through the winter until March. They were very abundant and a single battery in a few hours would kill as many as sixty or more. The shooter lies in a small boat, with his decoys around him, and his comrade in a row-boat picks up the birds.

NEW JERSEY.—Hammonton, Oct. 13.—On Friday I started from Lower Bank with a worthy resident of that place—Mr. Steve Henry Adams—for Landing Creek. We paddled up the creek and through the branches and guts, and started a number of wood duck, of which Mr. Adams handled down to the north, but there was a fair tide running. So, accompanied by my trusty pusher, James Kramer, we started for the meadows. The birds were plenty, but hardly enough water to pursue them successfully. I have heard some sportsmen say that a rail at all times is a dull, sluggish bird, and that any tyro can kill them; but if they could have seen the rail yesterday get up before the wind and twist and turn and go like a rocket, still winging his way, and then see him twist and turn to play to break them down. But with all the high wind and poor tide, I managed to beat sixty-four as fine birds as I ever saw. I killed a number that it was impossible to boat, which, of course, I did not count. The wind was so strong at times as to force us to sit down in the boat; but we had a

good time and was well pleased with our success. If sportsmen would like to have sport among the black ducks and mallards, let them go by rail to Bag Harbor City, and then by stage, seven miles, to Lower Bank. L. W. B.

DEER STALKING IN BLOOMING GROVE PARK.—The Blooming Grove Park Association owns a tract of some 12,000 acres of land much diversified. Included in this territory is a breeding paddock one mile square for deer and elk, which is inclosed by a high wire fence. At the present time the number of deer in the inclosure is quite large, and bucks especially have become superfluous. Among the rest a few old reprobates which are obnoxious to the gamekeepers, for some reason, and it has been determined to hunt them out of their coverts and kill them. To do this successfully, and afford amusement to members of the association, there will be a hunt for them on the second day of next November, when self-styled hunters will be enabled to exhibit their woodcraft and skill with the rifle. No dogs will be used, and the efforts of the hunters will be to jump them from their cover and hit them on the fly. That's what's the matter. The Executive Committee have requested us to urge those intending to take part to address Dr. E. Bradley at the Hoffman House, so that if the numbers warrant a special car may be engaged to leave New York on Friday, November 1, at 8:45 A. M. Invited guests of the association will share the privilege.

The winter sports of the association are bear and deer hunting, the shooting of ruffed grouse, ducks, wild pigeons, hares, rabbits, foxes, squirrels, mink and otter, and fishing for pickerel and black bass. Deer and ruffed grouse are especially numerous, and combined with the exhilarating atmosphere peculiar to the region, cannot but afford rare sport and enjoyment to those fond of out-door pastimes. Tickets to Millville Depot and return ("access to the park," \$5, and the privilege to be had only at the Erie R. R. office, corner Broadway and Twenty-third street. Time, 4 hours 11 minutes by rail, and 1 hour and 15 minutes by stage.

SOUTH CAROLINA.—Charleston, Oct. 12.—A very pleasant hunt came off a few days since near Summerville, the charming resort of a large number of Charlestonians, about 23 miles from the city. A large number of deer were started, and a couple of fine ones brought home. Governor Hampton, who was one of the party, bagged a fine buck in handsome style. The Governor is a capital shot, and is very fond of hunting, but has had few opportunities of doing so in any sport for the last three years. From August 1 to this time 56 deer have been brought home by the Summerville sportsmen. They report deer very abundant, and have had magnificent sport.

FLORIDA.—St. Augustine, Oct. 10.—Wilson snipe have appeared much earlier than usual this season. Good bags have been made.

VIRGINIA.—Blacksburg, Oct. 8.—Quails very plenty. A good many ruffed grouse have been killed. A few scores to be seen about wet places and springheads. M. G. E.

The Petersburg Index says that partridges are as abundant in the adjacent counties as sparrows. The coverts are large and numerous and the birds tame.

MICHIGAN.—Bears are numerous in Lapeer County. A 300-pounder was the trophy of a party near the town of Lapeer last week.

IOWA.—Pomeroy, Oct. 5.—Sport is prime here now; ducks are coming in all the time; geese in fair quantities. Doc and I drove out a couple of miles Tuesday evening and I bagged a pair of blue jays, making a clean double the first of the season. I walked up behind some stacks and took care for them, cutting them down clean at 80 yards with my 12 gauge. What No. 10 gun could do better? Glass ball shooting is on the decline here since the opening of the season. A party leave for Spirit Lake next week on a ten days trip from Dubuque. Any friends East who may wish to visit Iowa for sport will be aided as far as possible, and any questions will be cheerfully answered if they will address me through your office, as I am ever ready to lend a helping hand to brother sportsmen whenever an opportunity offers.

ARK DACOTAH.

MINNESOTA.—St. Paul, Oct. 8.—Ducks are beginning to fly pretty well and every one is out now on the war path. I have been out and "purchased" a few myself. C. P. M.

WILD PIGEONS.—Washington, D. C., Oct. 12.—Wild pigeons are numerous in Montgomery, Maryland and Fairfax Counties, Va., and the region thereabouts. A great many have been killed along Seneca Creek in the first-named county, twenty miles west of Washington, and the shooters have had rare sport. The birds are in good condition and fly low. They are feeding on buckwheat and acorns, and seem to be moving to the West. CHIEF.

—Wild pigeons are here (Blacksburg, Montgomery County, Va., Oct. 8) in some considerable numbers, as is the case every year in September and October, moving apparently southwest along the mountains. M. G. E.

A GENEROUS OFFER AND A RARE CHANCE.—Here is an offer from a merchant in Pennsylvania which we think some of our readers will be delighted to accept; but if disposed to do so write to the principal and not to us:

PINE GLAN, Centre Co., Pa., Oct. 6, 1878.

EDITOR FOREST AND STREAM:

I keep no hotel, nor do I run for one, that my object to induce parties to come to my hunting ground would be to make some money. I do not hunt for the market; I hunt because I enjoy it. I have several friends from the East who come up every season. I expect some, if not all, this season. Our principal hunting is for deer. We break them with dogs. We have a great many pheasants, and this season black and gray squirrels are very plenty. I expect to set my camp on Nov. 1 and stay until Dec. 15. I camp and hunt on my own and grounds that I am interested in. We camp in regular hunters' style, keep a man all the time at camp to cook and do the work. Where we hunt we can hear the whistle of the locomotive from the P. & E. R. R. on one side and Snow-Shoe on the other. Snow-Shoe is my railroad station. Now, I will take one or two good fellows and I will give them all they hunting they may want. I will assure them good, warm quarters while they are here. I will meet them at the depot and see they get to camp; see that they get game to take home, and if you, or any of your friends, may want to accept let them write to me and I will give them all the particulars. GEO. R. BOAK.

LONG BRANCH GUN CLUB.—At a meeting of the club in this city last Saturday there were elected about one hundred new members, who came from the Boston, Narragansett, Philadelphia and Baltimore Gun Clubs. The club as newly organized propose to hold a series of matches at Newport next summer, in which the best shots of the country will partici-

one has broken "out of about one hundred" sold by him, whereas he thinks I cannot know so much about bows as he. I will only suggest to him that I have used up, worn out and broken more than one hundred bows in the last shooting, and I think in that time I have learned something about them. I have no doubt "W. H." has used an Aldred bow for five months, and if he has I will say positively without any information on the subject, that his bow does not pull fifty pounds. It may be marked fifty, but will not weigh fifty. The reason I say this is that my experience is that little, weak bows will endure three times the shooting that strong, quick bows will. The reason is that the powerful recoil of the stronger bow more quickly affects the texture of the wood. Another reason why I think "W. H." shoots a weak bow is that he publishes no scores of his club at greater range than thirty yards. He says one might as well shoot at a barn as a regulation four-foot target at twenty yards. True, but why shoot at twenty? It would surely be of great interest and benefit to archers, and of comfort to publishers, if all clubs would shoot at the regulation target, so that all that would be necessary for the reporter to say would be simply: "Each archer 30 arrows; W. Tell, 50 yds., 150; 40 yds., 190," etc., in reporting scores.

To show the difficulty of discovering the actual value of the score published by "W. H." as made by the "Ortland Archers," in your paper of the 20th of Sept., I accompanied Mr. Maurice Thompson to the target ground of our club, and drawing a face upon a paper of a 24-inch target, with a 44 inch gold and 2 1/2 inch rings, we placed it on the front of our regulation 4-foot target, and shot the same number of arrows, &c., 11 ends of three arrows each at 30 yards, with this result:

	Ends.	Hits.	Score.
Maurice Thompson.....	11	83	175
Archer.....	11	33	137

Now, few archers care to take the trouble to make a new face for every size target they find being shot at by others, so it is very desirable that we have uniformity of targets. Then let the reporter give the score just as I gave the score of the contest at Indianapolis on the 1st of Oct., for the prizes offered by the State Board of Agriculture, adding, if he desires, the number of golds made by each archer. Will not other archers respond and discuss this question, for surely we ought to know at a glance how the score of any archer compares with our own. I have before me the English "Archery Register" for 1878, giving the names of all the clubs in England, and the scores made by each archer for the past year. What a fine thing it would be if every club would report their scores at a regulation target to the FOREST AND STREAM, and then a year's issue, bound, would hold the history of archery in this country for the year. I would not take \$100 for such a book if I could not replace it.

ARCHER.

ARCHERY SCORE CARDS.—We have received from Messrs. Holberton & Co., of 117 Fulton street, samples of two styles of archery scoring cards—one plain, and the other colored. These cards are somewhat like the scoring cards in use in England, and experience has shown that they are the simplest and best. The complete score of twelve persons, or one person twelve times, can be kept on this little card; all that is required is to prick the hits, under their respective colors, with a pin, so that at a glance the archer can see where he has hit and the value of the shot.

ORTLAND ARCHERS.—Hockensack, N. J., Oct. 13, 1878.—A 30 yards, 24-inch target, 13 ends;

Hits.		Value.	Hits.		Value.
Capt. Gardiner.....	14	44	Capt. W. Holberton.....	15	59
B. Wells.....	4	10	Miss Ward.....	18	58
Mrs. W. Holberton.....	20	84	Miss Gardner.....	9	31
Miss E. Hopper.....	4	20	Miss N. Hopper.....	8	13
Miss A. Sherman.....	6	30	Miss Dougherty.....	0	0
		188			190

188

190

A regular meeting of the Ortland Archers was held at the house of Mr. Gardiner, Hockensack, N. J., Mr. Holberton in the chair. A report was read by the Secretary, showing the club out of debt and a balance in the treasury. It was voted to continue the outdoor meetings as long as the weather permitted, but the proposition to shoot at short range indoors during the winter was voted down. The club have in use three American bows, two Highfields, three Fetham's, and six Aldred's make. There are been in use since May a new bow broken. Some of the members have been regular in attendance, and in consequence their scores have increased in a very satisfactory manner. Next season they hope to measure their skill with some of the neighboring clubs. It is a pity that the numerous rifle ranges do not furnish butts for archery practices; it would pay, as the expense would be very slight. The Brinton and Columbia ranges are particularly well adapted to this pastime.

W. H.

BUFFALO ARCHERY CLUB.—Sept. 28.—24-inch target at 20 and 30 yds.; 42-inch target at 40 yds.; 10 ends at each 20 and 30 yds.; 20 ends at 40 yds.

Hits.	Value.	Hits.	Value.		
Sidway.....	79	347	Spaulding.....	52	188
Davis.....	80	349	Smith.....	67	289

Score of Mr. G. B. Hayes, of same club, Oct. 2, 1878, 30 yds., 24-inch target, 13 ends, strong cross wind: 27 hits; value, 147. This is the best score we have yet seen.

New Publications.

THE MANAGEMENT AND DISEASES OF THE DOG. By John Woodruff Hill. New York: Albert Cogswell, Publisher, 24 Bond st.

We are not so abundantly supplied with dog literature but that we can welcome Mr. Hill's book as a useful addition to what we already have on the subject. The copy before us is an American edition of what we judge to be, from the favorable notices we have seen of it, a popular work in England. In fact, we can recall no other since "Mayhew," which goes so extensively into the diseases of dogs, and it has the advantage of the light of modern science. If we have a fault to find, it is in the too frequent use of scientific terms in place of others that would be intelligible to the average, or even ignorant, reader. Aside from this we should consider the book a most valuable addition to the sportsman's library.

THE NUTTALL BULLETIN.—As the early days of October bring to us the fourth number of the Bulletin for 1878, we notice with pleasure that the year has been a successful one for the Nuttall Club's publication, and that the prospects for its success in the future are brighter than ever before. At the beginning of

the year the size of the Bulletin was doubled, and the subscription price correspondingly increased; yet, notwithstanding these changes, the subscription list has been steadily growing larger all through the year. Although the increase in the size of the Bulletin was supposed to be from twenty-four to forty-eight pages, we find by looking over the numbers for the year past that they average fifty-four pages each. The magazine calls for the support of all ornithologists, whether professional or amateur; and in the advertising sheets, which it is now proposed to issue with each number, the collector and taxidermist will find a most advantageous method of introducing their wares to the class which makes use of them. The Bulletin for October opens with a delightful bit of bird biography treating of a species of which our knowledge has been very slight, the "Prothonotary Warbler (*Protonotaria alba*)," by Mr. Brewster. This is followed by some extremely entertaining "Notes on Birds Observed at Mount Carmel, Southern Illinois," by Mr. Ridgway, the observations having been made during the past spring, while the author and Mr. Brewster were collecting in company. Mr. A. Purdie's article on "The Nest and Eggs of the Yellow-bellied Fly-catcher (*Empidonax flaviventris*)" is of great interest, but his observations differ widely from those of Mr. S. D. Osborne in this same number. "A List of the Birds Observed at Coosada, Central Alabama," by Nathan Clifford Brown, and a continuation of Mr. Brewster's "Descriptions of the First Plumage in Various Species of North American Birds" conclude the longer articles of this number. Recent Literature is exceptionally full and interesting; but we must confess that it is to General Notes that we always turn first when we receive the Bulletin, and the Notes in this number are not less interesting than is usually the case.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

CORINTHIAN, N. Y.—Please send address to this office.

J. O. N., Littleton, N. C.—Bogardus uses Dittmar C powder.

R. W. McC., St. Johns, N. B.—See answer to "W. G. P." in this column.

H. R. B., Canton.—Was there ever a repeating gun made known as the "Sharps?" Ans. No.

PHILO LOGOS, Athens, Ga.—The word *loater* is probably a contraction, or synonyme of the words low fellow.

H. V. W. M., Newark, N. J.—Subscription price to Hunt's *Yachting Magazine* is \$6. Can procure it for you.

J., Baltimore.—The Dover's powders recommended are those containing one grain each of opium and ipecacuanha.

A. B. G., Boston.—A 10 gauge and a 12 gauge will shoot equally strong. A 10 gauge is preferable for marsh shooting.

C. T., Belleville, Ill.—For game on St. Louis, Iron Mountain and Southern Railway see answer to L. W. B., last week.

S. M., Chicago.—Can forward working plans, pig, specifications and building directions of home-made catamaran upon receipt of \$4.

BROOKLYN.—The guns are not so good. See advertisement of the powder in our advertising pages. Sport in Virginia is excellent this fall.

J. J. B., Petrolia, Can.—The firm we believe to be respectable. We know nothing of the article advertised. The Dobson is of the Sialian family.

FAIR SHOT, Chicago.—There is no difference between paper and brass shells in the leading of gun barrels. Perhaps your shells do not fit the gun.

CONSTANT READER.—Common sense should tell you that your complaint against officials, unaccompanied by your name, cannot receive attention from us.

I. C., Philadelphia.—Heed birds have been seen up the Hudson as far as Hudson. If there is food for them there their presence would be not at all remarkable.

W. P. B., Lynn.—The gun is too light for partridge and duck shooting. A proper charge for it is 2 1/2 drs. powder, 1 1/2 ozs. shot. For duck shooting, use shot No. 6.

BLUESOON, Halifax, N. S.—You will find all about sheep and cattle raising in Texas in the book "A Thousand Miles through Texas," price \$1.50. We can send you a copy of it.

W. F. P., Heppner, Oregon.—Can you tell me of any good house in Philadelphia or Baltimore that deals in milk, martin and beaver hides? Ans. L. Gerber, Phila., and N. C. Helsky, Phila.

J. N. B., Warren, Mass.—We do not know of any one whom you could engage with in cattle raising in southern Kansas. You might possibly find the right party by addressing W. N. Byers, Denver, Col.

D. H. B., Live Oak.—The black bear produces its young in the spring bringing forth one, two or three at a litter. You will find some interesting discussions of the question in some of our former numbers.

Ko., West Chester, Pa.—What kind of game is found in the southwestern part of Kentucky in the latitude of Watney County, about fifty miles from the mountains? Ans. Quail, rabbits and small game.

J. M. S.—The guns you ask about vary in choke, and some are not choked at all. The best book on gun bores is "Modern Breech-Loaders," by W. W. Greener. We can send it to you. Price \$3.50.

R. J. G.—There is no peculiarity about the Creedmoor manner of load ing, except that extreme care is exercised to see that everything is perfectly right. The Remington and Sharps 550 grains special bullets are used.

J. H. T. B. B., Cazenovia.—Kemp's book will be received shortly. Delay owing to negligence of Importers. For Boston Yacht Club book write to Mr. Thomas Dean, Boston, who may accede to your request for a copy.

S. E. F., Princeton.—You may procure gamullets for cold weather shooting any of the dealers in sportsman's goods advertised in our columns. You ought to know more about the game of your own neighborhood than we do.

E. N., Cambridge, Mass.—The catalogue we think is sent free. The ride is a good one. For description of Express bullet see our ride columns. The particulars regarding Blooming Grove Park Association are also given in today's paper.

E., Elgin, Ill.—Where can't I get a book that is authority on hunting and trapping; such a book as one would need in his travels in Montana?

Ans. "Hallow's Sportsman's Gazetteer" is very complete on hunting animals and birds. For trapping buy Batty's "How to Hunt and Trap." We can furnish you with them.

J. S. T., Oriskany, N. Y.—Cost of engine, boiler and fittings for 25ft. launch will be about \$600. Write to N. Y. Safety Steam Power Co., 30 Corliss st., N. Y. Second-hand engines, etc., in good condition, 25 to 33 per cent. less. Can procure you one, if desired.

W. F. P., Va.—Will you please let me know if I can procure any prepared food suitable for gold fish kept in an ordinary two quart globe? Have heard of an article made from rice paper for the purpose. Ans. Send to any dealer in aquarium goods for wafers for gold fish.

E. P. G., Washington, D. C.—The proper load of a 16 bore 29 inch barrels breech-loader, for quail and ducks, is 2 1/2 drs. powder, 1 oz. shot. Dittmar powder is not injurious to gun barrels. Use your wire brush to scrape the lead out of your gun as often as the lead gets into your gun.

JOHN PHENIX, Richmond.—Is it true that placing the bed with its head to the North promotes sleep? Ans. The best way to test this question is to try the experiment. Some persons possess more animal magnetism than others. We believe that it makes a great difference to some people which way their heads are placed.

DELAWARE, New Castle, Del.—Cartridge should fit chamber of gun. A good general rule for pattern is that your target should show one-half the number of pellets in the charge. Seventy-five dollars will not buy a first-class gun, but will buy a very good gun. The cartridge holders are as represented, so far as we know. Browning gun barrels ought not to injure them.

H. H. B., Pontiac, Mich.—The insect you sent as belongs to Hymenoptera, and is known to entomologists under the name of *Pelecinus polygaster*. It is not uncommon in many parts of the United States, and is found in the neighborhood of New York, mostly in shady woods clear of underbrush. The elongated abdomen is undoubtedly used to place its eggs in a place of safety.

E. B., Pittston, Pa.—Two weeks ago my setter's throat commenced to swell. In four days it broke, and discharged freely—it broke both inside and out. It is now healed up, but there is a hard lump left about the size of a shell walnut. What must I do for her? Ans. Let the lump alone, and it will probably disappear. If it does not, touch it lightly on the outside with tincture of iodine.

W. H. M., Bellevue, O.—The insect sent is the large water bug (*Belostomatidae*) of entomologists. It is not uncommon in ponds, ditches and stagnant pools. It is a voracious insect, and feeds on all water insects indiscriminately. It seizes them with its powerful claws, pierces them with its sharp beak, and sucks the juices from them. It is a dangerous insect in the aquarium, as it will destroy all the fish and other living animals.

H. W. H., N. Y.—I have the choice of two bitches, one a setter, and the other a pointer—both imported, with full pedigrees, and will score about the same number of points each. I desire to use my purchase for breeding purposes. Will you kindly answer which is the most desirable? Ans. For breeding purposes there is no choice beyond that of taste; for sporting purposes much would depend upon the part of the country in which you proposed to shoot.

W. G. P., Montrose, Pa.—My setter dog has-red mange. Have been referred to you as an authority in this matter. Ans. A very good remedy for red mange is the following: Sulphur, 8 oz.; white oil, 8 oz. oil of tar, 5 oz. Apply thoroughly to all parts of the body, after first washing the dog with warm water and soft soap. After three days wash off, and apply again. Give at the same time eight drops of Fowler's Solution of Arsenic twice a day for a week or ten days.

W. S., Jefferson, Ohio.—A Gordon setter dog, eighteen months old, does not seem to have any nose whatever. It runs over partridges in places where a dog with only an ordinary nose ought to smell them. Is there anything that can be done for him? Ans. If your dog has no nose we can suggest nothing to give him one. But we should hesitate to condemn him without further trial. Have you attempted to develop his powers of scent by making him understand what is wanted of him, or by trying him on other game?

W. VAN A., Mt. Sterling, Ky.—The specimens you sent us are commonly called bee-fies. They belong to Diptera, or insects having two developed wings, and are known to naturalists as Bombyliids. This group contains a number of genera, and a large number of species with wide geographical distribution. The specimens you sent are undoubtedly *Laphria (tergula)* (Str.), *L. thoracica* (Fab.). They are voracious insects, and seize on any insect that comes in their way, pierce it with their sharp beak, and suck out the juices. One small species of this group often comes into houses in search of flies, and is commonly called a mosquito hawk.

L. N. P.—Previous to Sept. 15 I caught a great many small striped bass with shrimp. Since then have been unable to catch any. Do they leave the creeks as early as that, as what I caught were caught in creek; or is different bait necessary? I have tried soft crab, but with no success. Ans. All fish are capricious and their movements cannot be always accounted for. The striped bass season is usually over by the end of October. They have probably left the creeks and will not be found there again until early spring. Good baits for striped bass are made of longitudinal strips of the menhaden, or mossbunker; of a wedge-shaped piece cut from the stomach of the bass, or from pork skin; sand eel, squid, mud worms and mussels.

CAMPER, Cambridge.—For roughing it you must assume rough clothes. There is solid comfort in an old soft hat and a well-worn pair of stout boots. You will need a tent, a camp stove, and such kitchen utensils as may be conveniently carried. Some warm blankets, soap, needle and thread, extra shirt buttons, etc. As we do not know whether you are going to hunt, fish, or gather chestnuts, we cannot be more definite. If you have your implements carried to the spot with a team, we should advise it. For provisions go to the nearest farmhouse in the day. Remember that it takes years of practice to be able to crawl up to a chicken roost in the night without raising a rumpus. For practical instructions on how to "rough it," visit us at and how to cook it, buttonhole the next tramp that stops at your door for a repast.

STATISTICS, Monticello, Wis.—Where is Tomoka Creek; and what fish does it contain? How is it reached? Ans. Tomoka Creek enters the northern part of Halifax River; it is well supplied with the same fish as Spruce Creek, but of a larger size, especially the black bass, which have here been taken weighing from 12 to 15 pounds. It is a stream of large volume and has good hunting grounds on its banks. Guides and boats would be taken from New Smyrna. Last winter there was a steamer coming from Jacksonville to Halifax Inlet and New Smyrna, fare \$5.00. Also one on the Halifax and Hillsboro Rivers connecting with the other boat. At New Britain, Daytona and Port Orange, on the Halifax, are comfortable hotels and boarding houses; terms \$3 per day. The best fishing is near the Inlet, where B. Pacetti has a neat cottage, with room for six or eight boarders. Mr. Low, at New Smyrna, has enlarged his house to meet the increasing demand for that pleasant retreat for sportsmen.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

NO. 111 FULTON STREET, NEW YORK.

(POST OFFICE BOX 2837.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 17, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS,
Business Manager.

S. B. TURKILL, Chicago,
Western Manager.

THE YELLOW FEVER FUND.—We sent to Mayor Ely, October 14, seven dollars, received for the "Sportsman's Contribution." Mr. and Mrs. G. M. Skinner, of Gananogue, Canada, \$3; Subscriber, Orange Co., Fla., \$5. Total received by us, \$400.

ITS MISSION PERPETUAL.—Dr. J. A. Henshall, of Cynthia, Ky., whose favor and support our Journal has enjoyed from its beginning, sends the following congratulatory words:

"I must congratulate you upon the constant improvement in FOREST AND STREAM. It has gained a prestige that it can never lose. It is now a matter of wonder how we ever did without it, for it has so worked its way into our daily life that it seems to always have been. May its prosperity increase, and its mission be perpetual."

Mr. J. C. Burnett, of the U. S. Treasury Department at Washington, says:

Your discussions of questions of natural history are alone worth all that the paper costs, not to mention the various chronicles of yachting, shooting, exhibitions, fish culture, etc., etc., all of great interest and benefit to those who are interested in particular studies and recreations. It seems to me you do everything in your power to make a paper to please every true sportsman and real lover of nature.

HALLOCK'S SPORTSMAN'S GAZETTEER.—Fourth Edition.—Forest and Stream Publishing Company have just issued the Fourth Edition of this most valuable work, with important emendations and additions, including a Glossary of common words in local use. The ichthyology of the Pacific Coast, specially revised by Prof. Gill, of the Smithsonian Institution, is very full. The work now comprises 909 pages, and constitutes the most complete and comprehensive encyclopedia of sport extant. Prof. T. V. Hayden, of the U. S. Geological Survey, says: "It is a most interesting and instructive work, containing much information with which I was not previously familiar."

The patronage which the book has so far received shows the popular estimation in which it is held. For sale at this office, price \$8.

FIELD TRIALS.

PROFESSIONALS VS. AMATEURS.

WE learn from a letter which appears in a contemporary that the Tennessee Field Trials will be held as usual this fall. The proposed Maryland Field Trials have been definitely abandoned. It occurs to us that there is room for much discussion as to the mode in which these trials should be held in this country in the future; whether there are not abuses to be corrected; whether a gentleman who may choose to break and handle his own dogs, and who works them in the trial as he would in the field, is not heavily handicapped as against the professional breaker who handles his dogs with a view to "trials" alone. If the latter proposition holds, and we apprehend that it will meet with assent from many who have witnessed Field Trials, the question arises as to whether the "Corinthian" should not have some opportunity shown him as well as the professional. In all contests of this nature it is supposed to be the desire of every one that the "best" may win, but certainly in Field Trials this does not always occur. The slow, pottering dog, who makes no mistakes simply because no opportunity is afforded him of making them, is ranked as better than the high-spirited, wide-ranging dog who works as nature and his master intended him to, merely because the judges cannot, or do not care to keep up with the latter. No better instance of this can be cited than one which occurred at the late Minnesota Trials, when one dog, doubtless a good one after a fashion, was allowed to consume nearly all of one day and part of another in her trial rather than be permitted an opportunity of making a flush, or a false point. In the hands of a skillful breaker, and one more particularly skilled in the ins and outs of a Field Trial, who scarcely allows his dog to go beyond the reach of his hand and voice, such a thing is very possible. We have received many letters on this subject, and it is one worthy of attention, and regarding which we shall be glad to have the views of our readers. If Field Trials are to become popular and universal it is necessary, first, to guard against anything like unfairness, or favoritism; and, second, against a system of breaking which will ruin dogs for general field work. Gentlemen sportsmen do not keep dogs for the sake of winning trophies or dollars at Field Trials, nor are they, as a rule, anxious for a record which will enable them to sell their stock. Neither have they their own reputations as breakers at stake. The professional is interested in all of these points, and if these "trials" are to be run for, or by them, it is better that they should be abolished.

A RIGHT GOOD BISHOP.

WE took occasion some time ago to express our approval of the direct usage of physical force in the individual, regardless of his cloth, when in defence of himself, his own reputation, or the fair fame of others. We cited how Mr. Trollope, in a recent book of his, places a clergyman of the Church of England in such a position that he falls to the ground a blackguard who has cast foul imputations on his daughter. We hold to the idea, without being of the sword-and-pistol school, that even in good society, if the fact was perfectly well understood that a knock-down would infallibly follow a coarse word or a shameful innuendo, men would be more guarded in their expressions, and causes of dispute of a frivolous character be less frequent. We honestly admire English and English gentlemen and society for this fact. Less overbearing than the French, by no means inclined to effervescence, somewhat indifferent to that polished glaze of manner which is but at the surface, your Englishman, positive as to his rights, is not to be bullied by word or gesture. The true bull-dog instinct is in him. Rouse his ire by direct insult and he seeks, not with pistol and knife to defend or to attack, but with that good strength of fists which nature gave him. Here is a case in point, and the clergy all over the world may be proud of one of their own cloth:

The Rev. Rowley Hill, Bishop of Sodor and Man, is driving out with his wife on the Isle of Man. A coarse fellow hurls an insult at the Bishop and his wife, and ends by throwing a stone which inflicts a scalp wound on the Bishop's wife. "Now," says the *London Telegraph*, "a good many laymen would in these circumstances have driven rapidly on to avoid a possibly worse assault." Let us add that quite possibly a large majority of American clergymen would have done precisely the same thing. Not so with our staunch Englishman. He stops his carriage, leaps out, collars the dastardly hound, and when the latter breaks away and runs the Bishop is close at his heels. A flying navy and a doughty clergyman of course might have been an unusual sight. The ruffian draws a knife, flourishes a club, but the Bishop is not a bit frightened and, having a better pair of legs, corners him. Between the two there can be no doubt but that, indifferent to the weapons, the Bishop would have mastered his man; but somebody comes to the help of the Church and the beast is captured. We clap our hands and cry out: "Bravo! to you, Right Rev. Bishop. You are a Christian gentleman and all the better for being muscular." Certainly, with that pluck you have, there is tenderness and mercy in your soul.

Now, what is the upshot of all this? It must mean that this English gentleman has legs than he can run with, and arms and fists that he can strike with. He belongs to no mauling type of man. When he was young, either at Eaton or Harrow, he had been taught, perhaps even by the great Dr. Arnold, of Rugby, to be true and honest and fearless, and at the same time to develop not only his brains, but the thews and sinews the Lord gave him. It was long ago that we thought that

physical exercise was useful to clergymen. We pride ourselves in the fact that the FOREST AND STREAM was among the very first to teach what was before our time considered heresy. We do not want O'Leary clericals, nor fox hunting deacons, but we must ever inculcate the idea that rational amusements, where health and strength are afforded, are of as much benefit to clergymen as to laymen. We are quite sure from the many examples we see in the United States that our doctrines are believed in, and we entertain the hope that good heaven will quicken all masses of society. It is altogether exceptional when the consciousness of strength develops brutal instincts: it rather tends to temper them.

CORINTHIAN SENTIMENTS.

BUT a few years ago the idea that American yachts were unfitted for cruising, and built entirely with a view to racing, at a sacrifice of almost every other desirable quality, would have been rejected with scorn and the announcement received as high treason. Did not *America* run a British fleet hull down? Did not *Vesta*, *Fleetwing* and *Henrietta* cross the Atlantic and bravely meet blow after blow and towering seas? And is not *Siaphia* a match for anything afloat, be it in a gale or zephyr? Have not other American schooners faced the dangers of the deep off soundings, and reached a home port again with the same spars they carried out? And who, in the face of such evidence, could venture to maintain that in model, staunchness, outfit and seamanship we were one whit inferior to our British cousins across the sea? All this is very true. Our large schooners, or rather some of them, are able sea boats, and have for skippers men who have trod the quarter-deck of square rigged craft for many a year, and who can, if need be, keep a day's reckoning, take an altitude and work out a sight without landing themselves on the prairie or in the middle of Africa. But what applies to our largest schooners unfortunately cannot be said of the smaller craft, in which most of the rising generation receive their first induction into and acquire their first taste for seamanship and a life at sea. There was a time not long ago when we stood alone in these assertions; but knowing something of the sport in the old country as well as in the new, and feeling convinced that the cruising spirit would in time develop among us as it had abroad, and that sooner or later a class of sailor graduates would naturally spring from among the racing members of the yachting public, our efforts have been directed in the first place to calling attention to the difference between racing machines and jockeying, as a means of excitement and passing pleasure, and the nobler phase of the sport, as embodied in the cruising yachtsman, master of a sea-going clipper, captain of his own ship, and all which that implies; and in the second place to pointing out the most ready course by which the aspiring tyro could steer in the wake of his leaders and climb the rungs of the ladder of proficiency, until he himself in turn shall have reached the pinnacle of the Corinthian profession. That we struck the current of the popular inclinations is becoming more and more evident with the advent of every season. This is what the committee having in charge the recent "cruising trim regatta" of the Dorchester Yacht Club say in their circular:

"Inasmuch as the tendency of the usual practice of regattas is to develop the 'racing' at the expense of the 'cruising' model, which latter, in fact, resolves very little, if any, encouragement at all, the promoters of and subscribers to this race have instituted it and opened it to all yachts large enough for cruising purposes, in the hope and expectation that 'cruising' yachtsmen will appreciate the effort, and that the result will appear eventually in the multiplication of sea-going models, and the correspondingly diminution of the 'skim dish' and 'sailing machine' variety of yachts, which have been so long, and are yet for a while, in favor. The fact that so many of the larger craft are hauled into winter quarters before weather liable to test their abilities can be looked for, speaks for itself, and demonstrates without words the need of the stimulus it has been, and is, the aim of this regatta to supply. The month for this race (October) has been chosen as being the more likely to furnish the desired weather, and as also less likely to bring to the starting line craft which are unfitted to compete."

We need hardly add that they strike the nail on the head, and that ere long we expect to hear others speak in the same strain. The influence upon model and rig can only be to the good of the sport.

THE BISHOP CLUB.—Gen. R. U. Sherman, of Onondaga County, whose sketches have frequently enriched the columns of FOREST AND STREAM, has associated himself with Lynott B. Root, H. Lee Babcock, Henry J. Cookeham, A. T. Goodwin and James W. Husted (the "Bald Eagle of Westchester") and incorporated the Bishop Club, for the purpose of hunting and fishing in the Northern New York Wilderness, and have leased some 7,000 acres and built a lodge in the neighborhood of the headwaters of the Moose and Black Rivers, in Herkimer County. Their Arcadia is reached from Alder Creek Station, on the Utica and Black River Railroad, by a wagon ride of twenty-one miles, a row of three miles across Woodhull Lake, and a walk into the woods, about a mile beyond. The membership of the club is limited to twenty, and parties visiting the lodge must provide their own supplies and service. With regard to the nature of the supplies, we notice by the club pamphlet before us, that Gen. Sherman recommends baked beans, and Secretary Root, sardines, both very good in their way, and seldom known to be in any one else's way. We wish the club success.

P. S. There is fishing up there, they say.

each range. Prize: A badge presented by Colonel W. H. Sterling, State Inspector of Rifle Practice:

The McClellan Badge, presented by His Excellency, Geo. B. McClellan, Governor of New Jersey, will be awarded to the individual making the highest aggregate score in the military team match, the headquarters N. G. match, and the match for the "Sterling Badge." The badge to remain in the possession of the winner until the next Fall Rifle Meeting of this Association, when it will be placed in competition as may be then directed. Won by Lieut. W. P. Wood.

Spirit of the Times long-range match, open to all comers; weapon, any rifle; distance, 1,000, 1,100 and 1,200; fifteen shots at each distance; position, any without artificial rest; entrance fee, \$5; the rules of the National Rifle Association to govern in the match, except where modified by the special conditions herein set forth; no sighting shots nor previous practice on the day of the match; no coaching allowed by competitors or outsiders, and no assistance allowed to any competitor in keeping score books. "Spotting" shots, giving or receiving any information, to debar the competitor so offending from further competition and from the receipt of any prize; a rope will be drawn twenty feet in rear of the firing points, and but two competitors at one firing point will be allowed within the rope at the same time. No. 2 entering the inclosure while No. 1 is in the act of firing, and No. 3 not entering until No. 1 comes out, and so on. No conversation allowed between competitors while within the ropes. In addition to the scorer, a spotter will be at each firing point, who will note the shot of each competitor. A competitor may look through the "spotter's" glass and locate the shots for himself, if he so prefers. No telescopes or field glasses, except those in use by the spotters, will be allowed in the match. First prize, gold, \$100; second prize, \$25; third prize, \$15; fourth prize, \$10; fifth, sixth, seventh, eighth, ninth, tenth, eleventh, twelfth, thirteenth and fourteenth prizes, \$5 each.

EXPRESS RIFLES AND EXPRESS BULLETS.

EDITOR FOREST AND STREAM:

Having had numerous inquiries in regard to Express bullets, referring to an advertisement in your paper, we asked Mr. Hobbs, the Superintendent of the Union Metallic Cartridge Co., to make some adapted to our mid and long-range rifles, and the first installment came to hand last week. The .44 cal. are 7-inch long; are flat across the base; are hollow from the point to within 7-32 of an inch of the base. This hollow is 20-100 of an inch in diameter, and the air is kept out by a thin copper tube like an empty cartridge case, which is inserted so that its closed end comes just flush with the end of the bullet. They weigh 280 grains. The .40 cal. are made on the same principle, are 7 of an inch long and weigh 225 grains. The composition is 1 part tin to 100 parts lead, and they are packed in the same manner as the ordinary or mid-range bullets. I had great curiosity to see how so light a bullet would work with so large a charge of powder as our English cousins say is necessary to develop the Express principle; and yesterday I took one each of our long range and mid-range rifles to the Blackstone Range to experiment.

When last in New York I had obtained some of Curtis & Harvey's Diamond Grain No. 6 powder for this very purpose, and had loaded my shells with 105 grains C and H in the .44 cal., and also some with 115 grains of Ladin & Rand Creamhorn No. 7. The difference in the specific gravity of the above powders is shown by the fact that the shells were full to within 1-16th of the top in each case.

The only point I expected to settle at the range was how far this charge could be depended on without change of sights.

I commenced at 100 yards, using a cardboard target and a 6-inch bull's-eye, and used the open lead front sight, and shot in my Creamhorn position, being careful to have the bull's-eye central cross shot. After shooting 12 or 15 shots into the bull's-eye I retired to the 200-yard point and shot an equal number, shooting 15 shots of each kind of powder before going to 200. I marked all the first shots, and had changed the bull's-eye for an 8-inch one, being careful that their centres should be in the same place exactly. I had a man at the target to note each shot, and when done there was no mistaking the range or the kind of powder each hole was made with. The average drop of the shot fired with the 115 grains Ladin & Rand was nine inches between 100 and 200 yards; of the 105 grains Curtis & Harvey, seven inches. I then tried the Curtis & Harvey at 250 yards, and found that the drop was an average of 12 inches from those shot at 100 yards. The Ladin & Rand dropped at 250 yards, an average of 14 inches from those shot at 100 yards. I then took a long-range cartridge, 109 grains Ladin & Rand and 540 grains pointed bullet, and it struck full 2 1/2

feet below where the lowest of the Express bullets had done. I then took the .40 cal. mid-range rifle, 30-inch barrel, and tried it at 100 yards, taking a new target. The powder charge in this case was 72 grains of Curtis & Harvey, and 78 grains of Ladin & Rand. Both kinds shot into the same 4-inch group at 100 yards. At 200 yards the Curtis & Harvey dropped 8 inches, and the Ladin & Rand averaged 11 inches drop. About 50 shots were fired with the .40 cal. gun. The sights and the holding were the same as in the trial of the .44 cal. gun, the object being to get the exact drop of the bullet between the ranges. Mr. F. J. Rabbeth, the well-known rifleman, was on the range a good part of the time and rendered valuable assistance, and did a portion of the shooting. Mr. R. tried his 24 cal. Winchester, model 873, on an adjoining target while the .40 cal. gun was being tried, and found that the average drop of about 20 shots between 100 and 200 yards was 24 inches.

My conclusions are, from the above experiments, that Mr. Rigby is correct when he says that with the Express sights and such a charge and bullet, that for ordinary hunting purposes no change of sights is necessary between 100 and 250 yards, beyond taking a very fine sight at 75 to 100 yards and a minor course one from 175 to 200 yards, to bring down a deer, antelope, or any other game worthy of being shot with an Express bullet.

Now, for some experiments showing the effect of such a bullet with such a charge of powder, I find the .44 cal. bullet, with either kind of powder, will go through 12 to 14-inch solid pine, but that only 3 to 4 of the weight of the lead will get through, the rest being left on the way among the fibres of the wood. The first .44 cal. I fired was into a block of pine 9 inches thick, at a distance of 50 feet. Of course it came through, but when I looked at the hole where it came out I was greatly disappointed, for it was only 7/8 diameter. After a while it occurred to me to split open the block and see what had been done on the way. At 2 inches from where the bullet entered the hole was 1 1/2 inch in diameter, where the wood had been carried away clean and clear, and from that it gradually tapered off to the exit. By the time the bullet was into the wood its length the hole was over 1 inch in diameter. The .40 cal. bullets have a penetration of about 9 to 10 inches in solid pine, and expand just as rapidly on entering as the .44 cal. On shooting one at 50 feet at a block of pine, 5 inches diameter across the grain, the hole at the exit was nearly as large as the hole made by the .44 cal. in the case above mentioned, and on shooting one at two pieces of 1 1/2-inch black-walnut planks, very dry, and placed 2 inches apart, the exit on the first one measured 1 1/2 inches across the grain and 1 1/2 lengthwise of the grain in diameter, and it started into the second plank on the same scale, but came out only about a 3/4-inch hole. From the shape of the bullets when caught and the appearance of the track left through soft woods, the air in the front of the ball when it strikes and begins to upset forces out the hollow portion until it is turned back upon the base, being in fact, turned in soft pine wood completely wrong side out in going in 8 to 4 inches, or even less; and as the bullets keep their rotary motion as long as they do their forward motion the effect on any living animal must be simply terrific. And I am prepared to believe all that has been stated about game being dropped in their tracks at 250 yards by a shot in the flank when a bullet of this kind is used. We are now prepared to furnish rifles either long or mid-range, with the long-range and Express sights, so that they can be used either at the target or on the plains with equal effect.

Geo. W. Davidson,
Supt. Sporting Rifles, Prov. Tool Co.
Providence, Oct. 9, 1878.

AN ENGLISH OPINION ON THE PALMA.—Under date of September 22 Sir Henry Holford writes from his seat at Wistow, Leicester, to Capt. L. C. Bruce, of last year's team, about the future of the Palma matches as it is regarded in England. His letter is worth study on the part of our National Rifle Association Directors, as it puts the whole matter in a full, clear light. Sir Henry says:

"I do not think that I have much to add to my often-expressed views as to best course to be pursued to keep up the interest in the great international rifle matches, for I still think that, to make them a success, they should not be open to more than (among others) one team from the old country. Your N. R. A., however, were so adverse last year to any restrictions upon separate teams from Ireland and Scotland that our N. R. A., in view of the opinion that there should be only one team representing Great Britain and Ireland, would not consent to countenance any separate teams, whether from England, Ireland or Scotland. Nor do I think it likely that a purely English team will ever be formed to contest the Palma. The match for the Elcho Challenge Shield shows that it would not be possible to get a team from any of the three countries separately which would have a chance of competing with the best team from the closest of the best shots in the United States; for, as you will remember, the winning team—the Irish—made only 1,010, though the best eight men in the three teams made 1,063. I fear, then, as long as the present rules are in force that you will in future only have, as this year, no match, or only Irish or Scotch teams to contend against. We, of course, have no right or wish to dispute the terms for the shooting for a prize given by the American people. It is simply a matter for us to choose them or leave them alone; but, in doing the latter, it is certainly a matter of re-

gret that the terms should be such as to practically preclude us from entering.

"With regard to your team having a 'walk over' the course, we shall look with much interest for the scores made, though there is no necessity for their shooting at all. The Palma is yours as much when challenged as when you have gained a victory.

"With kind remembrances to my friends in America, I am yours very truly,
H. St. J. Halford."

CURIOUS JOTTINGS.

—Chess editors will please address exchange copies to "Box 54, Wolcottville, Conn., U. S. A." We have added several of our chess contemporaries to our list, and expect that they will comply with the above.

—The report of the Judges of the sets of problems entered in the first tourney of the British Chess Problem Association awards the prizes as follows: 1st set prize ("Ex Sudore"), J. H. Pinnaison; 2d set prize ("Anybody"), F. E. Lamb; 3d set prize, not awarded; best four-move problem ("A Glebe"), C. Callender; best three-move problem ("Que assemblage"), J. W. Coates; best two-move problem ("Home, Sweet Home"), J. Paul Taylor.

—The following is the latest score in the International Tourney, British winners—J. Coppinger, J. T. Palmer, Wm. Nash, E. Palmer, H. Monck, R. H. Philip and H. Brewer, one each; J. Parker and Color-Sergeant Woods, two each, making a total of eleven British wins. American winners—William Olcott, T. H. Forster, L. S. Atkinson, J. Froch, D. C. Rogers, and L. W. Davis, one each; L. T. Brown, two, making a total of eight American wins. H. Holmes and F. H. Curtis have drawn one each.

—The following list embraces all problems entered for competition in the Forest and Stream Problem Tourney:

1. Excessively Advise Knowledge.	23. A Test Case.
2. Success to Literature in Chess.	24. Festina Lente.
3. Talk Enough—Gossip.	25. Nota Bene.
4. Furious Duo.	26. Endeavor to Excel All.
5. O to Richmond.	27. Diligence Ensures Success.
6. Ant Wredersheim.	28. Loin and Reel.
7. Sir Quickly Understand and Remember.	29. Conclude to Excel All.
8. Remember Ever Chess is Royal, Chess Lives Eternally.	30. Live Europa.
9. Study Each Move Carefully, and Only for Position.	31. Success Will Follow.
10. Forget Me Not.	32. XIII.
11. Down on Knives.	33. I Press toward the Mark for the Prize.
12. Tarrytown.	34. Q. 707.
13. Blue Bells of Scotland.	35. Valid and Strong (1st).
14. Silver Bells.	36. Valid and Strong (2d).
15. Deal with Us Gently.	37. Wald and Strom (2d).
16. Forgiveness and Forbear.	38. Marmite.
17. On Hand.	39. Fifteenth Amendment.
18. Tokkare.	40. He who dares these problems, choose.
19. Wallenstein.	41. He who dares these problems, choose.
20. Just So.	42. He who dares these problems, choose.
21. A Long Look Ahead.	43. He who dares these problems, choose.

—The following are entered for competition in the Photograph Tourney:
1. What is hope? The beautiful 2 Beauty in Simplicity.
3. What colors all it shines upon.

PITTSBURG, Sept. 25, 1878

H. C. SQUIRE, Esq.

Dear Sir—In reply to your favor of the 21st, would say that Dittman Powder is undoubtedly a superior explosive, and having been with Dr. Carver during his entire public career as a marksman, I have taken pains to observe closely its efficiency. Load your cartridges according to the formula you have given, and in no single instance does it err. At the conclusion I am in no little satisfaction to enjoy cleanliness as a result, to say nothing of no smoke.

Yours truly,

E. G. HATNEX, Agent for Dr. Carver.—Adv.

THE AMERICAN CARRIER-CAT CORPORATION, LIMITED.—The idea was borrowed from Belgium. The Belgians have turned their attention to utilizing the feline instinct of direction, and the good people of Liege, encouraged by the successful issue of recent experiments, propose to establish, at an early day, a regular system of cat communication between that city and the neighboring villages. Having caught the idea the A. C. C. L.'s agents are now catching the cats and training them to their work. The prospectus of the company, now before us, shows that the whole North American continent is to be cobwebbed with ramifications of cat-carrier lines, radiating from all the principal cities and reaching from the everglades of Florida to the snowy wastes of Alaska. The advantages claimed over the present mail service arise principally from the increased speed of communication. Every one knows that a cat can outrun a railroad lightning express. By an application of the tin-pan-caudal-attachment-patented it is estimated that the natural feline speed will be quadrupled, and thus letters may be forwarded at least five times faster than under the present system. We cannot yet give full details of the enterprise, as they have not been perfected. Suffice it to say that at each station of the A. C. C. L. cats from all the neighboring stations are kept in constant readiness to set out for their homes, where cats from other stations take the messages which are thus forwarded. An important advantage claimed by the originators of this scheme is increased safety in the carrying of valuable messages. Express trains may be robbed by road agents; floods and storms are elements with which Uncle Sam cannot cope; but a cat will carry the mails through. Road agents may pepper away with their rifles. Did any one ever know of a cat being harmed by bullets? The elements may do their utmost. Did any one ever hear of a cat struck by lightning, drowned in a flood, or blocked up in a snow storm? The rolling stock of the A. C. C. L. is enormous. It is estimated by the New York Superintendent that this city alone will furnish at least 40,000,000 cats, male and female, and a proportionate supply is to be found in every city and town in the Union, making the total number wholly incomprehensible. The well-trained "courier and scout-cat" department is another branch of the same service. The company have already taken a Government contract to supply several hundred extra-tough cats for use on the frontier. Among the modes of employment is that of transporting, by a circuitous route, the cat which has become domesticated in the camp to a point such that the Indian enemy shall be between the cat and the United States forces. When released the cat, with its message and tin-pan attachment, makes a bee-line—or, as the technical term is, a feline—for headquarters and dashes at quadruple-streak-of-lightning speed through the camp of the Red-Skin. The R. S. is either too much amazed by the supernatural vision of flying Tom to do ought save grunt in open-eyed awe; or else he lets fly his winged shaft and transfixes the rapidly-disappearing apparition, and Tom, nothing dismayed, appears in camp bringing two or three arrows with him. The hero of a thousand scalps as he draws forth each arrow, can distinguish from its peculiar form just what tribe it belongs to, and thus information is obtained which is worth more than a fortnight spent in beating about the bush.

A VIRGINIA BIRD STORY.—This is the story told by the Petersburg Index-Appal:—Some time last week Mr. William H. Walton, a farmer of Greensville county, was seated on a fence near a stack of oats, watching the operations of his field hands who were at work. While seated on the fence a small bird alighted on his shoulder and remained there until frightened away by a blow aimed at it by Mr. Walton. It flew off but a little way and returned to be treated as before, and repeated this feat until the gentleman concluded to allow it to remain on his shoulder in order to ascertain, if possible, what induced it to act as described. The bird moved close up to Mr. Walton's face and deliberately commenced to pluck a mouthful of gray hairs from his beard, after which it flew away to the hay stack and disappeared in the crevices between the sheaves of oats. Examination of the stack disclosed the fact that the bird was building its nest and had used the beard for the purpose of making a lining for the same. The bird is said to have been of the wren species.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their TIMING WATCHES are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & CO., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb. 1878, the Grand Prix de Casino, an objet d'art valued at \$100, and a money prize of \$105, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Chomondy Pannell, with a full-choice over Mr. Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 23 yards and 1 foot and 9 3/4 yards. He also won the second event, killing 8 birds in succession at 25 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the above-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdie, this gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, Phil killing 88 birds out of 100, using one barrel only. The winning gun also who great London Gun Trial, 1878, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 9, 1875; No. 163,593. BEWARE OF IMITATIONS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

WEBLEY'S TREBLE WEDGE GUNS.

WITHOUT A RIVAL.

Messrs. P. WEBLEY & SONS, Birmingham and London, at vast expense, have secured the most perfect machinery for gun making ever set up in any one factory in England. The result is that they can now turn out guns perfectly uniform in excellence, and in such increased quantity as to greatly reduce the cost. Their specialties this year are their fine Treble-Wedge Guns, Nos. 1 and 2, of which the above cut will give a tolerably fair idea. Every gun has fine Damascus or laminated steel barrels, reinforcing bar locks, pistol grip, extension rib, lever forepart and treble bolt, and is bored after Webley's system, which has produced such marvelous results, and yet all this at a price so low as to place the guns within the reach of almost any one. This is what machinery can do. It is a new thing to be able to buy a fine breech-loader, with every possible appliance which can contribute to its beauty, convenience or excellence in shooting at the price of ordinary guns. In addition to the Treble Wedge Guns, we have on hand upwards of one hundred of Webley's breech-loaders, top and side lever, of various grades, which arrived last year after the season's war. These guns are being rapidly disposed of at greatly reduced prices. They are all bore after the Webley's system, and will shoot just as well as the Treble Wedge Guns. Many of them are from 8 1/2 to 11 pounds weight, and are splendid guns for duck shooting, or for killing large game at long range. We also have Webley's celebrated Double Action Revolvers, the Pug, British Bull Dog, etc., etc., at but little over half last year's prices.

1 CORTLANDT ST., NEW YORK.

The Gun of the Future.

Samples of the Hammerless Gun now on exhibition, and orders taken by our agent. Guns to be delivered June 1.

See the Following Testimonials

Sta-It is a pleasure for me to inform you of my high appreciation of the W. W. Greener breech-loader purchased of you last winter. I consider choke-boring, if skillfully done, as the greatest improvement in fowling pieces since the introduction of the percussion cap. It gives the maker complete control of the pattern, and greatly increases penetration. To prove this, I will give you the performance of this gun. The 32-inch 16-gauge barrel, charged with 4 1/2 drachms of powder and 1 1/2 ozs. No. 6 English chilled shot, gave pattern ranging from 28 to 330 pellets in 32-inch circle at 40 yards. The same charge of powder and 1 1/2 oz. No. 4 American shot gives 100 to 175 pattern, with penetration. These birds are a characteristic of the choke-bore to show the greatest superiority in the large sized shot. What I am about to say will perhaps surprise you as much as the performance surprised me. On trial of the 12-gauge 28-inch modified choke-bore barrel, with 2 1/2 drachms of powder and 1 1/2 oz. of shot, I got about the same pattern and spread of shot at 25 yards as with the full choke 16-gauge barrel at 40 yards, with tremendous penetration. This is just the performance required of a gun for thick cover, in which you generally find wild grouse, woodcock and quail, these birds being killed, with few exceptions, at from 15 to 24 yards.

COL. JOHN BODINE.

MERIDEN, CONN.

PARKER BROS., 97 Chambers St., New York.

From an Eminent Sportsman.—The new 10-gauge double gun you have just built for me. Weing out, I have, however, delayed acknowledging its receipt until I had had an opportunity of finding out whether its shooting qualities equalled its good looks. I have handled and shot with guns of the perfect gun I have ever had in my hands. The materials, both wood and metal, the workmanship, engraving and finish are all first-class. It is finely proportioned and balanced, having the weight just where it is needed, and, although weighing 10½ lbs., it can be as easily handled as a 7½ lbs. gun. I consider it a large number of sportsmen, who one and all, without exception, agree with my opinion of it. Except for in the field. When I make a poor score at the trap I shall most certainly not blame my new Parker.
SENeca FALLS, N. Y., Jan. 10, 1878.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle \$2, ss. or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 22 and 23, extra long, and No. 44, model 1878. Send for Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY.

W. & C. SCOTT & SON'S
FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS
FINE TRIPLEX 12-GAUGE BREECH-LOADER, MADE BY
W. & C. SCOTT & SON.

[From CAPT. A. H. BOGARDUS.]

W. & C. SCOTT & SON: Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with extra 12-bore barrels; also a light 12 and 16 bore; all of your make, which cannot be excelled in the shooting qualities, and impossible to beat in the solidity and power of your patent Triplex Action. I used your gun in my two recent matches with Mr. Penell, June 23 and July 23, at which time I scored 70 and 71 in each match, winning by two birds; also in my match with Capt. Shelley, July 29, at which time I scored 84, "the highest score on record," and in the International Match with Aubrey Coventry, Esq., at Brighton, Aug. 6, for £1,000, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 50 yards rise. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is still in good condition.

Believe me, yours very truly,

A. H. BOGARDUS, Champion Wing Shot of the World.

[From COL. JOHN BODINE, New York.]

W. & C. SCOTT & SON: Gentlemen—I have received the Premier quality choke-bore gun, No. 8,696, in good order, and am pleased to say that its performance exceeds my expectations, while its symmetry and detail in all that the most fastidious could desire. It fits ones up to specifications of order, both in finish and shooting qualities. I have disposed of my two guns by other makers.

Gunpowder.

THE

HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 5 (coarse). In 1 and 6 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For use in water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FFG, in kegs of 25, 12½ and 6½ lbs, and cans of 5 lbs. FFG is also packed in 1 and 6½ lb. canisters. Burns slowly and makes. The FFG and FFG are favorite brands for ordinary sporting and water shooting. FFG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

For Forest and Stream and Rod and Gun. LONG ISLAND IN LATE OCTOBER.

OCTOBER'S flaming banners, of purple and of gold,
O'er all the bowery woodland, are faintly unrolled;
Now glow with brightest blushes, suffused with Autumn's smile,
O'er all thy realm, Long Island, from clouds that sail the skies.
Thy woods of elm and chestnut, so emerald-green are white,
Now glow with brightest blushes, suffused with Autumn's smile.
The maples of the uplands are flamed with royal red,
And robins and garlands golden o'er the pasture-oaks are spread;
The sunbeams by the roadside now wear a scarlet crown,
The bayberry bushes by the beach are o'er in russet brown;
The apple orchards, late despoiled of all their ruddy globes,
Tinct with the frost are all arrayed in vari-colored robes;
And low in swamps and thickets of cedar and of pine,
The woodbines reddened, and the lilhe, high-clambering grape-vine.
And there the village children come, the purpling grapes to glean,
Whose clusters load the alders that o'er the streamlets lean.

The grass of summer uplands, where far the sheep-dock strays,
The lush grass of the meadows, where wading cattle graze,
So green are while, are withered now, and thro' their thin brown leaves
The sorrowful breeze is sighing, like ane in pain that grieves.
The bubbling brook, whose currents glide through banks of living green,
So clear that in the crystal deep the spotted trout were seen,
Creeps brown and turbid now, all choked with foliage sere—
A clouded mirror now, are white transparent clear;
Nor more the angler comes with tapering rod to sweep
The brook or limpid pond where dark tree-shadows creep.

I stand high up a hillside, where far as eye may reach,
Stretch out fair woodlands and the sandy, yellow beach.
The harvest crops are garnered, the fields lie brown and bare,
The threefold rail in distant barns, resounds upon the air;
I hear the cow-boy's call, the whistle of the bird,
And all the joyous sounds of rural life are heard,
I hear the piping quail and the gunner's weapon ring,
And see the startled coveys burst forth upon the wing;
I hear far overhead, in the upper reaches of air,
The honking of wild geese, as onward swift they fare;
And in the salt bay meadows I see the fowler's bait,
I hear his gun, I see the smoke above his ambush dight;
I see the platoons of the coot, the squadrons of the brant,
And hovering black ducks, the shallow coots that haunt,
The sheldrake and the broad-bill, and all the feather'd flocks
Watch haunt the ocea bays and wheel o'er ocea rocks.

Fair scenes! bright scenes, enchanting scenes, that fill
The heart with o'erflowing joy, and the life pulses thrill,
So fair in all your Autumn pomp, in all your summer green,
When woods are bright, skies full of light, and waters smile serene!
Shelter Island, October. —ISAAC MCLELLAN.

The "Indian River," Florida.

THE writer, in company with Mr. H. C. Price, of Brooklyn, left Titusville in the early part of last February for a cruise on the beautiful sheet of water known as the Indian River. Only those who have taken this trip can form any idea of the charm of sailing and camping in those waters. Extending for over 150 miles, averaging two miles in width fed by various inlets from the sea, it becomes a miniature land-locked ocean. The water perfectly salt, and at night sparkling with phosphorescent light, teeming with fish of many varieties and containing numerous beds of luscious oysters. Its banks alternate between high bluffs of pine lands and palmetto hammocks (where quail, wild turkeys and deer are found), with dark and gloomy swamps, in whose tangled recesses lurk the panther and wild cat, and glide the alligator and moccasin snake. The perfect days and delicious nights all combine to make this a most desirable resort.

At Titusville we chartered a small flat-bottomed sloop, about 30 feet in length and about four tons burden. A water-proof tent, arranged to go over the boom and fasten down, under the sides of the boat, made us a comfortable and dry tent at night. A small galley stove, fitting in snugly under the forecabin, a good colored man as "chef," and plenty of corn meal, "hog and hominy," with ceteras, sufficed for the wants of the inner man. Rifles, choke-bore breech-loaders, fishing tackle of all kinds, with plenty of ammunition and metal shells, and last, but not least, a couple of staunch seters completed our equipment.

After leaving Titusville our first stopping-place down the river was at a noted orange grove: here we laid in a supply of splendid oranges, lemons and limes. The kind old gentleman owning the grove allowed us to pick our oranges from the trees ourselves, which made it more romantic. It was a pleasant sight to see the long rows of orange and lemon trees with their golden fruit gleaming amid the dark-green, glisten-

ing foliage, while all around them, standing as sentinels, clustered the "wind brakes" of graceful palmetto.

We next ran across the river to Merritt's Island, where we found the quail very plentiful, starting sometimes a dozen coveys in the hour. But alas, every "rose has its thorn." The mosquitoes were so numerous here and so vindictive in their attacks that shooting became almost a martyrdom, and the thick palmetto scrub told heavily on the dogs. We remained here some time. Our boat anchored in a little quiet cove, the surrounding banks fringed with palmetto and huge live oaks, their every branch festooned with a drapery of Florida moss, hanging gray and dead like old men's beards, as if a race of long-forgotten ancient Neptunes had been doomed to stand there in guard forever, the limpid water revealing in all clearness the white and pebbly bottom, where the channel bass, mullet and cavalli darted swiftly to and fro. Over all, the glorious sunlight and blue sky of Florida, the air musical with the calls of quail, the whistling of the red-bird, and the shrill cry of the sea-gull, while the deep booming of the surf (only half a mile distant) broke in with its heavy monotone.

We made frequent trips over to the Banana River, where wild fowl were found in great abundance, and a few Wilson's snipe. Our next halt was made at Crane Creek. Here we found plenty of quail and many curious and beautiful birds, among them white and blue herons, pelicans, parakeets and cormorants. Higher up the creek we saw many alligators.

One day, when paddling quietly up the creek on the look-out for "gators, a large flock of wild turkeys suddenly "broke cover" from a palmetto swamp. We both discharged our rifles at them, killing one fine gobbler. From Crane Creek we sailed down the river and made our next camp on the opposite side. Here a narrow neck of land about a half mile wide and covered with heavy palmetto scrub, divides the river from the ocean, and here we remained some time enjoying a daily surf bath, deer hunting, and shooting beach snipe and pelicans.

One day while crossing over the beach one of the dogs was observed to act very strangely. He came to a halt point on something in the scrub, and then ran to us apparently much alarmed. We retraced our steps, thinking it might be either a fox or snake, when suddenly, almost beneath our feet, up sprang a couple of deer. My companion brought one down with a charge of buck shot, and the other fell a victim to a Sharps rifle ball. After securing the game we had a good laugh at the novel idea of a setter dog pointing venison. During our stay here we killed three deer, and were thus enabled to gladden the hearts of some of the settlers by donations of fresh meat. And thus the happy days and weeks glided by. Sometimes we camped at the mouths of little creeks and inlets whose (to us) unknown waters we explored in a small skiff, sure to find good sport shooting alligators, deer and wild turkeys. The "casi-net" at night supplied us with mullet for the table and bait for channel bass fishing. It was grand sport catching these immense fish on hand-lines or with a stout boat rod and large salmon reel. Sometimes, too, we would hook a "tarter" in the shape of a shark, when the total loss of hook, and general demoralization of the tackle would be sure to follow. Higher up the different creeks and fresh water rivers good sport could be had with trout rod and flies.

At the St. Sebastian River we remained some time, and here an accident befell which bereft the writer of a favorite setter. Poor Dash could not resist his instinct to retrieve, and while swimming the river one day in hot pursuit of a crippled duck, and deaf to all remonstrances of his master, a huge alligator rose to the surface.

A yell of terror from the doomed dog; the deadly sweep of the reptile's tail; the metallic clash of its jaws; a splash; a struggle, and poor old Dash sank to rise no more. Peace to his body! He was a good dog and faithful friend, and may his spirit find some canine paradise where bones and birds abound and gators exist not. It was also here that the surviving setter distinguished himself by a panic. While hunting quail one afternoon, about a mile from the boat, Don concluded to investigate a tangled swamp. In a few minutes a howl was heard, almost human in its sound, and an arrow from the fretful porcupine, and, regardless of its master's appeals, sped frantically to the boat. Close behind him came a panther. Whether the panther would have caught the dog or not, must remain a mystery, for a couple of loads of bird shot, poured into the animal at short range, turned its course, and it slunk away into the thicket. As it was nearly dark, and no buckshot handy, the writer decided to "allow;" but it was many days before poor Don recovered the tone of his nervous system.

The fishing in Jupiter Inlet was simply superb, and sometimes we amused ourselves by baiting a large shark hook and, fastening one end with a heavy rope to a mangrove root, we generously contrived to hook one of these wicked gentry before morning. One of the most interesting sights of the river was Pelican Island. This is a small mangrove island on the east side of the river partially covered with water, and is the abode of myriads of these curious birds. Every tree is crowded with their nests, and pelicans of all ages and stages of development, jostle and tumble over each other on every branch. The noise is deafening and the smell far from that of Araby the Blest. Funny little pelicans, with great staring

eyes and long beaks, their ungainly sprawling limbs clad in sort fuzzy down, stare curiously at you, while solemn old birds, their pouches hanging down, gaze reproachfully upon you. Little tiny, half-fledged pelicans, with hardly any beak to speak of and no clothes, peep out over their nests to see what is going on, and, topping over, come fluttering to the ground.

But your space will not permit of a full description of all the sights, pleasures and exploits of this genial winter resort. Not least among its attractions may be counted the graceful hospitality of its inhabitants and the deliciously flavored oysters and oranges. And when we found ourselves, about the first of April, back again at Titusville, brown as berries, fat as seals, and with fearful and wonderful appetites, we bade adieu to the *Rover*, our floating home, with regret, well pleased with our trip and already looking forward with joyful anticipations to next winter, when we propose, *D. V.*, to try it again.

There is a railway, with a comfortable car, running from Salt Lake on the St. John's River, and I am told by the general manager that by next winter the road will be completed to Lake Harney, so that travelers can then reach the Indian River direct from Jacksonville without change of boat. Sponsoring the Jacksonville will be cordially received and taken care of by the gentlemanly superintendent of the railway, Mr. Churchill. By next winter a large hotel will be opened for guests. W. E. C. M.

SNIPE SHOOTING AT CHATEAU RICHER BEACH.

THE first of September brings gladness to the heart of the sportsman, for on that day snipe, woodcock and partridge shooting commences, and the woods and beaches are resonant with the sound of the fowling-piece, the whistle of sportsmen and the barking of cockers, and the proprietors of sportsmen's resorts prepare their salons and their chambers a *coucher* for the *messieurs de ville*. The fierce rays of the summer sun are somewhat tempered, and one feels in the early morning and evening twilight a suspicion of coming cold. The fields have been shorn of their waving crops, and the green leaves of the maple, the birch, the beach and the oak have changed to pink, to purple, to orange, to brown, and in fact to all the colors of the rainbow, while fruit trees luxuriate in myriads of blue and white plums and rosy and russet colored apples.

It was in the afternoon a few days ago when myself and friend, seated in a four-wheeled dog-cart, laden with the complement of fowling-pieces, ammunition and the superficial seltzer and drinkables not procurable in country villages, and drawn by a strong Norman pacer, whose steps varied not on the level road or on the ascent or descent of hill, drawn over the Dorchester Bridge, leaving the city of Quebec with his countless tin-covered roofs and mountain-pitched edifices behind, to pass a day or so at the village of Chateau Richer and try our luck at snipe shooting on its famous far-stretching beach. Quietly smoking our cigars, while our two pointers incessantly lay at our feet, we could not help feeling some of the enjoyability of life, which no other and then repays one for its ups and downs, its disappointments and its cares, its losses and reverses.

We passed through the village of Beauport, with its white-washed lime-stone, vertically twisted cottages on each side of the road cropping up one after the other for miles. Down to the right swept majestically past the great St. Lawrence, lavishing its waters the base of the rock built city of the heights of Lewis and the shores of the Isle d'Orleans. On this village site, nearly one hundred and twenty years ago, the brave Wolf was defeated by the chivalrous Count de Levis, with the loss of several hundreds of men in killed and wounded. The English afterward revenged the defeat by carrying fire and sword through all the villages of the north, from Beauport down. Soon we passed over the rushing, setting Montmorency River, and from the bridge we saw the fleecy cloud of misty waters the base of the rock built city of the heights of Lewis and the shores of the Isle d'Orleans. On this village site, nearly one hundred and twenty years ago, the brave Wolf was defeated by the chivalrous Count de Levis, with the loss of several hundreds of men in killed and wounded. FOREST AND STREAM.

unload our vehicle and put up our horse, who trot for fifteen miles did not seem to have fatigued him in the least; his *bonne femme* had aired the beds, put the rooms in order, and soon had a good substitute for dinner in the shape of fowls, eggs, potatoes, toast, coffee and tea; the little *ceteras* we had brought from the city rendered everything complete and insured for us a comfortable and pleasant country sojourn. As the day advanced, the sun shone brightly, and we were anxious to hear the news of the beach from our host, who cheered our hopes by his reports of abundance of snipe. His benevolent-looking face beamed with enthusiasm as he related to us the wonderful shots he had made, of the bags he had filled, of the *grands messieurs* whom he had had the honor to meet, and the magnificent wood-pieces in which his good fortune had been displayed. He had a bushy-headed, red-faced, unbowed, as was also his praise of the contents of our flask; but he prided himself in regard to the latter in possessing such rum as could not be purchased in Quebec, and in proof thereof brought forth a bottle of it. It was certainly the best we had ever tasted, and had been in his father's house for many, many years. In former times, when the West India trade with Quebec was at its height, more than thirty thousand barrels of rum were imported direct from there, and many captains took advantage of the extended length of ungarded river coasts to carry on a profitable trade with the farmers, many of whom laid in a stock which to this day still remains unfinished. Of such a stock was the rum which Pierre Garneau gave us to sample. As the evening advanced and his vivacity increased with additional potatoes, he related to us the burning and desecrating of churches, of the desolating of whole villages, and the entire destruction of harvested crops by the English; of the cruel mode of warfare, in scalping the dead and murdering the wounded, and even their prisoners. His own grandfather and grandmother had narrowly escaped death by taking refuge in the woods and what birds, squirrels and hares they could kill. "But," he continued, "*nous avons change tout cela*, and the English are our good friends, and much better than the French," whose atrocities during the reign of the Commune seemed to have horrified the old man. "Ah!" he said, "we have better laws than in France, and we can attend our church and listen to our cure without fear or danger, and we are not obliged to go to *la messe*." "And you, who will cure us of all diseases and make the lame to walk and the blind to see." Our good host became quite eloquent over the miraculous cures effected by *la bonne Ste Anne*, and resented any doubt of her superlative powers. The village of St. Anne is about seven miles below Chateau Richer, and is under the patronage of St. Anne, the mother of the Virgin Mary, and a patron saint of the sick. The village is a little party school, and is considered most holy relic, capable of curing any suffering by the simple touching it. This church was lately created by the deceased Pope Pío IX. a shrine of a high order, and it is estimated that over thirty thousand pilgrims from all parts of the continent yearly visit it. It has certainly been of great advantage to the inhabitants and caused the circulation of a large amount of money, and the employment of many hands. As we were about to leave, we were spent there. We at last confessed our faith in St. Anne, for our host was becoming argumentative, and we had to be out early on the beach.

It was between four and five o'clock the next morning when we heard our host calling us to get up—just the morning twilight, when one feels more than at any other time the desire for a little more slumber and folding of the hands. But the sportsman's life is not one of laziness, and we sprang from our beds to enjoy a bath in the spring water, which ran at that early hour of the day, as cold as ice. Cold and invigorated we took our blood to a proper temperature and refreshed and invigorated us for the exertions of the day. After taking a hearty breakfast of eggs and bacon and hot coffee, tempered by the richest of cream, we put on our *bottes sauteuses*, which reached up to our thighs and were fastened round our waist, and rendered impervious to water by thick coats of neat's foot oil, we let loose our dogs, shouldered our guns and, with the fish-bag, took the water by a sharp and the great red sun was just peering over the Island of Orleans, as through the wet grass we made our way to the beach, up which an easterly wind was beginning to blow. It had not yet begun to ruffle the surface of the River St. Lawrence, down which was quietly floating a *bateau* laden with pine dials, while the helmsman, in his shirt sleeves and wearing a *bonnet rouge*, was lazily sitting on the inner edge of the gunwale. The water was calm, the sun was over turned up fields, and by solitary paths in woods of autumnal tinted trees, we passed till we came to a large hedge of haws and stunted oak trees, in which we found an opening, and gained the beach. Here was our shooting-ground. We were almost on a level with the water and the beach stretched for miles before us, while to the right rolled on forever the great St. Lawrence, and the water was in waves of foam, and the clouds and the water seem to us as upon the ocean. To the left were the variegated colors of the Canadian forest, dotting the land as with raiment of costly workmanship; and far upward rose the ranges of the Laurentian Mountains, whose tops were still covered with the heavy clouds of night. Not a sound was heard, save our own hushed voices, as with poised guns and dogs at heel we carefully took upon the slinking birds which were so numerous, and which were so easily pointed, a whirr, whizz in the air, and the rapid discharge of four barrels. Down charge, and the birds were found—two brace and a half out of four brace. But old Garneau had marked the fugitives, and again we pushed forward. Another whirr and my gun brought down a bird, making three brace. A strange gun now appeared on the ground and flushed a bird which had escaped us; but we were careless as we were on comely ground, and the birds were careless as to who shot them, if such were to be their destined fate, which, so far, seemed most probable.

As we cautiously advanced we approached a small rivulet, and while looking for a safe crossing, rose a flock of wild ducks. Then our breech-loaders came into good service, for in eight discharges we were able to bring down five brace. By the time we had retrieved our birds the beach had become livelier and the reports of fowling-pieces were heard continually. The east wind continued to freshen, and this was a good omen, as it would surely bring up more birds, and in fact in a short time my friend and myself, having been somewhat separated, could again meet in the same happy hunting ground. The rushing of the snipe was glorious sport, and although walking in two feet of water is not pleasant, and laboring in as many feet of sinking, marshy ground is much less so and very fatiguing, the time flew rapidly, and it was a matter of surprise when looking at my watch I found it was past twelve—the hour agreed upon for our *al fresco* lunch. I decided my friend at a distance standing on a small

hillside waving a hankerchief to me, while Garne stood by his side. I hastened to him, anxious to show my prizes and to see his, and was envious enough to begrudge him the difference of one which he had gained on me. Some fowl and tongue sandwiches, washed down by Hennessy's best, dissipated all jealousy, and, finding a dry and comparatively soft spot, we lay down to enjoy the ever-consoling nipe. Evidently our fellow-sportsmen had followed our example, for there was but a sudden cessation of all noise; even the snipe must have gone more vigorously to work in robbing the forest with their long bills, for not a whirr disturbed the serenity, broken solely by wind through the long marshy grass and the purring of a spring near by which supplied us with water to soften the Hennessy. Our hunger satisfied, and our *siesta* over, we resumed sport with renewed vigor, and again the beach was alive with gun reports and terrified snipe. Steadily we pushed onward, dealing destruction in the most orthodox manner, and making good bags, and were beginning to grow a little homesick for the conveniences of the city, when a small party of hunters, the greater portion of old Garneau, who followed us and seemed to enjoy the sport as if participating in the killing himself.

We had reached the village of St. Anne, and he would not let us pass without our witnessing the truth of what he had asserted the evening before concerning the miraculous powers of the saints. So we went up to the church and entered it. A young girl was on her knees in the aisle, devoutly counting her beads, and she was so intent upon her devotion that she did not even notice our entrance. We waited until she had finished, or our examination of the piles of crutches which filled the sorts of nooks and corners in this favored edifice. With such proof before our eyes we could, of course, admit all the statements, however extravagant, of our credulous friend. We did not, however, see the relic; had we done so, it might probably have dispelled all our doubts. After the visit to the shrine we returned to the worship of Diana on our return tramp to Chateau Richer to the beach, and she was certainly as propitious then as before, for the birds naturally seemed to rush in our way. When nearing the village we took a start upward, and, crossing the road, reached the mountain path, and were lucky enough to add a few brace of partridges to our bag. On going along the shore we were again surprised and refreshed our questers, when I found a telegram which required my departure for the city early next morning. In fact had we not been so tired and hungry I would have left that evening, but it was with a delicious sense of comfort that, after divesting ourselves of our hunting gear, and performing a much needed ablution, we sat down to a comfortable dinner, and then, after a few minutes' rest, we retired. I had not tasted apple pie, not to mention the extras brought from the city. Our long walk was not an incentive to any lengthy discussion with our host, nor did he himself seem more inclined to it than ourselves, so we retired early and rose early the next morning quite prepared, if such were possible, to meet the tramp of the previous day. When I say possible, I mean that I had no doubt that I should have been able to get up early rising, when there are no fish to be caught nor snipe to be shot.

After a hearty breakfast, and a kind farewell to our friends, we started for Quebec with our booty—thirty-five birds—and arrived there to astonish the citizens with what could be found on Chateau Richer beach.

Fish Culture.

THE DOINGS OF THE U. S. FISHERY
COMMISSION AT GLOUCESTER.

One of our editors spent two weeks at Gloucester, Mass., lately, gathering information regarding the operations of the U. S. Fishery Commission there the past summer, but, having failed to furnish us the result of his observation, we are pleased to reprint from the columns of the *New York Herald*:

The operation of the Commission at Gloucester, as conducted for the past three months, have just been brought to a close, so far as the investigation of the fishes were concerned. Many eminent gentlemen had embraced the facilities furnished by the Commission, including Professor Verrill, of Yale College; Dr. Farlow, of Cambridge; Professor Asa Gray, Mr. Clarence King, Mr. Sanderson Smith, Professor G. Brown Goode and others, who were present the greater part of the season. It was, therefore, a Government school, and has been in command of the Commission for the purpose of making investigations of the "grounds" and "banks," determining the extent and boundary of those already known and searching for new ones.

AN IMPORTANT DISCOVERY.

Many important additions to the present knowledge of the subject have been obtained. A large flounder, closely allied to the English turbot and not inferior to it in excellence as an article of food, was discovered. "Strange to say, however," said Professor Baird, "it proved to be entirely unknown to the oldest fishermen on the coast, and was traced to the fact that the fish was taken in the barge and trawl—a fishing implement used alone by the United States Fish Commission and by Professor Agassiz in the United States, although extensively employed in Great Britain for the capture of market fish. The fish in question has so small a mouth that one two feet in length would be unable to swallow an ordinary baited hook, while a small hook would not be supposed to catch a fish of this size." The fish is so common that several tons could be taken daily by small schooners suitably equipped. Specimens of the fish submitted for critical examination to several well-known *restauranters* of Boston were pronounced by them to be excellent food fish. Besides the food fish just referred to, about 150 specimens of fishes were added to the list of species inhabiting the waters of the United States, some of which were new to the world. Among the more curious, however, from such distant localities as Madeira, the deep sea off the coast of Portugal or the waters of Greenland.

Many observations were taken of the temperature and density and chemical composition of the water at various depths up to 200 fathoms, with the special object of determining the physical conditions which influence the movements and migrations of the cod, of the mackerel, the menhaden and the herring. A most important scientific discovery was that of a new geological formation of the tertiary period of the coast. Masses of rock containing characteristic masses of fossils from all the best fishing localities, some thirty species in all, were secured, a considerable number being unknown to science. A large mass of information was also secured in re-

* Caught at Sault a la Pieve, a short distance to the north of Chateau Richer.

gard to the rise, progress and present condition of the great sea fisheries, which have rendered Gloucester so famous, this information relating more especially to the cod, mackerel and halibut.

QUESTION OF ARTIFICIAL PRODUCTION

Perhaps the most important work of the commission, in the opinion of Professor Baird, and upon which it is still engaged at Gloucester, is the series of experiments in reference to the artificial propagation of cod, mackerel and other kinds of fish. Should these prove successful it is easy to estimate the value to the country of an organization which hopes, by the aid of science, to increase the supply of hatchery and annually hundreds and perhaps thousands of millions of these fish at a very moderate cost. In addition to its labors in connection with the sea fishes of the United States the commission has continued the work of propagating shad and salmon on a very large scale. Twenty-three millions of shad were procured at the station in Albermarle Sound and at the station in Havre de Grace, in the State of Maryland, and were sent to every State in the Union. Twelve and a half millions of the California salmon, obtained at the United States Salmon Fishery Reservation, on the McCloud River, a tributary of the Sacramento, have also just been distributed throughout the United States. Generally the portion coming East would fill the regular packing cases, two large freight cars. The original cost of the eggs was about one cent per egg, and two hundred bushels, in referring to the importance of his mission the Professor said that the investigation of the sea and its bottom was important and essential as the investigation prosecuted in the West by Prof. Hayden, Major Powell, Lieutenant Wheeler, Clarence King, and many others. The production of food was considered one of great importance in an economical and political point of view, and the investigation of the sea required only the planting of eggs, while the raising of cattle and other kinds of food entailed a large expense. The population of the country was rapidly increasing, while the means of producing animal food on the land was decreasing in almost like proportion, and it was the artificial increase of food fishes alone that the country could look forward to with any degree of certainty. The season for the propagation of shad and of the rivers are over for the season, but the operations connected with the extensive propagating of mackerel, cod and herring are in progress at Gloucester, under the direction of Mr. James W. Milner, and will probably continue for several months. The extensive steam apparatus required has been erected on one of the wharves, and the prospect of success is very bright. The season for the propagation of shad will close between six and seven o'clock in the morning and will about the same hours in the evening.

The professor paid a compliment to the fishermen of Gloucester for the interest which they had taken in the matter, they alone having contributed over two hundred valuable collections. They are, in the opinion of the Professor, a very commendable class of citizens, and he will kindly refer to them in his official report. He has taken them repeatedly out on the steamer in order that they might see the wonderful mysteries of the sea as brought to light by a thoroughly scientific apparatus.

In referring to the *Herald's* Arctic expedition Professor Baird said that it was one of the most important enterprises of the age. He remarked that it was "an admirable opportunity for making scientific observations. And it is to be hoped," said the gentleman, "that the opportunities that will be offered will be utilized in the interest of natural history and of physical science as well as of geographical discovery."

THE TREATMENT OF ADHESIVE EGGS.—In our remarks concerning the translation of circular No. 4, of the Deutsche Fischerei Verein, we mentioned the fact that Prof. James W. Milner, Deputy U. S. Commissioner on Fish and Fisheries and his Assistant, Mr. F. N. Clark, had treated adhesive eggs by the dry method, as mentioned by Herr von dem Borne. Since that was published, we have learned that the gentleman mentioned hatched some two hundred thousand alewives, in the following manner:—After drying, freeing them from their stickiness by repeated washings, after impregnation, which was performed dry. Ten of the State Commissioners have tried to hatch this truly valuable fish, on account of the difficulty of handling the eggs, which have a tendency to mass together in large numbers, but the U. S. Commission has been successful, so far as they have had occasion to use them. In nature, these eggs are scattered by the tail of the fish, and adhere to weeds, silks, etc., with which they come in contact, either singly or in small clumps that are very difficult to prevent from reaching most of them. The Germans are very anxious of introducing this fish into their river, and we have had several letters from Herr von Behr on this subject.—*Frederick Mather in Chicago Field.*

STOCKING THE STREAMS.—The Fish Commissioners have made extensive preparations to continue to stock the different streams of this State with salmon during the approaching fall and winter. The Commissioners have received from Prof. Spencer F. Baird, U. S. Fish Commissioner, half a million eggs of the California salmon. They have made arrangements to hatch and distribute in suitable waters throughout the State two hundred thousand brook trout during the coming winter and spring. —*Easton (Pa.) Free Press.*

TENNESSEE—Columbia, Oct. 12.—It is now stated that Geo. F. Akers, State Fish Commissioner, will receive a large number of salmon fry for depositing in our several streams. We look forward with delight to the time when we can catch salmon from the Suck. VAL.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—The first fall meeting was held at their rooms, 608 Washington street, Boston, on Wednesday evening, Oct. 16, the President, Dr. John P. Ordway, presiding, and was of a very interesting character on account of the several reminiscences related by members concerning the sport enjoyed by them with rod and gun during the close season of the Association.

MR. H. C. SQUIRE:

Dear Sir—The Dittmar is splendid. I consider it a valuable discovery for the sportsman. I shall use no other.

Yours truly

MIDDLETOWN, Pa., Oct. 10, 1878.
 Dear Sir—Blitzmar is the powder for wing shooting—clean, strong
 no smoke, and nothing watering at your shoulder. Using Blitzmar
 you never have to ask the "other fellow," "Did I hit that bird?" You
 can see for yourself. Yours, etc.,
 FISKE & SON.—(Ad.)

ATLANTA, Ga., Oct. 16, 1878.

MENTINGDON, PA., Oct. 10, 1878.

FIGURE & SON.—[Adv.

Natural History.

ANIMALS RECOVERED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING OCT. 19, 1878.—One belted kingfisher, *Ceryle alcyon*, presented by Mr. James P. Swain, Jr., Bronxville; six black swans, *Cygnus atratus*, born in Menagerie. This is the second brood of cygnets raised by the same swan this summer. One red-tailed hawk, *Buteo borealis*, presented by Mr. Guso Rischewsch, N. Y. City; one collared plover, *Diospyros tojocu*, presented by Miss Emma L. Jacoby, Mamaroneck; one gray fox, *Urocyon virginianus*, presented by Mr. Harry N. Watts, N. Y. City; one American bittern, *Botaurus lentiginosus*, purchased.

W. A. CONKLIN, Director.

MICROPTERUS SALMOIDES AND M. NIGRICANS.—Under the revised nomenclature of Gill and Jordan, the big-mouth, Oswego, or grass bass, as it is variously called, will be known as *M. pallidus* instead of *M. nigricans* as heretofore. As the true black bass, known as *M. salmoides* is really the darkest in color, we are pleased with the change which marks the distinction between it and its cousin *pallidus*, or pale.

—Two California squirrels have recently been turned loose on Capitol Square, in Richmond, Va. They are larger and stouter than the gray squirrel of Virginia.

THE HAYDEN EXPEDITION.—Prof. Hayden's Surveying Expedition is officially reported at Washington all well. With the exception of some mules stolen from the Wilson detachment no losses have occurred to the survey during the summer. He reports that the work of the survey, though interrupted from time to time by storms, has gone on steadily, and that two tons of specimens are on their way from Bozeman.

EEL SPAWN.—Mr. Eugene Blackford has been exhibiting this week what appears to be eel spawn under the microscope. Prof. Baird has pronounced it. Having fixed the spawn we await the next stage in the development of this interesting question of reproduction.

LINNEAN SOCIETY.—The Linnean Society held its first meeting of the season on Saturday evening last with a good attendance. Mr. Merriam spoke of having found the past spring the nest and eggs of the black-backed woodpecker, *Picoides arcticus*, in Lewis County, N. Y. This is the first authenticated instance of the finding of the eggs of this bird. Both parents were taken. The change in the habits of the horned lark (*Eremophila alpestris*) were also spoken of, they being found much more abundantly in this State during the breeding season than formerly. Mr. Osborne also related his experience in finding the nest and eggs of the yellow-belly fly-catcher (*Empidonax flaviventris*) at Grand Canyon, N. B., imbedded in a tangle of moss and entirely hidden from view, and was only discovered by his almost desperate search and starting the female off. Several new members were proposed, and great interest was manifested in the winter's work to come. The fact of two of its members having each added a set of eggs before unknown to the record of science is one for which they are to be congratulated.

CARE OF YOUNG PIGEONS.—A considerate contributor sends the following:

Ma. Editor—I have made a little discovery with regard to feeding young pigeons. It is entirely new to me, though it may be an old story to some. A short time since, a pair of my old pouters neglected one of their young, feeding only one and starving the other. I was anxious to save the bird and make an experiment too. I mixed some suitable food, and putting it in a cup stretched over it a piece of thin rubber, through which I made a hole about one-half inch in diameter. After two or three attempts to feed him through the hole, the youngster began to see my meaning and would gorge himself freely. He was raised successfully, and I am proud of my success, for the hand-fed bird is as large as the other, and able to take care of himself. It is considerable trouble to feed a hungry bird four or five times in a day, but it may sometimes be desirable.

F. W. KIRCHELL.

Milburn, N. J., Oct. 17, 1878.

WHEN DO DEER FEED?

October 21, 1878.

EDITOR FOREST AND STREAM:

Let me "correct proof" in your last, where you have *Ametele*, instead of *Ametele* Keys; and then let me say in regard to the article headed as above in your last—something. Paul Canovas, born in St. Augustine, and long a resident of Jacksonville and its vicinity, was regarded by all who knew him as the best and most successful hunter of his day. I knew him well, and was related to him by marriage. He held the "Florida belief" that deer always came out from the hammocks to feed at moonrise, and killed many on their feeding grounds by moonlight. My own experience in Florida, Georgia, the Carolinas and Virginia; in New York, Pennsylvania, Maine and Vermont; and West, from Illinois to the Pacific, is that they feed when they are hungry and are on good feeding ground. How many of us who used to be up early for trout along the lakes and streams in the Adirondacks have started them at dawn as our boats dashed along the shores? How often at sunset have we watched them cropping the tender grasses on the glades near by our camps. With the Editor of FOREST AND STREAM I hold it peculiarly as a Florida belief, because I never heard it elsewhere.

One word of thanks from one of the "old ones" to "H. W. D. S." whoever he may be, for his kindly words to us whose tramping, camping, fishing days are nearly over, but who yet dearly love the old camp fire, the song and yam of liver, happy days. NED BUNTLINE.

In districts where deer are much hunted they feed mostly at night.—Ed.

QUESTIONS ABOUT SHORE-BIRDS.

Boston, Mass., Oct. 14, 1878.

EDITOR FOREST AND STREAM:

Having last September had a crack at the shore-birds in New Brunswick, there are some points with regard to which I should like to get information. I am, of course, referring to the name of a bird of the plover family of which I shot a great many. They were flying with the golden plover, dough birds, ring necks, etc., or, rather, I should say,

flying at the same time—generally in bunches of from five or six to a couple of dozen, but also a good many single ones, which always made a good deal of whistling—a single sharp note. They looked when flying more like a ring neck than anything else, although somewhat larger; but when picked they were almost as big as a golden plover, and most delicious on the table. The amount of meat on them, compared with their apparent size with the feathers on a truck was very marked. They had a short neck of a dark, yellowish color, some black about the neck, quite variegated back, with rich reddish brown, black, etc., and orange legs. I thought at first that they were chicken plover, until I shot one of the latter, and saw that there was a difference, they being larger and more black about the neck. I think it a strange that a bird that is so plenty here should have never come under my observation on our coast. If I am not mistaken, when flying their backs look with two white angular lines on the wings like inverted Vs.

There were also some birds exactly like peeps, only smaller, but, if not three, times as large, and very good they were. I compared the two often, and could see no difference except in size; but they were not mixed up together—some flocks being of the one, some of the other kind.

One other point—Is there any (to the unscientific eye) difference, except that of size, between the Jack curlew and the Esquimaux curlew or dough bird? I shot many certainly of the latter, as they were mixed up with the golden plover, and also some that were in flocks by themselves that were nearly half as large again; but as far as plumage goes, I could see no difference.

Some of the golden plover had very black breasts—not the beetle-head or black-breast, as I got those also, and know the difference in shape of head—to say nothing of the absence of even a rudimentary joint toe in the golden plover, but undoubtedly golden plover. If I remember rightly, when I was a youngster shooting around our harbor, the gunners used to say that the young birds for the first year had black on their breasts. These, however, seemed always to be the largest and plumpest, if there can be any difference in plumpness where all are in a ball of sweet, fresh butter.

The natives on the coast of New Brunswick can give no information as to the different varieties, as in the English-speaking communities they call all shore birds snipe or curlew, while the French lump them all under the term *alouettes* (arks), and do not consider them worth a charge of powder and shot. I noticed, however, that they were very glad to get them when I got more than I and my canoe men could use.

One more question—Is the large heron or crane that is so plenty here the same as the crane of the Western prairies which is said to be good eating? I was told that it was very good, but did not like the looks of the meat.

Doctor.

Judging from the description of the plover mentioned in our correspondent's first question, we should suppose the birds to be killdeer plover (*Spizella vociferous*) the rich reddish brown of the back especially points toward that species.

The large "peeps" were perhaps *Tringa Bonapartei*—the whiterumped sandpiper—though we should not like to say positively without a fuller description.

With regard to the Esquimaux and Jack curlew, we may say that size is the most apparent characteristic of the two species; otherwise they resemble each other quite closely.

Finally, the large heron of New Brunswick is a true heron (*Ardea herodias*), while the crane of the Western prairies is equally a true crane (*Grus canadensis*). In the vernacular the former is called the great blue heron and the latter the sandhill crane.—Ed.

The Kennel.

BREEDING FOR SEX.

BY MOHICAN.

IMPREGNATION is due to the spermatozoon (plural spermatozoa) of the male vivifying the ovum (plural ova) of the female. The ovaries—the organs which are removed in spaying—contain the ova; these latter are given off only at the time when the bitch is in heat, and find their way from the ovary through the fallopian tube to the uterus or womb, where, if impregnated, they are developed into perfect embryos. The spermatozoa are secreted by the testicles and are contained in the seminal fluid of the male, and under the microscope resemble so many little tadpoles. One or more of these spermatozoa may be necessary to impregnate an ovum.

Dr. Carl Weitman has propounded the theory, that if one, or possibly a few, reach an ovum, the female element will be in excess, and the result a female; if many, the opposite will hold true and a male be produced.

If coition takes place at the beginning of "heat" the ova will be at or near the ovary and few spermatozoa will reach the ova; but, if coition be delayed, the ova will be further down and more spermatozoa will come in contact with them. From the foregoing we deduce the following rule: To produce females coition should take place at the earliest moment possible; for males it should be delayed until the very end of "heat."

So much for theory; let us see how facts bear us out. Gentlemen have told me that if a cow is not served by a bull at the earliest moment after she is found to be in heat, the result is usually a bull-calf. One of our most successful breeders of blue blooded dogs, recently, in answer to my question, "When do you serve your bitches?" replied as follows:

"The sixteenth day; they usually bleed nine days; I wait a week longer unless I want a litter of bitch pups. C. (a noted breeder) once told me my idea was all humbug; so, contrary to my own judgment, formed from experience, I followed his advice and had a litter of five bitches."

A fact which seems to me to bear out the theory, is that in herds of wild animals the number of females is greatly in excess of the number of males. This is a provision of nature, as one male can of course impregnate many females, and is to be accounted for by the reason that the males serve the females at the first opportunity, the exceptions occurring often enough to preserve the breed.

This rule has been tested in human beings by Dr. J. B. Swift, who has reported in the *Boston Medical and Surgical Journal*, 20 Sept., 1878, twenty-two cases, in eight of which the facts bear out the theory, and in the remaining twelve the sex was correctly predicted before delivery. Of course the few cases reported are too few to furnish an unerring rule, but they are very interesting and warrant further investigations, which, in regard to canines, can be easily made by the owners of kennels. We should be pleased to hear from our well known breeders giving their experience in the past, if they have any reliable data, and from all who will take the trouble to fully record any authentic cases which may occur in the future.

[We would add to "Mohican's" article above, a statement that our own experience carries out the theory mentioned. On one occasion we bred a bitch so late in her season that we fancied we had delayed even too long. The result was a litter of six dog puppies.]

TENNESSEE FIELD TRIALS.—We are requested to announce that these trials will be held on Dec. 2, at Nashville, and that the programme will be about the same as in 1877, including trap shooting. The purses for champion, brace, puppy and under twelve months, will be attractive and graded. For particulars address Mr. H. Clarke Pritchett, Secretary, Nashville, Tenn., from whom programmes may be had. At present the judges are (unless they cannot attend): Gen. Wm. H. Jackson, of Nashville, Tenn.; Gen. Churchill, of Little Rock, Ark., and "Guyon" (Dr. Rawlings Young), of Corinth, Miss. Birds are plentiful and perfectly protected, and entries from Boston, St. Louis, Kentucky, Tennessee, Arkansas, Canada, Michigan and other points insure a full and enthusiastic meeting.

HUMANE METHOD FOR DESTROYING DOGS.

AS the safety of the community requires that the harmless and friendless dogs that infest our streets—the curs and mongrels without character or kind—should be destroyed, it behooves us that the mode by which they should be put to death should be as humane as possible. The method now used at the dog pound in this city is by drowning through the medium of a large iron cage, which, after being filled with dogs, is submerged. It is claimed that this plan is accompanied by a certain amount of cruelty, although if the generally received theory that death by drowning is painless, we cannot see where the cruelty comes in. There are other methods in use for this same purpose by which death is produced more rapidly, and we are indebted to *Our Dumb Animals*, of Boston, for the following cuts and description of the plan adopted by the Penn Society for the Prevention of Cruelty to Animals, of Philadelphia and which has been in use since 1874:

WEST.

No. 1.

EAST.

No. 2.

"In this instance death is caused by the use of carbonous oxide gas."

The woodcut represents the interior of a small brick building, nearly square, containing two rooms, one on the ground floor and one above it. The walls on the north and east are omitted in the pictures to allow a view of the inside.

Cut No. 1 shows best the upper room (from the east side); No. 2, the lower room (from the north side). The building is 12 feet 6 inches long, 11 feet wide and 12 feet high. The lower room runs along the whole width of the building, 11 feet, and is 4 feet 5 inches broad, a partition of brick separating it from the rest of the space between.

At the east end (marked A) it is 2 feet 8½ inches high, its roof or top being a little higher than the floor of the room above; the incline of the roof upward to the window D makes that end of the room 4 feet 4½ inches high; the incline was made to allow more light and an examination of the process, but window D could be made lower in the new building and the roof be made straight instead of inclined. Window D is 4 feet 3½ inches long and 1 foot 5½ inches wide. Windows A and B are 3 feet 5½ inches long, and 2 feet 6 inches wide; each of these windows has a sash of glass, and one of wire; the sashes lift in and out. Window C on the top is 1 foot 4 inches square. The floor is of brick, and the floor, ends and sides are covered with cement to make the room airtight.

In the two stoves in the room above the gas is generated. The stoves are known as the Rosebud pattern, No. 13, holding about 3 bushels of charcoal each; each has a pipe 22 feet 6 inches in length, with a cross-pipe running into the chimney. This length of pipe is necessary that the gas may be cooled before reaching the animals. There are four valves, or dampers, in the pipes, two at the end of the cross-pipe, and two just above them in the main pipes. There are also valves at the end of each pipe where it enters the lower room; these valves are opened and shut by the pulleys (which are not connected with anything else); they are "ground seat valves," six inches outside diameter, or in other words, to fit a six inch pipe; they are made of copper.

The mode of application is as follows:

Start the fire with a light substance, such as paper, and gradually fill the stoves with charcoal. Have the dampers turned on so as to send all the smoke and heat up the chimney. As soon as the fires are well lighted call the dogs into the lower room by window A or B, or at the wire sashes. As soon as the blue blaze appears on the fires shut all the windows of the lower room, reverse the dampers so as to cut off communication with the chimney, and send the gas into the lower room; also open the valves at the end of the pipes.

Not more than a minute ought to elapse before the dogs fall insensible. After that they will soon cease to breathe; leave them in, however, 8 or 10 minutes. After that time has elapsed open the lower windows to let the air escape that no one may breathe the injurious gas.

The theory of this method is based on the poisonous nature of carbonic oxide gas. This gas burns in the air with a blue flame, but when so burning it is converted into carbonic acid gas, which is not so deadly. When the fuel is in condition to burn on top with a blue gas, and then the upper part of the stove is closed, the gas can not get into the air, and the flame will be extinguished, and the poisonous gas will pass into the box through the pipes. The expense of this process is small.

FOX HUNTING IN NORTH CAROLINA.—Our correspondent, T. G. T., sends us from Gaston, North Carolina, the following graphic account of a fox hunt: "On the 4th of September I again crossed the Roanoke to repeat my sport after the red foxes. The old male I put to earth on the 2d had ample time to recover from the effects of that race, and I had secured his hole against future retreats. The morning was an exceptional one. The dew was very heavy, and about day the wind turned to the south; it became cloudy, and there was every indication of rain. I consequently prepared for it, and took along my umbrella. The party met me by appointment and to time. I had sent Lord Elgin around the day previous, so that I might have an animal not addicted to the bad habits of the old male, to be ready to start the first fox. We moved down the Roanoke and came right upon the fox without trailing him at all. He had hunted still lower down the river, and lay between the Sturgeon Hole (my crossing point) and Dr. W. W. Clement's. We witnessed the start. Logan raised his head as we approached a high fence, gave mouth as he did so, and leaped it, and was off in a second. Every dog soon was in place. I hesitated, and did not dash after the pack. I feared I might have started a deer, as he was as fond of that game as of the red fox. I went leisurely along until I came to the road on which the pack had gone, and there saw the track of the red. This delay placed me under great disadvantage. The fox went before the wind and up the river toward the Sturgeon Hole. The pace was rapid, the contest fierce and furious. It lasted but a short time. No fox could stand long such a press. He threw up the sponge before he was half way to the hole. The run was more off the river, rounding the bend, and the fox was seen in the distance. I ended the life of the mule. I rested, as usual, one day, and on the 6th crossed the Roanoke again, making the same arrangements with the party as before, and all were to time. We set out up the Roanoke for Curt's Hill, but struck a trail in the Allen field, which carried us immediately there. It was too warm a trail to be enjoyed in noting the varied maneuvering of the pack. You know the trail of a red fox is always faster and more direct than that of a gray. Every practiced huntsman from this fact readily distinguishes the game. Nor can it be mistaken for that of a deer. The hound never smells on the twigs and underwood unless the track is that of a deer, and then he invariably does. We trailed over Curt's Hill, and half a mile above in a dense forest we started. The race was a short one, too short for sport and not enough varied to justify a description. It was straight and true, and the red fox was seen in the distance as was the case when I crossed early in the morning, and in a few hours it was impossible. Being water-bound, I accepted the hospitality of my friend Hardy to remain with him until the water fell. In the evening he proposed to go some three miles off and hunt a gray. I consented, and about 4 o'clock we arrived in a large body of woods, a favorite resort of gray foxes. We hardly got fairly into the woods before Comet struck a gray, and very soon he was up and off; but, like the red in the morning, he soon came to grief, and in a brief time. Both were young foxes. T. G. T."

Gaston, N. C., Oct., 1878.

FLEAS AGAIN.—The Manufacturer and Builder claims that the oil of pennyroyal will drive away fleas without fail, but, it says, where the herb grows it is cheapest to make a decoction of it and dip all your pets in it once a week; but let the decoction get cold before you dip them. You may also gather the herb and put it in their nests, or scatter it in the pig pens once a month. If you can get the herb, scatter it about the oil and the them around the necks of your pets, not too tight, and pour a little of the oil on their backs and around their ears. In about a fortnight the fleas will have disappeared. It is a common remedy against lice in horses to tie such straws in a day around the necks and tails of horses. Another remedy against fleas in the house, it is said, is to put camomile flowers in the beds and on the carpets. Snuff has also some reputation in this respect.

EDITOR FOREST AND STREAM:

A few weeks since a friend of mine here gave me a young hound puppy, probably a month old. The little fellow was literally covered with fleas. The young lad who brought me the dog cautioned me about the fleas and said, "Rub him with coal oil; that's the way father does." As soon as the lad had gone I took the puppy in one hand and oil can in the other to the yard and thoroughly soaked the dog's hide with the oil (it was Canada petroleum as used for lighting purposes) taking care of the eyes, nostrils and mouth. The oil remained on about five minutes, when I took warm rain water and the ordinary laundry soap, washing out the petroleum as well as I could, and then rubbed the dog dry. The

fleas were still there and seemed to have a death grip, as it was almost impossible to pull them out. They showed no signs of life, however. In the course of a few hours I examined the dog and found one live flea, but have been unable to make a like discovery since. I believe the oil did the business completely. Yours very truly, C. A. Post.

Peterboro, Canada, Oct. 17, 1878.

We believe that petroleum is sure death to fleas, but it is dangerous to use unless washed off immediately as in the case mentioned by our correspondent.—Ed.

FLEAS ON DOGS.—A correspondent sends us the following recipe for removing fleas from dogs: "My dog was infested with these pests (fleas) to such an extent that by constant scratching most of his hair came out, and making his skin very sore. I use Buchan's carbolic soap for dogs and a solution of about 4 oz. pure carbolic acid, with 1 oz. glycerine added to a pint about half-full of water. With this solution and the soap I produce a copious lather all over the dog and rub it thoroughly in the hair. Now, the main thing is to leave the lather on the dog for about an hour, or until it is thoroughly dry, and then sponge it off with pure water. This will not only remove the fleas but will kill them. The action of the carbolic acid produces a healthy skin, removes all dandruff, scales, etc., and brings out a beautiful glossy coat. This I have tested on several dogs, especially on my red Irish setter, Grouse. His coat, formerly a dull yellow, is now a beautiful dark chestnut. He still the kennel he is infested with fleas, by using the remainder of the solution and washing it thoroughly with this it will effectually banish them and disinfect the kennel. Yours truly, G. L. W."

[For an occasional application this will do very well, but we believe that the frequent use of carbolic acid is very injurious to a dog's coat.—Ed.]

FRIEND.—The Dayton, Ohio, Journal publishes a long description of the red Irish setter bitch Friend, winner of the champion stakes at the Minnesota Field Trials, from which we take the following:

"She is a very handsome bitch, of dark, rich blood-red color, eyes solid brown, well set and full, intelligent. The only mark about her is a white blaze in the face. She was bred by the Rev. J. G. Leigh, of Liverpool, by his well-known Flash, out of his Stella, both Irish setters of undoubted purity, and their pedigrees are clear and unbroken for many generations, and recorded in the kennel registers of England and America. The strain is well-known, having won many prizes in England and Ireland. Being a true type of this best strain, she is entitled to her position."

In stating Friend's winnings, the writer of the article is in error in stating that Rory O'Moore, one of her get, tied with Paris for the prize for the best setter in the show at New York in 1877. There was no tie about it. The four judges were divided, and, an extra one being called in, he decided in favor of Paris. Nor can we understand why, if her first and only litter was sired by Rufus, as the article states, how she could have been shown at St. Paul with two pups by Bob.

WORMS IN PUPS.—A Pennsylvania correspondent recommends some milk for worms.

BREEDING NOTES.—The pointer bitch Gipsy (Col-Psyché), the property of Messrs. Linsman & Heston, of Warren, Mass., whelped on the 21st ult. eight puppies, sired by Champion Snaphot.

—Dr. Wm. Jarvis' imported red Irish setter bitch Rose (Palmerston-Flora) whelped, on the 11th inst., six puppies, four dogs and two bitches.

—D. Edward J. Forster, Boston, has bred his black setter Daisy, to Luther Adams' Drake (Prince-Dora) 16th October, 1878.

—Mr. A. O. Waddell's (Topeka, Kan.), smooth-coated black and tan birdette cocker spaniel, Jessie, has been bred to Mr. J. H. Whitman's cocker dog, Doctee (first prize at St. Paul, September, 1878). Doctee is black and white and heavily feathered.

SALES.—The Llewellyn setter dog Brussels has been sold by Mr. T. Donoghue, La Salle, Ill., to the Topeka Kennel, Topeka, Kansas. Brussels was bred by L. H. Smith, Strathroy, Canada, out of his colored bitch Dart, by Leicester, an imported brother to Mr. Smith's Paris, Pride of the South, Strathroy, etc., the latter a winner at St. Paul field trials. Brussels is a large, well-developed dog, and will be placed in the stud. Color, black, white and tan, and blue belton.

—Mr. W. T. Irwin has sold to Mr. A. C. Waddell (now of Topeka, Kansas) a fine black and white bitch puppy, of the Pedigree (now dead)—France litter.

—In our issue of Oct. 10, in a notice of sales made from the kennels of Mr. G. H. Goodrich, the address was given as Toledo, Ohio, when it should have been Toledo, Tama Co., Iowa.

NAMES CLAIMED.—Mr. W. M. Tilston claims the name of Stanley for a black and tan setter puppy bred by Wm. Stanley, Esq., and out of his imported Belle, winner of 1st prize at N. Y. Dog Show of 1877, and sired by Young Jock, he by old Jock (imported) out of Emerson Foot's Mab.

—Mr. Henry Smith, of Boston, claims the name of Rufus 2d for a four months old setter dog puppy, out of Mr. D. T. Charles' (of Albany) bitch Nina, and sired by Mr. Adams' Rock.

—Dr. J. W. Downey, of New Market, Wis., claims the name of Grouse II. for a black and tan setter puppy, whelped September 7, out of Mr. Tilston's Lou by Mr. Jerome Marble's Grouse.

—Mr. Arthur W. Leroy, of New Durham, N. J., claims the name of Young Lark for his orange and white setter puppy, 10 months old, by Mr. P. H. Morris' Lark, out of his June II.

—Mr. H. C. Glover, of the Imperial Kennels, Toms River, N. J., claims the name of Vista for a black and tan bitch puppy, whelped Sept. 7, out of Mr. Tilston's Lou by Mr. Jerome Marble's Grouse.

—Dr. Edward J. Forster claims the name of Neptune for his bull pup, whelped August 12, 1878, by Barnard's Tom (Eph-Nelle) out of Barnard's Kate.

—Mr. O. W. Donner claims the names of Lassie II. and Quince for two liver and white English setter puppies, sired by his imported Ranger II. (by Mr. Macdonald's champion Ranger) out of Lassie I.

Game Bag and Gun.

GAME IN SEASON FOR OCTOBER.

Moore, <i>Alex machis.</i>	Black-bellied plover, <i>ox-eye</i> , <i>Syn-</i>
Caribou, <i>Tarandus ramosus.</i>	<i>tarbia borealis.</i>
Bik or vaupe, <i>Cervus canadensis.</i>	Ring plover, <i>Egallitis semi-palmata.</i>
Hood or deer, <i>C. virginianus.</i>	<i>torquatus.</i>
Squirrel, red, black and gray.	Sh. or long-shanks, <i>Himantopus</i>
Hares, brown and gray.	<i>virgatus.</i>
Heed or rice bird, <i>Dolichonyx oryz-</i>	Woodcock, <i>Phalaropus</i>
<i>toratus.</i>	<i>hudsonianus.</i>
Wild turkey, <i>Meleagris gallopavo.</i>	Red-breasted snipe, or dowitcher,
Plumaged grouse or prairie chicken, <i>Capidonia cupido.</i>	<i>Macrogamphus griseus.</i>
Ruffed grouse or pheasant, <i>Bonasa umbellus.</i>	Red-backed sandpiper, or ox-bird,
Quail or prairie, <i>Ortyx virginiana.</i>	<i>Macrogamphus griseus.</i>
	Willie, <i>Totanus semipalmatus.</i>
	Tattler, <i>Totanus melanoleucus.</i>
	Yellow-shanks, <i>Totanus flavipes.</i>

"Bay birds" generally, including various species of plover, snipe, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets, etc., coming under the group *Linnæus* or Shore Birds.

†† This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

GAME IN MARKET.—Pinnated grouse (prairie chickens), \$1 to \$1.50 per pair; partridge (ruffed grouse), 50 cents to \$1.25 per pair; mallard ducks, 75 cents to \$1 per pair; black do., 50 to 75 cents per pair; wildgeese do., 50 cents per pair; broad bill do., 50 cents per pair; teal do., 50 to 75 cents per pair; red head ducks, 75 to \$1 per pair; wild turkeys, 20 to 25 cents per pound; Wilson snipe, \$2.00 to \$2.50 per doz.; plover, \$3 per doz.; bay birds, large, 50 cents per doz.; teal birds, 30 cents to \$1 per doz.; Philadelphia squabs, \$2.50 per doz.

Poultry.—Philadelphia and Bucks County dry picked chickens, 10 to 22 cents per pound; do. fowls, 16 to 18 cents; do. turkey, 15 to 20 cents; do. ducks, 15 to 18 cents; do. geese, 14 to 16 cents; State and Western chickens, 15 to 16 cents; do. turkeys, 15 to 16 cents; do. fowls, 13 to 16 cents; do. ducks, 12 to 15 cents; do. geese, 10 to 12 cents; Boston green geese, 12 to 20 cents.

MASSACHUSETTS.—Colchester, Oct. 19.—Cool shooting for the past two weeks has been fine and weather all that could be wished. High line for one man, 33; two men in boat, 47. The law being off, quails were about all killed this week about here. Have not heard of over six to one man.

S. K., Jr.

—From Connecticut, where the close season for woodcock, quail and grouse expires simultaneously, we hear that in some localities the woodcock shooting has been remarkably good, while in others, owing to the absence of frost, the cover still remains too thick to permit of good shooting. We also are informed that in certain districts in that State snaring has been carried on to such an extent as to entirely destroy all the birds. The game protective associations should look to this.

Shelter Island, Oct. 19.—The weather has been too warm for the sea fowl, still some have been killed. Early this week two boats were in the bay, off the shore, waiting for them. One boat got nine and the other one six. Some few fowl, chiefly loons, are flying in the morning over the beach. If the cool shooting here is as good as it was last fall and winter I will duly inform you of the fact. Yours very truly, ISAAC.

—The warm weather has interfered with duck shooting, although we have heard of one or two good bags of broad-bills being made at Good Ground. There has also been some fine cool shooting at the Thimble Islands, in Long Island Sound, but some cold weather is much wanted before the ducks will fly well, and until then, shooting over decoys, in this vicinity at least, is almost labor lost.

SHUTE! SHUTE!—Present weather appearances indicate that the regular fall flight of English snipe will soon be along. In fact there was a small flight last week, but the birds were very wild and neither dogs nor sportsmen had much chance with them. On the Hackensack meadows, up to the time of writing, there has been fair sport, considering the little grass that was cut, but there has been no shooting whatever on the Pine Brook, Hanover Neck or Whippany Meadows. Shooting has also been poor on the Newark meadows. Such birds as have appeared are in small wisps, but by the time this paper is in press the birds should be flying singly and the shooting better. For several weeks there have been scattering birds, and the Von Lengente Bros. have killed over their dogs—the "Jerseys"—about 100 birds.

—The rail are lingering in their favorite localities, notably on the Hackensack, and quite a number of late birds have been picked up by local gunners. Apropos of rail, we have had a number of specimens sent to us this season which were killed in mountainous districts, probably in localities where they were attracted by swampy ground, with small streams lined with rushes. Although the appearance of this bird at such high altitudes is undoubtedly of rare occurrence, yet the rail is a visitor to extremely high latitudes, as they are found in large numbers even beyond St. Paul, Minnesota, and other places equally far north.

PENNSYLVANIA.—McVeytown, Oct. 19.—As all game could be legally shot on the 15th inst., the hunting season has but rightly opened. Seven or eight deer have been shot in Licking Creek Mountains since the 1st. Wild turkeys are very numerous, and quite a number have been shot since the 15th inst., one man shooting two inside of an hour or two. Rabbits, partridges and other small game are being shot in abundance. After the election in November a large party are going on an extended hunt into the Seven Mountains, a few miles west of this town, and a famous deer resort. Upon their return I will give you a full report. Parties are leaving every day for the mountains, and the sport is getting interesting. I was out to-day and stirred up two large coveys of partridges, but it being very windy, and having no gun, I was unable to secure any. E. J. S.

Bloomersburg, Oct. 16.—Shooting fair with the weather quite dry; made a fine bag to-day—thirteen woodcock, five partridges. M.

Winterton, Oct. 20.—The prospect of quail hunting is very good. Our mountains are well stocked with deer. From all reports woodcock hunting was a failure.

Willis, Oct. 17.—Game will be plentiful in this county this season: splendid mall. We are having a good time hunting deer, which is our principal game. Bear will be very fat also this winter; great many here.

MARYLAND—Hagerstown, Oct. 18.—Sportsmen will, no doubt, be glad to learn that the rabbit "crop" will be larger than usual this season. There was so little snow on the ground last winter that hunters were unable to track them, and the number killed was not as large as usual.

VIRGINIA—Richmond, Oct. 19.—The close season for quail ended on the 15th, and now the voice of the hunter is heard in the land. Birds are quite numerous in the counties adjoining, but a great many are not grown. I found seven coveys last Wednesday, and only two were grown. Some of them were so small that they would fly about fifty or twenty yards and light, and you could catch them with a dog. I have seen some men who call themselves sportsmen, shoot the small birds, and brag on the size of their bag. Would you let me call them pot-hunters. If you don't, you should. Deer are quite numerous in the neighborhood of Chesterfield Court House. I understand that several have been killed within the last two weeks. Blackbirds are plenty on the flats opposite "the pond," and the "B" wharf, and from there all the way down the river. The farmers do not object to parties shooting them; in fact they are glad to have them killed, for they damage the corn a great deal. A party of four or five can have as much shooting as they want by going in the corn and taking them as they come over. One man killed twenty-two at one shot a few days ago. Yours truly,

Norfolk, Oct. 16.—Yesterday was the opening day for quail shooting, with us, and a great many parties were out. Best bag reported, 35; smallest, 6. Weather warm, weeds rank and high, and in some coveys birds not fully grown. Want two or three heavy frosts to make shooting perfect. Some few ducks in market.

—Our old subscriber and advertiser, Mrs. V. Slyck, has recently married Mr. D. B. Nye, Van Slyck's Landing, Currituck County, N. C., who respectfully informs his many sportsmen friends that he will turn out with board, skills and stool ducks. Duck, goose, partridge and snipe shooting. All grades of powder and Nos. shot kept on hand. Steamer *Cygnet* from Norfolk runs daily from Van Slyck's Landing Mondays and Thursdays at 6:30 A. M.

"HIT OR BREAK."—One hundred and eighty-five dollars were contributed to the Armstrong Relief Fund through the efforts of the "Hit or Break" Gun Club, of Columbia, Tenn., assisted by the ladies of that city. The club furnished the game for a game supper, and the ladies furnished the other delicacies, and superintended the cooking, arranging, etc. Over 600 quail were cooked, besides squirrels, rabbits, hares, ducks, turkeys, venison, etc., including the indispensable "possum an' sweet taters," a dish that has the true authentic flavor for the Southern sportsman. Our members contributed oysters, fish, hams, celery, cheese, "white sauce," etc. Wednesday evening, October 2, the doors of the Nelson House dining-rooms were thrown open and guests invited to the "spread." After partaking of the bountiful repast they mingled with the merry party within, and the contest between wit and beauty continued until the "wee ones' hours." The receipts, \$185, were given to the widows and children of the late Capt. J. B. Armstrong, who died in the service of his country in Memphis of the yellow fever while discharging his duties.

TENNESSEE—Columbia, Oct. 12.—Breech-loaders, muzzle-loaders, old muskets and their respective owners are seen in every direction, following the dogs in search of quail, and as a general thing with good success, as many large bags have been taken. Squirrels and rabbits are also numerous, and it is claimed by old hunters rabbits are more plentiful than for many years previous. Wild fowl shooting will be very good this winter.

GEORGIA—Rome, Oct. 17.—We have a better shooting season in prospect than I have known for years. From every direction comes in the cheering news of a big quail crop. I walked out a few days ago, after closing office at five o'clock, and got up two coveys, bagged seven birds by nightfall. How is that for shooting within a mile of a town of 6,000 population?

ALABAMA—Mobile, Oct. 18.—We are looking for frost soon, as it is quite cool this A. M. A member of our club killed last evening a *Sceloporus villosus*, weighing 5½ oz. Is this not unusually large for this bird, as I have shot large numbers, and can remember ever seeing one so large. With cold weather, we will have a digit of ducks, for which we are prepared and anxiously waiting.

Your woodcock is heavy. We have seen them weigh 8 ozs., however.—Ed.

LOUISIANA—Opelousas, October 10, 1878.—A few snipe made their appearance here about September 10, when we had some cool weather, with north wind, the thermometer falling to 46 degrees. Since then the weather has been quite warm, and the snipe have not arrived. I killed sixteen prairie chickens in fifteen shots on the 30th ult. or my better bitch; she did not make a single flush or false point. The time for hunting them here, though, is after frost, and we shoot them through the entire winter. They do not become so wild as they are said to do in the Northwest after winter has set in. If the snipe and woodcock visit us in sufficient numbers this season, the geese and ducks, they, together with the quail, will be a more important article than squirrels, turkeys, deer and bear, we already have here, would furnish a sufficient variety to please all. In the caber brakes of the swampy country between the Atchafalaya River and Bayou Courtaubeau, not far from here, are plenty of bear, and frequently in November (the best time to hunt them) that whole region, though subject to overflow in the spring, is so dry that water is scarce for fish and beast. It is the primitive forest, without human habitation; uninhabited by panthers, wild-cats, bears, deer, raccoons, opossums, etc., and some mosquitoes in warm weather. At a short distance on the north and west we have pine woods, with deer and wild turkeys, and clear streams, the home of black (green) bass. For a hundred miles west and southwest we have prairie, interspersed with timber along the streams, and southward to the marshes of the Gulf. In these prairies are the mounted game, also snipe, ducks, geese, etc., in their season, and formerly deer. Partridges (Bob White) are over the whole country, and in our prairie fields we have much

better sport shooting than in fields surrounded by woods. In the marshes near the Gulf thousands of geese and ducks are killed simply for their feathers. From here to Grand Lake, in Calcasieu Parish, is about two days' drive through the land of the prairie chicken, and snipe during the season; from there to the mouth of the Calcasieu River by sail-boat is only a few hours; and the game there is an abundance of red and other fish, oysters, ducks and geese, and, returning, prairie chicken and snipe. More can be combined in such a trip, through prairie and woodland, through fresh water to salt water, than in any other one from this point. Two weeks or three will cover it, and afford sufficient time for pleasure.

TEXAS—Galveston, Oct. 12.—On account of the mildness of the weather our shooting this fall has not been as good as usual. The army of water-fowl are waiting, no doubt, to avail themselves of the strong northerly that usually occur at this season—of four or five days duration—to assist them in their migratory flight. A few jack-snipe have been bagged, and some fat, delicious teal may be found every morning in the market. The Galveston Club appears to have four or five members. They are associated together as much for reduction of expenses of shooting as anything else. They will, no doubt, take pleasure in putting you or any other gentleman sportsman in the way of some sport should you chance to visit this city in game season. Some of the members are trying to get a fast steam yacht for hunting about the bays. On account of worms, she should be coppered, and should not draw over two and a half or three feet of water, with say fifteen persons on board. Then many of the best shooting points could be visited that are now inaccessible on account of distance, and being out-of-the-way places. More anon.

DR. FERBER'S LITTLE HUNT.—Last week came into our office Dr. Furber fresh from the Rocky Mountains, where he had been hunting in company with Mr. Otto Franck, of this city, and a few days afterward Texas Jack, who was guide and companion to these gentlemen, followed. The Doctor has promised a full account of his adventures for our columns, not the least important of which was the narrow escape of his party from the Bannocks, who were on the war path, murdering all the whites they encountered. We are always pleased to contemplate the tall, lithe and graceful form of our friend, Mr. Omohundro. Those who look at him critically from a standpoint of brute force would hardly believe that there was so much latent strength and courage beneath his placid and handsome exterior; but we believe that any lady who would calmly lift her eyes to meet his gaze would unhesitatingly select him for her cavalier. Dr. Furber speaks in highest terms of Jack's qualities as a guide, cook and circumventor of Indians. Of his own exploits and attributes Jack seldom speaks, except in a general way. He says that Dr. Furber's party was too fond of scenery to hunt much. Their love of the picturesque took them into dangerous ground, where scalps were not insured, and into the very heart of the Mauvais Terres or Bad Lands, where Indians were as thick as horned frogs on the sand plains of Arizona. But of this we shall hear anon.

After leaving his charge at Chicago Texas Jack joined Dr. Carver at Pittsburg and assisted him in giving an exhibition. The Doctor was received with *clat*, and captured a large gold medal, illustrating one of his shots at glass balls with the rifle. Dr. Carver is now starting it throughout the South. He exhibits to-day (Oct. 24th) at Macon, Ga.

CAPTAIN BOGARDUS' INTERNATIONAL TROPHY.—This is a beautiful jewel and a valued addition to the Captain's brilliant trophies. It has just been received, and was accompanied by the following letter:

TO CAPTAIN BOGARDUS:
SIR—By this mail I have much pleasure in forwarding to you a gold medal of International Gun and Plo Club, as a memento of your victory in the contest with Mr. Aubrey Coventry, at Brighton, and your straightforward and gentlemanly bearing throughout the match. Kindly let me know whether you receive it all right.

I am, sir, yours faithfully,
HENRY DOTT,
Sec. I. G. and P. C.

Captain Bogardus has just returned from a very successful trip through the West.

—Mr. Ira A. Paine was shooting week before last at the Academy of Music, Pittsburg, with good success. Last week he was at the Volks Garden, Brooklyn, and has engagements on hand for almost the entire season. During December he will give exhibitions at Harrigan & Hart's Theatre in this city.

—Messrs. Pooler & Jones, of Serena, Ill., have for sale a very light and convenient belt for carrying cartridges. With 30 cartridge holders the belt weighs only one pound; it is easily adjusted by a strap and buckle, and the cartridges are moved at pleasure. Worn either outside the coat or inside it. See advertisement.

—Collectors wishing fine specimens of North American birds are referred to the advertisement in our columns this week.

CLEANING BRASS SHELLS—Philadelphia, Pa., Sept. 20.—To thirty shells or less, thrown in a dish, add about two ounces of oxalic acid in hot water enough to cover them; let stand half an hour to one hour. They will then appear streaked, after stirring them with a stick. Take each one and wipe off the outside, place on a tin pie-plate and put them in an oven and let stay till hot and dry; lay one side to cool; when cold, prime, and they are ready for loading. Those living in the country may go to any drug store and get (if they have no oxalic acid) 4½ commercial muriatic acid, add this to the water covering shells, and after effervescing has gone on for a minute, place dish containing shells under a pump and let water run to them, put on a pie-plate and heat dry as before. The great cause of brass shells missing fire is, according to my experience, the priming them before thoroughly dry around the anvil. I have had miss-fires ten days after shells were primed, and, on removing the primer, found the anvil moist; but it does not do to blame our own carelessness, we must blame the manufacturers of shells and primers.

C. T. S.

MICHIGAN—Detroit, Oct. 18.—Abner Price and Harry Hawkins, the famed pigeon shooters, went to the Chair and Oct. 16, for a season of duck shooting. C. D. Brown, of Kinderhook, shot a blue crane last Saturday on the south shore of Coldwater Lake, which measured six feet from tip to tip of wings, was five feet and three inches from end of bill to end of toes, and its bill was seven and a quarter inches long. It was a beautiful bird. A bald-headed eagle, which measured four feet and two inches from tip to tip of wing, was also shot in the same township the same day.

CANADA—Toronto, Oct. 11.—There were 23 shooters, 15 birds each, of three classes: First class—John James, 13; B. Moore, 13; H. Miller, 13; J. Barnett, 13; J. C. D. Brown, 13; John Maughan, Jr., 13. Second—A. A. Deacon, 13; E. Wilson, 12; W. Kennedy, 10; Old man, 65 years, 10; T. Winfield, 10. Third—F. Lucas, 13; R. Wilson, 11; G. Monro, 8; J. Douglas, 11; C. Callaghan and R. Morrison, 10 each. In the shoot-off ties at 26 yards: First class—Miller and Barnett killed 5 each and divided. Maughan and Smith also divided, having killed 4 out of 5 at 20 yards. Second—Deacon, 1st; Perryman, 3d; Old man, 4th; Wilson, 5th. Third—F. Lucas, 1st; Douglas, 2d; Wilson, 3d; Morrison, 4th. The prizes were \$25, \$15, \$11, \$9 in each class. Old 65 is the nickname of a member of that age, who declares he can beat any breech-loader made with his muzzle-loader, either for distance or penetration.

DUCK SHOOTING ON LAKE ERIE.—On a certain bay on Lake Erie, not very far from Cleveland, which the writer of the rough sketch herewith appended requests shall be private, are the headquarters of a famous shooting club. The bay is three-fourths of a mile wide, skirted by marshes. On the 16th of September our friend put out his decoys in a favorable opening, and by dusk scored 23 ducks, of which two were wire-wings and the rest blue-winged teal. His narrative goes on to say: of the second day:

"Selecting a good position for blinding, I put my half dozen decoy teals about twenty-five yards down wind from the place I expected to shoot from, then, pushing my boat broadside to the decoys into a point of deer tongue, I patiently waited. It was now a quarter before five, and the cast showed signs of early daylight. I had the promise for a fair day. I could now hear the splash of the ducks as they came in singly and settled on the water, but could as yet see none. As it grew lighter I could see the ducks passing at a two-mile-a-minute gait, and soon had a half dozen down. These I set up on sticks for decoys, making a dozen, which were all I wanted. I now had sport in earnest, knocking down the blue-wings right and left, as they came on singly, in pairs and by the dozen at a time, getting at one once six with two barrels. My light gun became so hot that I was obliged several times to put the barrels in the water to cool. The little ponds, about fifty yards in diameter, were covered with dead ducks. I now cooked my large gun and laid it across the boat ready for use. Seeing four teals coming for my decoys with wings set for lighting, I waited. Now two of them are on the water, and after a wheel the others are pouring over the decoys ready to light. Bang! bang! goes the gun, and the two in the air lie dead on the water; the other two, having to rise toward me, present a fair shot. I quickly pick up my second gun, and they too are killed. Being in deer tongue about ten inches higher than my boat, I am obliged to be on my knees and to bend low until the ducks are near enough to shoot, and when I rise up they scatter like a covey of quails, and the shooting of them is not very unlike that of quails. About ten o'clock the birds quit. At noon, and at half-past ten I picked up, piled to the bay, set my large green umbrella and sailed direct to our dock. On counting my ducks I had ninety-nine. The evening shooting was nothing to speak of, as I got but fifteen, making a total for the day of 114 ducks, 108 being blue-wings, five green-wings and one widgown.

The next morning at five o'clock I was again on my way for the marsh, but this time I left my house instead of across the bay. The day being very warm, the ducks were not moving very much, and by ten o'clock I was back to the house with sixteen. Toward evening I again went out and bagged seventeen, making thirty-three for the day. The next morning at eleven o'clock I was home, having for my two and a half days' work 169 ducks. (Of course I don't cite this as an every-day occurrence, for it is not; it is an extraordinary case, the ducks being very plentiful on Tuesday mentioned.)

DUCK SHOOTING BELOW NIAGARA FALLS.—Editor *Forest and Stream*: It occasionally happens that immense flocks of ducks and geese, in flying up the gorge below Niagara Falls at night, strike against the cataract and are carried back to the river below, where during the next day they afford splendid sport for the local sportsmen, who, posting themselves on the banks with their guns and dogs, or cruising about in boats, pick them up in the eddies. The birds are easily approached, as they seem bewildered by the noise and spray, and when they fly do not rise high enough to see the river above the Falls, and, being lost to leave the water, soon return and are shot to the last one. Early Saturday morning (the 13th) the news came that the next day was full of ducks. There was an immediate scurrying home for guns, and some of the rocky cliffs echoed with such a fusillade as had not been heard on the banks of Niagara since the battle of Lundy's Lane. Hundreds of ducks were killed, nearly all butternuts. One boy with an old muzzle loader killed 22 in an hour and a half, and said if he had had one of them "even breech-loaders" he could have made a hundred. John Conroy, the famous Niagara guide, took the writer and a friend out in his boat about 4 o'clock in the afternoon, when the fun was nearly over, and we shot 20 in about an hour.

Niagara Falls, Oct. 16. ONYKARA.

IS DITTMAR POWDER SAFE?

WILKES-BARRE, Pa., Oct. 17, 1878.
EDITOR FOREST AND STREAM:
Knowing how great an interest you take in making reliable answers to letters of inquiry, and having noticed your reply that "Dittmar" is a safe powder, I wish to call your attention to the injury caused to three valuable guns at a trap shoot near Catasque, Lehigh Co., this State. The owners of these guns are well known to be men of truth. I give you the names of two of them; the third I have forgotten. The two are A. T. Everhart and D. Tomblar. The third, who lives at Albion, shot a Parker gun, which was completely ruined. While Everhart and Tomblar shot Scott guns which, while not completely ruined, were so shattered as to destroy confidence in their saltness for future

Yours truly, B. F. DORMANCE,

We regret that our correspondent did not send us more particulars as to how the Dittmar powder was used when the guns in question were injured, whether the charges were not excessive and whether the directions for loading were fairly complied with. Until we have these particulars we are not prepared to recede from our position as to the safety of the Dittmar powder. In referring to this powder we also desire to be understood as meaning the powder as at present made. Some of that manufactured by the old Neponset Company may not have been so safe. If Dittmar powder is unsafe, or injurious to guns as our correspondent would assume, how is it that Bogardus, Paine and Carver, who use it almost exclusively in their exhibitions, have never had a gun injured, or an accident of any kind?

PIGEON MATCHES

New York.—Dexter's Park, Cypress Hills, L. I., Oct. 22, 1876.—Monthly shoot for a gun presented by the Brooklyn Gun Club, open to members of the club only; to be shot at for 10 birds each from five traps, 75 yards rise, 80 yards boundary; the winner in each previous contest was disappointed by a bad rate gun trial; the first of the number being winning it three times; Brooklyn Gun Club rules:

W Wynn.....	25 yds.	1	1	1	1	1	1	1	1

JACOBSTAFF.

MARYLAND—Baltimore, Oct. 21.—Howard Ridgely and Geo. C. Potts, at grounds of Baltimore Gun Club. Conditions—\$100 per side, 50 birds each, 26 yards rise, 1½ ozs shot. Ridgely used a Purdy gun weighing six pounds forty-two ounces, his charge of powder being 3½ drachms. Mr. Potts shot with a ground gun made by Scott, of London, choke barrels, using four drachms of powder. The Baltimore Gun Club rules governed the match:

Ridgely—1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1
1 1 1 0 1 0 0 1 0 1 1 0 0 0 1 1 1 1 1—42.

Potts—1 1 1 0 1 1 1 1 1 1 0 1 0 1 0 1 1 1 1 0 1 0 1 1 1 1
1 1 1 1 1 1 0 1 1 0 1 1 0 1 1 1—40.

Shooting for a Cup.—After the match a sweepstakes was shot, in which, among others, Messrs. Carroll Livingston and John Heckscher, of New York, took part. Then followed a handicap sweepstakes for a cup presented by General Grubb of New Jersey. There were eighteen entries for this event:

J. P. Easter	1	1	1	1	1	1	1	1	1-0
J. T. Norris	29	1	1	1	1	1	1	1	0-8
H. W. Knibbold	23	1	1	1	1	1	1	1	0-8
J. Swan Trick	31	1	1	1	1	1	1	1	0-8
Donnet Swann	30	1	1	1	1	1	1	1	0-8
W. H. G. G. G. G.	25	1	1	1	1	1	1	1	0-8
C. D. Fisher	29	1	0	0	1	1	1	1	1-0
F. May	26	1	1	1	1	1	1	1	0-8
W. H. G. G. G.	25	1	1	1	1	1	1	1	0-8
R. C. Thomas	26	0	1	0	1	1	1	1	0-8
C. McDowell	25	1	1	1	1	1	1	1	0-8
H. H. G. G. G.	25	1	1	1	1	1	1	1	0-8

George Brown	29	1	1	1	1	1	1	1	0-8
George J. Popple	29	1	1	1	1	1	1	1	0-8
H. H. G. G. G.	29	1	1	1	1	1	1	1	0-8
C. A. G. G. G.	29	1	1	1	1	1	1	1	0-8
C. A. G. G. G.	29	1	1	1	1	1	1	1	0-8

At the shooting of nine for a second prize, Messrs. Norris and McCasland tied and divided.

ALABAMA.—*Mobile, Oct. 18.*—Monthly shoot of Gulf City Gun Club for gold badge; 29 balls from three traps, screened; one straight away, one quartering to right and one quartering to left; 18 yards. Tontal and Holt having once before won the badge were handicapped three yards. Conditions—Badge becomes the property of the member winning it most times during the year. Owing to the plague of the South our attendance was small. The following is the score:

Tunstall.....	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Alexander.....	1	1	1	1	1	1	1	1	0	1	0	1	1	1	1	1	1	1	1

Problem No. 28.
Motto: Silver Bells

White to play and give mate in two moves

SOLUTIONS TO PROBLEMS—NO. 24

1-B-B4	2-Kt-Q3	1-	1-B moves
2-Q-Q3 B5 ch	2-K-K5	2-Q-B5 ch	2-Kt tks Q
3-B-B2 mate		3-B-Kt3 mate	

"R. H. S." sends the following solution:

1-Q-B7	1-Kt-B4	1-	1-Kt-Kt5 or Q3
2-Q tks Kt ch	2-R moves	2-Q-B5 ch	2-R moves
3-Q or B mates		3-Q mates	

1-	1-P-B7	1-	1-P-B3 or B m'vs
2-Q tks P	2-Any	2-Kt tks Kt	2-Any
3-Dual mate		3-Q mates	

Game No. 78.—ALLGAIER GAMBIT.

Played in Class I at the recent meeting of the English Counties Association:

White.		Black.	
Major Martin.	Mr. Fisher.	Major Martin.	Mr. Fisher.
1-P-K4	1-P-K4	16-P-B3	16-B-K3
2-Kt-K4	2-Kt-K4	17-Q-Q3	17-B-K4
3-B-K3	3-P-Kt4	18-Kt-K4	18-Kt-K4
4-P-K4	4-P-Kt5	19-R-B3	19-Kt-K5 (c)
5-Kt-K4	5-Kt-K4	20-Kt-K5	20-Kt-K5 (c)
6-Q-Q4	6-K-Kt B3	21-N-K3	21-Kt-K5 (c)
7-B-K4	7-Castles	22-Kt-K4	22-P-K3
8-Kt-K3	8-Kt-K3	23-Kt-K3	23-Kt-K3
9-Kt-K5 P (a)	9-Kt-Kt Kt	24-P-K4	24-K-K3
10-B-Kt Ch	10-Kt-Kt B	25-P-K-K3	25-Kt-Kt (c)
11-Kt-K4	11-Kt-K4	26-Kt-K4	26-Kt-K4
12-B-Kt5 (c)	12-P-K-K3	27-Kt-Kt	27-B-K3
13-Kt-K4	13-B-Kt Kt	28-Kt-Kt B	28-Kt-K3
14-Kt-K4	14-Kt-K4	29-Kt-Kt	29-Kt-K3
15-Kt-K2	15-B-Kt P	30-White mates in two moves	

NOTES.

- (a) This sacrifice appears necessary to keep up the attack, for if he retreat the Kt-K3, the answer is R-K.
- (b) Better than P-K5, to which Black could have replied with Q-K5.
- (c) Exchanges being in Black's favor he should here, we think, have captured the Kt, and followed it by P-K R4 and B-K3.
- (d) A weak move, but in truth it is hard now to find a good one. The best resource probably was Q-K Kt.
- (e) A fatal error; he still had a very defensible game by playing Q-K R4 or Q-K Kt, we believe.
- (f) Major Martin's conduct of this game with so much vigor and judgment, makes his announced retirement from the arena of chess tournaments the more regrettable. — *Chess Players' Chronicle*.

Game No. 79—RUY LOPEZ.

Played at Paris on July 23, 1878, between Herr Englisch and Mr.

Gifford:		Gifford:

9-B-K K5	9-R-Q4		

CURSORY JOTTINGS.

—A chess circle has been established at Middletown, Conn. Messrs Oldack, Fowler and Mylchrist are numbered among its best players.

—Mr. W. A. Shinkman, the famous problemist, declines, it is said, to accept the second prize awarded him in the recent tourney of the American Chess and Problem Association. Our contemporary's assertions regarding the management of that tourney should be replied to at once if they are untrue, as is claimed by parties not on the defensive. But give us facts in your replies, gentlemen, or reply not at all.

—The allegation of our contemporary that irregularities occurred in the management of the recent problem tourney of the American Chess and Problem Association, render it imperative that the officers of that Association investigate the truth of the same, and if found to be well founded, take such steps as will prevent their recurrence; and if any of the officers are involved, they should be deposed and censured. If the allegations have been publicly and, we hope, properly refuted, no loss will be sustained by the Association, and the powers that let of the Association, and a refusal to consider them will jeopardize the existence of that body. If we are not mistaken, competitors in that tourney also aver that irregularities occurred which certainly would justify an investigation. We are at a loss to account for the silence of Secretary McKim, and we in all candor suggest that he should either deny the charges, or, if he cannot do so, resign his office. If the "allegations" are neither to be frowned down nor will they allow the matter to rest unless an investigation be ordered, and we therefore say

"Let there be an immediate investigation." Mr. Loyd should also hasten to deny or explain the accusations made by Mr. Allen, otherwise his neglect so to do will be construed as an admission of the truth of the same. We are aware that Mr. Loyd attempted to do this by addressing a letter to the *Holyoke Transcript*, wherein we regret to state that abuse alone was prominent and intelligible. A general denial, instead of replying to each statement in detail is, in our opinion, insufficient to disprove the specific charges made.

GAINING GROUND.—With the object of encouraging sea-cruising and promoting seamanship, the FOREST AND STREAM has persistently taken ground in favor of a sea-going model in preference to the light displacement sloop, and it is a matter of satisfaction to us to note the prevailing tendency in the direction pointed out. Mr. Charles H. Contoit, owner of *Prospere*, is now having built by Messrs. C. & R. Poillon, of Brooklyn, a fine sea-going keel schooner, which, in dimensions, approaches very near to what experience, as well as theory, teaches to be the best form for easy qualities and safety in rough water. The new schooner will measure 240 tons carter's measurement, and about 175 tons N. M. She is being built from a design by Mr. A. C. Amy Smith, and bears some resemblance to the fast pilot-boat *T. S. Negus*, modeled, we believe, by Mr. Townsend, foreman of Poillon's. She is 95ft. on water line, with only 90ft. in. extreme beam, or less than 22 per cent. of the length against *Intrepid's* 24. This decrease of beam we look upon as a decided step in the right direction. It is intended to spar the new schooner for cruising only; had she been designed for racing she would have gained had her beam been kept down to 80 per cent. of the length, as a longer and rather full body insures displacement enough, and with lead on her keel would have given ample stability for all the canvas so easy a form requires to send her along at a good rate. On deck she measures 106ft., over all, including rake of English counter and overhanging head, 114ft.; depth of hold, 10ft. 6in. and 11ft. water; mainmast, 75ft., heel to head; foremast, 73ft.; mastsheads, 8ft.; diameter of spars, 10 and 18in. at partners respectively; topmasts, 30ft., heel to hounds, with 4ft. pole; bowsprit, 20ft., outboard with a 16ft. jibboom beyond the cap, and a 4ft. pole to finish off. Keel of white oak, sided 13in., molded 9in. Depth of entire keel amidships below rabbet, 2ft. 4in. The keel has been sided so large in order to aid in stowing the lead as low down as possible. Frames of Maryland white oak, hackmatack and locust stanchions. They are double 6in. on floors, and double 5in. at futlocks. Garboards of white oak, 3in. thick. Planking same, 2 1/2in. and 3in. at wales. Bulwarks white pine, oak rail. Keelson of white oak 10in. square, apron of locust, stem and sternpost white oak. Ceiling yellow pine, about 3in. thick. Deck beams yellow pine, sided 9in., molded 6in. Deck planking of white pine, 2 1/2in. thick. Deck fittings of mahogany, mast partners of oak. Flush deck, saloon amidships, a'f' *Angela*. As was to be expected, the ubiquitous expert is around again and has given his opinion of the new schooner before all her frames are up even. This wonderful person expresses himself as favorably impressed, and has imparted to sundry non-professional news-gatherers the astounding fact that, having a longer floor than *Intrepid*, less ballast will be required in the new schooner, and being lighter she will sail faster. Mr. Contoit is fortunate, however, in not having consulted the wishes or opinions of half-educated experts, and may be congratulated upon having secured the services of one of the best yacht designers of the day in his behalf. We hope to lay before our readers at some future time a mathematical diagnosis of this schooner's elements compared with those of other craft already tested.

OAR AND PADDLE

COURTNEY-HANLAN RACE.—After some very exhaustive searching among all possible sources, and after the fullest investigation in all directions, instituted by the Boston *Herald*, the same conclusion is finally arrived at which in these columns we first gave to the public in regard to the honesty of Courtney in the recent championship match at Lachine. There is simply no evidence to bear out any of the aspersions so lightly and profusely cast upon the American champion by giddy-headed detractors. The reason why Courtney was beaten was because he could not row fast enough, and that is the end of the whole matter. We believe we were among the first who detected in Hanlan far greater power and speed than he allowed himself to display in his races with the small fry, and our views are now being accepted by others as accounting for the manner in which he disposed of the Union Springs champion, in opposition to the universally received notions of Courtney's invincibility, so tenaciously adhered to on this side of the St. Lawrence for a long time after his defeat, and which some are not even yet prepared to renounce. But for all Courtney's honesty of action during the race, we are not prepared to believe the latest statement imputed to him, and which is just now going the rounds of the press. He is said to have attempted an explanation of his

defect by ascribing his poor finish to "hidden obstructions." This is a little too silly for any one to accept. If Courtney made any such statement he should be placed under a doctor's care as suffering from "hidden obstructions" on the brain. What has been the most objectionable side of his conduct in connection with the race, is his tendency to braggadocio, both before and after the race. He talks very freely, as though he had actually been the winner and not his opponent. To speak slightly of Hamilton's abilities in a boat is a grotesque assumption, and does little to restore him to popular favor.

THE AMERICAN MEDITERRANEAN.—As abroad our British cousins conscientiously make their annual pilgrimage to the Mediterranean in whole squadrons and fleets, so, too, American yachtsmen are becoming more and more alive to the beauties and pleasures of winter cruising in the South. The Florida coast and West Indian Archipelago bid fair to draw within their waters a constantly increasing number of our yachts every year. *Intrepid*, *Ambassadors*, Mr. Contoi's new schooner, a small ship from Boston, and a number of steam yachts suitable to the Florida waters and lagoons, are on the berth for warmer climes. As the many attractions, convenient distances and ports, different languages, customs and historic associations of the islands become more generally appreciated, and with the introduction of a more seaworthy model the annual migration southward promises to become more of a leading feature among the followers of the sea for sport, and the day may be not far distant when it will become as usual a thing to see in West Indian harbors the American yacht ensign peak, as it is even now to meet the blue Admiralty colors of British craft in all seaport towns of Europe's inland ocean.

YACHTING NEWS.

BOSTON OCEAN MATCH.—In the matches sailed off Boston, Oct. 9, there were entries in all four classes. First class, keels over 30ft. sailing length; second class, schooners over 30ft. and under 40ft. sailing length; third class, keels over 20ft. and under 30ft. sailing length; fourth class, keels under 20ft. The following is a summary of the sailing:

FIRST CLASS.			
Name	Owner	Actual Time	Correct Time
Viking.....	Gormann.....	2 10 38	2 21 13
Shadown.....	Whitling.....	2 11 38	2 22 13
Napoleon.....	Goodwin.....	Withdrewn.	Withdrewn.
SECOND CLASS.			
Breeze.....	Whitling.....	2 15 33	2 27 16
Mist.....	Weston.....	2 33 44	2 42 07
Nellie G.....	Hall.....	Withdrewn.	Withdrewn.
THIRD CLASS.			
Eateka.....	Fuller.....	2 01 20	2 10 12
FOURTH CLASS.			
Annie.....	Anderson.....	2 17 57	2 22 31
Qual.....	McDonnack.....	Withdrewn.	Withdrewn.

First prizes were awarded the *Viking*, *Breeze*, *Eureka* and *Annie*, and second prizes to the *Shadown* and *Mist*.

HAVENHILL YACHTING.—In a match sailed Oct. 10, *Lizzie Warner* (Capt. Titcomb) beat *Edipie* (Capt. Doane) in 1h. 2m. 25s., over a course on the Merrimac, from Havenhill Bridge to Groveland Bridge and return.

DROWNING CASUALTY.—While returning to the yacht *Julian*, off Peekskill, in a skiff, Mr. Tucker was drowned, owing to the filling and swamping of the skiff. Mr. Tucker was a nephew of Mr. Augustus Schell of this city, and his loss will be deplored by his many friends. Dr. May, owner of the *Julian*, who was in the skiff at the time, saved himself by swimming ashore.

HARLEM REGATTA ASSOCIATION.

The second regatta of this association was held on the Harlem, Saturday, Oct. 19. All events were one mile straight away, with stream, the start in the morning being from Florence's Dock to Gates', this order being reversed during the flood of the afternoon. The weather was unpropitious and the water rough. The events were promptly called, and as a whole the arrangements were of a decidedly satisfactory kind, order and authority prevailing all day. The results of the day were in some instances unlooked for, the Ariels of Newark winning, quite contrary to expectation, in the gig race, and the Nautilus pair were badly beaten by the Atlantas and the Gramercys. Mr. J. T. Goodwin acted as referee, assisted by Mr. A. G. Swan, of the Atlanta Club, and Mr. Julian Kennedy. The first race, called early in the forenoon, was the first heat for junior single sculls. Entries, B. S. Keator, Yale College B. C., Wm. Tomlin, Highland B. C., August Schneider, Friendship B. C., and Geo. Norion, Gramercy B. C., their stations being given from the New York shore. Keator took the lead and won with ease, 7m. 39ts.; Tompkins, second, 7m. 52ts.; Schneider, third, 8m. 74ts.; Norton, last, 8m. 35s. Second heat, entries: Irving A. Lyon, Dauntless B. C.; I. B. Kipp, Highland B. C., and James L. Gladwin, Nereid B. C. Lyon got the best of the start and maintained his advantage all day, winning in 7m. 52ts.; Kipp, 8m. 14ts.; Gladwin, 8m. 17ts. Single scull, entries: R. B. Hartsborne, New York R. C., Rathbone won as he liked in 7m. 42ts.; Hartsborne, 7m. 46s. Second heat, entries: E. Mills, Jr., New York A. C.; H. Livingston, Yale College B. C., and H. P. Dain, Highland B. C. Mills and Livingston made a start from the former down ahead of the latter, 7m. 73ts.; Livingston, 7m. 73ts.; Dain, 8m. 39ts. This finished the morning's work. At 2 p. m. the pair-oared race was called, entries: Atlanta B. C., W. K. Downs and J. E. Eustis; Gramercy B. C., T. Williams and H. Mills; Nautilus B. C., Fred. A. Levien and Wm. Childs. Atlantas went to the front with Gramercy second. Opposite the Athletic Club grounds the Nautilus pair put on a sport and fouled the Atlantas. Boat stopped rowing, and when they got clear the Atlantas outrowed their opponents, and came in first, time, 6m. 54ts.; Gramercy, 7m. 43ts.; Nautilus disqualified. Eight-oared shells, entries: Nassau B. C.—J. B. Robert, bow; J. Wells, J. G. Ganaway, C. G. Peterson, J. H. Abell, Jr., J. D. Foot, O. Badgely, W. Robinson, stroke; A. T. Kots, cox. Columbia College B. C.—R. T. P. Fisk, bow; O. Eldridge, H. P. Brown, P. D. Browning, J. B. Newberry, C. L. Boyd, H. G. Ridaback, P. Parsons, stroke; Coghill, cox. Nassaus took the lead and kept it in spite of the vigorous sports of the college crew. When Byd slipped his seat their victory became certain. The Nassaus crossed the line with a lead of three-quarters of

a length; time, 5m. 50ts.; Columbias, 5m. 68s. Final heat, junior sculls, Lyon and Keator. The latter led off, but was passed by Lyon at the quarter mile, who won in 7m. 40ts.; Keator, 7m. 50ts. Final heat, senior sculls, Rathbone and Mills. Won readily by the latter in 7m. 15ts.; Mills, 7m. 20ts. Four-oared shells, entries: Mutual B. C., Albany—C. E. Bulgar, bow; Henry C. Graves, Abram Mull, W. S. Mosely, stroke, Atlantas B. C.—W. H. Downs, bow; H. W. Rogers, H. G. McVickar, J. E. Eustis, stroke, Palisade B. C., Yonkers, N. Y.—A. Moffat, bow; J. Fraser, W. H. Guernsey, B. G. Jackson, stroke. Mutuals took the lead, and, in spite of wild steering, won in 6m. 83ts.; Atlantas, 6m. 15ts.; Palisades, 6m. 34ts. Double sculls, entries: Yale College B. C.—E. P. Livingston, bow; H. Livingston, stroke. Olympic B. C., Albany, N. Y.—J. H. Girvin, bow; Martin Monahan, stroke. New York A. C.—R. W. Rathbone, bow; R. L. Newton, stroke. At the quarter mile Yale and a slight lead, and a little further on Olympics went out of their water and fouled them, but both crews kept on. Athletics then fouled Olympics twice and Yale had it her own way, winning in 7m. 15ts.; Olympics, 7m. 23ts.; Athletics, 7m. 25s. Six-oared gigs, entries: Ariel B. C., Newark, N. J.—W. Trautz, bow; J. Bennett, W. Mack, F. Freeman, R. Ross, Jr., H. M. Jury, stroke; Frank Allen, cox. Atlantas B. C.—W. H. Downs, bow; J. H. Kent, H. W. Rogers, Eugene Conger, H. G. McVickar, J. E. Eustis, stroke; Edward Blake, cox. Columbia College B. C.—H. P. Brown, bow; O. Eldridge, J. B. Newberry, F. D. Browning, H. G. Ridaback, P. Parsons, stroke; Nathan, cox. Dauntless B. C.—Frank Gilligan, bow; H. W. Peckwell, O. E. Knapp, S. B. Pomeroy, H. W. Walter, David Roach, stroke; J. J. Duff, cox. New York A. C.—W. F. Shore, bow; G. W. Stowe, M. O. Patterson, W. G. Demarest, J. W. Carter, H. West, stroke; N. W. Rathbone, cox. Ariels took the lead, and, without being hardly pressed, won by nearly three lengths in 6m. 39ts.; Atlantas, 6m. 43ts.; Columbia, 6m. 48ts.; Dauntless, 6m. 53ts.; Athletics, 7m. 25s.

MEETING OF THE N. A. O. A.—At the meeting of the Executive Committee of the National Association, held at the Metropolitan Hotel, Oct. 19, a resolution of thanks to the Common Council of Newark was voted, also one to the Passaic boat clubs for the courtesy shown by them during the recent National Regatta. The Fairmount Rowing Association was reinstated as member. A committee was appointed to consider the proposal of cups to be rowed for by the colleges, which were offered by the Bunka, Triton and Passaic clubs. Application for membership by the Longueuil Club, of Montreal, was denied. Mr. O. M. Remington, of the Narragansett B. C. of Providence, R. I., was elected President of the Association, and Mr. Henry W. Garfield was re-elected Treasurer and Secretary.

VISION-GRACE MATCHES.—In the first match of these two schools, sailed Saturday, Oct. 15, *Grace* carried away her upper peak block and gave up. *Vision* snapped her bowsprit at the knight heads and put back for a new one. The wind was fresh with a moderate sea.

The race was sailed Oct. 23, in a light breeze and smooth water. Won by *Grace* in 6h. 39m. 23ts., beating *Vision* by 18m. 46s., or, with time allowance, 13m. 46s.

CORINTHIAN CRUISERS.

NEW YORK, October 10, 1878.

EDITOR FOREST AND STREAM:

As it seems to be in order, I will give you my ideal of a small cruiser needed by Corinthians in these waters, having had some little experience and what I consider sound reason for considering her the perfect vessel, and well adapted to the purpose intended. My object in giving my views is not to advise those who have ample time and money, as that they may experiment to their heart's content, but to aid the young yachtsman who loves to sail his own vessel, and most of the time cruises with but one companion, or at most one man before the mast.

To be perfect my cruiser must have strength, speed, stability, strong, handy rig, and plenty of room on deck and below.

In determining the size of this perfect Corinthian cruiser, we must keep in view the fact that she is to be run and handled by myself and man Friday. Our means being limited, and unable to indulge in many barrels of beef forward. At the same time, we must take into consideration that we always wish we had a larger vessel, especially when untended by one who is just a little too big for us; for if anything more than another makes us feel bad, it is to haul for a "bung nose" near us, and get warmed. Besides, at times we may wish to have some of our friends with us, all it is not pleasant at times to sail alone, especially when we as know some good fellows who enjoy it so very much. We will make our cruiser as large as can be easily managed by two.

Now we want four berths in the cabin, and room forward for a man. So, to get a house 13 or 14 ft. long, with 5 or 6 ft. in cockpit and room forward of mast, will require 30ft. keel; we will therefore make our keel that length, and put on a counter, making a total of about 34ft., over all. As to width, we want all we can get without hurting the speed of our vessel; and besides, width means room on deck and below, and ability to carry sail; I will give her plenty of a good thing, say 12 or 13 ft. As to depth, being rather lengthy myself, and knowing by experience how unpleasant it is to get into unmentionable while sitting; and as depth means, like width, power and sail capacity, and we need plenty of freeboard and only a low house, we will make her 4ft. 9in. or 5ft. deep, with crown of deck and house, and plenty of ballast low down, will give us about 6ft. in our house.

Now before going further, I know our good friends who are rather touchy on the "English diver," will say she will be a perfect caracava. "But," we answer, "we want depth and breadth for our purpose, and intend to have them in our cruising yacht."

Our vessel, as above described, as far as dimensions go, if properly shaped and calculated, will require about four or five tons of cast-iron ballast, placed as low down as possible, and will have a draught of about 3ft. 9in. aft without keel. The question of centreboard or keel comes up next. If I put a keel on this vessel she will have a draught of at least 2ft. more, making not less than 5ft. 9in., with a loss of say 10 per cent. of speed; but, as I wish at times to cruise in New York Bay, and visit places where I do not wish to engage a pilot, nor sacrifice what I consider indispensable, speed, I give the preference to the centreboard. My vessel, from her depth, being necessarily of sharp floor, will require but a short one, say 8 or 9 ft., which I will place well forward, so as to injure our room below as little as possible. Concerning the rig of this vessel, the question to my mind is easily settled. We have only to choose between the cutter or English rig and our ordinary schooner rig. Being short-handed, except on special occasions, I will rig

her as simply as possible, keeping in mind only strength and utility. I will put in a long mast with a short stationary topmast, short bowsprit, with all the canvas in mainsail and jib my vessel can carry with ease in our usual fresh southerly breezes. Will have club-topail, jib-topail and balloon-jib for racing purposes; a small storm-jib to be set "flying," strong ground tackle, and she is about complete.

Now let us see what we have. Our little cruiser has accommodation below for captain, three guests, and a man or boy before the mast. Our cabin is 14ft. long, 9ft. 6in. wide, and 6ft. high, with a clean width of 6ft. between the berths, clear floor aft of centreboard. This, it is true, cuts the forward end of our house in two parts, but we must have a table in either case, and it matters little whether we have daylight between the legs or not. Ample room for cooking purposes, stores, tanks, ice box, spare sail, etc. Rig of simplest kind, so that few mistakes can be made by the "greenhorns." Altogether we have a powerful, able vessel, which can be driven to win a cup occasionally in competition with vessels of her length.

Having determined size and rig of our ideal cruiser, we will say how she shall be constructed. In my list of indispensables I have first mentioned strength. She shall, therefore, have a keel of solid white oak, extending her length, which shall not be less than 10x12in. at centreboard, and beveled forward and aft to suit shape of vessel. The rabbet for garboard being placed near the outside, so that she may have a solid back-bone. The frame shall be of oak, 2½x4in. at keel, and 2½x3 at top, not more than 12 or 14 in. from centres, and each and every of these frames securely tenoned and bolted to keel, and, in fact, everything appertaining to the hull as strong as wood and iron can be put together; for how pleasant for us to know, when we are lying in our berth below in an open harbor, with our well-tried ground tackle diving into a heavy sea, or "cracking it out to her" in a hard race, we can cry out, "Let her rip, she's all oak," and not feel it were necessary to sound the bell. Beware of plank keels and winging racers. We know that a vessel sails by her shape and rig, and that "winging" qualities, however highly lauded by builders who construct such vessels, is all bosh! We've been there, and tried it.

Speed.—In this most important and indispensable particular we need experience and practice; and since speed depends greatly upon shape, the question is how we shall obtain that form most desired. We ourselves only know from experience that vessels of our length of vastly different shapes develop speed; sharp vessels like the *Nimbus*, and short vessels like the *Beecher*, sail remarkably fast and about alike, although exactly opposite in shape—the *Nimbus* narrow, the *Beecher* extremely wide and flat. In this consideration I think it best under the circumstances to consult some party who has been successful in modeling speedy vessels; give him my dimensions, and get best shape his talent may suggest. I then have a perfect draught made of this shape, and give it and specification to a builder to work from, and in no case the model. The draught alone being given, necessitates the vessel being properly laid down, and can be certified; thus you can get it at your wish, not merely an approximation by rule of thumb from a model. Of course, in getting such a model you will have a vessel of character, such as the party fancies most to whom you apply. But you may at least console yourself with the reflection that experience will not make a bad failure, and generally a success in the desiderata wanted.

Stability.—Our cruiser being 12 or 13 ft. wide, or nearly one-half her length, possesses great natural stability, besides being assisted by depth and ballast low down. But, let us ask, is it well to give my cruiser so much width, even if I do wish room on deck? Let us, for a moment, glance at our opposite, the vantaged, but as yet untried, *Muriel*. This vessel is about 40ft. water line, 9ft. beam, and 7ft. deep—no deck room there, nor below either, except a lane. Now, from her shape, necessary from her dimensions, she has little stability. In fact, it is probable that without ballast she would roll over and sink under spars alone; so she depends almost entirely upon ballast for sail-carrying power, and to utilize this ballast her angle of inclination must be such that you could not stand on deck without holding on even in a moderate breeze. These vessels being dependent greatly upon ballast for stability, must necessarily be made to sail upon their sides, since inclination is necessary to utilize ballast; whereas, in our vessel we have width, and therewith natural stability, so that she may sail upon her proper lines, and utilize her ballast in moments of extra sail pressure. We sail in our vessel standing up like a house in our usual southerly breeze, and our lady friend, if aboard, may walk our deck if so disposed; while our enter friend alongside in the same breeze tells their friends aboard, when their feet begin to slip and teeth chatter, not to be afraid, as she rolls very low before she lifts her ballast. And it is perfectly safe and theoretically correct, although they seem to have their doubts about the case as they glance toward our craft.

Rig.—I adopt the sloop rig in its simplest form, and make it as light as possible consistent with ample strength, for with it I can drive my vessel to windward faster, and shorten sail in one-half the time with the same crew, than with the English rig. In fact, I regard the cutter rig, with its reading bowsprit, hosing topmast, and multiplicity of blocks, cringles, eyes, stays, &c., and other tackle, as an abomination, invented by some good English soul simply to furnish aboard English yachts redundant employment for seamen. In fact, enter rig, your craft, go slow and double your crew, and I prophesy that said rig eventually die a natural death, except among harbor sailors in these waters.

Mr. Editor, it was my intention to take you a short trip in this ideal cruiser, in company with one of our modified cutters, that we could compare their adaptation to these waters, but I will postpone doing so until some future occasion. CORINTHIAN.

Our correspondent has evidently gone into the question of small cruising yachts categorically and with unbiased mind in a manner creditable to himself. We regret all the more, therefore, our inability to subscribe to his proportions and ideas, and request him to follow this line of reasoning. To drive his enormously wide and deep boat at fair speed, assuming for the moment that such were attainable, he will require an immense spread of canvas, a necessity which we cannot by any means approve, much as "Corinthian" seems to glory in the big sails his ideal cruiser will stand up to. On the contrary, does it not betoken higher skill to so model a craft that

she can be easily driven and will call for short canvas only? Most certainly, and if we remind "Corinthian" of the fact that his design will need an ugly big thing of a boom some 24 feet long and a corresponding mainsail, while a cutter model of the same size only, though narrower and longer, would be fitted with a boom and mainsail some 33 per cent. smaller, would he not prefer toying with the lighter spar in a little blow; and how much less trouble to him, when alone or with his man Friday, to hoist, reef, furl and handle the cutter's sail than that of his own unwieldy rig? And what applies to the mainsail the headsail may equally claim. As to the hull, let "Corinthian" lop off three feet beam, put the amount in some 6 feet of length, and would not the resulting craft give vastly more satisfaction than his own broad and chubby ship? In the first place, the longer boat would be very much faster under less canvas, especially in a seaway, would be vastly much easier in every respect, give valuable room in length for private stateroom or for pantry and W. C., would admit of higher freeboard without deteriorating from her beauty, for beam and freeboard are incompatible in this respect, and would keep crew forward and cabin aft more select. Such a craft would walk away from your full-bodied frigate in a style that would make "Corinthian" wonder, and that at a less expense in the time and muscle our beamy friend would find a terribly uneasy and slow affair in rough water. The only drawback the cutter represents would be a moderately greater angle of heel, and for our part we are always willing to put up with this in consideration of her many other excellencies. So far as mere out of canvas is concerned, it is by no means essential to the cutter rig, that the cut of the canvas be as in England. Retain, if you have a mind to, the small gaff of the sloop, though nothing is thereby gained, and make your topmanger lighter. Eventually you will probably come to adopt the cutter style in its entirety, anyhow. The multiplicity of gear, which harasses "Corinthian," consists of one halliards and a light downhaul. The fore-sheet may be worked automatically. We think "Corinthian," when tired out and hungry after a hard day's thrash to windward, would be only too happy to let Jack go blow and start the supper singing on the galley, while he furiated sail, and then he would appreciate the difference of handling the big duds of his sloop and the smaller sails of the cutter. Finally, why cut up his craft with an unsightly cock pit, a regular sea catcher and cabin damper, dangerous at all times, even in the largest of yachts (witness *Mohawk*) when a flush deck with a wash streak is neater, safer and serves all purposes, besides giving nearly a half more length to the quarters below? If "Corinthian" objects to housing topmast in a dear boat, let him keep his hammer aloft; his neighbor who douses his will show him a clean pair of heels. As for ladies aboard ship, "Corinthian" is probably aware of the fact that in England ten ladies go to sea in yachts to every one who ventures afloat in America. We have seen in the much maligned cutter whole families—nurses, babies, etc., all included—take to the sea and cruise off soundings in small craft with a nonealance which speaks volumes for the weatherliness and cruising qualities of the easy form and snug rig. However we may differ from "Corinthian," his letter contains much information and bears the stamp of considerable thought.

HOW TWO NATIVES RAN FOUL RIFT.

EASTON, Pa., October 9, 1878.

EDITOR FOREST AND STREAM:

Having been much interested in your several published communications of the canoeists who ran the Great Foul Rift Falls of the Delaware, at Belvidere, N. J. I beg to add to the record the experience of some natives who recently undertook the feat, and who, like the remainder of the natives, are skeptic of the mile-a-minute run of the East Orangefles. Those Rince and Daniel W. Snyder are two of the most expert bass fishers of Easton. Their accompaniments are the best, and not a week passes in season but their boat-rigged team lands them from ten to fifty miles up the stream by daylight to fish the pools to town, and whatever the poverty in luck of other fishers—and there has been a liberal crop of this season—their live box always samples fine and numerous specimens. On the occasion in question Tom and Dan had driven to Bushkill, 36 miles, and reached the Rift with full fifty weight of bass in tow. Now, they use an ordinary batteau, and not being ambitious of making brilliant runs, usually carry at treacherous points; but this time they were beset at the head of the falls by one Courtwright, a one-armed pilot of Belvidere, who avowed that "he knew every rock in the Rift," and for one dollar would land them at the foot of the falls safe and dry, or no pay. It being a sultry day they were readily persuaded by the pilot's confidence to the indolent exhilarations of a safe sail through the rapids, rather than the conservative and fatiguing carry. So our one-armed pilot tackled the first or Little Rift, and in about three minutes—or the time that the East Orangefles had run the entire rift—he struck a rock not down on his chart; and, the next position, full suddenly, was he on the bottom of the boat, Dan under it, and Tom with the worst of it, in the current, tangled in the rope of the live box in tow, and the traps aboard on their own hook down the rift. They got to shore by swimming, tumbling and wading, landing with the boat at the head of the Big Rift. Here the chagrined pilot insisted on taking the boat on through, which he did easily; but Tom and Dan preferred to walk. Regarding the time of the run they kept no record, but walking at the ordinary gait of men cool from a ducking, they reached the foot of the rift some two or three minutes ahead of their boat and pilot. They pilot their own boat now, and no special difficulty, and make the run in from fifteen to eighteen minutes, and with lighter craft could make several minutes better time. They would like to see one of the three-minute runs by the foreigners. The official

measurements of the rifts are: Little Foul Rift, 768 ft.; Great Foul Rift, 4,029 ft.; distance from head of Little Rift to foot of Great Rift, 1½ miles.

IS FOUL RIFT DANGEROUS?

CAMBRIDGE, MASS., Oct. 15, 1878.

EDITOR FOREST AND STREAM:

Noticed, under the signature of "Magua" (an interesting canoe letter), who, after portraying the terrors of Wells' Falls, expresses doubt as to the possibility of running said falls, without an accident, in a canoe. I am, unfortunately, ignorant of the discussion as to who was the first to descend the Delaware in a canoe. Having all claims to priority, therefore, I would state that in July, '77, a friend and myself, in two canvas canoes—made, with very slight differences, after the *Rob Roy* pattern—when we worked our way up from Easton to Port Jervis, N. J., paddled down the Delaware to within a few miles of Philadelphia. Last summer, too, after spending some time on the Susquehanna, we launched again at Honesdale, on Lackawaxen Creek. Paddling down that rocky little stream to its mouth, we found ourselves on the Delaware, considerably above Port Jervis. From thence we went down the Delaware for the second time, "Wellses" and all, to within a mile or two of our previous stopping place. In neither of these trips did we carry anywhere on the river, and in neither did we meet with any accident beyond shipping some water. At Wells' Falls, to be sure, owing to the unavoidable breakers at the bottom of the shoot, both of us came through pretty wet, but I trust I have shown that the undertaking is not so impossible as "Magua" supposes. I must confess, however, that nothing but necessity could tempt me to shoot the falls in the open Adirondack boat whose only mishap your correspondent so well describes.

FOUL RIFT ON THE DELAWARE.—Says a correspondent: "There is no real difficulty in running the rift, and the natives make a little at the foot of the rifters; and a little grave ridicule of one of the many parties who get ducked by carelessness will not hurt the canoeists in general." Foul Rift promises to become historic in the annals of canoeing, and to have shot the rapids will be the Open Sesame to the canoeists' admiration and a passport into the brotherhood of the Knights of the Paddle.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

FRESH WATER.	PICKEREL OR PICKEREL, <i>Esox lucius</i> .
Black Bass, <i>Micropterus salmoides</i> .	Yellow Perch, <i>Perca flavescens</i> .
<i>M. nigricans</i> .	
Muskellunge, <i>Esox nobilis</i> .	
SALT WATER.	SPANISH MACKEREL, <i>Scomber maculatus</i> .
Sea Bass, <i>Sciaenops ocellatus</i> .	from
Striped Bass, <i>Morone americana</i> .	Cero, <i>Cybinus regale</i> .
White Perch, <i>Morone americana</i> .	Blonito, <i>Sardinia pilchardus</i> .
Weakfish, <i>Cynoscion regalis</i> .	Rogito, <i>Merluccius nebulosus</i> .
Bluefish, <i>Pomatomus saltatrix</i> .	

FISH IN MARKET.—RETAIL PRICES.—Bass, 20 cents; smelts, 20; bluefish, 8; salmon, 25; mackerel, 20; weak fish, 10; white perch, 15; Spanish mackerel, 50; green turtle, 15; terrapin, per doz., \$15; halibut, 15; haddock, 6; king fish, 18; codfish, 7; black fish, 15; flounders, 8; sea bass, 18; eels, 18; lobsters, 8; sheephead, 18; scallops per gallon, 18; soft clams, 40 to 75; white fish, 15; pickerel, 18; salmon trout, 15; hard crabs, per 100, \$2.50.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at the foot of the past week has been 59—15 from the Banks, 27 from Georges, 14 from the Bay St. Lawrence and 3 from Shore mackereling trips. The Bank fleet have averaged light fares, 6 vessels bringing 385,000 lbs. codfish, and 9 vessels 170,000 lbs. halibut. Receipts of Georges codfish, 270,000 lbs. 2,950 blbs. mackerel have been received from the Bay, and 600 blbs. have been landed by the Shore fleet. Mackerel of good quality put in appearance at Fischer's Island after the storm, and several vessels took good fares on Monday, Tuesday and Wednesday.—*Cape Ann Advertiser*, Oct. 18.

MASSACHUSETTS.—Cohasset, Oct. 19.—Fishing for smelts has been splendid in Weir River, Hingham and Boston Bay. High line for one man, 63 doz., at Kimball's; for two men, 67 doz. I went last week large green turtle, about 75 pounds; did not get him, as I could not kill him with shot, and he would not put his head out of water. B. K., Jr.

VERY LIKE A WHALE.—The fishing schooner *Leona*, of Port Hawkesbury, Cape Breton, which arrived in Portland harbour Saturday morning in tow of the steaming W. H. Scott, when a few miles off the coast discovered a whale floating on the water. It was taken in tow and brought to Portland. The Portland Press says the monster is white with barnacles, is of the megaptera or hump-backed species, and is about eighty feet long. It had a harpoon firmly embedded in its back, and had evidently died from the effects of the wound. It is a right whale, and will probably be towed to one of the islands and the oil extracted.

NEW YORK.—Shelter Island, Oct. 19.—Bunker fishing good lately, and the factories in full operation. The black-fishing, also, has been good, and the fish are still plenty, but the cold season will soon drive them into the mud. We have had no difficulty in catching numbers of them, when we could procure fiddler bait, but the fiddlers are getting scarce.

—E. H. Howell, of Bath, Steuben Co., N. Y., sends some really fine specimens of bass fish which he says are some tied by himself from instructions received from your valuable book, the "Sportsman's Gazetteer." They are what I think an improvement on the "Fowler," and we have had great success with them this season on black bass. A friend of mine, the editor of the Allegany Co. Reporter, having caught as high as 52 fine fish in one day in Hemlock Lake.

—John Klaber and Henry Chandler went fishing in Newark Bay. In the basket they carried a bottle of whiskey. In attempting to disentangle his line Chandler ran a hook into Klaber's thumb, Klaber seized the lines and threw them overboard. Chandler whacked Klaber over the head with the butt end of his fishing rod. Then both clinched and tumbled into the water. They were rescued and reconciled.

PENN.—McVeytown, Oct. 7.—Nearly 2,000 black bass have been caught in the Juniata River at this place this season, showing a large increase over the number taken last year. Joseph Dunn has caught the largest number—about 350—beating Charles Green, the second champion, in a fishing match a few weeks since. Joe, in the vernacular of this neck-o'-woods, is "immense." The fish taken averaged about one pound each. A strange fish was caught on an outline in the Juniata at this place recently, in the following singular manner: An eel had taken a bait and became fastened on a hook, when, it is supposed, the strange fish attempted to swallow it, during which the eel wriggled through the gill of the larger fish and wrapped itself around it, thus securing both the eel and strange fish. It measured in length 28 inches and weighed about five pounds. It is supposed to be a salmon, which fish at one time inhabited these waters. E. J. S.

VIRGINIA.—Richmond, Oct. 19.—Black bass are just beginning to take the hook in this part of the James. Judge Clouton, I. S. Baird, J. W. Bronaugh, Esqrs., and others have caught some very fine ones. All of our fishing is done with live bait or troll, none of our fishermen being able to use a fly (except to catch tree toads and cat tails). Some of your experts should come to our State Fair and show us how to do it. We would be pleased to see them and would treat them well. JAMES RIVER.

Leesburg, Oct. 18.—Until to-day the hand-liners have been taking large strings of large bass. Major Ferguson, with fly, has on several occasions taken in about an hour a half-dozen averaging two pounds. Wm. B. Clagett, at Anli's, took ten, smallest two pounds, largest five pounds eight ounces, the largest taken this season. T. W.

TENNESSEE.—Columbia, Oct. 12.—The drought had nearly spoiled our full fishing, but a refreshing rain of this week saved it, and a party is off for the trout streams next week. Mr. C., while fishing in the river at this place a few days ago, caught two striped bass, the first, it is said, that were caught here. The usual quantity of catfish, drum and buffalo are being caught by river fishermen. VAI.

FLORIDA.—Jacksonville, Oct. 18.—We expect a lively winter. We are promised a direct line to Jacksonville from New York. The first steamer, the Western Texas, is advertised to sail on the 26th. We are to have a first-class new ship and anchor on the route between Charleston and Jacksonville. She is reported to be very fast, and will leave New York at an early date. AL. FRASCO.

Belleville, Canada, Oct. 16.—Fishermen report but poor takes in the bay as yet, though the catch of white fish has been above the average. VAN.

THE BARBLESS FISH HOOK.—Many of our readers will remember how strenuously Mr. Seth Green has advocated the use of the barbles hook, and how much chaff he has drawn upon himself from anglers of the old school and unbelievers. It seems that Messrs. Aul & Co., of Bloomsburg, Pa., became inoculated with his views, and contrived, not merely a hook without a barb, but a spring to prevent a fish from getting off after he is once hooked. Last fall Messrs. Aul sent us specimens of these hooks, asking our opinion of them, and we candidly told them that we took no stock in the invention. Only once or twice since have we heard anything about the hooks until we received, last week, a letter from a Texas friend who speaks in highest praise of them and wishes us to recommend them. This of course we do not do; but if any of our readers wish to test them it will be easy to procure some samples and experiment therewith. Our correspondent recommends Nos. 7 and 8 for black bass and Nos. 4, 5 and 6 for white perch. He says: "You have a hook now that will hold your bass. Let him jump out of the water as high as he pleases, shake as he wishes, run under logs and rear and scotch and pitch, line taut or slack, all to no purpose—he cannot catch the hook."

MIGRATIONS OF FISH.—We have repeatedly spoken of fish being taken along the New England coast of late years which were formerly wholly unknown there, and supposed never to move north of Cape Hatteras. The investigations of the U. S. Fishery Commission under Prof. Baird, disclose a great deal of most valuable information respecting the migrations of fishes, and no doubt of the causes also of such migrations. Our very observant correspondent Concha sends this week some data of value, altogether corroborative of what has been before stated to be ascertained facts. We quote:—

NEW BEDFORD, MASS., Oct. 16, 1875.

EDITOR FOREST AND STREAM:

Much has been written regarding the annual and occasional migrations of fish, but little has as yet been learned regarding them. Some forty-five years ago I recollect the bluefish, then an unknown species, began to appear, and was called "horse mackerel," and was reputed to be unwholesome. In 1862, when engaged in seining and netting in the waters of New Bedford, I assisted in taking six Spanish mackerels, at that time called "Spanish mackerels," and a number of bluefish, and which in the succeeding year were captured, and on sending to New York, brought the, to us, unheard-of price of one dollar per pound. The increase continued for some time, until within three years hundreds have been taken at a time from the pounds at Wood's Hole, etc. Little more than two years since, a strange fish with large scales was caught here, which no one could name. On sending description and scales to Prof. Baird, he at once called it the "Tarpm" or "Jew-fish." This year many have been caught, and it is almost a daily visitor over fifty pounds each. Pompanos are also getting plenty, and perhaps in a few years Jew-fish and pompano will be a regular fish at our summer hotels. Mr. C. B. Randall caught two striped bass weighing respectively twenty-five and eighteen pounds, Monday, and since the storm of last week quite large quantities averaging ten pounds each have filled our markets. Cod and tautog fishing still good here; scup all gone. CONCHA.

[The scale of the tarpm resembles translucent enamel on all that part over which other scales lap; but the exposed part seems frosted with pure silver, so that a freshly caught fish resembles an immense mass of silver. We have tarpm scales which are as bright as they were twenty years ago.—Ed. F. & S.]

COHASSET NARROWS, July 23, 1875.

EDITOR FOREST AND STREAM:

COHASSET NARROWS. He southeast from Boston fifty-four miles, on the Old Colony road. Take your regular bass tackle, which, if possible, should consist of two rods—one short rod, such as is used for trolling in Hell Gate; the other should be longer, much more pliant, but still strong. For the stout rod I would recommend the usual large multi-plying reel, carrying 600 feet of cable-laid line for the large bass. The other reel, for the lighter rod, should carry 100 yards of good linen line, such as used for school bass on Harlem River. Procure several good gut leaders six feet long, a dozen brook trout hooks (also on single gut), some small brass swivels, some split buck shot, some small copper wire, annealed, and some large trolling hooks, large enough to hold a good-sized moss buster for bait, so as to be prepared for hunching.

To reach Cohasset Narrows from New York, any of the Sound boats can be taken. The Fall River Line is the most direct, leaving New York at 5 P. M., and arriving at the Providence depot at 6 the next morning. For fifty cents you take a carriage, with your luggage, to the Old Colony depot, and buy an excursion ticket for Cohasset Narrows for \$3.00. Taking the 5 A. M. train—other trains at 11 A. M. and 4 P. M.—you arrive at your destination 10:17 A. M. At Cohasset Narrows you can usually get comfortable quarters at Parker's, near the depot. At Cohasset Narrows the train breaks up, one part going to Provincetown, the end of Cape Cod, the other to Woods Hole, for Martha's Vineyard, Oak Bluffs and Nantucket.

Your fishing ground is on the railroad bridge, which crosses the Narrows a few rods from your hotel and the railroad depot. The tide, going either way, runs with great rapidity through the bridge, and you take fish in both tides. On this bridge, which is not high, you fish from a comfortable standing place. You will notice most of the fishermen using a light rod with a six-foot leader attached to the line, with a small swivel, and a small hook baited with two shrimps. On their leaders they have two small floats about two feet apart. You hook one shiner from the under, land part of the tail, through the length of the entire body, covering the shank of the hook; the other shrimp hooked from the middle (under part) of the body through the head, entirely covering the hook and lapping the other shrimp. You will find each fisherman provided with a basket of shrimp, from which he occasionally takes a handful and drops them over the edge of the bridge, following these shrimp with his hook until it reaches some eddy. After a short time you ought to strike a bass weighing from one to six pounds or upward. The fish once struck, you proceed to walk toward the shore, while the bass keeps the spring of the rod until you reach the fish. Jos. Hathaway's services can be obtained for a dollar a day, which includes bait and the fish taken during the day, and the use of his fish car, keeping the fish alive.

Should you wish to fish in any of the ponds that abound in this vicinity, which are full of black bass and other fish, I think Mr. Hathaway, Sr., could be induced for a reasonable consideration to take you to these ponds with his horse and comfortable wagon.

For the larger striped bass you have your stout rod and your strong hook, baited with an eel or a menhaden. The larger fish are taken either at night, and run from twenty yards and upward. When the tide is ebb, out you can take your stout rod, and with your strong hook attached to your line, with a swivel and copper, or otherwise baited with any kind of fish, you try for bluefish, and you find rare sport; for a blue fish ten pounds weight on a rod, with plenty of room, is sport indeed. Bluefish are taken every day from three to twelve pounds, and perhaps larger, but I took a number of eight-pounds weight.

Should you tire of fishing you can do as I did: take a run down to Provincetown and you will be paid for your trip. Should you wish to go out in the bay—for Cohasset Narrows is the extension of Buzzards Bay—you can get a good boat and skipper for a reasonable price and fish for bluefish, or anchor for squeteague or weakfish, rock bass, etc. You can get an excellent boat from Mr. Smalley. This Doctor.

We regret that this letter was not published when written last July, as its appearance then would have been more timely. Its omission was an oversight.—Ed. F. & S.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A. B., Phila.—See answer to T. C. S. in this column.

H. J. J., Philadelphia.—We would not advocate breeding from a dog and bitch of the same litter.

H. D. K., Passaic, N. J.—William Perkins, of London, Eng., made one mile in 6:23, in June 1875.

W. F. P., Lexington, Va.—The prepared food for goldfish is a wafer of cake. Can be obtained from Greenwood, 11½ College Place; Bagot, 31 Fulton st., and probably from any drug store.

P. H. R., Stoneham, Warren Co., Pa.—What is the name of the bird I send you? Have never seen one like it in this vicinity before. Ans. It is the ordinary Virginia rail (*Actitis virginianus*).

G. S., New Castle, Del.—I shot at a 30-inch circle, 45 yards, with 3½ drachms of common powder, 1½ oz. of No. 8 shot, and it put within the circle 240 pellets. Ans. Remarkably good.

J. P. H., Boston.—Can you inform me if any No. 8 cartridges for breech-loaders are made in this country, and if so where they are to be procured? Ans. There are none made in this country.

CATAMARAN, Mobile, Ala.—Working place of either a Terreshoff, or home-made double-hull boat will be sent you upon receipt of \$4 each, or \$7 for both. This includes specifications, rig and instructions.

N. K. I., Boston.—The Remingtons, Parkers, and others sell an excellent gun for about \$45, which we think will answer your purpose. Sometimes a second-hand gun of superior quality can be bought at a low figure.

J. W., Le Roy.—Is deer shooting prohibited in Pennsylvania, and for how long? Ans. Open season Oct. 1 to Dec. 16. Act passed May, 1875. In Pike County deer shooting is prohibited for three years from 1st day of October, 1874.

J. K. S., Phila.—Can you let me know the title of the book written by the Duke Alexis on his return home after his first visit, and where can I obtain a copy? Ans. We do not believe that any such book was written, or, if at all, for general circulation.

G. F. L., Bridgeport.—Can you give me or refer me to the source from which I can obtain the description of the operation of removing the ovaries from paps? Ans. You will find the information you want in No. 28, Vol. VIII. of this journal, issue of June 23, 1877.

H. F. T., Concord.—Please give me the name of some cheap book on breech-loading shotguns, and how to load them, etc.? Ans. W. W. Greener's "Modern Choke Bore" and "Breech-Loaders," by Glean, are good books. The first costs \$2.50. We can send them to you.

JAMES—Houghton, Osgood & Co., of Boston, are the publishers of Judge Catton's book on the "Antelope and Deer of America."

T. D. McC., Middletown, Ct.—Where can I get a hunting book that is light and easy to the feet that is well-kept, except rabbit? Ans. We have heard the hunting book made by Thomson & Son, whose advertisement appears in another column, spoken highly of. The alligator skin boots, also advertised, are good.

A. A. P., Hipon, Va.—Would you be so kind as to let me know the price of Wilson snipe on the 14th inst.? I sent four dozen to Knapp & Van Nostrand. They quoted them at \$1.75 per dozen. Is that correct? I see that they have been all along quoted in your paper at \$3. Ans. We give the selling and not the buying price.

G. H., Jr., East Orange, N. J.—I have a 12-gauge gun weighing 8½ lbs. Will you please inform me what is the correct load for it in quail shooting, and what size shot; also, best way to load for ducks? Ans. For quails, 3½ drs. powder, 1½ oz. No. 9 shot, or No. 8 late in the season; for ducks, 4 drs. powder, 1½ oz. No. 4 shot.

C. F. T., Landsdowne.—I have a muskiff puppy aged three months that has dew claws. Will you kindly inform me when it is best to cut them off and how? Ans. It should be done immediately. Use a pair of sharp scissors; after dividing the skin draw the dew claw to one side before detaching it, so that the skin may afterwards cover the wound.

B., East-Jaffrey.—The actions of the two guns mentioned are about equal in durability and safety. A 12-gauge, 30-in., 8½ lbs., right barrel moderate choke, left full choke, would be a serviceable gun for general shooting. Wire cartridges and buck shot should not be used in anything except a cylinder bore. Many choke-boreds have been ruined by forgetting this rule.

W. L. A., New Bedford.—I want to ask your opinion as to the trapping in the Dismal Swamp, and if there are any beaver in the vicinity of Lake Drummond, and if it would be practicable to go from Norfolk in a boat large enough to live in through the winter? Ans. Bears, partridges, deer, coon, otters, etc. We are not sure about beaver. You can fit out at Norfolk with everything you require.

T. M. G., Woodstock, Ohio.—I want to buy a good gun: 1. Can I do better, all things considered, than the Parker; my shooting is almost exclusively ducks and quail; an thinking of a 10-lb., No. 10, full choke? 2. Can I do better in choice for my kind of shooting? Ans. 1. An excellent gun. 2. A 1½ oz. 8-lb., 12-gauge gun would be better for quail and general shooting; 10-bore for ducks.

J. M. F.—I have a Gordon setter puppy 4 months old. His forelegs have become bowed and the upper joints seem to turn out, while the lower joints seem to turn in a terribly awkward manner. Ans. Your puppy has the "rickets." You can do nothing for him. By careful feeding and attention the bending of the legs and the enlarged joints may disappear, but the chances are against it.

F. P. R., Princeton, Mo.—Where can I purchase a bound volume for deer hunting in our Maine forests? What is the best dog for partridge Ans. Breeders of hounds from whom you might want one, what you want are: Isaac Weigelt, Rochester, N. Y.; L. M. Wooden, same place; Howard & Benham, Glen Cove, N. Y. A small set better makes a good partridge (ruffed grouse) dog, but should be broken on these birds.

G. H. P., Saginaw, Mich.—For a thousand miles ride what make of saddle is the best? Ans. The Eureka (Cat) saddle is what Texas Jack uses. He says the best man to ask is Peralto. There is a most excellent saddle made at Austin, Texas. The McEllen saddle is the best easily available. It depends whether you ride on prairie or mountain what saddle is the best. You want high horn and cantle for mountains.

HARRY HUNTER, Providence, R. I.—What is the proper charge of Dittmar powder for a 7 pound 14 cal. muzzle-loading shot-gun? Also for a 10 pound 10 cal. ditto, and also for a 7 pound 12 cal. breech-loader for quail and ducks? Where and at what price can I obtain it? Ans. For the No. 14, 3 drs. by measure; for the No. 12, 3½ drs. by measure, and for the No. 10, 4 drs. by measure. The powder can be had from H. C. Squires, No. 1 Corlandt st., this city; price 81¢ per can.

L. R. R., Lebanon, Ct.—1. A 14 gun, 12 gauge 30 inch barrels 8½ lbs., left barrel choke and right barrel modified choke, adapted for shooting quail, ducks, quail, hare, etc. 2. What food is best for young dogs? 3. Of what does the "Sportsman's Gazetteer" treat? 4. Will Sturtevant's moveable-sight shot at the Parker gun? Ans. 1. Yes. 2. Scraps from the table. 3. It is an encyclopedia of sport, treating of shooting, fishing, natural history, dogs, resorts for sportsmen, etc., etc. 4. Yes.

A. W., Nashua, N. H.—On the second day of July last, at Lake Wilmisauksee, N. H., we put an eel weighing about three pounds into a box sunk in the lake, six or seven inches long, 24 deep, 22 wide, with just opening enough to let the water in. On Oct. 4 we found the eel alive and in good condition. It had not one particle of food in the time. Ans. Your eel might live to be a Yethu-alah among his kindred, under such attentive care. No doubt he found plenty of food in the water that flowed through the box.

X. C. D., Attica, N. Y.—1. Have a Moore & Co. 10 bore gun, 20 in. barrels, 9½ lbs. Damascus steel, etc. Is the make a good one? 2. I have made the following targets, using 3½ drs. powder, 1½ oz. No. 10 shot, at a 30 in. circle. Are they fair targets? 3. What would be a good target at 40 yds? What loading would give the best results? Ans. 1. Yes, if the gun is a genuine one. 2. As there are 1,047 pellets in 1½ oz. No. 10 shot the targets are fair. 3. About 600 pellets. 4. 4 drs. powder, 1½ oz. shot.

T. W. H., Danville, Pa.—I am the owner of a white Gordon gyp, very finely bred, and of pure blood. A friend of mine owns a black and tan Gordon dog, and claims there are no Gordon dogs except the black and tan with strip of white down the breast. How is it? Ans. Your friend is wrong. There are "Gordon" dogs with a preponderance of white. At English dog shows there is no classification for "Gordon" dogs, but one for "black and tans," and a pure Gordon might have to go in the English setter class.

A. W., Toledo.—Yacht racing is governed in England by a regular official set of rules devised by the Yacht Racing Association, an organization similar to our National Association of Amateur Oarsmen, in America each club issues its own rules; but with trifling exceptions they correspond to those abroad and to the Rules of the Royal Yacht Association. You will find the full of these in "Hallow's Club List," price 50 cents, for sale at this office; or can order you a book of the Yacht Racing Association from England upon receipt of 75 cents.

G. L. J., Ausable Forks, Essex Co., N. Y.—1. Is the Moore (London) muzzle-loading shotgun (D. H.) reliable? 2. What is the proper load for said gun, 12 bore? 3. Is the following a fair pattern with above gun? With 3 drs. powder, 1 oz. No. 8 shot; distance 40 yds., 161 pellets in 3 in. target? 4. Ans. When Moore was alive his guns were second to none. It is the custom now to send many trade guns with his name. 2. You do not give the weight of your gun. It may be anything from six pounds to ten, and the charge would vary accordingly. 3. Yes, better than fair.

H. S., Erie, Pa.—Does all Dittmar powder lose its strength after being loaded a while? I loaded snipe shells with it last June. In shooting them last week at a board fence the shot would rattle off like hail, making no penetration. Ans. If you had re-reamed your shells they would probably have done as well as at first. With this powder everything depends upon loading; the wad must fit snug upon the powder, and in old shells they very likely work loose. Remove the shot from some of your cartridges, break the wads firmly down, and try them, and let us know the result.

J. W. B., Boston, Mass.—Please tell me how to tan buckskin so it will be suitable for clothing? Ans. Buckskins are made by rubbing off the hair while the skin is fresh, or after soaking in a weak lye; then dress with the brains of any animal, by mashing them into a paste with hot water, which rub thoroughly into the flesh side, and then hang the skin to dry. Ans. and add: You are very good, though care should be taken not to use too much salt, as it causes the skin afterward to absorb moisture too readily. Smoking the skin after dressing gives it a fine velvet finish.

M. B. F., Monticomb, Ala.—I have a pointer pup 12 mos. old, whose eyes are inflamed and running water; he also has a breaking out of yellow patches on his belly on the right side next to his hind leg; his appetite continues good up till now. Ans. Your description of the symptoms is too indefinite. The dog probably wants an alterative. We should give him a pill composed of podophyllin, 5 gr.; compound rhubarb pill 3 grs. Mix and give once or twice a week. If the breaking out extends, give him six drops Fowler's Solution of Arsenic twice a day for a week or ten days.

T. W. A., Knoxville, Tenn.—What is the proper distance to handicap a No. 10 gun over a No. 12 at glass balls from single trap at 18 yards rise? The Long Island rules at birds. If I am not mistaken, handicap three yards at 21 yards rise. Some of our sportsmen claim that if both guns are loaded with 1½ oz. shot, that the No. 10 gun has no advantage. Ans. Where equal charges of both powder and shot are used, the 10-gauge gun has no advantage, and should not be handicapped. When the charge of powder is unlimited the 10 gauge gun, being presumably heavier, should be put back three yards. It is assumed that the charge of shot is limited to 1½ oz.

E. L. F., Baton Rouge, La.—1. Where can I get shells for a hunting rifle loaded with Dittmar powder. Can such shells be bought loaded with Dittmar, and do they cost any more than the black powder shell? 2. There is a cartridge made for a sporting rifle 50 cal, 100 grs. powder and 475 lead. What make of rifle takes this cartridge? It is the best powder and shot I've seen in an American rifle for killing game, but would you not consider it too tremendous? Ans. 1. You will have to load them yourself. Cost somewhat more. 2. The heavy cartridges are no doubt for the Sharp's buffalo rifle. With a weight of 16 pounds in the rifle the recoil is not very great.

A. M. C., 7th Regt.—What game is to be found in the vicinity of Laramie, Wyoming Territory, say around the waters of the Laramie and Little Laramie rivers? I intend to go there in the spring, and wish to know what game to choose? Ans. Deer, two kinds, elk, antelope, bears, mountain sheep, mountain lions, goats, sandhill cranes, ducks, snipe, enowhen, trout in the Black Hills streams, big, perch, catfish, suckers, bull heads, are all contained within the limits of Laramie County. For full hints on mountain shooting, choice of guns, game resorts, etc. see Hallow's "Sportsman's Gazetteer."

T. C. S.—My pup three months old throws up food as soon as eaten. What is the matter? Nose good and does not get overcast; it gets tight. If he has worms what is the dose of area nut to give him? Ans. Probably worms. The dose of area nut is 2 grs. for each pound of the dog weighs, to be given fasting and followed in a few hours by a dose of castor oil. We should prefer, however, giving him one grain of castor oil for three successive days. It is possible your puppy has slight inflammation of the stomach. A teaspoonful of castor oil with three or four drops of laudanum in it might relieve him.

F. F. E., N. Y.—1. Will fine powder in shot-gun scatter the shot more than coarser powder when the shot is propelled by latter with same force? 2. Having proved the proper quantity of fine powder to use does it require more of coarse grain to get the same penetration? 3. Is there less recoil with coarse powder where equal penetration is obtained? Ans. 1. We are inclined to think that from the quicker ignition the shot would be scattered more with fine powder than with coarse. The fact could be easily determined by experiment. 2. It would probably require more by measure. 3. Yes, owing to the ignition being more gradual; or rather the recoil would probably be felt less.

A. A. N. Y.—We can only infer from your description that your dog has something like paralysis, caused perhaps by overfeeding. We would suggest to you to bathe his legs with a liniment composed of laudanum, liquid ammonia, spirits of turpentine and Loap liniment, of each ¼ oz., mixed. The only internal treatment we can suggest is the following somewhat empirical one, but which has been found efficacious in many cases: Score a red herring with a knife, and well rub 2 drs. of it; give every morning on an empty stomach, and keep the dog without other food for two hours after. Vigorous hand rubbing may relieve him.

J. W. P., Chillicothe, O.—1. Is Wm. Moore, London, considered a reliable maker of double-barreled breech-loaders? 2. What is the reputation of Francotte and other French makers? 3. Of the names just mentioned whose gun would you choose, everything considered? 4. Would an 18 in., 12 bore be suitable for upland shooting and an occasional shot? Ans. 1. As Wm. Moore died about the time breech-loaders came in vogue, he can hardly be considered a good maker of them at the present day. 2. We have had no experience with French breech-loaders. The old Lefauchaux was father of them all, but we do not know if they are at present made. 3. We should prefer an English make. 4. Yes.

AN ILL, Wilmington, N. C.—1. Will the use of Fowler's Solution (5 to 10 drops three times a day) so affect a dog as to lessen his capacity for work during time medicine is given? 2. Would you advise the use of any external remedy in connection with the solution for sore throat or mange? 3. Will 10 drops three times a day produce nausea and congestion of the eyes? Ans. 1. Probably not, but a dog requiring medicine of any kind should not be worked hard, but given only moderate exercise. 2. For mange we would, but not for sore throat beyond a good washing with Spratt's soap. 3. Yes, and is altogether too much; for an ordinary dog 3 drops twice a day is plenty; in a bad case it could be gradually increased to 10 or even 12.

INQUIRER, Huntington, Tenn.—1. What variety of foxes are natives of Europe? 2. When and by whom were the first red foxes imported into America? 3. Is the common gray fox a native of America? 4. How many different species of the fox have we in America? 5. Where is the black and where is the silver fox to be found? Ans. 1. The red fox (*Vulpes vulpes*) and the Arctic fox (*Vulpes lagopus*). 2. It introduced into America about 1840, and there seems to be some doubt about the middle of the eighteenth century. 3. Yes. 4. Six species, besides several varieties. 5. Black fox and silver fox are synonymous terms. The black fox is a variety of the red fox, and may be found wherever that species abounds. It is perhaps most often taken in the Arctic regions, but is, of course, extremely rare.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDICATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 24, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

Business Manager.

S. H. TURRILL, Chicago,
Western Manager.

NEW DIRECT STEAMSHIP LINE FROM NEW YORK TO JACKSONVILLE.—The Jacksonville Yacht Club, the Artillery Company and the City Council of Jacksonville, Florida, have arranged a suitable reception for the first incoming vessel of Mallory's new steamship line from New York to Jacksonville direct. Her name is the *Western Texas*, and she will probably sail on the 30th inst. The officers of the vessel will be entertained by the Yacht Club at their club-house. This line will doubtless prove to be most serviceable to sportsmen going to Florida, as they can ship their boats, dogs, decoys, tents and other impedimenta direct and cheaply. Ammunition, fixed and loose, can be obtained at Pittman's in Jacksonville as cheaply as anywhere at the North, and carefully selected to suit the game to be found there. He is supplied by Schuyler, Hatley & Graham, of this city.

—The Delevan House, at Albany is the favorite stopping place of sportsmen returning from the North Woods. The Messrs. Leland are the kind of gentlemen that sportsmen like to meet. The reputation of this house is founded upon its liberal management, excellent cuisine and the constant efforts of both Messrs. Chas. E. and Warren F. Leland to make their guests comfortable and satisfied. Their latest enterprise is the manufacture of their own gas from crude petroleum, by what is known as the "Haulon Process." This gas is fully double the illuminating power of ordinary coal gas at about one-fourth the cost. DeL.

DUCK SHOOTING AT NIAGARA FALLS.—A correspondent in our game column to-day gives some interesting facts about shooting ducks in the great gorge below Niagara Falls, where they become bewildered by the noise and the spray.

—A poultice of bruised peach leaves, applied twice a day, is said to be a magic cure for wounds of nails in the feet of man or beast.

LORD DUFFERIN.

ON the 19th inst. there sailed from the Canadian shore the most popular representative that Great Britain has ever sent to one of her dependencies. With great executive ability Lord Dufferin possessed in an eminent degree the rare faculty of making himself universally beloved and respected by the people over whom he was sent to rule. Probably the great secret of his success was that, coupled with his intimate knowledge of men, he possessed in a remarkable degree a versatility that makes him at once author, statesman, traveler and sportsman, together with a sympathetic temperament and the faculty of attracting popularity, while retaining all the dignity attendant upon his rank and official position. We think it was in 1859 that a pleasant book, bearing the title of "Letters from High Latitudes," appeared with Lord Dufferin's name attached as author, and immediately achieved great popularity. The book was a gossip narrative, describing a yachting expedition to Iceland and Jan Meyen, but the account was so graphic and the story so well told that it stamped the author as a man of no ordinary genius or capability. To us who were so familiar with this book in those days, and who had watched his career with interest, it seemed as though an old friend had been appointed when, in 1872, the Gladstone administration nominated him as Governor-General of Canada.

Lord Dufferin's success in Canada was immediate and thorough. The people loved him none the less that he identified himself with their lives, their pursuits and their amusements, while the country recognized his policy of government as one which was to, and did, harmonize party dissensions and confer great and lasting benefits. Leaving Canada as he did with the good will of all, was evidence of the tact and skill with which he had governed.

In his capacity as sportsman and traveler Lord Dufferin commands our highest admiration. As the former, he has tracked the moose through the pathless forests of Manitoba, and has caught the lordly salmon in the river which he rented for his personal use, but which he was always ready to place at the service of his friends. His wife, the Countess, is also an expert with the salmon rod and, we believe, with the rifle. During his term of office Lord Dufferin visited every portion of the Dominion from Prince Edward's Island to British Columbia, and made himself thoroughly acquainted with the products and peculiarities of each province and with the wants of the people. Everywhere he met with the same hearty reception and endeared himself to the people. His social qualities added largely to his popularity. His lavish hospitality and the splendid entertainments given at Rideau Hall were in strong contrast with the mode of life of his predecessor in office, and established a court which brought back to the memories of those of the ancient *regime* the splendors of the days of the old French governors. Almost a cosmopolitan himself, Lord Dufferin was well calculated to meet the peculiarities of Canadian society, and during his first winter became proficient in curling, snow-shoeing, skating and tobogganing. He was also, we are happy to say, a reader of FOREST AND STREAM, as are many of the highest officials of Canada. It will be long before the Dominion will again have so popular a Governor, and as the steamer which bears him home plows its way through the waters, thousands of hearty God-speeds follow her and her precious freight.

IS THE SLOOP SEAWORTHY?

"IS it not really a shame that even our largest sloops cannot make a match at sea?" This was the remark of a gentleman, made within our hearing, upon reading the report of the recent attempt of *Vision* and *Gracie*, two sixty-ton sloops, to test their sailing qualities in a slashing breeze and sea. Their object was praiseworthy enough, but to any one acquainted with rough-water sailing, and the requirements of a thoroughly capable sea boat, the probabilities of successfully accomplishing a twenty-mile course dead to windward and return, in a tumble of a sea outside the Hook, looked problematical enough. However, the sloops in question put in an appearance after a full overhauling and as thorough preparations for the rough weather expected as shipcarpenters, riggers and skippers knew how. When they found a single reef-breeze and a moderately steep sea awaiting them it turned out a rather discomfiting experience, as they learned that no amount of preparation and care could possibly atone for a radically faulty model and inadequate rig for the work the craft were to be put through. Hardly had the sloops settled down to their task, when away went *Gracie*'s iron work, and spare blocks being a scarcity abroad, the boatswain's locker evidently having been poorly looked after, it became unfortunately a matter of necessity to ease off for home. This was to be regretted, as her excess of depth and what meagre claims she possessed in a very moderate degree to being considered good at outside work, never even had a chance of coming into play.

But if *Gracie* was thus early out of the match and bound for the doctor's shop, *Vision* had all the better show, and one might have expected that under easy canvas she would have readily made the course. However, her unseaworthy model and rig proved a much more serious obstacle than *Gracie*. Of course there was some sea on, but nothing like what those aboard this smooth-water craft imagined; nor was there anything in the weather to justify the notion that the sloop "was too small" for the work out. Imagine an English 60 "too small" for a single-reef breeze! Such a craft across the seas would soon be cut up for firewood. *Vision* went at it in

business-like style, smashing her head into the green ones as they came along, making a terrible fuss over it and very little headway. Talk of cutters being diving bells, we never saw one take such solid water aboard as did this sloop. To watch her labor was almost painful, and ere long it became evidently a question of time when something had to give way. Finally she put around, unable to stand it any longer and with a free sheet was scudded for shelter, her bowsprit gone close to the knightheads, and this in spite of bobstays as numerous as the strings on Erin's harp.

Such is the record of our two largest sloops in their latest venture in open water, a repetition of many a similar one before, fraught with like results. To characterize *Vision*'s performance in this and other such misadventured attempts to keep the sea, in the mildest term, is to call it farcical. The exhibitions in rough water of this and other sloops—for *Vision* is, after all, a representative of the smooth-water racer—would be disappointing in the extreme were it not for the hope they instill that sooner or later the crying shortcomings of our present style of craft will lead—force, we should say—yachtsmen into a course more creditable to themselves and their craft and more in consonance with the higher aims of the sport.

Strange that among the larger sloops progress in direction of the snug cutter-rig should be so slow, a good deal like a fly backing out of a molasses jug; first one leg, then the other, and so on. When *Vision* came out she cruised in the sloop-rig in all its primitive clumsiness and lubberly unhandiness. Then we saw a housing topmast shipped aloft in place of the hideous broom-handle pole of the oyster smack, and this season still another step in advance: her big jib cut up into fore-sail and jib, as it should have been the first day she left the ways. Is it too much to expect that after all the exasperating disappointments, with her and others of the kind, with so many slips between the cup and the lip, we may see them out next spring with a running stick over their nose and shifting jibs, so much preferable to the heavy standing spars now in vogue, without particular aim, hampering and dangerous in spite of multitudinous bobstays? With a running bowsprit *Vision* could have made the course in her match with *Gracie* and would have landed a fine piece of silverware for her enterprising owners with safety, perhaps, even if not with comfort or speed. Change your rig to the cutter, go to sea, and an abler model will very soon follow.

SUBSTITUTES FOR CURRENCY.—In certain sections of the United States and Canada coin and currency are very scarce, and many substitutes are used in barter and traffic. For instance, in the mining regions bags of gold dust are used; in the fur-bearing districts, beaver pelts; on the coasts of Labrador and Newfoundland, fresh, pickled and smoked salmon, mackerel, cod oil and seal skins; on the plains, buffalo robes, ponies and beads; in East Tennessee, bars of iron; in Maine, bunches of shingles, called cedar coin. To illustrate—1 gal. of cod oil equals 50 cents; 2 gallons, 1 fresh salmon; 8 salmon, 1 barrel of mackerel; or 1 beaver pelt is \$1; 8 pelts, 1 buffalo robe; 2 robes, 1 pony; 4 ponies, 1 squaw. And the same with the other substitutes specified. The natives adapt themselves to the necessities of the case and the hour, although indifferent to greenback or fiat money arguments and squabbles.

TRAINED HORSES.—No better example of the extent to which the natural intelligence of the horse may be carried by tuition and careful training can be found than in the exhibition at the Aquarium in this city. Here are nearly a dozen horses, all thoroughbreds from the best stables of Kentucky, who, in the short space of five months, have been taught the most difficult tricks. The credit of this experiment is due to Messrs. Reich Brothers, proprietors of the Aquarium, who sent to Kentucky, with *carrie blanche* to buy what he pleased, Mr. Oscar, who will be remembered as the exhibitor of the trained Trakene Stallions when they first appeared with Barnum's circus. The horses being purchased and brought here, they were taken to Coney Island and trained. They are well worth a visit.

Trained horses are the rage now. With Barnum's "Greatest Show on Earth," now at Gilmore's Garden, there are some fifteen or twenty trained stallions. A feat which attracted much attention when it was first brought out in Paris—Count Patrizio catches with his hands a cannon ball as it is fired from a veritable cannon. Fish, the champion bare-back rider of the world, is also with the Barnum troupe, and, from the crowds which visit the Garden nightly, it would seem as though Mr. Barnum's high-sounding title for his show was warranted.

OCTOBER ON LONG ISLAND.—Let none of our readers neglect to read the beautifully descriptive idyl of the now venerable Isaac McLean, which appears in our issue this week. The writer's style is similar to Whittier's, while nothing could be more literally true to nature than his marvelous word painting. Besides, each of his poems contains more information of the habits of creatures and animate objects than some volumes of natural history do.

—The *Poultry World*, of Hartford, Vt., is publishing some exquisitely colored lithographs of domestic fowls of all breeds. The set will well repay the trifling cost of purchase.

—And pretty soon we shall begin to hear of the Eddys' on Light-house on this side of the Atlantic!

From conversations with Mr. Darling and others, I am satisfied that the experience of "M. V. H." and Mr. A. H. Thomas, as stated in their letters, found in your issue of Aug. 29, is correct. Hunting deer with dogs has little or no tendency to drive them out of a particular locality. During my extended travels in Maine for several years, I have been informed that the experience of those who hunt deer is uniform. The deer, when chased by dogs, do not leave the locality in which they are started, but after being driven for a long distance, invariably return at the end of two or

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

day afternoon, in which the success of experiments with the Shelton auxiliary rifle barrel. The auxiliary consists of a barrel some 30 inches long, formed at the breech like a shell so as to fit snugly in the chamber of a fowling-piece. There is an adjustable bearing at the muzzle of this barrel, so that it is in close contact with the barrel of the fowling-piece, which can be slipped in or taken out. It can be carried in the belt without the slightest inconvenience, and when large game presents itself to the ordinary hunter who is provided with one of the patent rifle barrels, the fowling piece can be easily transformed into a long rifle. The experiments yesterday were varied and successful, and the results were most encouraging and thorough. The achievements of Dr. Carver were fairly varied in flying shots by ex-Judge Blydenburgh, while the long range shots at a target by Mr. Clark H. Shelton were astonishing.

wind from the firing points bothering the marksmen. Four matches were carried through, the leading scores standing:

supper by the vanquished at the Biddle House, after which they left the same night for Chicago. Below is the full score and analysis:

ARCHERY.

NEW BRUNSWICK AMATEUR ARCHERS.—Mr. Editor: Archery, now so popular, seems destined to become all the rage in the future. Its hold upon those who enjoy out-door sports will last longer than the reign of the rifle, for the reason that the fair sex are among the participants and can take an active share in the sport the same as in croquet. The best judges of field sports well know that the game of croquet would never have lived a season were it not for the mingling of the sexes, and thus it is that archery, a far more pleasant pastime than croquet, advances with strides and reaches the popular taste. Many ladies have become experts already in handling the bow,

and in many instances cause their friends of the sterner sex to blush. There are to be found many fine marksmen among the gentlemen members of clubs in and around New York. Several matches have been shot this season and have been enjoyed by the participants. Next season we predict a large accession to the clubs now existing. An amateur match at 30 yards was shot at New Brunswick, N. J. Saturday, Oct. 5. The following are some of the scores: Wm. Asien, 120; Wm. Maller, 98; Herbert Asien, 140; J. O'Blake, (f Brooklyn, 189.

PENNSYLVANIA—Titusville, Oct. 21.—The archery season has probably closed its doors, and we are to wait until next season and hope to bring into the field men and ladies who shall draw the bow with such certain aim that our readers may look for some very fine scores from us. We think, as young archers, that our first season's shooting is well up. The closing contest between our two teams came off on Wednesday, Oct. 16. A strong wind was blowing and our arrows drifted somewhat. A large crowd was present, and considerable interest was manifested at the final contest of the season. Ten ends were shot at 40 yards. Following is the score:

Thirty arrows by each man at each range. Archery has taken quite a hold in the West, and next season bids fair to see many interesting matches not only here but all over the country.

THE BEST WOOD OR BOYS.—A German correspondent prefers the common osage orange wood, used for hedges, for knots in preference to sassafras or any other wood. It is bony, but of great elasticity. The osage orange is the popular bois d'arc of the Indian tribes. There is certainly nothing better, for their experience counts for anything.

ATHLETICS.

Boston, Oct. 19.—Young Men's Christian Association: No. 1. Heavy dumb-bells—James Bagley, 105 pounds; Frank A. Ellis, 105 pounds. No. 2. Throwing light hammer—G P Whittiers, 77ft. 5in.; Mr. Deane, 66ft. No. 3. Standing high jump—J Dunphy, 4ft. 3in.; E W Hamilton, 4ft. 2in.; Frank Burgess, 4ft. 2in. No. 4. Putting shot—O P Whittiers, 32ft. 3in.; J J Fitzpatrick, 33ft. 2in.; Frank Burgess, 32ft. 2in.; D O'Hara, 32ft. 2in. No. 5. 100-yards dash—F J McQuinn, 10½s; J F Kane, close second. No. 7. Hurdle race, 1-mile—J F Kane, 6½s; J C Bibber, 6½s; D O'Hara, 6½s; J H Maxwell, 6½s; E M Gilliam, 6½s. No. 8. Hop, step and jump—F J McQuinn, 42ft. 2in.; F Burgess, 39ft. 2in.; C P Whittiers, withdraw. No. 10. Hurdle race, 120 yards—Frank Burgess, 20s; F J McQuinn, 25s. No. 11. Mile walk, amateurs—W H Holt, 7m. 35s; A W Gerry, 7m. 41½s; J P Root, withdraw. No. 12. Three standing jumps—J Dunphy, 33ft. 3in.; J Eichorn, 31ft. 3in.; C P Whittiers, withdraw. No. 14. Mile run, amateurs—J O Bibber, 5m. 24½s; W J McQuinn, 5m. 29½s; D O'Hara, 5m. 31s; E Friebe, 5m. 59s; Proctor Reed, withdraw. No. 15. Running broad jump—F J McQuinn, 19ft. 4in.; Frank Burgess, 17ft. 10in.; C P Whittiers, withdraw. No. 16. Mile walk, professionals—C P Daniels, 7m. 49½s; James Bagley, 7m. 51½s; J F Nolan, 7m. 59s.

YONKERS—Saturday, Oct. 19.—The Mile Square Athletic Club's fall games:

1. A 100-yard Junior Run—George Motaram, 1st, in 12½s; G G Wagg, 2d; O E Westergund, 3d. 2. One-sixth of a Mile Hurdle Race—Entries as above; Motaram, 1st, in 50½s; Wagg, 2d. 3. Mile Walk for Boys Under Seventeen Years—J S Fraser, 1st, 8m 50s; J Powers, 2d. 4. Club Members 100-yard Handicap—Six Entries—A H Rose, 1st, in 11½s; J M Percival, 2d. 5. Five to all 100-yards Handicap—First Heat—H H Howe, of Greenwood Club, 1st, in 11½s; W M Little, Mystic Boat Club, 2d. Second Heat—M McPail, Farmwood Club, 1st, in 10½s; T J Breerton, Green Wood Club, 2d. In a third heat between these four men McPail won in 10½s. 6. Club Race, 440 yards—Won by W S Ferguson in 67s. 7. Open Hurdle Race, One-sixth Mile—W Irvine, 1st, in 44s; C Shaw, 2d. 8. Club Handicap, 220 yards Race—Won by George Frazier, Jr, in 37s. 9. Mile Walk, Open—J O Williamson, Greenwood Club, 1st, 7m 43s; W M Watson, Manhattan Club, 2d. 10. High Jump, for Club Members—C P Ward, 4ft 6in; George Frazier, 4ft 4in. 11. Open Race, 440 yards—Three Entries—C H Rowland, 1st, 56½s; O M Shaw, 2d. 12. Mile Walk, Handicap—Won by M Percival in 8m 50½s. 13. Junior Race, 440 yards—Three Entries—G G Wagg, 48s; J H Foster, 44s. 14. Half-mile Race, Open—Three Entries—C H Rowland, 1st, 2m 28s; M Berrian, 2m 40s. 15. Vaulting With Pole—Four Entries—W S Ferguson, 7ft 4in; J M Percival, 7ft 3in; H Howe, 7ft 2in. 16. Running Broad Jump—G Frazier, 16ft 3½in; J E Martin, 16ft 2in.

17. Half-mile Run—Three Entries—Won by W R Hill in 2m 29s. Hockensack—Oct. 19.—American Athletic Club, first annual meeting:

1. 100-yards Run—Four Entries: First Heat—J G Wray, 11s; P Nichols, 2d. Second Heat, three entries—W D Bowne, 11½s. Third Heat, between Bowne and Wray—Won by Wray in 11½s. 2. One Mile Walk—Four Entries—B B Wall won in 5m 5s. 3. Half-mile Run—M G Badgley winner, 2m 27½s. 4. Running High Jump—Four Entries—A H Oakes winner, 4ft 11s. 5. Three-mile Walk—M H Johnson winner in 25m 5½s; C E Lewis, 2d. 6. Running Broad Jump—McClellan, 18ft 4in; W D Bowne, 17ft 3in; J F Johnson, 3d. 7. 220-yards Run—Five Entries—J C Wray an easy winner in 29½s. 8. Pole Vaulting—J McClellan, 8ft 3in; W D Bowne, 2d. 9. Standing High Jump—W D Bowne winner, 4ft 3in. 10. Handicap Run, 440 yards—J C Culbertson, 35 yards; A Lee, 21 yards; G G Badgley, 45 yards; S W Hogg, Jr, scratch. Hoag won in 57½s. 11. One Mile Run—Won by J Magee in 5m 24s; T H Noonan, 2d, and W H Copas last. 12. Hurdle Run, 100 yards—Seven Entries—Won by W D Bowne in 22s; McClellan, 2d. 13. Tug of War, between McClellan's and Bowne's teams of six men each—Won by McClellan's.

HACKENSACK—Oct. 19.—Hackensack Athletic Association:

1. 100-yards Run—Six Entries—J F Reimus, of Staten Island Club, 1st, in 10½s. Second Heat—Won by J Lafon, Mystic Boat Club, in 12½s. 2. Standing High Jump—E Hogue winner. 3. Half-mile Walk—Won by W Lotzer, 4m 27s. 4. Standing High Jump—S O Wells, winner, 4ft 2½in. 5. 440-yards Run, two heats—E Hogue won in first in 1m 15s; W Lotzer, 1m 12s, in the second. 6. One Mile Walk—E D Phillips, Hudson Boat Club, 1st, 7m 57½s; L Foslack, Manhattan Club, 2d. 7. Running High Jump—W R Reeves winner, 5ft 1in. 8. Half-mile Run—Won by O K McCullough in 2m 20½s; W T Wells, 2d.

WEST SIDE DRIVING PARK—Jersey City, Oct. 10.—Olympic Athletic Club, of Jersey City Heights, first annual games:

First Trial Heat—200-yard Handicap—Edward Young, 4 yards, 1st, 11½s; H Cordukes, 5 yards, 2d. Four started; run with the wind. Second Trial Heat—100-yard Handicap—A Clark, 2 yards, 1st, 11½s; A McLean, 5 yards, 2d. Six started. Mile Walk—Handicap—Charles McBride, scratch, 1st, 8m 33s; S Dayton, 50s, 2d. Four started; run by three yards. Final Heat—100-yard Handicap—Edward Young, 4 yards, 1st, 11s; A Clark, 5 yards, 2d. 450-yard Handicap—W Haslan, 8 yards, 1st, 1m 4½s; F Clarke, 12 yards, 2d. Five started. First Heat—120-yard Run, over six hurdles—W Haslan, 1st, 17½s. Second Heat—120-yard Run, over six hurdles—A McLean, 1st, 17s. Final Heat—120-yard Run, over six hurdles—W Haslan, 1st, 16s. High Jump—Mark Coughlin, 4ft 6in. Four completed. Final Heat—120-yard Run, over six hurdles—W Haslan, 1st, 16s.

LEHIGH UNIVERSITY ATHLETIC ASSOCIATION.—Oct. 12.—order of sports:

1. 100 Yards Dash—Four entries—Duncan, 1st, 10½s; Strong 2d. 2. Putting the Shot—Potter, 1st, 31ft 2in; Holland, 2d. 3. Hurdle Race—120 yards—Bradley, 1st, 19s; Strong, 2d, 19 1-5s. 4. Throwing the Hammer—Potter, 1st, 57ft 11in; Leo, 2d, 44ft 3in. 5. 220 Yards—Eight of a Mile—Duncan, 1st, 24s. 6. Pole Vaulting—Potter, 1st, 7ft 11in; Tucker, 2d, 7ft 10in. 7. Standing Broad Leap—Duncan, 1st, 8ft 4½in. 8. Half-Mile Run—Eight entries—Strong, 1st, 2m 20½s; Donahue, 3d, 2m 46½s. 9. Running Broad Leap—Potter, 1st, 4ft 6½in; Leavitt, 2d, 13ft 11in. 10. Mile Walk—Brooks, 1st, 9m 13s. 11. Quarter Mile Run—Duncan, 1st, 6½s; Strong, 2d, 6½s. 12. Strangers' Race—100 yards—Jenkins, 1st, 11s. 13. Consolation Race—Three-legged—won by Holland and Lee.

MASSACHUSETTS—Worcester, Oct.—The annual contest in athletic sports at Holy Cross College, in this city, occurred to-day. The results were as follows: The first feat was throwing the base ball, won by Curran, 80, 330ft. The mile walk was won by Casey, '80, in 9m. Hitch-and-kick, won by Gallagher, '83, 7ft. 4in. Throwing heavy stone, won by Donnellan, '80, 22ft. 10in. Tossing caber, won by Boscawen, '81, 18ft. 6in. Hop, step and jump, won by Boyce, '83, 37ft. 3in. Three-legged race, won by Bica, '79, and Boscawen, '81. High jump, won by Boyce, '83, 5ft. Apple race, won by Gallagher, '83. Hundred yards dash, won by J. F. Flinn, '81, 11s. Small boys' race, won by Couch, 15s. Running long jump, won by Boyce, '83, 15ft. Hundred yards race, won by Cunningham, '83, 19s. Wheelbarrow race, Barry, '79. Consolation race, won by McCabe, '79. The exercises were under the supervision of Messrs. Cassidy, '79; Redding, '79; Clifford, '80; Lynch, '81, and Fitzgerald, '82, and to them is due much of the credit for so successful a series of trials of manly strength.

WRESTLING.—Robert Wright, of Michigan, and John McMahon, the California wrestler, signed articles at Detroit on the 16th inst., to wrestle within 15 days for \$500 against \$250 for Wright, collar and elbow, best two in three falls. The event will probably take place on Oct. 31st, at Whitney's Opera House. The following are the measurements of the two contestants:

	Wright	McMahon
Age.....	28	36
Height.....	5' 8"	6' 10"
Weight.....	157	198½
Chest.....	40	43
Biceps.....	15	15
Forearm.....	12	12
Thigh.....	24	24
Calf.....	15	16½

WRESTLING.—In a 25-mile bicycle race at Lillie Bridge, London, recently, J. Keen, the champion, beat his own previously fastest recorded times for 24 and 25 miles by a fraction over three minutes. The following is the time made by Keen in each mile: First mile, 3m. 2s. 2d. 6m. 39s. 3d, 9m. 67s. 4th, 13m. 19s. 5th, 16m. 41s. 6th, 20m. 8s. 7th, 23m. 33s. 8th, 26m. 43s. 9th, 29m. 53s. 10th, 33m. 20s. 11th, 36m. 38s. 12th, 39m. 55s. 13th, 43m. 19s. 14th, 46m. 45s. 15th, 50m. 14s. 16th, 53m. 41s. 17th, 57m. 6s. 18th, 1h. 0m. 34s. 19th, 1h. 3m. 55s. 20th, 1h. 7m. 31s. 21st, 1h. 10m. 55s. 22d, 1h. 13m. 52s. 23d, 1h. 17m. 11s. 24th, 1h. 20m. 29s. 25th, 1h. 23m. 43s.

—Bicycling is all the rage at Harvard. The Harvard Orlinson (newspaper) offers a cup for a contest in the athletic games November 2.

Although bird-line may be obtained in small quantities in other countries, Japan is probably the only one in the world in which it is regularly manufactured on a large scale, and gives employment to some thousands of persons. The following brief particulars respecting its manufacture, etc. are condensed from the *Huigo News*, and may prove interesting.

Bird-line is called by the Japanese *mochi*, a term which gives a good idea of its nature, as it means "bird-catching-sticky-substance." The date of its first discovery is uncertain, some placing it five hundred years back, and others three hundred. During the last twenty years the quantity produced has been perceptibly affected through the destruction of the trees by denuding them of their bark for its manufacture; but the Japanese have been endeavoring to obviate this, though without much success, by leaving in a particular manner a certain amount of bark on the trees, in the hope that they might serve a second time.

The best kinds of bird-line are distinguished by being free from bark, of a dull whitish color, extremely viscid, and having a very gummy consistency; these descriptions are said to keep good for any length of time. The principal tree from which this bird-line is made is a dark evergreen, found in the southern half of Japan, which grows high up the shady sides of deep mountain glens, and is frequently used as an ornamental shrub. Its bark is of a grayish-brown color and rather rough texture; the leaves are of a smooth dark green, rather more pulpy than our holly leaf, and have an unbroken edge.

The manufacture of bird-line extends over a period of several months, commencing about June, when the bark is stripped off the trees and macerated in water for some forty days, after which it is collected and beaten in a mortar. "The pestle used is shod with iron, its flat under-surface being armed with spikes projecting downwards. When the pulpy mass under the pestle becomes glutinous, it is taken out and washed in water in order to remove as far as possible the rough outer bark. The pulp is then again poured and treated in a caldron with hot water, on the surface of which it floats. During this treatment it undergoes considerable manipulation, at the hands of the workman, for the purpose of separating the remaining particles of bark, which sink to the bottom of the boiler. This is the most difficult part of the process, as much skill and experience are required in the workman to keep the stuff from adhering to his hands. After this, the pulpy mass is again washed in cold water, and the pounding, boiling, and washing are repeated until the material becomes sufficient clean and pure. During the process we have briefly described, about nine-tenths of the weight of the raw material is lost, two hundred and fifty pounds of the latter not turning out more than twenty-five pounds of good bird-line.

The uses to which the Japanese put this substance are numerous, the chief being of course the snaring of birds and animals. By means of it, animals as large as monkeys are caught, when they once get the stuff up their paws, they soon cover themselves with it, and so exhaust their strength in trying to get rid of it, that they fall an easy prey. Birds almost of the size of ducks are taken, and by a very ingenious process. The young shoots of the *viscaria*, which attain considerable length and are strong, are gathered, dried, and knotted together in one continuous length. This is floated out to sea, after being smeared with bird-line; and very often in the morning several birds are caught. Small birds are caught in various ways; some by means of a decoy-bird concealed near a patch of tempting food, in which are fixed numerous little splinters of bamboo like large needles, the upper half of which is smeared with bird-line. Others, again, are taken on trees by means of a long slender bamboo the top of which is anointed with the lime, and then stealthily thrust against their feathers. Rats are easily caught by spreading a small quantity on a piece of board or paper, and placing it near their holes. Bird-line is also employed upon a bamboo stick, and everywhere used in Japan for catching flies and other insects.—*Chambers's Journal*.

THE BUZZING OF INSECTS.—The old naturalist generally thought that the buzzing of insects was produced by the vibration of the wings; but they had scarcely attempted to analyze the phenomenon, and their opinion was abandoned when Reaumur showed that when the wings are cut a blow fly continued to buzz. Other explanations of the phenomenon have been advanced by various naturalists, but none of them are satisfactory. M. Jousset de Bellesme has been making some investigations on the subject, and, after proving that previous theories are unsatisfactory, it describes the results of his own researches. To avoid confusion, it should be distinctly understood what is meant

by buzzing. In the scientific acceptance it means to imitate the sound of the humbees, which is the type of buzzing insects. But the humbees give out two very different sounds, which are an octave of each other—a grave sound when it flies, and a sharp sound when it alights. We say, then, that buzzing is the faculty of insects to produce two sounds at an octave. The definition limits the phenomenon to the hymenoptera and the diptera. The coleoptera often produce in flying a grave and dull sound, but they are powerless to emit the sharp sound, and, consequently, do not buzz. There are two or three ascertained factors which will serve as guides in the interpretation of the phenomenon. First, it is indisputable that the grave sound always accompanies the great vibrations of the wings, which serve for the translation of the insect. It is easily seen that this sound commences as soon as the wings begin to move, and that if the wings be cut off it disappears entirely. The sharp sound is never, on the contrary, produced during flight; it is only observed apart from the great vibrations of the wings when the insect alights, or when it is held so as to hinder its movement, and in that case the wing is seen to be animated by a rapid trembling. It is also produced when the wings are entirely taken away. From these two remarks we may draw the conclusion that the grave sound belongs properly to the wings; that it is caused by their movements of great amplitude. There is here no difficulty. As to the sharp sound, it is certainly not produced by the wings, since it survives the absence of them. Yet the wings participate in it and undergo a particular trembling during the production of this sound. To discover the cause it is necessary to go back to the mechanism of the movement of the wing. It is known that among nearly all insects the muscles which serve for flight are not inserted in the wing itself, but in the parts of the thorax which support it, and this is the movement of these which acts on the wing and makes it vibrate. The form of the thorax changes with each movement of the wing under the influence of the contraction of the thoracic muscles. The muscular masses intended for flight being very powerful, this vibratory movement of the thorax is very intense, as proved by the holding of the wings of these insects between the fingers. But as the vibrations are repeated 200 or 300 times per second, they give rise to a musical sound, which is the sharp note. In fact, the air which surrounds the thorax is set in vibration by that directly, and without the wing taking part in it. There then are two simultaneous sounds, one produced by the vibration of the wings and the other by the thoracic vibration, the latter twice as rapid as the former, and therefore an octave. This is why in flight only a single grave sound is heard. When the thorax moves alone a sharp sound is produced. This, M. de Bellesme believes, is the only explanation that can be given of the movement of the two sounds which constitutes buzzing.—*London Times*.

HOUSE CATS GROWN WILD.—In *Chambers's Journal* we find the following: A greater nuisance to game preservers in England than the mountain-cat is grinnakin that has become wild—the semi-wild cat. Almost the equal of the mountain-cat in ferocity and destructiveness, these wild cats are enormously more numerous. It is amazing the number of domestic cats that, by cruel neglect on the part of their owners, or other causes, annually revert to their natural state, and take up their quarters in the woods, to live as wild animals. During the five years in which the Duke of Sutherland's game-keepers bagged only five mountain-cats, they shot two hundred and thirty-five of the other kind; and when we come southwards, into the preserves near large towns, the numbers grow enormously. "In the preserves say from ten to twenty miles round London," says a recent writer in the *Fall Mall Gazette*, "the cats thus killed must be counted by thousands. Families change their houses; the cat is driven away by the new-comer, and takes to the fields. In one little copse not more than two acres in extent, and about twelve miles from Hyde Park Corner, fifteen cats were shot in six weeks. When two or three wild or house-leopards take up their abode in a wood they speedily attract half-a-dozen hitherto tame ones; and if they are not destroyed, it would be impossible to keep either game or rabbits." We have on more than one occasion protested against the heartless cruelty of turning cats out of doors to starve, when shutting up houses for the season. As is seen, the poor creatures are often driven wild with hunger and exposure, and liable to be killed as a measure of general police. We again denounce this odious misusage of the faithful and domestic cat, as a scandal to humanity. Those who cannot permanently provide for cats ought not to attempt to keep them.

A KNOWING HONEST.—A German almanac for 1879, which is early in the field, contains a notable story of Cossack ingenuity, which has been reproduced by the *Globe*. During the late war a Cossack rode up to the door of a little inn at Braille, dismounted, drank a

succession of glasses of brandy, and then made a show of remounting his horse. The landlord reminded him that he had not paid for his drink. The Cossack with a heavy sigh drew out his huge dirty purse and began fumbling for a coin, when his horse gave a sudden snort and fell to the ground. The Cossack was in despair; he did everything he could to raise the beast upon its legs, but all was in vain. "He is dead! he is dead!" cried out in chorus a number of bystanders, who had been attracted to the spot by the accident. The poor Cossack would not believe it. The crowd, knowing that a Cossack's horse is his own property, and that the loss of the animal would be a terrible blow to his owner, began to make a collection in order to mitigate his sufferings as far as possible. Even the landlord was touched, forgot his ill, and presented the bereaved man with another glass of brandy, refusing any pay. The Cossack lifted up his saddle, slung his lance over his shoulder, dropped a farewell tear over the faithful beast, and walked sorrowfully away. When he was about a thousand paces distant he suddenly stopped, turned round, and gave a long, shrill whistle. At the sound of the well-known signal the horse sprang up, neighed a friendly answer, and off with lightning-like speed to his grinning owner. The Cossack was soon on his back, making significant symbols of thanks to the assembled crowd for their generosity and sympathy. In a few minutes he was out of sight, and the landlord of the *Krotschka* was loudly registering his vow that he would never again trust a Cossack.

YE QUAIL HUNTER.—The foolish cow frisketh her tail and chaweth her cud and goeth forth with joy to browse in the thicket the whole day long.

But the wise cow knoweth that quail shooting hath begun, and she barkeneth unto the voice of wisdom, which saith, Lo, the hunter is come anon, girt about with the shot-pouch and the powder-horn, and in his hand he carrieth a weapon, the barrel of which he doubled.

And he goeth about seeking the birds that do run upon the ground with tottering swiftness, that he may ensnare them and slay them with the weapon and devour them, even upon toast.

And the weapon goeth bang and ye hearth the sound thereof, and ye smelleth the powder, but ye knoweth not, nor doth any man knoweth whereunto the discharge appertaineth.

For it flyeth with basins into the thicket and into the region located thereon, even into the whole territory thereunto adjacent.

And it falleth upon the cow and it smiteth her sore, so that she lifeth up her tail and flyeth, being sorely and grievously displeased.

But the bird escapeth the wrath, and from a rail in a remote corner of the land laugheth he the hunter to scorn.

Therefore has the wise cow said in her heart, I will lay me down in the home pasture and will not go into the thicket, nay, not for the hunter or any under man.—*St. Louis Journal*.

CARE OF CANARY BIRDS.—Place the cage so that no draught of air can strike the bird. Give nothing to healthy birds but rape and canary seed, water, cuttlefish bone and gravel paper and sand on the floor of the cage. No hemp seed. A bath three times a week. The room should not be overheated, never above seventy degrees. When moulting (shedding feathers) keep warm, avoid all draughts of air. Give plenty of German rape seed; a little hard boiled egg, mixed with crackers grated fine, is excellent. Feed at a certain hour in the morning. By observing these simple rules, birds may be kept in fine condition for years. For birds that are sick or have lost their song, procure bird food at a bird store. Very many keep birds who mean to give their pets all things to make them bright and happy, and at the same time are guilty of great cruelty in regard to perches. The perches in a cage should be each one of different size, and the smallest as large as a pipe-stem. If perches are of the right sort, no trouble is ever had about the bird's toe-nails growing too long; and of all things keep the perches clean.

RAISING THE WIND.—A few days ago a tramp, who was sparring his devious way along near Reno, conceived a brilliant idea for raising the wind. He knew that the Wells Fargo stage would pass along that road in about half an hour, so he took off his coat, tore his shirt and pockets, rolled in the dust, and finally tied himself, with much difficulty, to a tree. His intention was to tell the stage passengers that he had been foully dealt with by highwaymen, and have a subscription to repair his losses taken up on the spot. The stage, however, took a short cut by a new road that day and didn't go by at all. After waiting until dusk, the tramp tried to take off his bonds, but before he got the first knot loose a grizzly came down out of the mountain and picked up the greater part of his left leg.—*San Francisco News Letter*.

AN ARMY CLUB.—About forty regular army officers, active and retired, met Thursday, Oct. 10, at the Army Headquarters, this city, to form an association modeled upon the Royal United Service Institution of Great Britain, but with less of its technicalities and details. It is to be called the Military Service Institution of the United States, with headquarters in New York, and the object will be to inform all officers on distant posts of the steps and discoveries made in military science.

—It is not so very many years since a moustache could not safely be worn by a New York merchant or bank clerk. A thirty or twenty-five years ago a man who ventured to cultivate one was regarded as an outlandish foreigner, a flashy and disreputable sort of person, an eccentric individual, or a loose Bohemian. Moustaches stood in the way of a man's getting credit, and a bank president who did not shave his upper lip would have been looked on as a monstrosity.—*Sun*.

—A naturalist claims to have discovered that crows, when in flocks, have regularly organized courts, in which they sit around and try offenders—a sort of crow-bar, so to speak.—*Boston Globe*.

They often meet in caw caw, too. In the spring it is not unusual to see a crow caw.

BUSINESS RULES.—Business before pleasure, the surest road to success. No engagements should be made that will interfere with your business; if any be made they should be broken off. Pleasure before business, the quickest, straightest and shortest route to poverty.

—Algernon, under her window in the cold white moonlight, with tender expression says:

"Tis the last rose o' hof summer,
Le left hoo blooming aho-none;
All its to bar-lee companions
Ah-bar ha-deh hed and go-hone."

—The peanut crop of the United States for the year ending Sept. 30, 1878, was 1,121,000 bushels. 1 Virginia eats most; Tennessee next; North Carolina, third.

—The Lincolnshire Rifle Volunteers were recently turned out for a parade and a sham fight, when the discovery was made that they had been served with ball cartridge.

—To prevent meat from scorching during roasting, place a basin of water in the oven; steam generated prevents scorching, and makes the meat cook better.

—Enos Brown and Sons of Deep Hollow, Dutchess Co., New York, have caught 107 bears during the past twenty years.

—We go East for the precious metals and to the West for solid meat—for gold to the Orient and for beef to the Ox-ident.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb. 1878, the Grand Prix de Casino, an objet d'art valued at \$100, and a money prize of \$200, his the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Chalmers Kessel, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 28 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 5 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdy, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 56 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 109 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1873; No. 183,933. BEWARE OF IMITATIONS.

W. W. GREENER, St. Mary's-Works, Birmingham, England.

H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

WEBLEY'S TREBLE WEDGE GUNS.

WITHOUT A RIVAL.

Messrs. P. WEBLEY & SONS, Birmingham and London, at vast expense, have secured the most perfect machinery for gun making ever set up in any one factory in England. The result is that they can now turn out guns, perfectly uniform in excellence, and in such increased quantity as to greatly reduce the cost. Their specialties this year are their fine Treble-Wedge Guns, Nos. 1 and 2, of which the above cut will give a grip, extension rib, lever forepart and treble bolt, and 1-bored after Webley's system, which has produced such marvellous results, and yet all this at a price so low as to place the guns within the reach of almost any one. This is what machinery can do. It is a new thing to be able to buy a fine breech-loader, with every possible appliance which can contribute to its beauty, convenience or excellence in shooting at the price of ordinary guns. In addition to the Treble Wedge Guns, we have on hand upwards of one hundred was over. These guns are being rapidly closed out at greatly reduced prices. They are all bored after the Webley's system, and will shoot just as well as the Treble Wedge Guns. Many of them are from \$10 to \$11 pounds weight, and are splendid guns for duck shooting or for killing large game at long range. We also have Webley's celebrated Double Action Revolvers, the Pug, British Bull Dog, etc., etc., at our little over half last year's prices.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre of bore of .32, .38, or .41 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 41, model 1873. Send for Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY, NEW HAVEN, CONN.

221. "OLD RELIABLE" 221. (TRADE MARK.) STILL TRIUMPHANT.

In Fall Meeting of N. R. A., at Creedmoor, Sharps Rifles were entered in sixteen matches; took first prize in twelve of them, and good prizes in the other four. Among them the

The New York State team, using the Sharps Military Rifle, won with a score of 974. Best score by any other rifle, 960.

The International Military Match.

New York State Team, with Sharps Military rifle, 1,044. Best by any other rifle, 903.

The Inter-state Long-Range Match.

Average per man with Sharps Rifle, 213. Other rifles used averaged respectively 193 and 197.

The WILHELMUS CUP, won by Mr. Frank Hyde with a Sharps Rifle with a score of 143 out of a possible 150 at 1,000 yards. THE LEROI CUP, won at Spring Meeting with a score of 205. Best other rifle, 197.

For the Grand Aggregate Prize at Fall Meeting, three competitors each, with Sharps Rifles—Mr. Frank Hyde, Col. W. H. Clark and Capt. W. H. Jackson—fired on a score of 310 points.

THE LONG-RANGE MILITARY CHAMPIONSHIP, won by Capt. J. S. Barton, with a Sharps Military Rifle. All prizes in the match were won with Sharps Rifles.

AMERICAN TEAM WALK-OVER DAY, J. S. Sumner made, with a Sharps Long-Range Rifle, the extraordinary score of 221 points out of a possible 225 at 800, 900 and 1,000 yards.

W. & C. SCOTT & SON'S FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS FINE TRIPLEX 12-GAUGE BREECH-LOADER, MADE BY W. & C. SCOTT & SON.

(From CAPT. A. H. BOGARDUS.)

W. & C. SCOTT & SON: Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with extra 10-bore barrels; also a light 12 and 20 bore; all of your make, which cannot be excelled in the shooting qualities, and impossible to beat in the solidity and power of your patent Triplex action. I used in each match, winning by two birds; also in my match with Capt. Shelley, July 9, at which time I scored 70 and 71, "the highest score on record," and in the International Match with a Sharps Coventry, Esq., at Brighton, Aug. 6, for 2,600, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 30 yards rise. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is still in good condition.

Believe me, yours very truly, A. H. BOGARDUS, Champion Wing Shot of the World.

(From COL. JOHN BODINE, New York.)

W. & C. SCOTT & SON: Gentlemen—I have received the Premier quality choke-bore gun, No. 8,095, in good order, and am pleased to say that its performance exceeds my expectations, while its symmetry and finish is all that the most fastidious could desire. It fully comes up to specifications of order, both in finish and shooting qualities. I have disposed of my two guns by other makers.

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland particle shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 50, and 64 lbs., and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR KROOF, MANUFACTURED TO ORDER.

IRA A. PAINE'S

FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, and therefore would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball abroad the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300. Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

**Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.**

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.
MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the pulper, is now ready for the market. Price \$5. Old style, \$6.
Parties buying glass balls will receive, in each barrel containing 250 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Platt Street, N. Y. City.
FOX TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhardt, Logan Co., Ill.

THE AMERICAN SPORTSMAN'S JOURNAL

{ Volume 12.—No. 13.
{ No. 111 Fulton St., N. Y.

It would seem to be a task of supererogation to speak of our stay in the Notovivay Region. That section, also, has been written up by me for this paper. We went deer hunting, as said before, and had much hunting but little deer. The Captain placed us all three on a stand, and went with his rifle to the edge of the woods. We waited for half an hour, with our guns cocked, and on the *qui vive* for the slightest sound, but there was only an utter, perfect stillness. The next half hour we sat down, with our guns lying in our laps, gazing with strained expectancy into the depths of the shadowy forest, but nothing could be seen except the shadows of the woods. The next half hour we sat in the hollow by the fire, and the next hour we all got tired, and Col. Burke, pulling an old breast deck of cards out of his pocket,

proposed a game of seven up. We all assented, and were soon in the mysteries of high, low, jack and the game. It was Colonel's deal. I and Douglas were intently watching him to see that he didn't slip the jack from the bottom, when a splendid buck, with branching antlers, cantered slowly past us, and disappeared in the woods beyond. Edmund seized his gun and fired a round in the tree tops. Douglas pulled trigger, and his gun snapped, and upon examination he found he had forgotten to load it. Warned by this incident, we kept strict watch for an hour, and, nothing unusual happening, Edmund proposed to play the old game out. This we agreed to, and in the midst of the play another deer leaped by us, not ten feet away. We finished the game and went home, for we had enough of sport as that, and we left Sunday morning for Richmond, where we were to spend the next days. While there we had the pleasure of meeting Mr. Charles Palmer, President of the Game Protective Association. By the way, any gentleman sportsman from the West or North who desires to know all about hunting in the Old Dominion, had best write to Mr. Palmer at Richmond, Va., for he is the best informed man on that subject in the State, and he is always willing to afford all information about sporting localities, time, place, and quantities of game.

I am glad to say that the subject of sporting, so long neglected in Virginia, is now receiving much attention from all sections. Game associations are springing up all over the State, who make it their business to see that the provisions of the game law are rigidly carried out and enforced. The Virginia Legislature are moving, also, in that important work, and last winter organized a new committee on Game, with your humble servant as chairman. Many new bills, increasing pains and penalties for violation of the laws, were passed, and old ones changed, among them the time of shooting partridges. The old law was from the first of November until the 1st of February, but now the shooting season commences the 15th of October, and closes the first day of January. Another law was passed for the protection of wild-fowl, which prohibits the shooting of ducks and geese in the night-time, also declares any decked boat from being used against them, and expressly declares that no swivel-gun shall be used, and only those that can be held up and fired from the shoulder. Sportsmen intending to shoot in Virginia this winter and fall, will please, like Captain Cuttle, make a note of this.

Our next point was Fauquier County, where we led an easy life at a bachelor hall.

We lingered in Fauquier a few days, a little town of small dimensions but of huge aspirations. It is the county seat of Fauquier. Warrenton is noted for its beautiful girls and its successful politicians. Whether there is any irresistible strength in the union of the two, I leave to some speculative philosopher to determine; but as this is a game letter and not a political one, I will skip, as the prisoner said to the sheriff, when he was on his way to jail Oh, about Fauquier! It puts me in mind of an incident that happened to me in that county that never will be effaced from the tablet of my memory as long as reason—or the sense of smell—remains.

I was, like Mr. Dick Swiveller, hopelessly entangled in Cupid's net, woven by Venus' fairy fingers and meshed by the magic of dazzling smiles and bright glances. In other words, I was in love, as Socrates, Napoleon, Petrullo and other celebrated men were, and I was weighed down by a hundred and fifty pounds—real mountain theory, who took after her mother, who kicked the scale at about 500 lbs., and has never left the porch since she was married. Well, the girl, as I was saying, took after the mother, I took after the girl, and the old man took after me, for he forbade me to his house. However, me and Miss Susan escaped the parental eye and had a stroll together. We sauntered lazily down the public road, with my faithful pointer, Josh, at my heels, who followed me as closely as the dog Wolf did old Rip Van Winkle. Josh was a discreet dog, and a useful one, too, for he watched the road closely, and would bark at the sound of an approaching footstep a half mile away, and every one except—well, I will make no exception—knows how much a courting couple needs some faithful monitor to warn them of critical eyes and unexpected appearances. Susan and I stopped at an old blacksmith-shop, and, leaning against the fence near by Susan, was making eye and tongue tell. We disconcerted any couple in building castles in Spain. Suddenly I was aroused from my dream, for I caught sight of Josh in a dead set. He stood on the side of a ditch, with his fore foot raised, his body rigid and his tail as straight as a poker, showing in his splendid pose his thoroughbred blood.

"Susan!" said I, "here's a flock of partridges in that ditch—let's climb the fence and get 'em."

So we both scrambled over and approached Josh, who never moved, but stood trembling with excitement. "He on, sir!" But a stone dog could not have been more stationary. "He on, sir!" I ordered a second time. But Josh stood like a soldier on parade. "The devil is in the dog," I muttered, and approached him and looked down into the ditch. I couldn't detect any covey of birds huddled together in a clump, nor could Susan, who was gazing breathlessly and eagerly over my shoulder. Instead of the birds I saw an animal something like a raccoon, with white stripes on his body and the most curious beard like eyes, that gazed into mine without flinching. I again ordered my dog to "lie on," but he, not moving, I got a heavy stone and prepared to cast it on that animal, which to save my life I couldn't get out or understand what it was. Just as I was about to throw, I noticed the singular proceedings of my dog. Josh, who struck out across the field in as wild a gait as if he had a tin pan tied to his tail. Josh was smarter and more knowing than his master, for I heaved the rock and struck the animal plump * * * With a wild shriek Susan fled, and I too, but we avoided each other immediately, for, Mr. Editor, it was a polecat that we stirred up.

From to you, my dear friend, who wanted to meditate suicide. Let them provoke a certain animal and, my word for it, they will be utterly and completely disillusioned, and love's sweet dream be rapidly shattered.

Leaving Warrenton, we struck for the Alleghany Mountains, and hiring a coach, we traveled en vigneron—stopped where we chose, idled where pleased, and enjoyed those sum-mer days in the wild, beautiful mountain scenery as only those men could do with good weather. The Alleghany mountains had sciences, which, after all, Rochebaudou, that wisest of Frenchmen, says, is the secret of happiness. In the course of time we reached Mountain Lake, one of the greatest natural curiosities in this country, a spot that every tourist and lover of fine scenery ought to visit. It is a lake on the top of the Alleghany Mountains, a half mile long and nearly as wide. It is clear as crystal, and upon fathoms deep, is ice cold even in summer, and is clear as crystal. The Alleghany mountains have been made to stock it with fish, but in vain. The lake lies like a jewel in the mountains, reflecting back with minute distinctness every object, mirroring with perfect fidelity even

the spider-web that is woven from branch to branch. I think that, as the evening sun touches the lake with its declining rays, it is the loveliest picture that mortal eyes ever rested upon, lying there in its limpid, placid beauty, its water changing from a pure opaline hue to a warm ruby tint, like Loch Katrine.

When in the soft sunlight it lay,
And islands that emerald bright
Floated amid the livelier light,
And mountains that like giants
To keep watch and ward o'er enchanted land.

There is a one-house hotel at the lake, where travelers are taken in and done for by the proprietress, for she is of the gentler sex, hails from Pennsylvania, wears corkscrew ringlets, and talks philanthropy. She is a female Joey Bagstock—devilish shy, sir—and knows a thing or two. After having their bills at the tavern, the overcharged tourists are like the little boy who was asked by a nule—not any prettier, but a thundering sight wiser.

Our jaunt was nearly over; we agreed to spend one more week in the mountains, where there was good trout fishing, and then disband. So we went to Rappahannock County, which is, I think, the banner county of the Old Dominion. I could write a long letter about this section, but will have to curtail, as I am already too prolix. I would tell you that, if I could give you an account of some of the many adventures in old Rappahannock, I am afraid you know we three comrades were swelled to five by the accession of Sainty Menefee and Major O'Bannon. The major being one of those types of manhood who can shoot, ride, and toss off a heaker to the fairest of his loves, and like his maternal ancestors in Old Killarackie, he can, like them, sing—

"Faith I'm ashamed of him,
It's a way with all the braves,
But, bedad, I'd make an elegant lady,
For I'm fond of tobacco and the ladies."

But I must put on the brakes to my literary locomotive, only to say that we disbanded after having seen many adventures in a quiet way as the Argonauts or the immortal Ulysses, who only differed from us in the fact that he defied and conquered Circe, while the witching Circes in this section conquered us, but, I am glad to say, didn't change us into hogs.

The birds—partridges I mean—are unusually abundant in Virginia this fall and will afford splendid sport. The best time is from the 1st of September to about the 10th of December. In this period the birds fly better, are easier found, and do not keep hid in the thickets.

And now, Mr. Editor, in conclusion, let me add that I have a request to make of you. Do, for the sake of suffering sportsmen, give us a receipt for cooking partridges properly. There is nothing that tends to rile a shooter's feelings as to have the birds he has so hardily found and bagged served up to him burned to a crisp, or, worse still, parboiled in water, and having no more taste than leather. Give us a good receipt how to prepare them for breakfast, and the suffering brotherhood of sportsmen can cut it out, paste it in their hats, and show it to the 'aly of the house as a gentle hint how he wants his birds daintily prepared, so that he can enjoy them, and not say, like the exasperated Frenchman, "By Gar, I gives you one belle poil partridge, and you brings back a moi une dead little poor bird."

Alexandria, Va., Oct. 1878.

We can conceive of no daintier dish than a partridge carefully broiled and laid on toast with a sprig of parsley for a garnish.—E. F. & S.

HAND TO HAND WITH A GRIZZLY.

THE following account of a fight with a bear, is given by the Calaveras (Cal.) Chronicle of a recent date. Mr. N. Rogers, who lives near West Point, Cal., had been out squirrel shooting during the day and was armed with a light rifle. It is said that, although grizzlies had been frequently seen about the rancho, no danger was apprehended from them at this time of the year. The moral of the story, however, is that when there is even the most remote possibility of encountering dangerous game, the hunter should be provided with a repeating rifle. Terrible as is the foe, these arms do equally terrible execution:

Mr. Rogers was so successful in gunning that by 4 o'clock his game-sack was well filled, and as he was two miles from home, determined to retrace his steps. In leaving the flatter ridge on which he had been shooting, he had to cross a patch of comparatively open country, the only growth it contained being a species of furze and an occasional bunch of chaparral. He had gone only a short distance, and in descending into a little blind ravine, came upon a huge grizzly feeding on the carcass of a sheep.

The bear was not over twenty feet distant. Man and beast discovered each other at the same instant. For a moment Rogers stood irresolute. His first impulse was to run; but his better judgment told him that if he did so, and should be pursued by the grizzly, escape would be impossible. Dreadful as was the alternative of facing his terrible enemy, it was his only hope, and Rogers resolved to stand his ground and sell his life as dearly as possible.

There was a chance that the grizzly might not attack him if he remained quiet. As it happened, however, the grizzly, who had been building upon that foundation, were speedily dispelled by the bear giving a low growl, dropping his mutton, and advancing toward him. The hunter's heart leaped in his throat, and then, with every muscle and nerve drawn to its utmost tension, he awaited the onset of the beast with as much coolness as though his life was not at stake in the unequal contest.

As the grizzly advanced toward him, and got within a distance of about fifty feet, Rogers threw up his right shoulder, and with a steady aim planted a bullet in the bear's breast, just inside the point of the right shoulder. The animal was hit hard, but no sixty-to-the-pound bullet ever stopped a grizzly. With a growl resembling a roar, the infuriated beast rushed to the attack. Throwing aside the now useless rifle and drawing his knife, Rogers braced himself for the death struggle. As the grizzly rushed upon him, his haunches, its great, black, scaly head towering two feet above Rogers, the latter involuntarily threw up his left arm, like a pugilist on guard. The bear seized the arm in its mouth, and throwing its great paws over the shoulders of the hunter, hugged him in an embrace that forced his eyes from their sockets and the blood from his nostrils.

Rogers' right arm was free, and he drove the long, keen blade of his knife into the side of the grizzly close to the shoulder. The blade reached a vital point, inflicting a fatal wound, but its immediate effect was only to intensify the grizzly's ferocity. It hugged Rogers the closer, its long,

sharp, chisel-pointed claws tearing gaping wounds in the hunter's back, while the bones of his left arm were crushed and ground to powder in the bear's vise-like jaws.

Wild with the agony of his wounds, Rogers plied his knife with the energy of desperation, driving it again and again into the vitals of the bear, literally carving it alive, while the latter, with claws and teeth, lacerated his human foe most frightfully. It was, indeed, a struggle to the death. Rogers, weak from the loss of blood and half delirious from pain, now fought by intuition, having only a vague consciousness that his life depended on his killing the bear. The terrible wounds of the grizzly began to tell upon its vitality. Rogers' senses were not so dulled but that he knew that the grizzly was gradually relaxing its hold, and the ray of hope the knowledge afforded stimulated him to renewed exertions with his knife. The bear endeavored to support itself despite its wounds, wavered for an instant, and then, with a low moan that sounded almost human in its expression of pain and despair, toppled over, dragging the man with it, the latter falling partially beneath. Summoning all his remaining strength, Rogers plunged his knife into the grizzly's abdomen, the hot life blood and viscera spouting full in his face.

The bear relaxed its hold, and Rogers, torn, lacerated and bleeding, crawled far enough away to escape being rent to pieces by the terrible death struggle of the grizzly. Although victorious, Rogers' condition was critical in the extreme. He was a mile and a half from home, so weak and faint that he could hardly stand, and in danger of bleeding to death before he could reach help. His left arm hung crushed and useless at his side, his left scapula and clavicle were broken, the blood trickled from the terrible wounds on his back, and his legs were literally furrowed by the crooked claws of the bear's hind feet. Conscious that he must soon have help or perish, he summoned all his resolution and staggered along in the direction of home, more dead than alive, a trail of blood marking his footsteps. He managed to reach a spring in sight of his house, and then his endurance gave way. He fell in a dead faint by the water's edge. He was soon discovered by his son and was taken home.

The grizzly was the largest ever killed in the county. It measured nine feet in length, "over all," and weighed 1,400 pounds. The left side of the bear was literally torn to pieces, there being no less than twenty-two knife wounds, nearly every one of which reached a vital point. One of its fore paws it covers an ordinary dinner-plate.

Mr. Rogers is lying in a very critical condition. In addition to his horrible wounds the shock to his system was a terrible one. His left arm, literally mangled and torn to shreds, has been amputated at the shoulder. His left clavicle and scapula were fractured, and the three lower ribs on the right side broken. The flesh and muscles on his back are so torn and abraded that the vertebrae are actually visible in places.

Fish Culture.

ENCOURAGEMENT TO BREEDERS OF FISH.—An esteemed correspondent, R. E. R., of Farrisburg, Vt., says that the salmon placed in Lewis Creek (an old-time salmon stream) in May, 1875, have none of them been seen this season, though this should be the time for the returning grise to appear, and asks if all hope of a successful issue of the experiment must therefore be abandoned. Fifty thousand fry were turned out there. In reply, we can only say that if we were to argue unfavorably from premises like these, there would be little encouragement to continue the work of attempted fish culture in this country. Although scientific, earnest men have been at work for ten years past, the results seen by no means commensurate with the outlay of time, money and patience; yet they are not only not discouraged, but are increasing every known method for propagation: they have spread their efforts from a single State to thirty-six at least; and they look forward with faith and patient waiting for the time when the seed sown broadcast will not only reappear again in spawn and small fry, but in fully developed and mature fish, which will assume for themselves the work of reproduction in the old natural way when fish were abundant everywhere. The best assurance that fish culturists have of future success is in statistics of work done in Great Britain and on the Continent, where fish culture has been prosecuted much longer than it has here, and where the supply of fish food has been largely increased and cheapened. We can also point to the experiments of several centuries in China, and the persistence with which the breeders there have stuck to their business.

THE VARIOUS COLORS OF TROUT FLESH.—The other day we found in the London Field an article with the above heading, signed by that well-known angler and author, Francis Francis, and we eagerly scissored it out and laid it aside for careful study; but alas! after we had journeyed through many speculations and statements of facts about such and such fish having been caught in waters which were named, we found the conclusion of the whole matter in the following paragraph:

"Indeed, there seem to be so many contradictions and exceptions in every theory set up as regards color, that I hardly know what to think. Certainly, as a rule, fish get pinker as the season advances. In March you meet fish with very little color, if any, whereas in August they are quite the exception. 'Altogether the matter is a puzzle, and I confess that I cannot see my way in it so clearly as I should like to.'"

Never were we so sorely disappointed. When the oracle opened its mouth to speak, we felt justified in expecting authoritative utterances; but we found only humble confessions of ignorance and doubt. The mystery still remains a "puzzle."

One thing is certain: color in trout flesh does not indicate difference in age or variety of species. There are pink, white, red, saffron, carmine, and yellowish tints in fingerlings, and also in three-pound fish. In the clear mountain brooks of New Hampshire, in the quiet ponds of Long Island, in the tamarack-dyed waters of the Adirondacks, in the broad limpid streams of Michigan, and in the timber belts of Wisconsin, the white, the pink and the red are taken side by side; and

The Kennel.

THE SHEPHERD'S DOG.

IF the wonderful intelligence of the colley, or colliie, as different authorities spell it, was more understood in this country the dog would be better appreciated and we should see more of them. The Newfoundland has generally been placed at the head of the canine kingdom for superior instinct, or intelligence, and the colliie as next, but his friends of the present generation are inclined to put the latter first. Certainly the tales told of his wonderful quickness, some of which we shall presently relate, would indicate that in this respect he attains something very nearly approaching reasoning power, if not an actual understanding of language itself. Dr. Gordon Stables, who, being a Scotchman and an ardent lover of collies, writes feelingly and fluently on the subject, contends that the word colliie (which latter is also his mode of spelling) should be pronounced with the o long, as though it had but a single l. The institution of dog shows had its effects upon collies, as it had upon nearly all other breeds of dogs, and the effect of bringing him into this prominent and public notice (in England) was to make known his good qualities, not only for his peculiar work, but as a companion and house dog. The result of the latter demand was an effort on the part of breeders, at least those who breed to supply a popular want, to improve his beauty, and to this end he was crossed with the black-and-tan setter, the result being a dog with a finer coat, in many instances a better tail, and ears that were not at all like those of the original colliie. We have seen such in this country, and if we were judging we should scrutinize very closely the coats of such dogs as came under our inspection, for it is probably in the coat that the chief characteristic of the colliie is to be found; the coat that should be impervious to the severest form of "Scotch mist," no matter how long the exposure. After all, if merely a beautiful companion and pet were wanted the black-and-tan setter in his purity is all that can be desired, and while the colliie in his native condition is one of the most valuable animals who ranks as assistant to man, it seems like desecration to attempt to improve or change him for the sake of mere beauty, when the change may result in a lessening of the wonderful intelligence given him by nature.

We have said that the colliie is not appreciated in this country. We should have said that he is known to comparatively few, but he is unquestionably a "coming" dog, as is indicated by the increased numbers of entries at our dog shows. Considerable numbers are also being imported, and fortunately by a class to whom active competition only increases the desire to have the best. The result we hope will be that all of our sheep raisers, or wool growers, including those of Colorado, Texas, New Mexico and California, will be able soon to provide themselves with pure bred specimens of this breed without having to send to Great Britain for them. There are persons now in this country who possess good collies without knowing it. Shortly after the last dog show in this city we were walking with Mr. Lort in a town in the western part of the State, when we met a little girl who had for a companion a splendid specimen of a colliie. The eyes of the great English judge was immediately fixed upon the dog, and he remarked that he was not only the finest one he had seen in the United States, but that he would be hard to beat in England. We afterward discovered that the dog had been brought from Canada when a puppy, and his owner considered that he had warned off all intending purchasers when he fixed his value at fifteen dollars.

The head of a well bred colliie when in full feather will look disproportionately small in comparison with the body. A dog 23½ inches high at the shoulder should have a head 9½ inches long, measuring from the occiput to end of the nose. The general appearance is "foxy," but the head should not be too flat. The eyes are bright and extremely quick and intelligent, and of a dark hazel color. The ear should be small and what the Scotch call "worn at half cock;" that is, when the animal is listening it should be pricked, with the top falling forward. As in all animals where speed is an object, the shoulders should slope well back ward and should be well supplied with muscle. The chest should be deep rather than wide, the forelegs perfectly straight and the elbow well let down. The foot should be the round, cat-foot, such as a pointer's, and not the long hare-foot; and in a dog intended for active work with sheep the pad should be firm and tough. The ribs should be well rounded and the back ones pretty deep, and the loins strong and muscular. The coat, as we have intimated, we regard as the most important feature in the conformation of this dog. On the face and ears it should be smooth, but on the neck and shoulders it should be massed with a deep frill on the chest. On the back and loins down to the root of the tail the coat is abundant and should part in the centre, and the tail itself should be heavily feathered and even bushy, being carried gaily and with a curl, but not over the back. The hind legs should be smooth below the hocks, and the forelegs while being smooth in front should be moderately feathered behind. The texture and quality of the coat are most important. Dr. Stables says, that as that glorious garment, the Highland plaid, is to the Highland shepherd, so is his coat to the colliie—it protects him by day and shields him at night. On the breast and on the breech it is somewhat finer in texture than on the back, for these portions of the dog's anatomy require protection from cold more than anything else; but over the neck, shoulders, back and loins the long outer hair is as hard as so many needles, while underneath is a woolly growth both

warm and waterproof. The fashionable colors for collies are black-and-tan, or black, tan and white, the tan being not that of the Gordon setter, but much lighter. The white is generally on the forelegs or feet and hind feet, on the chest and around the neck, with, perhaps, a blaze on the face; but there are many colors that are perfectly legitimate, and in some parts of England there is a blue, mottled with black, or brown and white, that is much prized.

The institution of field trials for collies has done much of late to bring them into notice, and we believe that Mr. R. J. Lloyd Price, of Bala, Wales, is entitled to the credit of having originated them. We believe that at these trials, which usually take place on the hills, the dog is given three sheep to pen without assistance, which is much more difficult than penning a number would be, and is also sent of a long distance alone to bring a few sheep home from the hills. As the shepherds share in the prizes given at these trials it is likely that the emulation thus excited will aid in developing to the fullest extent the natural sagacity of the animal. The working of tending and driving sheep by a well bred colliie can be witnessed almost every day at the Central Park in this city. The dog, Scot, a blue mottled, is the property of Mr. W. F. Morgan, and was, if we mistake not, bred by Mr. John Hobart Warren, of Troy, N. Y., who imported a number of fine collies from the Queen's kennels at Balmoral. When Scot had attained his growth he was, at our suggestion and through the kindness of Mr. Conklin, placed with the sheep in the Park, where he soon developed all the characteristic sagacity of the race. Only a few days since while we were riding past, the keeper, at our request, called to Scot, "Go around them, Scot," and in two minutes the whole flock was in a compact mass, with Scot galloping around them and waiting for further orders. Dr. Stables, in one of his articles on the colliie, tells the following amusing story: "I wonder," says he, "whether my old friend, Peter Molvor of that ilk, a Godly man and an elder of the kirk, ever heard of Darwin? He, Peter, settled the origin of the colliie, at least to his own satisfaction if not to mine. 'Sure enough,' said Peter, 'he was made before Adam himself. What could Abel have done without a colliie, and what could Noah have done in the ark with all his beasts without a real *Hielan' colliie*?' The same writer mentions that he was once in a farmer's house in Scotland while Kooran, the colliie, was lying by the fireside apparently asleep. 'Gang o'er the moor, colliie, laddie, and fetch the sheep home.' The farmer gave the order as quietly as if speaking to a man servant. Kooran jumped up with alacrity, looked very pleased indeed, and trotted out, wagging his tail, but showing no excitement, for he was going on a mission of trust that required both caution and thought. 'O'er the moor' in this case meant a journey of fully two miles, but in one hour Kooran was back with the sheep, galloping to have the yard gate opened. Half an hour later the farmer looked out at the window. 'Oh bother take that cat,' said he, 'I want have an onion this year.' Now, this time Kooran didn't take time to go out by the door, but darted like lightning through the open window, in a state of agitation and meriment that contrasted strongly with his staid demeanor when going for the sheep.

St. John in his "Sketches of Highland Sports" tells of a shepherd who to prove the quickness of his dog, who was lying before the fire, said in the middle of a sentence concerning something else, "I'm thinking the cow is in the potatoes," laying no stress upon the words. The dog, who appeared to be asleep, immediately jumped up and, leaping through the open window, scrambled up the turf roof of the house, from which he could see the potato field; he then, not seeing the cow, ran into the byre where she was, and finding that all was right came back to the house. After a short time the shepherd repeated the words and the dog repeated his look-out; but on the false alarm being given the third time the dog got up and, wagging his tail, looked his master in the face with so comical an expression of interrogation that those present could not help laughing aloud at him, on which, with a slight growl, he laid himself down in his warm corner with an offended air, as if determined not to be made a fool of again.

"Stonehenge," in his latest edition of "Dogs of the British Islands," gives a remarkable instance of this ability on the part of the colliie to understand what is being said about him: "Entering the drawing room of a lady who has a celebrated dog of this variety as a pet, I was met with the question, 'What do you think of my pet—is he not a perfect beauty?' After looking him over as he lay on the rug, and with a desire to tease my hostess, to whom I owed a Roland or two for her many previous Olivers administered in badinage, I replied very quietly, 'Yes, certainly, if he had but a colliie coat and a little more ruff.' The words were hardly out of my mouth when the dog rose from his recumbent position, seized one of my feet in his mouth, gave it a gentle but vicious little shake, not sufficient to scratch the leather of my boot, and then lay down again. There was no emphasis on my part, and not a word uttered by the lady until after the act was completed, when I will not say that eyes and tongue told me I was rightly served. From a long knowledge of the dog, I really am inclined to believe that he knew I was 'picking holes in his coat,' and resented the injustice accordingly."

If space permitted it, we could fill pages with anecdotes of these dogs, indicative of their intelligence. The principal breeders of collies in this country known to us are: Mr. John Hobart Warren, of Troy, N. Y.; Dr. J. W. Downey, of New Market, Frederick Co., Md.; Mr. Frederick Bronson, of this city; Mr. George B. Grinnell, Milford, Conn.; Mr. T. W.

Lawson, Boston, and General Palfrey, U. S. A.—but of course there are many others.

SNAPSHOT.

We print above a portrait of the head of the well known pointer dog, Snapshot, the property of Messrs. Lincoln & Hellyer, of Warren, Mass. Snapshot is a lemon and white, or, rather, almost a red and white dog, of immense power and substance. He is now well along in years, but in excellent condition, and for breeding is unsurpassed by any dog in the country. He is by Mr. Whitehouse's celebrated Rap (Hamlet-Sal) out of Judy (Dash-Venus), and was bred by R. J. Lloyd Price, Esq., of Rhwllas, Wales. The following are Snapshot's prize winnings: 1st at Birmingham, 1869; 1st at North Wales four years in succession; 1st at Oswestry, 1873; 1st at Wolverhampton, 1874; 1st at Wolverhampton, 1876; V. H. C. Crystal Palace and silver cup, 1870; 2d at Crystal Palace, 1872; 1st at New York, 1877; 1st at Syracuse, 1877; 1st at Philadelphia, 1877; also numerous specials.

WHAT'S IN A NAME?—A friend of ours had a fine bulldog puppy which he named Neptune. Sad to relate, he fell into a pond the other day and was drowned. Even his name could not save him.

—The Westminster Kennel Club advertise in another column a number of puppies, all sired by Sensation, and out of good bitches, at remarkably low prices.

THE MINNESOTA FIELD TRIALS.

LETTER FROM JOHN DAVIDSON.

MONROE, Mich., Oct. 25, 1878.

EDITOR FOREST AND STREAM:—As the editor of your contemporary—the *Chicago Field*—after an incubation of nearly six weeks, has hatched out an accusation of fraud against one or more of the judges at the Minnesota Field Trials in their decisions given there, and thinking from his remarks relative to bench shows and field trials, that I am the party against whom his insinuations are principally directed, in self defense please allow me a small space in your columns. I hold myself responsible to the committee of management of the Minnesota Kennel Club alone for my actions while on official duty there, and earnestly desire a complete and thorough investigation of everything in any way connected with the bench show and field trial by that committee; and after hearing evidence on both sides—not on one side only—should anything fraudulent appear, let them expose it and show where it belongs; but I do not in the least hold myself in any way whatever responsible to any prejudiced person or self-constituted authority, whose practical experience in the field cannot compare with many that of school boys, and who at the Minnesota Field trials boasted that he would either run field trials in America or ruin them, and that if the Leicester-Darts could not be run to the front he would burst the whole thing; and who, after the decision had been announced giving Tempest second prize, came to me and asked how it was possible that I could condescend, as one of the judges, to allow a prize to go to a pup by a dog that, of all others he had ever seen, he considered the meanest and most contemptible; and that were he a judge, he would never consent to giving any prize to a pup in any instance by such a miserable brute; and whose interference with the judges was so intolerant as to cause the rule to be read to him, notifying him that his position was not with the judges, as he was merely a reporter and spectator, and not a reporter and judge; and by whom, as I had been previously informed, every effort would be made to run his favorites to the front. Such information to me was quite unnecessary, as my recollection was very distinct where and by his report they were beaten by an imperfection in the rules at a field trial, by a great error of judgment at a bench show, and now by fraud. (Poor unfortunates.) This is the person who is the exponent of justice, and who advises the guarding against favoritism and dog jockeying at our bench shows and field trials, and brings forth accusations of fraud against others. Let us by all means have an investigation, with the proper party to conduct it, where both sides can be heard.

JOHN DAVIDSON.

The integrity of Mr. John Davidson is based upon too solid a foundation to be shaken even in the slightest degree by any accusation from the source he names, should he be the one accused. We can ourselves verify Mr. Davidson's statement as to the meddlesome interference of the person named and to the fact of its having been necessary to read to him the rule in question. This last effort of the "dog ring" to "run" everything connected with field trials and bench shows in this country will be duly appreciated by owners and breeders. An attack upon the man who, of all others, has their entire confidence, simply because he cannot be made to do the bidding of the "ring," must be gratifying to them.—ED.

CURE FOR DISTEMPER.

NEW WESTMINSTER, British Columbia,
September 16, 1878.

EDITOR FOREST AND STREAM:

Seeing by your valuable paper that a gentleman recently had the misfortune to lose twelve dogs from his kennel by distemper, I venture to give you a remedy which I do not remember of ever seeing in print, and which, as far as my experience goes, is the only one that can lay any claim to infallibility. I have been a lover and owner of dogs since my childhood, and have treated a great number for distemper. The salt remedy lately given in your paper I was acquainted with and practiced twenty years ago with varying results. Some dogs recovered, others died. The various treatments recommended by writers on dogs and their diseases I have used to some extent, sometimes to good purpose, sometimes otherwise. About sixteen years ago, a person seeing me throwing into the river the body of a fine setter pup which I had used every endeavor to save, but failed, told me, had I ever another case, to put a seton in the back of the neck and leave it until the eyes and nose stopped running and the dog had recovered his appetite; then to take it out and give no other treatment. I followed his advice, and never since have I lost a dog by distemper. I have prescribed the treatment for, I suppose, a hundred dogs, not one of whom have died, nor has paralysis ever followed this course of treatment that I am aware of, while with the sulphur, calomel and other mineral treatment it is of very frequent occurrence. Sometimes I give a mild purgative, but often do not.

The skin of a dog not being porous like that of many other animals, the chance of throwing off any impurities of the body by means of the skin is impossible; by the seton you create an artificial means which nature has not provided. Almost as soon as the seton is inserted a green, foetid, purulent fluid commences to discharge, and as soon as this discharge, takes place the dog appears to be relieved, and when it ceases the dog is cured. Of course, as long as you leave the seton in a discharge continues, but the character of the matter is totally changed; and as the disease abates, so the discharge becomes less in quantity and of a healthier sort, until it is merely a very slight one, not offensive to the smell, and similar to that caused by any cut or wound; then remove the seton, and the dog is all right.

This may be no new remedy to some, but knowing the great worth of it, I cannot refrain from urging its use by all who have dogs with distemper. I have the almost confidence in its efficacy, and would not be afraid to guarantee the cure of any dog with distemper or forfeit his value if unsuccessful. Having never known it fail in a single instance, hence my great faith in it. Of course, a light diet, warm bed, good care, etc., being essential to a dog's well being while in good health, is more so when affected by disease, but as a rule you need have no extra care taken of your dog, the seton will do the business of itself. The mode of inserting the seton is as follows: Grasp a portion of the loose skin on the back of the neck and lift it clear from the flesh; take a sail needle threaded with four or five strands of sewing twine; thrust it through the skin, not touching the flesh; draw the needle through till it is clear; cut off and tie both ends of the twine together, so that it will not pull out if it should catch on the skin, and the thing is complete. Examine the wound each day, keeping it washed with warm water and Castile soap, and occasionally draw the seton back and forth to create irritation and free discharge.

While speaking of dogs and their diseases, has it ever come to your knowledge that rabies does not exist on the Pacific coast? I have never heard of a case in California, Oregon or Washington Territory, and in British Columbia I am certain that no dog has ever been mad. The temperature in these countries varies from 50 deg. below zero to 110 in the shade, so that we have both extremes. Mange, distemper, cancer, etc., in fact all the other diseases that canine flesh is heir to, prevail, but no rabies. The Indians keep great packs of all sizes, sorts and descriptions of dogs, which receive the harshest kind of treatment, having no care, being half starved, except in seasons of great plenty of fish. Sometimes, when the numerous, and often ferocious, Indians are killing or starving, the Indians having a superstitious fear of killing dogs. Yet no madness takes place. Wolves and foxes are plentiful, subject to the same conditions as regards food and climate as in other parts of America, but no wolf or fox goes mad.

Even the skunk theory won't wash here. This animal (two varieties) is very plentiful, and many dogs make a specialty of killing them, and often justly so, and only earn the same bestowed upon them of being "bully rood skunk dogs." Now, in the natural order of things, it is scarcely possible that a dog can kill skunks for a number of years without being occasionally bitten, but no evil results appear to ensue. The Indians, who, of course, are the oldest inhabitants, know nothing of canine madness. I have often conversed with them upon this subject, explaining its symptoms and characteristics, but they know none of it, neither do their traditions contain anything respecting such an affection. I speak from personal knowledge only as regards B. C.; as to other parts of the coast, from information derived from others.

Hoping that my experience in treatment of distemper may have the effect of causing or inducing others to try the seton, and with the good results that have accrued to my dog patients, I remain, yours truly,
MOWITT.

WORMS IN PUPPIES.—In mentioning a remedy for worms in our last issue the types said "some" milk for "sour" milk. Our correspondents who send me the item says that he will insure it to drive all the worms from puppies, that he has tried it for years and with unflinching success. If it is a sure remedy we can all cry "Bureka!" The puppy should be allowed to drink freely of the sour milk.

—It is stated in the *Herald* that the Queens County Hunt will next year, in all probability, transfer their hunting field from Long Island to Newport, the hunt to extend from August 15 to October 1. It is doubtful if a more pleasant tract of country can be found in New England than that situated in the locality mentioned; but it will be a sad loss to the Queens County people, who have come to look upon the hunt as something belonging to themselves.

—Mr. L. H. Smith's Peersess has whelped eight puppies to Paris.

—The Irish setter bitch Fan, belonging to Mr. J. O. Lombard, of Greenville, Pa., has whelped nine puppies to Mr. Arnold Burges Rufus.

—The Westminster Kennel Club's lemon and white pointer bitch Daisy, winner of first prize at N. Y. Dog Show of 1877, and one of the celebrated Fako-Lilly litter, whelped last week a litter of puppies to Sensation.

—L. F. Whitman's blue belton bitch Mell (not Nell) visited Burges' Druid on the 31st inst.

—A correspondent recommends crude petroleum, just as it is pumped from the wells, as a remedy for all forms of mange or skin disease in dogs. Refined oil should not be used, as it contains an acid.

—Some very handsome Gordon setter puppies by Mr. Jerome Marble's Grouse out of Champlain Lou are advertising in another column.

—Dr. J. W. Downey, of New Market, Frederick County, Md., has bred his red Irish setter bitch, Kathleen (Rufus H. Colleen), to the Baltimore Kennel Club's imported red Irish setter dog, Derg.

—Jill, pure Laverack (Orphina-Pedegree), property of A. F. Huston, Coatesville, Pa., was bred to the Laverack Carlowitz, at Delaware City, Delaware, Oct. 12, 1878.

—Mr. Wm. H. Brown, of Packersville, Conn., claims the name of Vick for his orange and white bitch pup, out of Denison's Flirt by Carlowitz.

Yachting and Boating.

THE FOSTER YACHT MODEL.

A SHORT time ago we published a description of the new yacht, recently built by Mr. John O. Foster, of East Gloucester, Mass., and in our comments upon the same, gave it as our opinion that she would perform well in a sea, and be a speedy craft. This turns out to be true to the fullest extent, and we take this occasion to lay the results of repeated trials with her before our readers, for they substantiate all that has been said in these columns in reference to the cutter model for sea-going purposes. The yacht in question is 58ft. over all, with 11ft. 4in. beam, and about 7ft. 6in. draft, and must, consequently, be classed among the very narrow and deep boats, exceeding in these respects even the general run of British cutters. We are informed from reliable sources that she is fully up to her builder's expectation and the most sanguine hopes of her admirers. She has been found fast, stiff, able, and very easy in rough water. When close-hauled in a heavy sea, she ran ten and three-quarter knots off the reel by patent log, which is certainly no mean showing for a craft of her dimensions. This was before her best trim had been ascertained, and under small working sails! Mr. Foster finds nothing in her he would care to change after repeated tests, but for racing purposes would fit her with a boom 7ft. longer than at present, a gaff 4ft. longer and about 9ft. more bowsprit. She has not yet been fitted up inside, and is for sale. Under a flush deck ample accommodation is had, including "standing height in cabin." All the gear works inboard. If Mr. Foster can dispose of her, it is his intention to build an eighty-tonner on similar lines, and provide her with a "lifting" screw, an arrangement for which he has received a patent. The satisfaction which auxiliary steam yachts have given in England will lead to their introduction in our waters before long, and in this respect Mr. Foster shows himself to be wide-awake and among the first in his profession. A crack "eighty," fast under canvas and with steam-power enough to move independent of calms or contrary winds, is, we fancy, just the thing for those gentlemen who prefer to unite a reasonable amount of traveling and certainty of movement with the pleasures of sailing under canvas at times. For Florida and West India cruising nothing handier could be devised. The patentee informs us that his invention will be supplied to the new boat, and can as well be fitted to the "twenty" already afloat. The propeller attachment is of the lifting kind, similar in general principles to that of the White Star steamer *Britannic*. We have before us a full set of lines of this new boat, a sail draft, and her auxiliary steam gear as well, which we will be glad to show to any one interested.

THE YAWL IN AMERICA.

IT is rather a feather in the cap of Pacific coast yachtsmen that they should have taken the lead of their Eastern brethren in the introduction of a handy cruising rig in place of the sloop. The gentlemen who have tried the "yawl rig" out there see no reason to change back to the sloop, but find their short main booms and smaller mainsails so snug that their example will be followed by others before long. There are now four craft sailing on the Golden Gate with small mizzeners over their stern, *Raven*, *Frolic*, *Sappho* and *Raven*, and some of the astonished natives dub them luggers! Even concerning the question of speed, experience in San Francisco does not seem to point to any inferiority of this peculiarly handy rig, if we may take their annual regatta as a

criterion, for in that match both *Frolic* and *Raven* beat the New York built *Clara* and others by a very respectable stretch. Moreover, the reports which reach us in relation to them are all favorable, and the very fact that the owners of the yawls are well satisfied with the handiness, appearances and efficiency of the new style—new to this country, at least—is equivalent to the old saying, that "the proof of the pudding lies in the eating thereof."

The peculiarity of this rig is the sub-division of the canvas into small, easily-handled sails, carried on equally reduced spars. If we presume the mast stepped nearly amidships, or at about 42 of the length on load line from forward and the head sail in two pieces, the tack of the outer one, or jib, hauling out on a running bowsprit and the tack of the inner one, or foresail, set up at the knighthead, and if, in addition, we cut the main boom off at about the middle-head, and the short of it and set the canvas thus lost in a small sail of the lug pattern out over the counter, it is evident that for cruising and Corinthian purposes many advantages of a most satisfactory character will be gained. They may be enumerated as follows: Concentration of weights amidships, through carrying the mast, rigging and gear well aft; a reduction of the main boom to about 60 per cent. in length of that of the sloop, coupled with a somewhat smaller decrease in the size of the mainsail itself; the retention of reduced canvas inboard, and, as a natural sequence, the greater facility and saving of labor in handling small sails under all circumstances and for all purposes. This is all so self-evident that the query suggests itself, why not fix upon the yawl, then, to the exclusion of the sloop entirely? There is a limit, however, beyond, or rather below, which we should not pass, since in craft of light tonnage sails and spars are small at best, and probably handled with ease and safety by the crew always likely to be found aboard, be it forward or aft among the amateurs. In the superior handiness of the yawl is lost in the manifold of sheets and halliards, while this multiplicity of gear rises as a paramount obstacle to the quick maneuvering incident to the limited size of the yacht. It is quite true that in British waters the mizzen aft may be met with on the tiniest of clippers, and even on boats of some size, but the question whether any gain is derived from adhering to a rig not adapted to circumstances, merely in imitation of more pretentious flyers. The mainsail and boom of anything much under 30ft. in length are surely within the ready control of a crew anything like proportionate to the boat's tonnage, and it is scarcely needful to add that two hands cannot manage them to their satisfaction, unless, indeed, they happen to be young Corinthians lacking the "best" of older hands.

Moreover, in our waters, at least, cruising and racing among the small fry, and for some time to come will be carried on largely in waters with ready access to a port of which they would be certain to avail themselves in nasty weather. It would be unwise to sacrifice in their readiness of maneuver, general simplicity, cheapness in first cost and efficiency—for in very small sails the superiority of large surfaces is beyond question—in an attempt to attain a characteristic of doubtful value and which serves only to substitute a fresh objection to our mind quite as much to be shunned as unhandiness itself in a vessel of moderate dimensions. It is when applied to the larger classes of sloops that the preference a sailor intuitively entertains for the yawl becomes so manifest, and it will therefore not be amiss to draw attention to the relations to each other of sloop, yawl and schooner for cruising and racing purposes combined. We are not disposed, for as yet it is hardly to be expected that we can muster a numerous constituency who would be content in the possession of strictly cruising yachts only, which, like a large number in England, neither have nor make any pretensions to excessive speed. Almost every cruiser in America likes to have an occasional brush with the smartest of the fleet, and the thirst for keen competition in every walk of life is still so predominant a national characteristic with us that we cannot expect to graduate into the sloop and schooner class without a gradual transition. The predictions of the yachting public is still almost entirely for a craft that can lay more or less claim to being speedy, and the yawl rig must therefore stand the test of its compatibility with this requisite or be rejected as unsuitable to yachts on this side of the Atlantic. Leaving small, smooth-water craft out of consideration, let us glance first at the cruising peculiarities of the yawl. Her head sail, when in light weather there are probably sufficiently familiar with the strong points in its favor, so often reverted to in these columns. The only other matter in which the yawl differs from the sloop is in the management incidental to the small mizzen aft. All operations upon the mainsail will certainly be performed with much more readiness and less labor than in the sloop, facts which stand out in bolder contrast when it is remembered that the boom is entirely inboard, reef-earings and knittles being within easy reach, and the narrow canvas kept under control with a small crew without any possibility of the bunt getting away from them, should the man at the helm let a sea knock the craft off. The additional gear entailed by the mizzen need consist only of halliards, sheet and halyards. The sail is small, and handling it presents no difficulty, and though its presence causes some addition to the gear to be tended in working ship in light weather there are such substantial advantages to be gained by its use, especially for racing purposes, as will be shown presently, that those who have tried the yawl are very apt to give this rig the preference to others. When the sloop has to huff, check her way and take down a reef, the yawl keeps driving at it, simply hauling up or lowers her mizzen, runs in her jib, shifts gear to No. 2 and runs the smaller jib put in light weather there are change! and a spoke or two of lee halyard to set up her halliards, she is off again on her course and has left a long wake between herself and the clumsy rig, besides coming out to windward as well. When the wind pipes heavier, her sail is reduced still further in less time, with less trouble and with greater safety than in the sloop. With bowsprit run in, the smallest jib set and mainsail snugged down to the last line (if exists, we have got our yawl prepared for the worst, under the most favorable conditions, and making sport of the sea that would be pöccellent control, and making sport of the sea that would be the bane of a sloop with her standing bowsprit digging into it at every drop, and a heavy boom slashing across the quarters. She would be compelled to furl jib, and under close-reefed mainsail would hardly come about in a seaway. There can be no question about the yawl rig being faster in outside work, more steady than the sloop, and in this respect it is therefore more suitable to the racing tastes of American yachtsmen than the latter. For cruising it is so superior that it is preferred that further comment is unnecessary. It is safer and more economical in all respects. No wonder, then, that the gentlemen of San Francisco have no intention of returning to the river rig after once having been impressed with the

handiness of the yawl through practical experience. If we now pass to a comparison with the schooner, the racing canopies coupled with canvas masts, of the rig under consideration will be more apparent. In any weather the yawl can show the schooner a clean pair of heels. So much stress is placed upon its superiority that in Europe we find in mixed matches the schooner rated, according to the rules of the Yacht Racing Association, at only three-fifths her tonnage and the yawl at four-fifths in comparison with the cutter. Just here let us remark that however fair and rational the relative rating of schooner and yawl, undoubtedly it is always been a matter of wonder not only to ourselves but to British yachtsmen as well, that the cutter should be so heavily handicapped against her opponents, when in a little stiff breeze the yawl douses her mizzen and becomes virtually a cutter under single reef. Excepting in the lightest of weather this discrimination between the two rigs does not seem warranted. In any other kind of weather, both yawl and cutter should be considered on an equal footing, for the yawl is entitled to a higher place among the various styles of canvassing than the Y. R. A. rule would imply. The allowances of this rig to the schooner long experience has fully justified, at least in the degree that any such comparison can be brought down to actual figures. For racing moderate-sized vessels—and the reader should bear in mind that it is mainly to our larger class of sloops that we intend these remarks to be directed—the yawl has the claim of speed over the schooner, will under two spars and to admit of racing and cruising alike to advantage. Such craft can be rigged as yawls greatly subservient to their handiness as cruisers and not a whit inferior to the sloop or cutter, except in the lightest of breezes and on waters which should be the racing grounds of the open boat rather than of the stately sixty. San Francisco having led the way, New York may follow, though *vice-versa* would have been, no doubt, more pleasing to the metropolitans' pride.

TEXAS YACHTING.—Under the energetic lead of Com Jno. H. Forsyth yachting has become very popular, and the number of yachts owned in that city and vicinity reaches probably forty. They are mostly of the jib-and-mast sail type, well suited to their waters. Wolkart is the Pat McGlehan of the South, having turned out some very fast boats that are said to have beaten all the craft imported from the North. Among his fast ones are *Adella* and *Comet*, boats which spread a very large area of canvas, and which are said to sail so fairly well even in rough water. The sport is fast gaining great avidity, and next season a regular club will be organized and official regattas held instead of scrub races as heretofore.

YACHTING NEWS.

FOAM-REBECCA MATCH.—*Editor Forest and Stream:* The private match between two schooners of the E. Y. C. referred to in an article in your issue of October 17, and in which *Rebecca* receives much more credit than she deserves, was sailed at the same time as the E. Y. C. regatta of September 11. In the heat to windward from Swampscott to Halfway Rock *Foam* beat *Rebecca* 13m., gaining about 13m. on *Magie*. From this point *Foam* was dead ast to Harding's Ledge, and it freshened so sharply just as *Rebecca* reached the Rock that she gained considerably on the leading yacht, which held only the moderate breeze which they had had before. In place of *Rebecca* beating *Foam* "with the 20m. allowance," *Foam* won by 4m. 12s., ordinary corrected time according to the club allowance, or 7m. 68s. according to the sailing rule. The private race between *Rebecca* and *Foam* was the account of a participant. *Foam* fully justified the confidence of her owner in offering *Rebecca* such odds as he did. Your correspondent is in error when he says *Foam* was not improved by the alterations made on Oct. 22.

The second trial in the series of three for a set of colors between the schooners *Foam* and *Rebecca*, of the Eastern Yacht Club, was sailed on Saturday over the club course from Marblehead Rock. *Rebecca* was the challenger, and *Foam* the defender. The race was sailed at 11 a. m. in a breeze of 7m. 37s. under the club rules. In this match she allows *Rebecca* 20m. In the first heat, which was sailed in the last club regatta, *Foam* led by 4m. 23s. above the club allowance, and lost the heat by 8m. 1s. In the second heat, which was sailed from Marblehead Rock round Halfway Rock, the Hardings and Egg Rock, *Foam* led 29m. at the Hardings, and 33m. at the Graves. In approaching Egg Rock the wind was light, and *Foam* was forced to make a tack to fetch by. This change of wind led the *Rebecca* four miles dead to leeward, and, while she was working up to Egg Rock, *Foam* was reaching away for the home stakeboat, which she passed in 5h. 32m. 40s. actual time. This was making the race at a rate over five miles an hour, according to the club rules. Mr. Hovey's *Edith* was the stakeboat, and after waiting the 20m. allowed, finding it was growing calm, she followed *Foam* into Marblehead, *Rebecca* not having appeared.

OAR AND PADDLE.

COLUMBIA COLLEGE REGATTA.—The fall regatta of Columbia College was held Saturday, October 26, on the Harlem, near Mott Haven. The weather was favorable and the race smooth. Mr. Edmond Kelly acted as referee, Mr. E. E. Sage as judge, and Mr. Rob Cornell as timekeeper. Course, one mile, start from Macomb's Dam and finish opposite the boat-house. First race for single sculls—W. Parsons had a walk-over, Philip Thompson failing to appear; time, 7m. 62s. Second race for six-oared gigs—H. Collins, 7m. 43s. and 7m. 52s. with six-oared class of 32, freshman—Horace Clark, bow; J. C. Spencer, E. Livingston, F. Webb, W. Sands; stroke, J. Hamilton; coxswain, George Parsons. Class of '81, sophomores—R. T. P. Fiske, bow; D. Clarkson, H. Beers, H. Muller, J. Montgomery; stroke, George Vail; coxswain, George Taylor. Class of '79, seniors—T. H. Leggett, bow; John Mulenbach, C. Eldridge, G. Erhard, S. B. Newberry; stroke, W. B. Parsons; coxswain, Robert Cor-

nell. The seniors were on the Westchester side and the freshmen in the centre. The latter got the best of the start, but were soon overtaken by the seniors, who took the lead and maintained it throughout the race, winning in 5m. 33s.; freshmen second, two lengths ahead of the eph's. Third race for pair-oars—Entries: H. P. Brown and C. Eldridge, R. T. P. Fish and H. Ridaback; won by the former in 7m. 30s. Last race for four-oared gigs—Entries, College: C. Eldridge, bow; H. Muller, R. Livingston; stroke, W. Parsons. School of Mines—It. T. P. Fiske, bow; P. D. Brown, J. D. Newberry; stroke, G. P. Erhard. The S. of M. had the Westchester side and seemed the stronger crew. The steering of both boats was poor. The College crew, slightly the better in this respect, took the middle of the river and won by three lengths; time, 6m. 51s. Prizes in the shape of medals were distributed at the boat-house after the races were over.

MORRIS-PLAISTED RACE.—The race between these two men was rowed over the Hulton course, on the Allegheny, near Pittsburgh, Oct. 16. The distance was two miles with turn. Morris was the favorite, as he might well be, for his success was a foregone conclusion. There seldom has been a sculler more overrated than Fred Plaisted. Mr. Robert Cook, formerly of Yale, acted as referee. At the word "Go" Plaisted took a slight lead, but Morris closed on him, and in spite of a momentary stop, when the oars of both touched slightly, rounded the mark with a long lead. This he spun out to five lengths, and finally crossed the line in 13m. 45m. three lengths ahead.

HARVARD UNIVERSITY CLUB.—The sum of \$10,000 has been offered to send the Harvard crew to England, but nothing definite has as yet been arranged. The challenge from Yale will in the meantime remain in abeyance, but Yale was challenged to a single-scull race for next spring.

SYRACUSE ROWING ASSOCIATION.—This is the name of a new organization recently organized in Syracuse, N. Y. The following officers were elected: President, Samuel A. Steele; Vice-Presidents, Wm. P. Hersey, R. W. Hinsdale; Secretary, Geo. L. Whitmore; Treasurer, A. W. Whitmore; Financial Secretary, H. N. Letts.

CONNELL UNIVERSITY REGATTA.—Tuesday, Oct. 15, the day to which the University regatta had been postponed, turned out very favorable, the water being smooth all day. First race for single sculls: G. M. Wells, of '79, and E. L. Preston, of '78. The latter took the lead with a stroke of 32 against Wells' 33 and won in 16m. 23s. Second race, for class crews, proved close up to the mile mark, when class '81 took the lead and won in 12m. 20s.; crew of '80, 13m. 37s., and crew of '79 in 12m. 40s. Names of the winning crew were: J. N. D. Shink, E. H. Cole, R. D. Jay, J. G. Allen, G. E. Reed, T. Waterbury and O. L. Taylor, coxswain. Third race for gigs: Sprague Boat Club against Tom Hughes Boat Club. Won by the latter in 12m. 7s., in spite of the stroke ar slipping his seat! Names of winning crew: T. Peacock, D. W. Hutchinson, W. M. Taylor, H. B. Nichols, F. Leary, J. C. Wait and S. Mott, coxswain.

YALE vs. HARVARD.—Harvard University Boat Club has accepted Yale's challenge, and the eight-oared four-mile race will probably be rowed at New London.

CANOEING ON LAKE SUPERIOR.

EXTRACTS FROM A JOURNAL OF A CANOE VOYAGE ON LAKE SUPERIOR AND THE UPPER MISSISSIPPI IN 1840—MADE BY W. H. C., OF CHICAGO.

MADISON, JUNE 26, 1840.

EDITOR FOREST AND STREAM:

Arrived here to-day in the Steamer *Illinois*, Captain Blake, from Chicago, which we left on the 24th. Many pleasant people on board, among them Mr. and Mrs. F. W., of Peoria, Ill., with whom I passed a delightful week last winter, spending the days with the hunting club in the exciting sport of hunting deer on horseback with long spears, and carousing over the prairies like ancient knights with lance in rest, but charging the foe with scarlet coats instead of steel armor. Many were the deer that fell by our lances, and many were the flocks of geese whose wings fell before our prowess. "At evening, around the board sitting." My companions on the proposed tour, Major H. and Mr. F., have preceded me, and are on their way to Saint Is. Marie in a canoe, which they purchased here. I shall join them by the first boat which goes up from this island.

Macino needs nothing but a large and well kept hotel to become a great resort for summer travellers. At present one is accommodated in a simple but comfortable manner at the house of old Mr. Lealey, whose wife undertakes cooking whitest fish better than any one on the island. As every person of taste who comes here lives principally on this delightful fish, it is an important consideration.

The scenery of this island has been often described by abler pens than mine—those of Mr. Jameon and Miss Martineau, for instance. Some of the old residents amused me by the oddity of their characters, and also gave me much valuable information as to the early history of the place, and the condition and resources of the Lake Superior country. I find General Scott and staff here, with Colonel Bankhead and a large party from Detroit, all of whom are going to the Saint in the *Fairport*, a small and dirty steamer, which plies in these waters, and which I must also take. Among the crowd I found Mr. J. L. Schoolcraft, a naturalist and sportsman. He showed me a fine collection of butterflies and moths; also a specimen of the spotted grouse, which occurs in the Northern Peninsula. Mr. S. is also an angler, and told me that he had taken in the Saint rapids a brook trout which weighed five pounds. Anglers in New England streams, where my trout fishing has hitherto been done, would hardly believe this—we used to think a pound trout a monster.

The scenery along the St. Mary River is fine. As you approach the mouth there are a thousand little islets in sight, some of them barely large enough to afford a resting place for two or three trees. At Point St. Joseph, on Drummond's Island, we see the ruins of an old fort, which the British had there formerly, now nothing but a pile of stone. Next comes Lake George, a fine sheet of water, on the northern side of which appears a chain of mountains which are said to divide the waters of the lake from those of Hudson's Bay. After winding through a narrow channel we turned a point and came in sight of the village of Saint Mary. The military band which was on board struck up a lively air as we approached the fort, the Indians yelled, and the cannon roared a salute, which echoed far away among the granite hills on the Canada shore. But a grander sound than this was the deep voice

of Lake Superior, pouring its surplus waters down the rapids, which foamed and boiled in a thousand convolutions among the everlasting rocks of the bed of the St. Mary.

The village is a small trading post of forty or fifty houses, inhabited principally by voyageurs and engagés of the American Fur Company. When the contemplated canal is finished the upper country will be opened to commerce, which, with the fisheries, have been monopolized by this company. There are also areas of iron and copper on the shores of Lake Superior, which will hereafter be worked to advantage.

Just beyond Fort Brady I recognized the tent of my companions, and soon learned with satisfaction that everything was ready for our final start from the abodes of men. Our bank canoe, purchased for twelve dollars, was about 23 ft. long, and 4 ft. wide, and capable of containing six men with their baggage, and 2,000 lbs. of provisions; all of which would not sink the boat six inches. When they loaded she would ride over the waves like a life-boat. They will cut-ho any other craft in a heavy sea, and the only difficulty in travelling is the necessity of unloading them in deep water, for the least pressure on a rock would break them instantly. Our crew consists of three half-breeds, one of whom will serve as cook.

July 23.—Mr. Schoolcraft fitted us out with boat and men, who took us to the Canada shore, and we commenced fishing for trout, which abound in these places. By trading the rapids I got to a spot at the foot of a little fall, where I found them of good size, all that I took being over half a pound, and the largest of two pounds weight. These were taken with a fly, to which they rose readily; and I found these, my first Western trout, to exactly resemble those of New England in appearance and flavor.

July 29.—We find our stock of provisions for six men for three months so John that we conclude to send a part up to Lapointe by the brig *John J. Astor*, a vessel belonging to the American Fur Company, the first vessel on the Lake, which was for years the wonder of the gens du Nord.

One must also carry birch bark, gum and watsap (the flexible roots of the cedar), for repairing the canoe, a process often necessary on these rocky shores.

S. C. C.

Sea and River Fishing.

FISH IN SEASON FOR NOVEMBER.

FRESH WATER.
Black Bass, *Micropterus salmoides*. Pike or Pickerel, *Esox lucius*.
M. pallidus. Yellow Perch, *Perca flavescens*.
Muskelunge, *Acipenser nubilus*.
SALT WATER.
Sea Bass, *Scomber ocellatus*. Goby, *Cyprinops regalis*.
Striped Bass, *Morone saxatilis*. Haddock, *Merluccius*.
Walrus, *Odobenus rosmarus*. Kingfish, *Micropogonias undulatus*.
Dunghies, *Paralichthys oblongus*.

FISH IN MARKET.—Bluefish, 8 cents; bass, 15 to 18; salmon, 25 mackerel, 18; weakfish, 10; halibut, 15; kingfish, 25; codfish, 7; blackfish, 10; flounders, 8; lobsters, 10; sheepshead, 18; scallops, \$1 per gallon; soft clams 50 to 75 cents per 100; whitefish, 15; salmon trout, 15; hard crabs, \$3.00 per 100; smelts, 15; terrapins, per dozen, \$15; frostfish, 8; haddock, 7; sea bass, 18; eels, 15; pickered, 15; sunfish, G; yellow perch, 8; pike, 8; muskelunge, 13; prawns, per gallon, \$1.50; frogs, per pound, 30.

Live codfish and muskelunge are the new features of the market this week. Bluefish have turned their heads southward, and will be found on the North Carolina coast. The fishing for striped bass in the vicinity of New York is remarkably good, and much sport is afforded.

NEW ROUTE TO RANGELEY LAKES.—The Portland and Oxford Central Railroad, which has been defunct for some years, has passed into new hands, and will in future be known as the Rumford Falls and Buckfield R.R. It has been thoroughly rebuilt and equipped with new and elegant rolling stock, and with such officers as J. Washburn, Jr., for President; S. C. Andrews, Treasurer, and S. T. Corser (so long the efficient Superintendent of the G. T. R.) for Superintendent, the public may feel assured that nothing will be spared to make this a first-class road in every respect. This road leaves the Grand Trunk Railway at Mechanic Falls, thirty-six miles from Portland, and its present terminus is Canton, twenty-seven miles from McFalls. Here passengers take a Concord coach for Byron, thirty miles distant, and it is safe to say that no piece of road better than this exists in New England. The road follows the Androscoggin and Swift rivers, and with the beautiful mountain scenery, and the wonderful bear stories that stage drivers always tell their passengers, the drive is enchanting. From Byron to the shore of Lake Moosehuncantonic is only seven miles, and here you are right on the shore of the greatest of the great lakes. It is on the shores of this lake that Allerton's Lodge is situated, and at the head of the property of the Ogunquit Angling Association. Middle Dam Upper Dam, and the camps of the Boston clubs can all be reached from here, and all "carries," the curse of the tourist and especially the ladies who visit the Lakes, are avoided, and you have saved forty-six miles, as this route is that much shorter than by the way of Farrington and Phillips. BARR.

ANGLING CELEBRITIES.—To the long list of distinguished men who have made angling their relaxation and amusement, we must add Charles Kingsley, the preacher and poet; J. A. Froude, the historian; and Tom Taylor and Tom Hughes, authors of distinction. In the late "Life and Letters of Kingsley," edited by his wife, we have many glimpses of these men taking their sport by the side of lake and river, to wit:

"To Tom Hughes—This gracious rain will put the fish all right in a week, and we might run to Farnham or elsewhere, for a day, to see what a large March-brown and a red or a golden palmer would do. That's the spot to throw your fly and let it sink, and in half a minute take it out gently to see and let it sink, and if it do, but him as if you loved it enough at the end of it, and if so, but him as if you loved him, and hold on. We will fish both streams, and oh, my

goodness; if we only have a son-water—all's in that blessed sound. Shelly did not know what the dear old Zephyrus was good for; who does but, we the heirs of all creation, masters of water, 'the mother of all things.'

"To J. A. Proude.—Yesterday I went up the side stream in the park, and after the rain it was charming. They took first a little black gill, and then settled to a red palmer and the congering turkey-brown. My beloved black alder they did not care for, but I kept seven brass of gold fish and threw in twelve, more over 1 lbs., though. Oh! I wish you had been with me."

"Mackerel Castle, Sligo, July 4.—I have done the deed at last—killed a real live salmon over five pounds weight, and lost a whooper by light hooking."

"July 6.—I had magnificent sport this morning; five salmon killed; biggest seven pounds, and another huge fellow ran right away to sea, carrying me after him, and was lost after running 200 yards by towing a ship's hawser. There is nothing like it; the excitement is maddening."

If the good man lost his wits over a five pound fish, which would be called a grilse on the Restigouche, what would have happened had he chanced to fasten a twenty-five or thirty pounder? In our country we should introduce this English custom of throwing back all small trout, say those under six or eight inches long, and it is for FOREST AND STREAM to teach young anglers that there is more credit in the capture of one two-pound trout than in killing one hundred yearlings.

S. C. O.

GREEN BASS.—Frank J. Bowman, Esq., in a letter written from Pike Lake, Bayfield County, thus describes the green bass that is there found in great abundance:

Like its near kinsman, the black bass, it has in the dorsal fin nine spines; the second dorsal, one spine; twelve soft rays, with a remarkable uniformity of color on back or belly, closely resembling the dark, polished green of the oak leaf. In weight, from two to five pounds. It is a bold biter, and a good-sized green frog is the most tempting bait you can throw; a live minnow killed well will strike handsomely into a bright spoon hook, or piece of red tannal drawn rapidly through the water. It takes the bait with a rush, and must be given line or it will tear loose or break the tackle. Its leaping and shaking propensities are remarkable—on the first leap it will frequently jump from three to four and a half feet from the water, and will leap and shake like a Scotch terrier from four to six times before taming down. Its flesh is very firm, and its flavor is excellent. I am of the opinion that some idea of the gameness of the fish may be formed from the fact that Mr. Knight, who has long enjoyed the reputation of an experienced angler, found it impossible to save more than a half dozen of the first fifty bass he hooked, and your correspondent, although boasting that he had lost but four large trout in making a catch of several hundred, had no better success than Mr. K. in handling green bass. After losing a heavy braided line and breaking two pieces in good hard fighting, we fell back on a stout old half inch never say line. This armed, we made a fair showing of thirty-two big bass in a half day's fishing.—*Ashland (Wis.) Press.*

ALL ABOUT THE HELMGRAMITE.—*Editor Forest and Stream:* After a careful examination of the authorities, and a thorough search in journals and books, I am of the opinion that the helmgramite has been overlooked, and perhaps it will be interesting to "Knights of the Rod and Reel," who look to your paper for such information. I give a short statement of the habits and value of this bait: The helmgramite is the most "killing" bait for black bass. By that name it is known in the South. In the Northern States it is called "Dobson" or "Dobson." Our rivers and canals are full of them, and yet a very large number of fish are never say line. They have used them. By anglers who know it is in constant use from the last of June until the close of the fishing season. By some they are called salamanders, which is entirely wrong. In appearance and shape it very much resembles the thousand-legged worm, and has pinchers like a pinching bug. It grows to be about 3½ inches long, and is of a dark brown color. It instantly clings to any object it strikes, lies entirely under the water, and will stay in the water for a long time of all kinds. It protects itself from fish by hiding under rocks and drift in the bottom of the streams, or in the crevices of submerged stone walls. They are found under cobble-stones and rocks, on the rillies, or clinging under the timbers of old dams and decayed driftwood. In the canal and feeders they live in the walls of locks, on the gates, bridge timbers and sunken boats. They are caught on the rillies by standing in the stream with minnow net, so as to hold the upper end of the trails together in one hand, the lower end of the trails spread so as to stretch the lead line on the bottom of the stream, then with a hoe turn over rocks and stones as far up the stream as you can reach. Being thus disturbed, the helmgramite will curl up in a ball and drift into the net, from which it must be taken before resetting the net. Timber and driftwood must be turned over, for they will be found underneath. The difficulty of finding them in canals is because of the water being too deep to wade. The theory of some naturalists is that the helmgramite develop into butterflies, and that the butterflies dig holes in the river bank and deposit eggs that are hatched the next year into helmgramite; but the more practical fishermen say that hundreds of small ones are found through the season, with the larger ones on rocks and decayed wood in the streams, showing that is where they breed and multiply. In the early part of the season they are found in streams and remain in that condition until spring. As bait they are better than "crays," and when used are hooked under the shell that covers the neck. All kinds of fish take them readily, and the angler is not annoyed by turtles eating them off his hook. They will live for months if kept in a cool place—in a bucket or box, partially filled with pieces of moist decayed wood. Boys who catch them sell them at a penny a dozen. Anglers who are enjoying exceptionally fine black bass fishing this year, good catches being made every day along the banks of the Big and Little Miami, the Stillwater, Mud River, Wolf, Twin and Bear creeks, and at the lakes near Carlisle, and over at Aigua and up at the Lewiston reservoir. Bait is plenty and the waters in prime condition. Camping parties are scattered all along these streams, and will be until cold weather sets in.

Dayton, Ohio, Oct. 16, 1878.

ISAAC.

THE YELLOWSTONE AS A TROUT STREAM.—A letter to the *Cleveland Leader* says: "At every halt along the river everywhere you would fish or paw around among the boulders upon which the river flowed for trout. In both instances the reward for one's trouble was sure to be most satisfactory. The trout, whitefish and grayling took the grasshopper baits

that were thrown them with the greatest avidity. This may seem strange with regard to the whitefish, as their reputation on the great lakes for taking the hook is not the best, yet here they proved better biter than the trout. General Sherman, in his report on the National Park, says he does not believe there is a finer trout stream in the world than the Upper Yellowstone."

FISHING AT SATEE STE. MARIE.—A tourist gives the following account of his experience: "Seating myself in a canoe, the Indian took his position in the stern and another stood in the bow. The one in the stern used a paddle to keep the boat's head up stream, while the other used a pole to steady the boat. We had a dip-net about four feet in diameter, with a handle twelve or fifteen feet long. This was hung over the projection of the cutwater, while the handle trailed back in the water. Thus equipped, we sailed out into the rapids, which are half a mile in length and one mile wide. At the foot of the rapids the fishing is done. The water boils and tumbles like the swiftest of the Delaware, and is generally half white with breaking foam. With his pole the Indian in the bow holds the canoe, or lets it float steadily sideways, now up a little and then down, but always under perfect control, and always dancing with the rush of water. He watches the water constantly, which varies in depth from two to nine feet. Suddenly, with a quick motion, he shoves the end of the pole under the bow piece, grasping the net at the same time with the other hand, and never taking his eye from the water, plunges it in, perhaps ten feet away, and forces it to the bottom, or, as the canoe sags back with the current, lets it drop a few feet, and then with a peculiar twist raises it to the surface, and with a toss like turning a flap-jack, drops a five-pound white fish into the canoe. This was repeated time and again, right in the swiftest water, and seldom only one fish was caught, but once six that would weigh eighteen pounds. Often I could not see the bottom, and one was caught in eight or ten feet of water. I could not see the fish until they brought to the surface. It was the only kind of fishing that I ever saw that I did not think I could learn to do. It is said no white man ever did learn. The Indian I was with took 1,800 in one day. We were out an hour and took about thirty. I could not induce any of the other passengers to go out, but they asked me if I had seen the City Hall at Detroit."

TIM POND.

NEW BRITAIN, CONN., SEPT. 25, 1878.

DIPNET FOREST AND STREAM:

Last year my friend, of Mount Vernon, Maine, told me something of the "Tim Pond" method of fishing. About the first of the month I started with said friend and two other gentlemen for a week of trouting and gunning in the mountains and lake region of Maine. We drove our own teams. A good way for sportsmen or any party desiring recreation and amusement in the open air in the finest forests and by the most beautiful lakes and streams of New England is to go by railroad, or by team to Farmington, Maine, thence by stage, or private carriage on good roads, via New Vineyard, New Portland and Kingsfield, to Eustis. This was the route we took. The drive on a September day—at the foot of rugged mountains and by the side of the dashing Carrybas, the river—is most enjoyable to any lover of nature. In the evening we arrived at a comfortable dwelling and the "Tim Pond hotel" being given by one of the party well versed in the art, the proprietor, Mr. Kennedy Smith, appeared at the door and recognized old friends. Smith knows how to welcome his guests and cause them to feel at home. It was not long after our appetites were appeased before we retired. As gray dawn Kennedy Smith was astir and so were his good wife and brisk daughter, and ere the sun had lighted up the far-off peaks our guests were up and the lawn, and Mr. Eustis, you should have been there that bright early morning, and the landscape I saw around to the left is Pleasant, where Arnold with his brave soldiers camped, amid the snow and ice of winter, on that memorable march to Canada. In front of us boldly stand the three peaks of Mount Bigelow where Arnold sent his aid to "look over into Quebec." To the right is Saddle-Back, and further on are Kennebec and Mount Abram, the peaks of which lies our Promised Land—the camping ground of Tim Pond!

After an appetizing breakfast the "packs" were put into a wagon and we started for Pond. When we had about a mile and a half our guide took from the wagon one pick and his best assistant the other, and we plunged into the forest. For a time the path was good then only fair. The forest trees were mostly spruce, fir, pine and cedar. There were some hard-wood trees. The air was invigorating and healthful. Literally, there are tons of gum upon the spruce trees. This dense woodland is inhabited by large game. There are many evidences that Bruin made a congenial home here, but he does not seek acquaintance with man, deer, caribou and moose, in the season, can be hunted here, and most deer are caught by any lover of nature. After about five hours we had accomplished six miles and stood by the shore of the annex of the main lake or pond. This annex evidently was partitioned off by the industrious beaver many years ago. It is but a few acres in size. The real pond, according to the State survey, has a surface of about a thousand acres. It is a beautiful sheet of clear, sparkling water nestled down among the green trees, hillside mountains. Our guide soon placed his boat before us and stored our packs and equipments inside for transfer to the landing opposite the camp. We took a few fine trout in the small pond and then crossed the bar or opening in the beaver dam into the real lake. After rowing a short distance our guide landed and hastened to put the camp in order for our reception, and his assistant anchored us in a good place for fish. For an hour or more the sport was exciting. In a short time what trout we had caught were cooked and well appreciated by six hungry men.

Each morning we arose early, drank from a health-giving spring near camp, took to our boat, returning after an hour with all the trout we were able to catch. We were not, though our appetites were keen. During the day we hunted parties with two dogs and a well-trained pointer, though I do not think we found them as plenty in the wilderness as near openings, where their haunts were filled with them. Near sunset each afternoon we took more trout, for we had only to cast in our hooks to gain the speckled prizes. Thus we spent our time, varying the programme by visiting some of the wildest and grandest scenery New England affords. One day we visited "Tim Pond Stream" which connects this lake with Dead River. It is a charming stream, with high embowered banks, numberless rapids and three dashing cascades. The deep basin at the foot of each waterfall is alive with trout. There are no fish in this lake except trout. Never has any one of any size been caught here. The lake is swarming with its exclusive inhabitants, which can be taken by bait or by a "fly," by a novice or by a professional. Few have "whipped" these waters, because few know of them, though each year their fame is increasing. For one desiring the life of a fashionable hotel this is not the place. It is the place for the true sportsman, the place for recreation, for health, the place to worship God in his first temple.

The enjoyment of our party was complete. We gained in weight, health and strength next year I hope to see some of your readers. Instead of going to Farmington by railroad another route

is by the Maine Central R. R. to Anson, thence by stage and private conveyance to the residence of Mr. Smith. Should any one wish for further information they can obtain it by addressing Kennedy Smith, Eustis, Maine.

J. WARREN TUCK

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 31. The bulk arrivals have included 3 with codfish, 270,000 lbs., and 4 with halibut, 54,000 lbs. The number of Georges arrivals has been 18, with 270,000 lbs. codfish. The Baymen arrive slowly, but most of the fleet are on the way home, and the arrivals will soon be numerous. The number of arrivals the past week has been 2, and the receipts 300 lbs. mackerel. The Shore fleet are mostly across the Bay, and the season will soon be brought to a close. The arrivals for the week have been 4, and the receipts 500 lbs. The mackerel season will close with a small stock on the market, number ones and extras being scarcer than ever before known, and commanding a good price. The smaller sizes are in better supply, but prices rule low.—*Oape Ann Advertiser*, Oct. 25.

CONNECTICUT.—New London, Oct. 26.—Blye's old friend, on Monday, in four hours' fishing, captured 37 black bass, many females in spawn. Is it not unusual for them to be in spawn at this season? Bass of 5 lbs. 6 oz. weight have been caught in Gardiner's Lake.

MISAL.

Black bass of two years old commence spawning in July and continue into September. October is late for them. Nevertheless, all fish are not wholly regular as to periods, and may spawn at almost any month.—*Ed. F. & S.*

PENNSYLVANIA.—Erie, Oct. 19.—Fishing has been the finest ever known in our bay. Muscalonge and black bass are being caught in large numbers every day, which is no doubt owing to our stringent laws in regard to all kinds of seine fishing, which are being enforced very rigidly.

STRETS.

VIRGINIA.—Richmond, Oct. 23.—Angling for bass between Buchanan and Clifton Forge is very fine. The river is filled with fish. The sport is improving in the vicinity of Richmond, and by another season we may hope that the river throughout its length will be well stocked with that game fish.

M.

Norfolk, Oct. 16.—Very fair striped bass fishing near the Bridges. Fish run small, but plenty. Drum, salmon trout, spots and tailors in fair supply from the seines.

RICHMOND.

TENNESSEE.—Nashville, Oct. 21.—James Snow, Esq., with a party of gentlemen, went down the river of Harpeth River on a fishing excursion, and last Saturday they had splendid sport, taking seventy-five bass and one cat-fish. The bass averaged three-quarters of a pound, and the catfish weighed seven pounds. A large quantity of fish, principally cat, drum and buffalo, caught in the Cumberland River, were offered for sale last week in the market. This is the beginning of the season for catching jack. It seems they are more voracious on cool, frosty mornings than at any other time. A number of our crack anglers are already making preparations for their fall sport.

J. D. H.

Nashville, Oct. 26.—The fall season for fishing has opened most favorably, large creels being taken in almost all of the streams in this section. A gentleman landed a five-pound jack in the Cumberland last week, and another party took in the same stream a large string of bass, and two or three jack averaging about one pound weight.

J. D. H.

Savannah, Oct. 23.—Our fall fishing has been quite fair. Several parties have enjoyed reasonably good sport. On my last expedition, I captured eight game representatives of the bass species.

THE LEAGUE CHAMPIONSHIP CAMPAIGN OF 1878—THE STATISTICS OF THE SEASON'S PLAY.

The League Association's season of 1878, which began on the 1st of May last, finished up on the 1st of October, though the League clubs have played exhibition games since then and up to the close of October; but the championship season was from May to October, the last game of the championship pennant series being played on Sept. 30 last. The contesting clubs numbered only six during 1878, and it was the best League season on record, both as regards the equality of the competing clubs and the fine fielding exhibited by the respective teams. Without further preface we proceed to give the statistics of the season's play, beginning with the full record of the season.

THE FULL RECORD.

The full record of the season, giving the summary of the games won, lost, drawn and played is as follows. The names are given in the order of win games:

	Games Won	Games Lost	Games Drawn	Games Played
Boston	41	1	1	43
Cincinnati	37	8	1	46
Providence	37	8	1	46
Chicago	37	8	1	46
St. Louis	37	8	1	46
Milwaukee	37	8	1	46
Games lost	10	22	21	53

MODEL GAMES.

The model games—or games in which the score of the winning nine does not exceed three runs—in the League championship contests of 1878, were as follows:

	Games Won	Games Lost	Games Drawn	Games Played
May 1—Boston vs Providence	1	0	0	1
June 13—" Indianapolis	1	0	0	1
July 20—" Cincinnati	1	0	0	1
Sept 11—" Indianapolis (10 innings)	2	0	0	2
Aug 5—" Chicago	2	1	0	3
Aug 10—" " "	2	1	0	3
Aug 31—" Milwaukee	2	1	0	3
June 11—" Indianapolis	3	0	0	3
Aug 9—" " "	3	0	0	3
Sept 13—" Chicago	3	0	0	3
July 29—" Milwaukee	3	0	0	3
July 4—" " "	3	2	0	5
Aug 1—" " "	3	2	0	5
Aug 3—" " "	3	2	0	5

COMPLETE RECORD OF LEAGUE CLUB GAMES FOR 1878.

CRICKET.

THE AUSTRALIANS IN SAN FRANCISCO.—The last game of the series of matches played by the Australians in America took place at San Francisco, Cal., Oct. 24, 25 and 26, on the Recreation Grounds. The wicket was not a very good one, and what with indifferent bowling and wretched fielding, the Australians had no difficulty in running up one hundred and ninety-seven the first day, with a loss of but six wickets. C. Bannerman scoring 78 after giving a couple of chances at the bat, one after another scoring less than 20, while Spofforth contributed 45, his best score in America. The second day's play saw the Australians run their score up to 802, Boyle contributing 35, Bailey 25, Allan 21—not out—and Gregory 15, Murdoch being disposed of for 3 only. In the inning there were no fewer than 43 extras. The first inning of the twenty-two resulted in a score of 63 only, and we had to allow the Australians their score by yielding them 105 runs. Perry Malone, the San Athletic baseball player, led the score against the Australians with 22, Aiken getting 12, these being the only double figures scored. The final result was the success of the Australians in one inning, with 125 runs to spare.

The prize tourney, which was commenced on the Union Grounds, Brooklyn, on Oct. 22, stood as follows on Oct. 30, four games having been played :

	Alaska.	Flyaway.	Hudson.	Won.	Played.
Alaska.....	..	0	1	2	3
Flyaway.....	1	..	1	1	3
Hudson....	1	0	..	1	2
Games lost.	2	0	2	4	8

NEW YORK—*Utica*, Oct. 28.—*Utica* Cricketers (amateurs) and the *Utica* Base Ball Club. (professionals), the latter having never played a game of cricket. The fielding of the baseball club won them the game, it being especially fine in the second inning:

ARCHERY.

A NOVEL CONTEST—*Highland Park, Ill.*—On the 19th October a very interesting match was shot between Mr. W. B. D. Gray, an excellent pistol shot, and Messrs. E. B. Weston and H. C. Carver, members of the Highland Park Archery Team. Mr. Gray used a 9-ounce revolver and was handicapped to shoot 100 yards to the Archers' 60 yards; 90 shots each at a regulation 45-inch target. The score is as follows:

	Shots.	Hits.	Value.
W B D Gray (pistol).....	30	24	106
	30	17	85
	30	26	118
Total.....	90	67	309
E B Weston (archer).....	30	21	85
	30	15	69
	20	11	51
Total.....	90	47	205
H C Carver (archer).....	30	18	83
	30	22	126
	80	20	86
Total.....	90	60	290

OMNIAI ANNUUS.—*Hackensack, N. J., Oct. 26*.—Distance, 90 yards; 24-inch target; 9 ends:

	Hits.	Value.	Hits.	Value.	
Missa Ward.....	42	180	Miss Dougherty.....	0	0
Miss Holberton.....	19	80	Mr Holberton.....	17	8
Miss Slocuman.....	5	25	Mr Gardner.....	8	40
“ Hopper.....	6	30	Mr Ziegler.....	6	30
“ L Zingram.....	1	5	Mr Wells.....	1	5

—Will those who are so kind as to send archery scores please send size of target, distance and number of ends?

MARIETTA, Ohio, Oct. 23.—Hiawathas, of Muskingum, and the Eighty-one Archers, of Marietta College.—The former club numbers about thirty members, and includes ladies. The latter is strictly a college club. Bows in use are of American Highfield and Aldred manufacture, and range in weight from 40 to 48 lbs. The Aldred bows are the finer finish and more flexible, yet they cost so much more than others that it is difficult to decide which is economy. I think Aldred has sent no lance or lemonwood bows to this country over fifty-five pounds, so it is impossible to judge as to their durability. I have in use a Spanish yew, of forty-nine pounds weight, made by Aldred, that I have used constantly for four months, and to-day seems better than ever. Will "Archer" be kind enough to tell us whether he has ever used a bow of this weight? I have broken three bows of lance and lemon. True, they were heavier and may not have been broken had they been lighter; but I prefer using a bow of forty-nine pounds to buying at fifty-five or sixty pounds every two or three months. Conditions—20 yds., 26-inch target:

Names.	Hits.	Value.	Golds.
Capt. L. Devol.	24	126	4
Edward Devol.	29	147	5
Emery Devol.	29	145	2

Total.	129	671	15
Hiawathas ahead.	4	58	5

ARDEN.

ATHLETICS.

—The *Athletic and Sporting News* is the name of a new weekly journal started in Montreal a month ago. It is devoted chiefly to cricket, base ball and what are popularly known as athletic sports. It is an eight-page paper and creditably gotten up.

A GHOSTLY VELOCIPEDE.—Brighton, England, has been startled by the apparition of a man mounted on a bicycle of colossal dimensions, who glides along on a level with the tops of chimneys, towering above the height of ordinary carriages. The driving wheel of this machine is nearly eight feet in height, so that the rider's head is about twelve feet from the ground. The courage required to mount on top of a wheel of this height was only outdone by the dexterity with which the machine was guided and the velocity attained. A champion bicyclist ventured to try a ride on this monster, and found it necessary to cling inconspicuously to a lamp-post in order to dismount. A man of ordinary size is enabled to ride this bicycle by means of a secondary treadle placed upon the usual crank, and connected by a rod, the action or stroke being what is termed reciprocatory. The wheel is 280 inches in circumference.

—The closing games of the season of the New York Athletic Club, open to amateurs, will be held on Tuesday, Nov. 5, 1873, commencing at 2:15 p. m. Entries close on Friday, Oct. 25, 1873. The following games will be given:

Handicaps—1. 100-yards race; 2. 250-yards race; 3. 440-yards race; 4. $\frac{1}{2}$ mile run; 5. two-mile walk; 6. 1-1/4 mile hurdle race; 7. 100-yards dash; 8. 100-yards race; 9. 200-yards race; 10. 400-yards race; 11. 800-yards race; 12. 1 mile race; 13. 2 miles race; 14. 3 miles race; 15. 4 miles race; 16. 5 miles race; 17. 6 miles race; 18. 7 miles race; 19. 8 miles race; 20. 9 miles race; 21. 10 miles race; A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 FULTON STREET, NEW YORK.

[Post Office Box 933.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 35 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, OCTOBER 31, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. FANKS, Business Manager. S. H. TURRILL, Chicago, Western Manager.

OUR FOREIGN CIRCULATION.—FOREST AND STREAM circulates in sixty-eight towns in the twenty-seven following named foreign countries:

England, Ireland, Scotland, Wales, Germany, Cuba, South America, Bermuda, New Guisada, Italy, France, New Zealand, Holland, Prussia, New Foundland, Japan, Belgium, Sandwich Islands, West Indies, Switzerland, Russia, India, Denmark, Norway, Australia, Austria, and Spain.

AUSTRALIA.—We have received a copy of the special edition of the *Illustrated Australasian*, which was prepared for circulation at the Paris Exposition. We presume that others who, like ourselves, have seen this publication, will be surprised at the wonderful growth and progress attained by Australia in a few years. Melbourne, from a collection of shanties in 1851, has increased to a magnificent city with public buildings on a scale that would do credit to the largest towns of Europe or this country. Two years from now an industrial exhibition is to be held at Melbourne, the buildings for which have been designed. It promises to be a very grand affair, and we trust that America will be well represented.

MOOSE!—We have had the pleasure of examining two moose calves, male and female, which arrived in this city by steamer from Nova Scotia on Saturday last. These beautiful animals were taken to the stable of W. F. Morgan, Esq., where, upon being removed from their crates and placed in a loose box, they made themselves entirely at home. They are but five months old, but as large as good sized ponies, and very gentle. Their destination is the deer paddocks of the Adirondack Club at the foot of Mount Marcy, where they will join two others of the same species, the desire of the club being, if possible, to propagate them and stock their grounds.

Ex-Gov. O. F. Winchester, of New Haven, Ct., and President of the Winchester Rifle Manufacturing Company, arrived in this city from Europe last Tuesday.

RETURN OF THE HOWGATE EXPEDITION.

THE preliminary expedition of the Howgate Polar Colony returned last week after having accomplished, as far as limited means would permit, the purposes for which it had been dispatched.

The schooner *Florence*, in charge of Captain Tyson, well equipped, and with a scientific corps on board, left New London August 2, 1877, and arrived at Cumberland on the 12th of the next month. The long winter was spent at Annatook Harbor, in latitude 66 deg. 23 min., and longitude 68 deg. 45 min. It had been understood that a relief vessel would soon follow them, and a permanent colony be established as a basis for further operations. Congress failed to pass the necessary act, and, for the time at least, the little *Florence* was left in the lurch. Her instructions, however, were of a thorough nature, and, thanks to the foresight of Captain Howgate, covered the possibility of the failure of Congress to establish the expedition upon a sound footing. Though compelled to return after a most tempestuous and dangerous voyage, in which there were added to the ordinary perils of the deep the hardships of a severe climate and the terrible risks of navigating an ice-bound sea, the expedition has been fairly fruitful in results of a scientific nature, and the stock of our knowledge concerning life and vegetation in high latitudes has been materially extended.

Professors Kunlin and Sherman were continually on the lookout for fresh specimens of the animal and vegetable kingdoms, especially those of a character seldom to be met with, and concerning which we are still more or less in the dark. Away from the ship, undergoing martyrdom for the sake of science in rudely-built huts of snow, and subsisting upon the most meagre kinds of food, they collected a large assortment of skins, eggs, skeletons, birds, and flora, which will give an ample field for research, and ere long grace the museums of the country. The lowest temperature experienced was 45 deg. below zero, the average for the winter being in the neighborhood of 25 deg. below.

When the breaking up of the winter allowed them a chance to free themselves from the pack, they made the best of their way to Disco, reaching the Danish post July 30, 1878; and failing to meet with the promised aid, turned their craft homeward after a season of trying exposure and perilous adventure. After putting into St. Johns, N. B., for provisions, the *Florence* was again put underway, and reached Provincetown, Mass., October 26, after a very rough passage, during which the schooner sprung a leak, necessitating a constant working of the pumps to keep her afloat. Throughout the expedition Captain Tyson gave fresh proof of his fitness for the responsible duties delegated to him by Captain Howgate, and the successful manner in which he carried his vessel and crew through the trying ordeals that faced them for many months is ample proof that the confidence in his abilities, born of his conduct during former expeditions, and his memorable drift of more than a thousand miles on an ice floe, has not been misplaced. It is to be regretted that so energetic and capable a leader did not receive a more liberal support from his country; for, in that event, there seems little doubt but what he would have been the means of securing to America the distinction of first having planted her national flag upon the very axis of the earth. If the *ultima thule* of all Polar expeditions has not been reached, the voyage of the *Florence* has by no means been barren of result.

THE SPECULATIVE RANGE.

THE establishment of the West End range in New Jersey, the opening of which is reported in our rifle columns, marks a new step in rifle practice. It is a speculative move. The directors have started it with the primary object of encouraging rifle practice. In this they are not unique. All ranges are started for this end, but they have a secondary aim—the evolution of dividends. The concern is to pay, at least that is the expectation of the dozen or more men who have put their money into it, who have secured the co-operation of the Erie Railway Company and are now ready to have the riflemen of the metropolis make use of the privileges offered. All this is perfectly legitimate. There is no reason why, if a paying clientele can be secured among the riflemen of any one locality, some person, or company, should not cater to it, and give an equivalent in conveniences and facilities for which the marksmen are willing to pay? Such an organization, properly conducted, considering itself merely as a machine, may live and prosper, but it must not become smothered; its dealings must be rigidly, without partiality, between its patrons, and the record of work done must be as exact as Bible truth. There has been no end of the amount of labor of love which has been done thus far in the growth of rifle practice in this country. Much of it has been very poorly done, and at a costly rate. Now, if a purely business corporation shall step in and take these duties upon itself, riflemen will have no objection to pay a fair price for any conveniences they may enjoy. In any event the experiment is an interesting one, and be it successful or otherwise will be closely watched by all interested in rifle practice.

WELCOMES FROST.—At last a change for the better has set in. The long looked for frost has made its appearance in the South, and the entire extinction of the terrible disease, which has so long borne heavily upon our brethren of the Mississippi

Valley, seems to be near at hand. Those who can still remain away from the seats of the scourge will do well in not returning too hastily. Those who must go, however, should exercise due care until the very last germs of the disease have been eradicated.

—Since our humorous editor began to scintillate, a few months ago, all the newspaper chifloniers and buzzeris honor him by staling his best sparkles and giving him no credit. That is natural.

GAME PROTECTION.

MEMORANDUM.—We have received the following circular dated Grand Rapids, Oct. 10:

Dear Sir—The President of the Michigan Sportsmen's Association for the Protection of Fish, Game and Birds, has appointed the following gentlemen to prepare papers for presentation at the next annual session of the association, to be held at Lansing on Tuesday, the 21st day of January, next (1879), commencing at 2 o'clock p. m., and to continue three days, or until the work of the session is finished, viz:

On Laws for the Protection of Game Animals of Fur and Feather—H. B. Ransy, East Saginaw; D. H. Fitzhugh, Bay City; C. B. Headley, East Saginaw.

On Fish Laws, Including Propagation as well as Protection—J. H. Miller, Richland; Frank N. Clark, Northville; A. J. Kelllogg, Detroit.

On Trespass Laws and the Mutual Rights of Sportsmen and Landowners—L. D. Norris, Grand Rapids; T. Stewart White, Grand Haven; H. H. Brown, Battle Creek.

On Enforcement of Game, Fish and Trespass Laws—E. C. Nichols, Battle Creek; W. O. Colburn, Detroit; E. F. Mulliken, Howell.

On Nomenclature, both Popular and Scientific—G. Archie Stockwell, Port Huron; N. A. Osgood, Battle Creek; S. T. Holmes, Bay City.

On Sporting Dogs—John E. Long, Detroit; E. N. Gillman, Detroit; E. C. Sanborn, Baltimore.

It is expected that these committees will be prepared to report in full, so that the business of the session may be transacted promptly and completely. If any member of any committee cannot serve, he will please notify the President at once, so that his place may be filled by someone who will act. Voluntary essays or papers on any subject pertinent to the objects of this association are respectfully and earnestly solicited, and should be sent (if the writer cannot be present) to either H. H. Hubbard, Battle Creek; C. B. Headley, Saginaw; H. B. Blackman, Howell, the Committee on Voluntary Essays and Papers, or to the President.

We ask the particular attention of every individual who may see this circular to the importance of securing the enactment of more wise, simple and efficient laws for the protection and preservation of the wild animals of fur, fin and feather, whose flesh constitutes so important and nutritious a part of the food of the people of the State. All game protection or sportsmen's clubs in Michigan are earnestly solicited to send delegates to the next session and join in the State Association. Each subordinate club is entitled to five delegates. Individual membership is also solicited. We want the influence of every citizen of Michigan to assist in our humane and humanizing work. By order of the President

J. C. PARKER, Sec.

These gentlemen of Michigan are taking the right course, and are setting an example which should be followed by every State wherein there is a State game protective organization; and in those States where such organizations do not exist, they ought to be speedily formed. Another State which is equally awake and foremost in its practical efforts, is old Virginia. We commend the two States named to the consideration of all sportsmen. Whatever they accomplish will stand hereafter as permanent useful work, representing and constituting a substantial part of the fabric and plan of universal game protection for the whole country.

Our readers may have not forgotten that the "International Association for the Protection of Game," which comprises 250 members selected from among the best scientific material in the country, at a meeting held so long ago that its age is ancient, appointed committees on Law, Nomenclature, and Distribution of Species, to devise and frame a code of laws adapted as nearly as possible to the climate and requirements of every section of the United States and Canada. That much valuable work has been done by these Committees we are well aware, and we do not despair of its seeing the light at some future day. Meanwhile, what separate States or individuals may do, only adds the general effort, simplifies the work, and eliminates obstacles. It may not be possible to reach a finality for years to come; but we are firmly convinced that we shall some day have a code of laws so sensible and so wise that all sportsmen will welcome and abide by them, and nothing will conduce so directly to its speedy adoption as the separate investigation and action of individual States like Michigan and Virginia.

CENTRAL NEW JERSEY ASSOCIATION FOR THE PROTECTION OF GAME AND FISH.—We received a very pleasant visit last week from Dr. Charles A. Hart, formerly of the U. S. Army, who brought us a certificate of membership as a compliment from the society and gave us much interesting information respecting its operations in protecting and propagating game. Col. William H. Sterling is President of the society and Mr. Force, Secretary. The society has about 1,000 black bass spawnners nicely located in a stream with rocky bed, and 200 brook trout in another stream. There are many quail now on the territory under their charge, but they will turn out a lot more of the birds next spring. There are plenty of rabbits, also. Col. Sterling, who is a very enthusiastic breeder of game, has now a fine colony of English pheasants on his premises on the Eastern Shore of Maryland, which he planted about three years ago. They are now breeding and doing well.

BLOOMING GROVE PARK ASSOCIATION.—This flourishing club was organized to promote game protection, bro-d game, afford sport to its members and friends, and a pleasant resort to their families and themselves at all times. It owns 12,000 acres of land in Pike County, Pennsylvania, a most commodious house, and other very desirable property: as will presently appear. On Tuesday night a large meeting composed of many of its wealthiest and most enthusiastic stockholders, was held at the Hoffman House, this city, to hear the report of the summer's work and arrange for the deer hunt on their grounds to-morrow. In the absence of Dudley Field, Esq., the President, Mr. Chas. Hallock was called to the chair. T. H. B. Hughes was appointed Secretary *pro tem*. The minutes of the May meeting were read and approved.

John Avery, Esq., of the N. Y. Department of Sewers, made a report from a special committee on drainage. He reported a perfect system of drainage completed for the premises.

Dr. E. Bradley, from the Executive Committee, made a long and able report of the most gratifying character. He said that since the May meeting, a new road, seven miles long, underdrained and ballasted and equal to any road in the county had been constructed from Millville, on the Honesdale branch of the Erie R. R., to the Club House at the Park, at a cost of about \$3,000, which outlay only about \$500 remained to be paid. Mr. John Denning, a wealthy resident of Millville and a member of the club, had contributed most liberally in money and labor to the enterprise; the balance unpaid was due to him. Although there is a grade of 900 feet to surmount, a buggy has been driven over this road in one hour. Application will be made to the Pennsylvania Legislature next winter for privilege to erect tollgates obstructing the main trail of the road to prevent planting of timber, railroad ties and blue stone from the territory of the Association. Mr. Denning has opened his residence at Millville as a half-way house for visitors who arrive at night and wish to drive out in the morning. The club has bought and owns a 3-seat covered Concord wagon, and a buckboard to convey visitors in to the railroad to the Club House, and a very fine team of horses. A third horse died.

Several other club improvements are an ice house, carpenter shop, barn, woodshed, store room, cutting room, and a cemented cistern of 348 barrels capacity, connected with the club house by leaders and force pump. Twenty-seven new rooms have been furnished, and the whole number (89) are now supplied with one or two beds each. On Fourth of July week 70 people were comfortably accommodated. A road one-half a mile long has been made from Lake Giles where the club house stands to Beaver Lake, with wharves at the terminal and boats and rustic waiting houses at both lakes. There are now 13 boats distributed among the several lakes on the domain. Bathing houses for ladies have been built near the boat house on Lake Giles, and the road to Lake Laura (6 miles) has been much improved. An excellent gamekeeper's lodge has been made at Lake Laura. The circular drive around Lake Giles (3 miles) is in progress, and completed when the boat house is finished. The Club House is being constructed at the sole expense of Cassius M. Reed, game proprietor of the Hoffman House, and the money is in the treasury. When finished there will be rustic seats at intervals along the shore, which is for the most part wooded. Col. Bowen, of the Erie Railroad, has interested himself much in the general enterprise, and the Erie Company has furnished excursion tickets at very low rates. Three hundred tickets of this class have been sold this present season. Guests have come from other directions, of course. The Club membership has been largely increased, and now numbers 110 live and active men. Among other new members is Wm. H. Furman, Esq., the well-known fish culturist, who has arranged to stock all the headwaters of the streams (which aggregate some 20 miles) with trout, and keep them stocked. The Count Mazelli, a French nobleman, has cleared three acres of ground for a pigeon shooting field, and donated five sets of traps. He has also secured 150 pairs of English rabbits for planting, and they will arrive out in April and be turned loose. The premises are now well protected by faithful game keepers. Deer and grouse shooting prize well. Bass fishing has been excellent, 1,500 fish have been caught, but a large proportion were returned to the water alive. Nevertheless more bass are to be supplied at once. There is a large supply of wild rice ready to be sown around the two marshy lakes (six of the eight lakes have wooded marshy shores), to attract wild fowl. Some seeds of the giant North American water lily have been sown (*Nelumbium luteum*). Next year a windmill to supply the house from the lake, to feed fountains and protect against fire, will be built, also a telephone. Dr. Bradley further stated that he had spent 18 weeks at the Park to pass summer with his family. He had known of no sick, save whatever among any of the guests during that period. There was no location more healthy.

Dr. J. Russell Strachan spoke of the importance of planting patches of grain—20 acres or less—as feed for the game birds and animals; and of establishing brush houses about the woods as shelter for birds in winter, and of scattering grain about for food. He showed how new berries would be attracted from all districts of the adjacent country.

Next year he read from Dr. M. Goldsmith, of Holland, Vt., recommending the introduction of Nevada and Mountain quail: also a letter from Superintendent Holland, stating the situation at the Club House, and that all preparations were made for the expected excursionists.

In reply to Dr. G. Croly Esq., of the *Graphic*, Dr. Bradley stated that the financial condition of the Club was most satisfactory. Its resources in timber were ample to pay off all its debts; he now had no improvements, and a member who had named had agreed to pay sufficient for the timber and stone to liquidate its indebtedness. But the club did not wish to waste its resources. It preferred to raise money in other ways.

Count Mazelli suggested that voluntary subscriptions be made by new members.

Mr. Brown proposed to sell bonds.

Mr. Thomas proffered personal aid.

Finally, it was moved by Mr. Hughes and seconded by Mr. Croly, that a committee be appointed to solicit from new members subscriptions to the Improvement Fund Bonds—\$500 of the proceeds to be applied to new improvements and the balance to wipe out accrued liabilities. Carried, Messrs. Bradley, Hughes, McGinnis, Geo. Brown and Mr. Thomas were appointed committee by the Chair, with power. Several hundred dollars were subscribed upon the spot.

A motion of Mr. Hughes was adopted to add at once to the supply of bass and trout in the Park waters.

The meeting adjourned.

It was ascertained that at least thirty visitors could attend the Deer Hunt to-morrow (Nov. 2) and a special car was engaged to take them over the Erie road. Among others are Col. Wingate, Capt. Hardy, Count Mazelli and Dr. Hart, U. S. A.

The Rifle.

THE COLUMBIA RIFLE ASSOCIATION.

There may be a few more nooks about the metropolis where a rifle range may be sandwiched in, but they will not stand long without pre-emption for such use, so indefatigable are the riflemen and their purveyors in securing new range privileges. The explorers who fixed upon Creedmoor, of course, had better choice, and took the best they could find; certainly no better place as a site, pure and simple, irrespective of the question of accessibility, has yet been discovered. But it was felt that a place, however good it might be, which could only be got at when it suited the convenience of a hostile railroad company had a weak point. Glendrake was opened, and was not given a chance to live by the company who had it in charge. The semi-private range of Morsemere turned out some excellent mid-range scores, but it did not fill the bill as a popular range. Little grounds here and there were opened. Britton was the next spot pitched upon, and the Jersey salt meadows began to find, after all, that they had a use. But there is more than a single salt meadow in Jersey, hence naturally there should be more than one rifle range, therefore came the establishment of the Columbia Rifle Association. The aim has been all along to get a range which could be used by riflemen at any and all ranges, and yet should be so located as to be generally readily and cheaply. There are a thousand and one minor conveniences and necessities, but the essential points are the all distance facilities and the ease of access. The range at West End, Hudson County, N. J., certainly does possess these. A bullet may speed 1,500 yards between firing point and target, across a section of country as level as standing water can make it. The range is really a piece of marsh land, with a few hummocks at one end, on which the targets have been fixed. Shade is wanting, or will be, when the hot summer days shall come, and mosquitoes will, no doubt, be plentiful about those times, but on the whole the west-end range is a good working one, and should be popular when the et ceteras shall have been provided, and a liberal management put at its head. The list of officers and directors is a good one, those for the present year being:

Officers—Hon. E. P. O. Lewis, President; Capt. Leslie C. Bruce, Vice-President; Col. B. W. Spencer, Treas.; Hon. John Kennel, Sec.; Major Henry Fulton, Col. Chas. H. Braine, James A. Reading, Range Committee. Directors—Major Henry Fulton, Colonel C. H. Braine, James A. Reading, Hon. R. F. Kane, Hon. E. P. O. Lewis, Col. D. S. Steele, Major A. Anderson, Capt. R. C. Coleman, Hon. S. S. Parramore, Col. John Bodias, Capt. L. O. Bruce, Hon. John Kennel, Colonel B. W. Spencer, Colonel B. F. Hart, Hon. G. A. Hobart.

The target arrangement is a peculiar one, not yet fully carried out, but when completed it will be compact, if it possess no other advantage. The mantle system is followed, but instead of scattering the targets about in rows, they are set in tiers, and the firing points established as fixed firing stations. From 100 to 1,500 yards it is intended to have mantles, set one behind the other in a line from the firing point. The targets of canvas, swung on a post, coming in toward the marker, with all the unused targets drawn in. The plan really reduces itself to the usual shifting of the marker from one mantle to another, instead of the usual shifting of the markers from one firing point to another.

On the opening, last Saturday, a very full representation was had of shooters, and those interested in rifle practice. There was the usual Directors' Match, but untoward hitches, and the opposition of the professional markers employed, to having their practice spoiled in the soft mud, delayed the work so far that this match was abandoned, and the day's work was opened with a short short-range match, open to all comers; 100 and 200 yards; ten shots at each; any rifle. In this the leading scores were as follows, the three first being the prize winners:

200 yards.		200 yards.	
W. M. Farrow.....	4 3 4 5 6 5—33	4 3 4 5 5 5—33—56	
A. Anderson.....	5 4 5 5 5 5—33	4 3 5 5 5 5—32—56

N. Angel.....	4 5 0 4 4 4—31	4 2 0 3 3 3—19—50	

The military gentlemen present were given an opportunity to do a bit of team work, and New Jersey was humiliated and taken the York target, when the leading places were easily taken by the visitors. The conditions of the match made it open to teams of five from any National Guard Organization in the United States; 200 and 300 yards; rounds, ten at each distance. Competitors to appear in the uniform of their corps and use the rifles with which the organization to which they belong is armed. The first prize was a great silver-mounted Italian drinking horn, presented by the President, Hon. E. P. O. Lewis. The trophy was valued at \$550, and went to the team of the Ninth New York, the scores standing:

Ninth Regiment N. G. S. N. Y.			
Sergeant A. Strole.....	4 4 3 4 5 5—33	5 0 5 4 5 5—32—54	
Sergeant W. H. Nordbrack.....	4 4 3 4 5 5—33	4 5 5 4 5 5—32—54

A long-range match was started to go over the 800, 900 and 1,000 yards range, fifteen shots each, any rifle. Lateless, however, prevented anything beyond the completion of the first range, where Eugene W. Decker made a perfect score of 75 points, Gilbert L. Morse Jr., Capt. E. A. Perry, 60, and H. H. Jocelyn 68. Another day was set for the completion of the contest, and the party from the range were, in twenty-five minutes by train and boat, put back in the city, a contrast with the hour or more travel to and from Creedmoor, which did not fail to bring out favorable comment.

VERMONT—Brattleboro.—The autumn meeting of the Ft. Dunmore Rifle Club closed on the 28th with a competition for Hooker Medal; distance, 400, 500 and 600 yards; 10 shots at each distance. Score:

	400 yds.	500 yds.	600 yds.	Total
Chills.....	45	42	41	128
Hobbs.....	41	45	41	127

—The Roxbury City Guard had a very good meeting at the Walnut Hill (Boston) range of the 22d, forty-one members participating. The weather was delightful, the wind blowing steadily across the range, the clock indicating 3 o'clock nearly all the time. Match No. 1 was open to every member of the company, five rounds at 200 yards. The winners were as follows:

H. T. Rockwell.....	21	H. C. Gardner.....	19
Corp V. W. Lihgrow.....	19	Corp F. J. Andrews.....	17
Leut Matthews.....	15	Leut J. E. M.	15
N. A. P.	15	Sergeant D. C. M.	15

Match No. 2—Five rounds each at 200 and 500 yards; open only to those who made 15 points or more in previous match. The winners were as follows:

	200 yards.	500 yards.
H. C. Gardner.....	4 3 5 5 5—33	5 5 5 4 4—28—53
N. A. P.	4 3 5 5 5—33	5 5 5 4 4—28—53
W. L. G.	4 3 5 5 5—33	5 5 5 4 4—28—53
H. T. Rockwell.....	4 3 5 5 5—33	5 5 5 4 4—28—53
H. C. Gardner.....	3 2 4 3 5—26	5 0 0 0 0—5—21
Leut Matthews.....	4 3 5 5 5—33	5 5 5 4 4—28—53

Match No. 3—"Consolation," five rounds at 200 yards; open only to those who made less than 15 in first match. Winners:

J. C. M.	13	Sergeant P. Prager.....	17
J. C. M.	13	J. C. M.	16
J. C. M.	13	J. C. M.	16
J. C. M.	13	J. C. M.	16

Match No. 4—"Nursery"—Five rounds at 200 yards; open to those only who made ten or less in first and third matches:

Capt A. W. Hersey.....	16	F. H. McKelvey.....	8
G. W. L.	11	Corp W. H. H.	6
J. C. M.	10	J. C. M.	8

No. 5—"Skirmishers" match, open to every member of the company; seven rounds—four in advancing and three in retreat. Winners:

H. T. Rockwell.....	2 3 3 5 5 5—30	J. C. M.	4 0 4 4 5 5—30
N. A. P.	2 3 3 5 5 5—30	H. C. Gardner.....	4 0 4 4 5 5—30
Sergeant Griffin.....	5 3 3 4 5 5—31		

—The Medford Rifle Association had a very satisfactory little fall meeting on the 21st instant, at its range about a mile from the Boston and Maine depot, Medford Centre. The weather was delightful, a gentle westerly breeze blowing across the range during the early part of the shooting, dropping to almost a calm as the day progressed. The light was good, though at times the bright sun caused a mirage, and the conditions may be said to have been every way favorable to good scores. Numerous ladies witnessed the sport; several carriage loads of sight-seers coming upon the grounds. Ample arrangements, too, had been made for the bodily comfort of the spectators. The targets were opened at 9 o'clock for bull's-eye practice, and shortly afterward the regular matches were called. The first decided was the "State team" match, at 200 yards. This competition was open to teams of five from any organized rifle association; ten rounds per man; any rifle and position within the rules; entry fee, \$5 per team. The prizes were: First, one-half the entire amount of entry fees, and for the second, the entry fee was refunded. The scores standing:

	200 yds.	300 yds.	400 yds.	500 yds.	600 yds.	Total
N. W. Arnold.....	5	4	5	5	5	24—46
L. W. Farrer.....	5	4	5	5	5	24—46
S. E. H.	4	4	3	4	5	24—42
N. W. Arnold.....	4	4	5	4	5	24—42
D. W. Allen.....	4	4	5	4	5	24—42

Massachusetts Rifle Association.									
David Kirkwood.....	4	4	4	4	4	4	5	5	43
W. H. Jackson.....	4	4	4	4	4	4	5	5	43
J. C. Lowell.....	4	4	4	4	4	4	5	5	43
W. E. Garfield.....	4	4	4	4	4	4	5	5	43
E. B. Souther.....	4	4	4	4	4	4	5	5	43

First Team—Medford H. A.

J. R. O'Brien.....	4	4	4	4	4	4	5	5	43
L. L. Hubbard.....	4	4	4	4	4	4	5	5	43
H. K. Richardson.....	4	4	4	4	4	4	5	5	43
H. A. Cushing.....	4	4	4	4	4	4	5	5	43
J. Grady.....	4	4	4	4	4	4	5	5	43

Second Team—Medford A. R. A.

F. W. Hayer.....	4	4	4	4	4	4	5	5	43
J. E. Tiedel.....	4	4	4	4	4	4	5	5	43
C. H. Russell.....	4	4	4	4	4	4	5	5	43
J. H. James.....	4	4	4	4	4	4	5	5	43
J. W. Vining.....	4	4	4	4	4	4	5	5	43

The "ring" being open to all comers, had a large number of entries. The rules of the match are that it shall be kept open until the proceeds equal the value of the prizes; winners to be decided by the aggregate of two scores, whenever made; ties to be decided by string measure; distance, 200 yards; rifle and position, any; rounds, five; target, 24in. in diameter, divided into inch rings, and counting from twelve (cent) to one on the extreme circumference; shots not to be spotted, but on target to be removed, with flags, for examination and record. The prizes are: First, \$10; second, \$8; third, \$8; fourth, \$5; fifth, \$3; sixth, \$3; seventh, \$2; eighth, \$2; ninth, \$1; tenth, \$1. The first prize is to be awarded to the person making the best record; second, third best; third, fifth best; fourth, seventh best; fifth, ninth best; sixth, eleventh best; seventh, thirteenth best; eighth, fifteenth best; ninth, seventeenth best; tenth, nineteenth best.

MASSA OUTFITTERS.—The Gardner Rifle Club at the Hackmatack range in that town were out last week for practice. Distance, 200 yards, off-hand; two scores of ten shots each; possible 240 Massachusetts, 100 Creedmoor.

	M. C.	M. C.	Totals.
I. N. Dodge.....	102-45	102-44	204-89
G. R. Pratt.....	97-43	101-43	198-86

B. F. Butler.....	85-33	89-39	174-78

On Saturday, the 10th inst., the fourth and the final competition for a champion rifle badge was held by the Worcester sportsmen. Two contestants made the score, as follows:

Distance, 1,000 yards; A. L. Rice, 93; A. G. Mann, 84. The wind was blowing very hard. The badge now becomes the property of Mr. Rice, he having taken the lead in three of the four trials made.

At North Brookfield a sportsman's club has been organized and has 40 members. Its officers are: Warren Tyler, M. T. Wentworth, L. H. Hobbs and George Campbell, Vice-Presidents; M. D. Wires, Secretary; O. H. Draper, Treasurer.

The Sportsman's Club at Westborough is reported to have disbanded.

At Millbury the Slocumb Guards, a company in the Tenth Regiment, M. V. M., were out for practice Saturday, the 19th. There was not a large turn-out, owing probably to the weather. The four best scores out of a possible 25 were as follows:

A. G. Coffin, 19; Charles Simmons, 18; Louis N. Bell, 16; O. G. Green, 14.

The Woburn Phalanx, of Boston, enjoyed one of the delightful fall days of last week in a target shoot at the Walnut Hill Range. The men went down with their brass band. There were ladies, too, and generally it recalled one of the old style bouts on the range, when there was pretty much everything accomplished except good scores. All the matches were at 200 yards, with military style. The first man on the list having but 8 points. In the second match, same number of shots, Private J. Hull won with 18 points. The third contest, with seven shots per man, the leading scores stood:

Pvt. Kelly.....25 Capt. Welr.....1 Pvt. Kenney.....7
Capt. Grady.....14 Lt. Liddle.....1 Pvt. Simmons.....7
Pvt. Richardson.....14 Pvt. Seely.....1 Pvt. Simmons.....7
Pvt. Duran.....14 Pvt. Trull.....8

HARVARD VS. MEDFORD.—The return match between the Medford and Harvard University teams at 200 yards was completed on the Bellevue Range, Medford Centre, on the 23d. Considerable interest was felt in the result of this contest because of the close finish of the first trial of the series, when the teams having tied, the Harvards won by the misfortune of the Medfords in having an "outer" in their score. On the second day the Medford team reversed the tables, and, by excellent shooting, led their opponents by 24 points at the end of the match, attaining a high average, 41.6 out of a possible 50.

The weather was quite pleasant, but as the shooting progressed the air grew cold, the match flushing so late that the black disks on the targets showed faintly and indistinctly while the last rounds were being fired. Sighting shots were allowed previous to the contest. At 200 yards, ten rounds per man. Following is the full score:

Medford Amateur Rifle Association.									
J. E. Osborn.....	4	4	4	4	4	4	5	5	45
H. B. Cushing.....	4	4	4	4	4	4	5	5	45
L. L. Hubbard.....	4	4	4	4	4	4	5	5	45
H. K. Richardson.....	4	4	4	4	4	4	5	5	45
J. H. James.....	4	4	4	4	4	4	5	5	45

Harvard University.

T. Russell.....	4	4	4	4	4	4	5	5	43
H. W. Powell.....	4	4	4	4	4	4	5	5	43
F. W. Shapson.....	4	4	4	4	4	4	5	5	43
C. A. Parker.....	4	4	4	4	4	4	5	5	43
T. Leo.....	4	4	4	4	4	4	5	5	43

The time and place for shooting the third and decisive match between these teams is not yet decided upon, the choice resting with the Harvard Club. The match will probably be shot at Bellevue range.

THE CONNECTICUT STATE TROPHY.—The Willowbrook Range at Berlin, Conn., witnessed some excellent shooting on Wednesday last in the third contest for the cup presented to the Connecticut Rifle Association by the State of Connecticut. The conditions of the match are ten shots each at 500, 800 and 1,000 yards, town teams of four from any town in the State being allowed to enter. The winning team holds the trophy for one year. In 1876 the trophy was won by Middletown and in 1877 by Hartford. Teams from Hartford, Middletown and New Britain have competed each year. Badges for the individual members of the winning team have also been presented by Mr. Steele.

On Wednesday the shooting Saturday commenced about 10 o'clock A. M. Lots were cast for the assignment of targets. Hartford going first to the 500 yard range, New Britain to 800 and Middletown to 1,000. In the three years of the competition the scores have stood:

Hartford.....	1876	1877	1878
New Britain.....	437	504	504
Middletown.....	430	468	450

At the close of the shooting the result was announced by Mr. T. Sedgwick Steele, who was chosen executive officer of the day in the morning. Mr. G. W. Yale, captain of the Hartford team, then turned over the trophy to the New Britain team, and Mr. Wm. Parker, captain of the New Britain team, received it. Mr. Yale also presented the individual badges to the members of the New Britain team. The following were the full scores made:

New Britain Team.									
Wm. Parker (Remington).....	500	500	500	500	500	500	500	500	500
J. R. Atkinson (Sharps).....	500	500	500	500	500	500	500	500	500

C. O. Case (Remington).....	500	500	500	500	500	500	500	500	500

Middletown.....	177	170	170	170	170	170	170	170	170

BRINTON RANGE.—A series of five competitions is announced at Brinton Range, N. J., November 1, at 1 P. M.; teams of 10 men, 10 shots at 200 and 300 yards, for the club championship cup; entrance fee, 50 cents each man each competition. The following clubs have signified their intention of joining the competitions: New York Rifle Club, Empire Rifle Club of New York, Railway Rifle Club, Bergen Point Rifle Club, and others are expected.

The first competition in the Sharps rifle match on the Brinton Range at 10 shots, 200 yards, any rifle, resulted in a victory for W. M. Farrow, with a score of 43 in the possible 50. If this gentleman goes on in his scouting way it will be a sufficient inducement for many similarly inclined but a trifle less able to remain out of a contest in which he shall appear as a competitor. The other scores were:

A. H. Hovell.....	48	N. O'Donnell.....	35	T. R. Roche.....	37
F. A. Davis.....	41	A. W. Dimeck.....	33	C. J. Donaldson.....	31
J. P. Ryan.....	41	B. Sauer.....	33	C. B. Palmer.....	31
J. M. Darr.....	41	H. Smith.....	33	J. A. Harty.....	31
V. Daly.....	40	A. McInnes.....	31	D. Loder.....	31

ZETTLER CLUB.—New York, Oct. 29.—Zettler Gallery, 207 Bowery, 10 shots, Creedmoor targets, 60 points possible:

M. B. Engel.....	48	C. Judson.....	45
W. M. Farrow.....	46	T. Broadway.....	44
C. G. Zettler.....	44	C. J. Zettler.....	44
M. Dorrer.....	44	G. A. Sherman.....	44
D. Culhan.....	43	C. Volars.....	40
N. Klein.....	43	N. D. Vals.....	40
D. Miller.....	43	F. F. Reyles.....	40

This is the fourth competition for a fine clock, to be won three times: Won by C. Judson on a score of 49; H. Oehl, 49; W. Klien, 47; M. B. Engel, 48.

G. A. SHURMAN, Secretary.

Seppenfelt Rifle Club, 177 Bowery, Creedmoor rules, 200 yards target reduced, possible 59, October 25:

H. Anderson.....	46	J. N. Chambers.....	43
V. Sautz.....	42	T. W. Keck.....	42
C. R. Kell.....	42	C. G. Walker.....	41
John W. Adams.....	42	D. Dorrer.....	40
Wm. Seppenfelt.....	42	J. Hoffer.....	40
J. M. (Scribner).....	42	A. Scholl.....	40
Ed. Story, Jr.....	42	S. H. Hoagland.....	38
Aug. Grunberg.....	42	H. Batenberg.....	35
L. Bachmann.....	42	J. W. Hemen.....	35

CONTIN'S GALLERY.—The seventh and final competition for the Marksmen's Badges of '78 took place Monday evening, Oct. 28, 1878. The average shooting was remarkably good, and there was a large amount of interest taken through the entire series of competitions. The badges are three in number, and were offered for weekly competition, open to all comers, to be won three times before becoming the final property of the winner. The conditions of shooting were: 10 shots, rifle 22-100 calibre, off-hand, at 300 yards, Creedmoor target reduced for the distance; rules of the N. R. A. The following are the best scores made by each competitor in the possible 50:

S. H. Stoley.....	43	C. E. Overbough.....	44	W. R. Hewitt.....	39
A. J. Howitt.....	43	F. M. March.....	44	E. B. Young.....	37
V. Sautz.....	42	D. Dorrer.....	42	H. B. Young.....	37
L. B. Steple.....	37	W. F. McDonald.....	44	J. F. Smith.....	37
M. M. Smith.....	42	N. B. Thurston.....	41	N. B. Waters.....	37
J. E. Dorrer.....	42	S. C. Long.....	41	C. P. Dorrer.....	37
Frank Ader.....	39	J. B. Wecker.....	41	H. Roudsman.....	37
F. G. Fulford.....	40	W. A. Barber.....	41	J. S. Sings.....	37
N. D. Dorrer.....	40	P. J. Callahan.....	41	O. B. Dorrer.....	37
J. W. Rosenbath.....	40	W. O. Wetherbe.....	40	H. D. Cornell.....	37
T. Fitz.....	40	A. Varn.....	39	W. H. Dorrer.....	37
W. H. Dorrer.....	39	J. W. Hemen.....	39		

—Mr. James S. Coulin has arranged a golden shooting match to run through the winter. The conditions prescribe that there will be issued 150 tickets at one dollar each, which entitles the holder to shoot ten shots at a "ready measurement" target, on which is inscribed the name of the marksmen, the number of his ticket and the date of shooting. The target is then placed in a sealed box, and as soon as the entire number of tickets are sold the targets are measured by the trusted parties and the prize awarded according to the various measurements. No competitor is entitled to win more than one prize. In case of ties, unless arranged by mutual consent, the parties must fire ten shots at new targets. Fourteen prizes will be paid in gold as follows: First prize, \$200; second, \$18; third, \$15; fourth, \$10; fifth, \$7; sixth, seventh and eighth, \$5 each; ninth, \$3; tenth, \$2.50; eleventh, twelfth and thirteenth, \$3 each; fourteenth, \$1.

—The fall meeting of the California Rifle Association was set for the 26th, 27th and 28th instants, the first day's shooting to take place at the Bay View Range, and the second and third days' contests on the San Bruno ground. Nine matches were provided, and with but one long-range match there, there was plenty of opportunity left to the military men to show their skill.

TARGET-HITTERS VS. GAME DROPPERS.—May I ask this question: Does shooting on the ranges, at the usual long ranges, ever make a rifleman a good game hunter? Does not that kind of shooting, using globe and peep sights, entirely unfit a man for quick, open-sight work in the forest or on the plains? My own experience says yes. I never knew a first-class target shot worth a—blessing after deer, elk or antelope. But I like to hear what others think on this point. I'll put "Texas Jack" against Mr. Hyde or Mr. Parli on the plains, and he will kill two to their one all the time, or more game on the same ground than both of them put together.

E. Z. C. J.
[A few of the Creedmoor experts are also not unused to work on game. What their success is at this style of work we do not know, but presume it is not great. The majority of our range shooters visit the firing points as a relaxation, and do not find time to go on hunting expeditions. The question whether one style of shooting unfits a man for the other can only be answered by a comparison of experiences. Ned gives his above; we shall be pleased to hear from others.]

THE TORONTO CLUB.—Garrison Common, Oct. 21.—Excellent scores were made. The men fired seven shots each at the ranges named, Mr. A. Bell putting in a perfect score at 200 yards, Wimbledon rules:

	200 yds.	400 yds.	500 yds.	600 yds.	700 yds.	Totals
A. Bell.....	25	22	30	21	115	
Geo. Lewis.....	25	22	30	21	108	
W. Crut.....	27	29	30	21	107	
P. Wilkinson.....	29	30	20	20	106	
John Little.....	29	30	21	21	106	
A. Andersen.....	30	21	22	27	106	
G. Manton.....	23	23	23	31	100	

—A new rifle organization has been formed at Trenton, N. J., and a range up to 1,400 yards has been secured.

POWDER TESTS.—Your issue of October 17 contained some experiments by Mr. Davison, which interested me very much; but why does Mr. D. put slow-burning powder against Curtis & Harvey's quickest, or Diamond grain No. 6? I have found that our best brands of quick powder will hold the bullets just as flat as the imported article. Let Mr. D. try the Hazard Electric No. 3 or 4 grain, and I think he will find a little flatter trajectory than with the Curtis & Harvey No. 6.

W. M. F.

Game Bag and Gun.

GAME IN SEASON FOR NOVEMBER.

Moose, <i>Alces maculatus</i> .	Red or Y. deer, <i>C. virginianus</i> .
Elk or wapiti, <i>Cervus canadensis</i> .	Squirrels, red, black and grey.
Flares, brown and gray.	Quail or partridge, <i>Orizyx virginianus</i> .
Wild turkey, <i>Meleagris gallopavo</i> .	Plumaged grouse or prairie chicken, <i>Capreolus capreolus</i> .
Woodcock, <i>Colinus virginianus</i> .	Curlew, <i>Numenius americanus</i> .
Ruffed grouse or pheasant, <i>Bonasa umbellus</i> .	Sandpipers, <i>Tringa</i> sp.
Plover, <i>Charadrius</i> .	Willetts.
Godwit.	Red or rice bird, <i>Delichonys oryzivorus</i> .
Halls, <i>Actitis virginianus</i> .	Wild Duck.
Snipe and Bay Breach.	
Caribou, <i>Tarandus rangifer</i> .	

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

¶ The frequent alteration of game laws makes such confusion that sportsmen are kept quite in the dark as to when shooting on various kinds of game is permitted. We therefore append the following table for reference:

States.	Plumaged Grouse.	Ruffed Grouse.	Quail.	Woodcock.
Ill.....	Sep 1 to Jan 15	Nov 1 to Feb 1	Nov 1 to Feb 1	Sep 1 to Jan 1

Iowa.....	Sep 1 to Dec 1	Oct 1 to Jan 1	Oct 1 to Jan 1	Jan 1 to Jan 1
Main.....	Aug 1 to Oct 1	Sep 1 to Dec 1	Sep 1 to Dec 1	Jan 1 to Nov 1
Mass.....	Sep 1 to Jan 1	Sep 1 to Jan 1	Sep 1 to Jan 1	Jan 1 to Jan 1
Neb.....	No Shooting	No Shooting	No Shooting	No Restrictions
N. H.....	Aug 1 to Feb 1	"	Oct 1 to Jan 1	Forbidden

GAME IN MARKET.—Plumaged grouse (prairie chickens), \$1.10 to \$1.25 per pair; partridge (ruffed grouse), \$1.10 to \$1.50 per pair; mallard ducks, 50 cents per pair; black do., 75 cents per pair; wild do., 60 cents per pair; broad bill, 50 cents per pair; teal do., 60 cents per pair; canvas backs, \$2.50 per pair; red heads, \$1.50 per pair; venison, saddle, 25 cents per pound; carcasses, 15 cents

During the war I supplied a great many of the pyramidal tents to the army, and in some cases with the sheet-iron outfit, and received many grateful and congratulatory letters from officers using them. Many of the tents are in use to this day in Arizona. Gen. McDowell, who used one in Arizona, pronounced it the best tent ever supplied the army.

We all thought rail shooting was pretty well over when October set in, but on a night of that singular bird appeared on our marshes about two weeks ago, and afforded considerable sport for some days. My partner and I started on the fifth to get the tide on Woodbury flats, and while rowing down the river we observed several bunches of ducks, familiarly known as stiff tails, flying along through Hough Howell's Cove.

"I believe my son's (a familiar expression of my partner) met their steel-heads," said he. "Have you any big shot in your cartridges?"

"I have eight made up No. 8," I replied, "and about a dozen of No. 8; the balance are ad No. 10."

"Have you any of that chilled shot of Sparks?" he asked.

"They are all chilled."

NEW JERSEY—Kinsey's Ashley House, Oct. 28.—Broad
bills, black ducks and sprig tails are plenty. Several bunches
of geese came on the past week. No brant yet. Your
correspondent bled twenty head in parts of two mornings last
week. First westerly winds and we make the feathers fly.
29th.—Some bags to-day of thirty.
29th.—Birds very plenty to-day. I just came in with a
bag of broad bills, two red heads, six black ducks—wind
north-west.

We all thought rail shooting was pretty well over when October set in, but on a night of that singular bird appeared on our marshes about two weeks ago, and afforded considerable sport for some days. My partner and I started on the fifth to get the tide on Woodbury flats, and while rowing down the river we observed several bunches of ducks, familiarly known as stiff tails, flying along through Hough Howell's Cove.

"I believe my son's (a familiar expression of my partner) met their steel-heads," said he. "Have you any big shot in your cartridges?"

"I have eight made up No. 8," I replied, "and about a dozen of No. 8; the balance are ad No. 10."

"Have you any of that chilled shot of Sparks?" he asked.

"They are all chilled."

Writing for the Press.—Causser knows that he will deserve and win the thanks of all managing editors if he can but impress these few simple rules upon the minds of those who write occasionally for the press:

I. Write upon one side of the leaf only. Why? Because it is often necessary to cut the pages into "takes" for the compositors, and this cannot be done when both sides are written upon.

II. Write clearly and distinctly, being particularly careful in the matter of proper names, and words from foreign languages. Why? Because you have no right to ask either editor or compositor to waste his time puzzling out the results of your careless scribbles.

III. Don't write in a microscopic hand. Why? Because the compositor has to read it across his case, at a distance of nearly two feet. Also, because the editor often wants to make additions and other changes.

IV. Don't begin at the very top of the first page. Why? Because if you have written a head for your article the editor will probably want to change it, and if you have not—which is the better way—he must write one. Besides he wants room in which to write instructions to the printer as to the type to be used, where and when the proof is to be sent, etc.

V. Never roll your manuscript. Why? Because it maddens and exasperates every one who touches it—editor, compositor and proof reader.

VI. Be brief. Why? Because people don't read long stories. The number of readers which any two articles have is inversely proportioned to the square of their respective lengths. That is, a half column article is read by four times as many people as one of double that length.

VII. Have the fear of the waste basket constantly and steadily before your eyes. Why? Because it will save you a vast amount of useless labor to say nothing of paper and postage.

VIII. Always write your full name and address plainly at the end of your letter. Why? Because it will often happen that the editor will want to communicate with you, and because he needs to know the writer's name as a guarantee of good faith. If you use a pseudonym or initials, write your own name and address below it. It will never be divulged.

IX. "These precepts in thy memory keep," and for fear you might forget them, cut them out and put them where you can readily run through them when tempted to spill innocent ink.

Causser's word for it those who heed these rules will be beloved and favored in every editorial sanctorium.—*Boston Transcript* Cauter.

EFFECT OF DIET ON LIQUOR DRINKING.—Charles Napier, an English scientific man, has been testing the truth of Liebig's theory that liquor drinking is compatible with animal food, but not with a farinaceous diet. The experiment was tried upon twenty-seven liquor-drinking persons, with results substantiating the Liebig theory. Among the more striking instances of reform brought about by a change of diet was that of a gentleman of sixty who had been addicted to intemperate habits for thirty-five years, his outbursts averaging one a week. His constitution was so shattered that he had great difficulty in insuring his life.

After an attack of *deltium tremens*, which nearly ended fatally, he was persuaded to enter upon a farinaceous diet, which, we are assured, cured him completely in seven months. He seems to have been very thin at the beginning of the experiment, but at the close of the period named had gained twenty-eight pounds, being then of about the normal weight of a person of his height. Among the articles of food which are specified by Napier as pre-eminent for antagonism to alcohol are macaroni, haricot beans, dried peans, and lentils, all of which should be well boiled and flavored with plenty of butter or olive-oil.

The various green vegetables are said to be helpful, but a diet mainly composed of them would not resist the tendency to intemperance so effectively as one of macaroni and farinaceous food. From this point of view high glutinous bread would be of great utility, but it should not be sour, such acidity being calculated to foster the habit of alcoholic drinking. A like remark may be applied to the use of salted food. If we inquire the cause of a vegetarian's alleged disinclination to alcoholic liquors we find that the carbonaceous starch contained in the macaroni, beans, or oleaginous aliment appears to render unnecessary, and therefore repulsive, carbon in an alcoholic form.—*New York Graphic*.

HORSE BISCUITS.—The horses of the German army are now fed with biscuits. These biscuits consist of thirty parts of oat flour, thirty parts of dextrinated pea flour, thirty parts of rye flour, and ten parts of linseed flour; sometimes of twenty parts of pea flour, twenty parts of wheat flour, twenty parts of corn meal, twenty parts of rye flour, ten parts of grained bread, and ten parts of linseed flour. The ingredients are made into biscuits. The first named mixture is the best. These biscuits are made with a hole in the middle of each, so they can be strung on a string, and hung to the saddle bow, or be carried by

the trooper around his waist. Each biscuit weighs, when baked dry and hard, about two ounces. Seven biscuits are broken up and given to the horse in the morning, moistened with water if convenient, otherwise dry; twelve at noon, and seven at night. After careful experiment in camp, on the march, and in garrison, they are reported by all the cavalry and artillery officers better than oats. A trooper can easily carry thirty pounds of these biscuits, which will furnish his horse with full rations for eight days, or will serve, with forage, for twelve days' hard marching.

THE BOLE RESIDENT OF CARSON CITY.—Riding one autumnal day in company with a party of borderers in quest of buffalo, we came upon a town standing silent and deserted in the midst of a prairie. "That," said one, "is Carson City. It did a good trade in the old wagon days, but it busted up when the railroad went farther west and the people moved on. There's only one man left in it now, and he's got snakes in his boots the hull year round." Marvelling what manner of man this was who dwelt alone in the silent city, we rode on. Only one house showed signs of occupation, and in it dwelt the man. We passed through the deserted streets and gained the prairie beyond when a shot rang out behind us and a bullet cut the grass to our left. "Hello! he's on the shoot," cried one. "Ride, boys!" and we rode. Carson City soon faded from view, but not so the memory of that "busted-up" town and its solitary indweller, who had perennial "tin jama" and was "on the shoot."—*From a Nevada Letter*.

EXPLORING THE FOOT HILLS OF THE ROCKY MOUNTAINS.—Some attaches of the school of Mines at Golden, Nevada, have been exploring the foot of Green Mountains under the direction of Prof. Lakes. A local paper says: The basaltic lava capping the table mountains above Golden were passed en route and their origin explained as a lava outburst from a fissure extending along the eastern flank of the mountains, from which a flood of molten material poured over the surrounding country and preserved, on the base of the Table mountains and the mesas of the divide, the ancient prairie from the denuding floods which, with these exceptions, have brought it to its present low level. This eruption was contemporaneous with similar overflows from Alaska to South America, which covered the region west of the Rockies with a lava flood thousands of miles in width and hundreds of feet thick, at a time when mountain making was going on in various parts of the world—when the Himalayas and the Alps were in their last throes.

—In 1831, at New Haven, Professor Silliman drove into a small maple tree a staple upon which to hang a lantern. The other day the staple was found inside a block of wood, and for a while people wondered how it got there.

—"Cheese it," according to our excellent and elegant friend Dr. Elliott Cones, is a corruption of "don't give it a whey."—*Washington Capital*.

Messrs. TIFFANY & CO., invite attention to the new patterns of their Plated Ware, made expressly for this season.

The articles are specially designed for their best trade, and the adaptability of forms to the uses for which they are intended has been carefully considered.

This ware is made of hard metal, soldered with silver at every joint, heavily plated, stamped with the name of the House, and guaranteed to be the BEST PLATED WARE MADE.

Gunpowder,

GUNPOWDER.

DUPONT'S Rifle, Sporting and Blasting Powder.

THE MOST PERFECT POWDER IN USE.

Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 78 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN. Nos. 1 (coarse) to 4 (fine), unequal in strength, quickness and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong and clean Powder of very fine grain for Pigeon shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," FGs and FFGs. The FG for long-range rifle shooting, the FFG and FFGG for general use, burning slow and not 1.

SPORTING, MINING, SHIPPING AND BLASTING POWDERS.—These are the most special grades for export. Mould, Cannon, No. 1 and No. 2. Dupont's Powder is the most perfect in the world. Powder manufactured to order of any kind of grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 WALL ST. N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long-range rifle shooting.

Gunpowder.

THE

HAZARD POWDER CO. MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6x10 lbs. A fine grain, quick and clean for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6x10 lbs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 55, 105 and 135 lbs. Burns slowly and very clean, packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER, ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb., 1878, the Grand Prix de l'Esime, an object valued at £169, and a money prize of £705, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 28 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 8 birds in succession at 32 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1876, beating 107 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 165,323. POOLER & JONES,
PATENT BOSS

Cartridge Holders and Belts.

The only practical cartridge holder in use. Will carry brass cartridges, and positively prevent waste from starting on shot. Suitable for either paper or brass shells. These cartridge holders can be easily attached to any hunting vest or coat front. A vest will hold 50 of the cartridge holders. Two dozen of these holders only weigh 5 ozs. One belt complete, with holders attached, only weighs one pound. The belt can be perfectly adjusted to fit either a slim or large man. Will deliver to any address, prepaid postage, on belts any number of loose holders on receipt of the following prices: Spring brass cartridge holders, per dozen, \$1.35; adjustable belts with 30 spring brass holders, complete, \$4. Elegant nickel-plated holders and buckles, the gayest and nicest belt in use, \$5. We solicit correspondence from dealers. All our belts are made of the finest Russia leather, and have Neck-Straps on (not shown in cut). Cash must accompany orders. Send money by registered letter on **Serena, Ill.**, or P. O. Money Order on **Ottawa, Ill.** Send 10 cent stamp for sample holder. Address all orders to **POOLER & JONES, Serena, La Salle Co., Ill.**

Card's Patent Rotating Glass Ball Trap.

NEW MODEL READY.
SEPT. 15, 1878.

EXCELS ALL OTHERS. Throws in every possible direction. No screen needed, as no one, not even a plover, can tell the direction the ball will take. Waste stationary if desired. All metal. WORKING PARTS NICELY FITTED. Send for Circular.

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

**Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.**

These Traps are the only ones that give satisfaction, as they are simple in construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the Rough Glass Ball, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

My IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old Style, \$6.

Parties buying glass balls will receive, in each barrel containing 250 balls, score book and rules for glass ball shooting, containing 40 pages.

[Volume 11—No. 14,
No. 111 Fulton St., N. Y.]

For Forest and Stream and Rod and Gun. LAID UP.

WEAK of limb and dim in eyesight,
Mourn the sportsman old and worn;
Sighing thine be of the lime-light,
And the burdens he has borne,
Gazes on his store of trout-rods,
On his guns and tackle all;
Thinks of when and where he used them,
Every summer, spring and fall.

Thinks of those who with him hunted,
In their loyal sporting prime;
How they dropped the antlered monarchs,
How o'er hill and crag did climb;
How on lakes of silvery water
Sped their birchen bark canoe;
How they gazed in the gloaming
To the camp, the tried and true.

Thinks of those who have been gathered
To the Hunting Grounds above—
Those who loved the Stream and Forest,
Shaded glen and lily cove;
Those who worshipped God in temples
Never made by mortal hand;
Those who glided in His greatness
With their Rod and Gun in hand!

—NED BONTLINE.

For Forest and Stream and Rod and Gun.

The North Shore of Superior.

I WAS "weary waiting" for the summer vacation before the boys came from college, and had the home preparations complete. Our guides had been secured by letter, and after reaching Sault Ste. Marie we had nothing to do but purchase our bulkier provisions and wait for the Silver Islet steamer. F. and I being old campaigners—he on the North Shore and I there and elsewhere—had reduced our "plunder" to the limits of necessities and such luxuries as would become necessities in so long a trip as we were to take. But supplies for a month for seven men, with Superior appetites, made no small store. The barrels of hard-bread, potatoes, onions and pork; the hams, flour, sugar, coffee and tea; the boxes of canned goods, together with the camp equipage, made heavy loads for two boats during the first week or two of the trip.

At the Sault we took the fine steamer *Ontario*, of the Sarnia line, and under the charge of her excellent captain, Robinson, we reached Silver Islet within twenty-four hours, notwithstanding a dense fog and several ministerial passengers, a combination of circumstances full of threatening to our safety, if we could rely upon the opinion of one of the steamer's hands, who said he was "ready to bet something would happen before reaching port with them ministers aboard."

We found at Silver Islet we had to have our goods duly entered at the Custom House and duties paid; but as we had most of the original bills of purchase, and the customs officer, Mr. John Livingston, was a gentleman, as indeed most Dominion customs officers are, we were detained only so long as was necessary to transact the business.

We left the port in our boats at about five o'clock in the afternoon. The sun shone upon Thunder Cape and Pic Island, and the scene, with breaking fog out on the lake and the bold heights of the cape and islands to the south, was a magnificent one. To the northeast were rocky islands and mountains, showing a varied and beautiful coast.

We camped that night, July 12, 1878, on the banks of a little inlet which we thought should be named Fly Harbor, or Mosquito Bay. The long, low fish, however, and mountains of Thunder Cape in view till late in the evening. We rigged our tackle and tried the rocks for a rise, but without success. The next morning we started early, hoping for a breeze to take us past Black Bay. We tried a few rocks as we passed along, but avoided the streams emptying into the bay on account of flies, which we were told at Silver Islet were very troublesome. We camped on the fish, but for several miles along there, we were in very heavy seas, and the buoyancy of our Mackinaw boats was pretty thoroughly tested. About 5 o'clock we sought a safe landing, and, finding a sheltered cove on an island near Lamb Island light-house, we settled

for a Sunday camp. The rocks rose a sheer precipice to the height of three hundred feet to the west of us, and a point jutted out to the east into the lake, so we were secure from the swell. After the wind quieted, as it almost always does as the sun goes down, F. and I went out on the reef to try a cast. The sea was still high, too high for comfortable fishing, but we took three trout, of one-half, one and a half, and two and a half pounds respectively, and one lake trout of about three pounds. I had a strike from a big trout which carried away two flies and a leader—being an old leader quite worn. While F. and I were fishing Morton had taken the rifle, and we found him with a brace of rabbits on our return. Indeed the island had a dense rabbit population, and on Sunday they invaded the camp—at least some did. I don't remember who fired the first gun in defence of our altars and fires, but another brace was contributed to the Sunday evening meal. We didn't hunt nor fish on Sunday, but only acted in self-defence in that case.

Monday morning we tried the rock-fishing again, but, meeting with no success, abandoned our project of coasting the south side of Isle St. Ignace and started north for Nepigon Bay, with a fresh following wind. Fishing at one or two brooks which emptied into the strait, we picked up a few small trout, and stopped for dinner at a little stream Louis, our chief guide, said he had fished when in the coast survey service. It was a most unpromising place, with only a little pool not more than seven by ten or twelve feet, and studded with brush and logs, which, with the overhanging branches, made casting impossible; so, winding our lines to within three or four feet of the tips, we dropped the flies in as we could. Trout were there in abundance, and the rush of the speckled beauties to the surface was beautiful to see. There was no room to play, and we had to rely on main strength and swiftness. These served us fairly, and in a few minutes we landed some twenty-eight of varying values between six ounces and two pounds. We left behind us when we sailed after dinner a few flies and leaders attached to roots and branches, to mark the spot for some future fisherman. We steered almost due north through Nepigon Bay, passing between islands of great wildness and beauty. The forms of some showed distinct outlines of lions at rest, as clearly as Lion Island on the California coast.

Not intending to visit the Nepigon this year, we steered for a river marked on the chart, about five miles east of Red Rock, and went up its dead water for about two miles without finding any signs of rapids. The country for several miles beyond appearing low and level, we rowed back to find a camp on the shores of the bay.

Tuesday afternoon we had no wind, and the men took to the oars. About six o'clock we made a little river—all streams from the wonderful Nepigon and the stately Pic down to the veriest tumbling brook, are rivers on the North Shore—that, from the sandy islands about its mouth, we judged was powerful in spring freshets. We pushed over the bar and went up the dead water until stopped by the logs, when we saw some fine trout, which determined us upon making camp there. While supper was preparing F. and myself went up the brook. Except at the pools, one could jump across it anywhere. We saw hundreds of trout, mostly small, and an occasional splash gave signs of the presence of larger ones. For some time they seemed reluctant to take the fly, but just as the call to supper resounded through the woods they began to rise freely, and, starting down, we got into camp with some twenty-five or six large trout, and a larger number of each. We found Morton busy, too, right at camp, with his rod, and a display of six two-pounders was not dispiriting. While we were washing for supper he landed two more even larger. Next morning Morton and myself went up the stream at sunrise and returned to the breakfast call in an hour or so with as many as we could well carry, making our total catch there of eighty-five averaging a full pound each, the largest about two and a half pounds. Having now a supply for nearly two days—two pounds of fish per man at a meal with pork, potatoes and the other accompaniments, in my experience with North Shore appetites—and never killing fish for mere sport, we left camp, intending merely to test the coast and streams as we sailed. We found little in the two days to tempt us. We could get no rises off the rocks, and the rivers were sluggish and warm, at least near their mouths. We visited Eagle Flat River, ascending it to the first rapid, finding no sign of trout. We passed some Indian villages, at one of which we spoke to the first white man we had seen for days—a Scotchman, who said he owned a house we had seen on the Paxe Flat River. He had two or three good looking Mackinaw boats, and seemed to be a resident among the Indians.

The second night we camped at Black River. The scenery along the coast had been in that day of the most description. Abrupt hills rising often into grand mountains; rocky and wooded islands with stretches of quiet and of breeze-touched water between, and a fair, following wind most of the time, made a perfect day. And when we rounded the point at the mouth of the river and saw the foam of the falls in the distance between the mountains, the delight we felt at ending such a day in such a spot, with enough trout we were sure of catching to supply us to the next good fishing ground—for the guides said it was always spoken of as a good stream—was that, as fishermen, we had nothing further to ask. The stream was magnificent and promising. The water was just of that color which holds the most beautiful of trout, and which, when in pools, is sure to hide the liveliest of fish. All

along up the river on the west side were deep, dark pools against a clean, sometimes abrupt, sometimes shelving shore, the east side growing gradually shallower in the sand to the water's edge. At the foot of the falls were two glorious eddies with their circling islands of foam. If fishermen ever imagined a more beautiful place for their royal sport, they must have more gifted imaginations than ours. Soon relieving the boats of the freight, we pushed up to the foot of the falls, and all was excitement to see who would kill the first fish. Getting out my line with two or three preliminary casts, down dropped my brown hackle and silver doctor just where I would have them—on the outermost edge of a big apron of foam close under a fall. Carefully I drew them toward me, when a trout struck, and as I struck at the same time, determined to hook him, back came trout, flies and all clear behind me. I needed no landing net. He measured a good four inches, and the blow killed him, or I would never have told this part of the story. I believe we took six or seven—no; the log, which imports as absolute verity as a court record, says eight—such trout in two hours' industrious whipping of that stream. Below, on or above the falls, it mattered not. Bites we had, but from flies, not fish. We supposed when we first looked at the river that it took its name from the color of its water. But the two hours' fishing convinced Morton and we had lost by that time all energy of contradiction, that it was named from the flies.

We made Blackbird River the next day for dinner. It was an unpromising stream at the entrance, of considerable width, with dark water. The pool below the first rapid showed large pike lying lazily on the bottom, and we hardly expected to take any trout. There was a beautiful pool at foot of the second fall, in which we saw some fine trout, but we could get no rise. Fishing through the thick underbrush a few rods, we came to a rock which overhung the swift and noisy brook some seven or eight feet above it, and a careful look over into a little pool, hardly holding a half barrel of water, brought into view forty or fifty beauties. There was no such thing as casting, and reeling in our lines so the fly—for we could use but one—was within three or four feet of the end of the rod, we gently dropped it above their noses. There were rushes, flashes and struggles, the unhooked dispersing up and down the stream, to return with a minute's quiet, so that in as many minutes we had twenty-four. They were not large, but of a beautiful color and full of life. The catch would average over a half a pound each. We saw some larger ones which we judged would weigh two and a half or three pounds, but a pound fish was the largest we could get to rise. Dinner was called, and we went back to the landing. The fishing done was done under such difficulties that I mourned a broken tip, and we lost at least a half dozen flies. They would catch in the brush in spite of us, and a stiff but variable breeze did not make fishing any easier. We had a hard pull out of the deep bay that afternoon, and a head wind until within a mile or two of Mountain Lake River, which we reached about six o'clock. The water was warm, but it seemed clear and beautiful, like the Agawa, the lower banks of which we were reminded of. But poling up and casting for a half mile yielded no results but a few small trout not worth the trouble. There is quite an extensive clearing at the mouth of this river, and signs of a large Indian encampment during the fishing season (which with the Indians is the fall run of fish, and in the winter). We noticed some trout, numerous piles of fish bones indicated. We noticed some trout, judging from the characteristics of the head bones. There were some pike and whitefish bones also. Some of the wigwag poles were standing, and other signs showed an occupancy of the place the last winter.

Saturday's sail was a lively one. The sea was heavy, so that we could not land at some rivers we had intended to visit, and those we touched on happened to be small and uninteresting. By noon we made the mouth of Little Pic River, over the bar of which the rollers were breaking; but, watching our chances, we dashed in and went up stream. To the right for nearly a mile the formation was alluvial, covered with a growth of fine timber. To the left the mountains rose in sheer precipices for eight hundred feet. The scenery was magnificent. After sailing a mile or so we entered the river, the mountains were to be seen on both sides, and the river current, between large boulders, up which it was impossible to get our boats. There were few inviting pools, but being determined to test the stream, we waded for a quarter of a mile, and brought back a few "magnificent" fish, which, however much they would be thought of in New England fishing, did not add anything to the charms of Little Pic. We descended the river, and not liking the sand bar for a Sunday camp, and finding the wind had shifted, carefully crossed the bar and had a fine but rough sail for a few miles to the mouth of a little stream opposite Pic Island. The sea had been such as to wash up the sand at the mouth of the brook and make quite a pond, out of which, and a few yards above, we took twenty-four small trout before supper.

Sunday we had a glorious day. There was just enough breeze to keep off the flies, and the scenery was charming. In front of us were the wooded heights of Pic Island, and to the right and rear the mountains of the main land. Hot biscuits, plum pudding, and various other delicacies which this hurried camp of the week day did not give us time to prepare, graced our Sunday board.

For Forest and Stream and Rod and Gun.
IN SULLIVAN COUNTY.

"YES," said Loser, "that's so! I ain't joking, the woods are just full of them. As soon as the law is up they come out and stand in your way just like barn swallows."

We know from experience how barn swallows stand. Years ago, down at Bill Chadwick's, on Barnegat Beach, at snipe time, we used to shoot at swallows for toothache drops. Our individual score, not of birds but of drops, was kept in chalk on a beam of the low ceiling in the bar-room, and we recollect that the result generally was about five more straight lines added to our account.

This is the way barn swallows stood for us.

"Just you go half way up the mountain," continued Loser, "shut your eyes and pull the trigger. You'll hear partridges drop like chestnuts after a frost. Ain't that so, Colonel?" But the Colonel failed to corroborate; a man had just passed the Son of Malta sign, and he was preparing his chin for a wiping off in the little back extension.

"Dogs? What do we care about dogs? I never saw a dog yet that didn't worry you all to pieces before the day was half over. I once borrowed an imported dog, a setter, and counted so much on him I had almost a mind to leave my gun home. But when I sat on the fence I made up my mind that he wasn't worth sticks. You can see that very fence now, just come around to the back of the house and I'll show it to you. Well, I sat there and told him to go into the piece of woods and hunt. I waited for about an hour for him to fetch out something, when, darn his black and tan hide, if I didn't hear a snort near me, and there he was, worrying a poor beetle almost underneath my feet. I really believe the brute had been sitting there all the time. We don't want dogs when we mean work up here. Get your gun up—write

for it, go down for it, get it up somehow—and if I don't show you sport as is sport then my name isn't Loser."

We sent for the gun, and, in spite of his antipathy to the canine race, our dog came with it. As soon as we reached the fence Loser took his favorite station, while we plunged into the strip of woods. Flora acted nobly considering it was her first hunt of the season. The birds were tame and lay close, rising generally within easy gun shot. In a little while a brace of woodcock were bagged, and we were indeed proud of the general result. Loser, too, was doing his share, as the occasional bark of his piece rang through the woods. It must have been two hours when we completed the circuit, and emerged at the same spot where we had entered.

There sat Loser, on his pet rail, and we imagined he had got tired and had gone to his old quarters to rest. "I wouldn't sell that little piece of mine for a fortune," and he slapped the stock of his gun. "Just think of it, eight with the right hand barrel at the first shot."

"What!" we exclaimed, "eight partridges?"

"No! the mischief! no! Eight shot in that little bit of paper," and he pointed to a scrap he had pinned to a tree, which we had failed to notice.

"Where are your birds?" we asked.

"Birds?" said he in amazement. "I haven't got any birds. I've been waiting for you here. I was afraid you'd get lost, and I've been watching for you to come out, excepting a short spell when I laid down and took a nap, but the darned ants took my ear for a habitation and tried to cart in a load of sticks and sand, which woke me. But let's go home; it's about dinner time, and you'll need a rest if you must go to York to-night."

However, there was quite a decent bag to show, and Loser grew several inches taller when he showed what we had done. *Liberty, N. Y., Oct. 10, 1878.*

PETER REE.

Fish Culture.

THE AQUARIUM.

ITS FORMATION AND MANAGEMENT.

CHAMBERS' Journal of two years ago published an article brim full of useful hints and information on the management of Aquaria, from which we make extracts herewith. The same rules apply to general fishculture and the management of ponds. The information is just what hundreds of our readers are desiring at this very moment.

The leaves of all growing and healthy plants give off oxygen, the great source of the life-sustaining power not only of the atmosphere, but of the water. We now see why fish will live in water with growing plants, and die without them. But the mutual relation between plants and animals, as carried on in the world, extends even farther than this, and is not altered at all because they live in water. Not only do the plants produce oxygen for the animals to live on, but they appropriate and use up in their own tissues the carbonic acid gas thrown off by the animals. Unless this mutual arrangement existed both plants and animals would die. Carbonic acid, which is poisonous to animals, is absorbed by the plants—it is composed of carbon and oxygen—and plants have the power of separating and using the carbon for their own substance, and letting go the oxygen.

Thus we find in a jar of water a true microcosm—a little world, in which all the changes go on which are necessary for the maintenance of the life of man and animals on the surface of the earth. Overcrowding is one fruitful source of disease

HAN SHUTLER OF

AW ROBERTS
ENG

(who wrote the article now quoted just eighteen years ago), I's accidental discovery was like meeting an old friend long supposed dead. It revived many pleasant reminiscences of a long voyage among the rocks and icebergs, the seals, codfish and salmon of the dreary Labrador coast. The habits of the capelin are well known to the fishermen of that region. In May they arrive in immense quantities to spawn, coming on going with each tide to cast their ova or milp upon those shores or flats of the bays and inlets which are either sandy or muddy. There is one stream called "Freshwater," which empties into the Inuvik Inlet or Great Esquimaux Bay, which is an especially favorite resort for them, the whole bottom of the stream being sandy. This stream is on the main-land, of course; but the belt of rocky islands (some twelve miles wide), which girls almost the entire length of coast, is filled with capelin swarming from May until late in July. The codfishing season extends from about the first of June until the middle or end of August. Codfish generally follow the capelin. Capelin constitute a principal part of the food of the few fishermen who winter in Labrador, being cured by spreading them out on the rocks in the hot sun of July. They are eaten greedily, cooked or uncooked. A very accurate drawing of this pretty fish accompanies the article in *Harper's Magazine* referred to by Mr. Buckland. The selches used by the fishermen are 100 feet or more in length, and they are often hauled in full of capelins.

NEW SCIENTIFIC PUBLICATIONS.—It affords us pleasure to extend to the *American Quarterly Microscopical Journal*, the first number of which appeared last month, a welcoming hand. American students and workers in this department of scientific investigation have long felt the need of some periodical in which they could publish their new facts, or discuss those already announced; but up to this time, if we except the *Annals*, which for a short time flourished in Chicago, but soon died, no medium has ever existed in this country through which microscopists could express their views. So true is this, that many of our ablest investigators have been obliged to send their papers abroad. The *Journal* is edited by Mr. Romyen Hitchcock, whose qualifications for this office are well known, and among the contributors are Professors H. S. Smith, Seaman and Lighton, Dr. Belfield, J. D. Hyatt, E. B. Hine and Percival Wright. The appearance of the periodical is attractive, and this number is illustrated by some beautiful plates.

We hope most sincerely that this venture may be a successful one, and that the *Journal* may live and prosper for many years.

A number of papers of very great interest to entomologists have recently been issued by Mr. J. A. Lintner, who has drawn his material largely from the State Cabinet at Albany. The papers to which we have reference are printed in advance of the regular reports, and, beside their great value to the student, they are important as giving a great deal of information in regard to certain insects, which, in one stage or another, cause great injury to the agriculturist by feeding on the foliage of various trees and other plants which he desires to protect.

The first and second of these papers, appendix D and E of the Twenty-third New York Annual Report, and an extract from the Twenty-sixth Annual Report, deal chiefly with the Lepidoptera, and, besides being replete with interesting facts, contain the descriptions of a number of new species. The former is illustrated by two admirably executed plates.

The fourth paper from the Thirtieth Annual Report is not less interesting than the others, though more miscellaneous in character, for it contains notes on, and descriptions of, Entozoa, Coleoptera, Lepidoptera, etc. We have read these articles with much pleasure, and shall hope to receive from Prof. Lintner a continuation of the series when published.

Natural history matters have recently assumed a very considerable activity in Cincinnati, and we are gratified at learning that the Natural History Society of that city is at last located in its own building, and has "a sufficient annual income to enable it to do earnest work in promoting the objects for which it was established." One of the results of the present happy state of things is the publication of the *Journal of the Cincinnati Society of Natural History*, of which Nos. 1 and 2 are now before us. A portion of No. 1 is taken up with a list of officers, a history of the society, and a catalogue of the Lepidoptera observed in the vicinity of Cincinnati, after which we come to an interesting paper entitled "Notes on Paleontology" by Messrs. S. A. Miller and C. B. Dyer, in which a number of new fossils are described; this is followed by an article on "The Tongue (*Lingua*) of some Hymenoptera," and both contributions contain a great deal of which is new and interesting.

No. 2 contains a number of papers, most of them geological or paleontological, the latter describing a great number of new species of fossils. We all know that the paleontologists of Cincinnati are very favorably situated for obtaining good things from the Lower Silurian, and no doubt they exercise due care in making new species and genera, and are conservative, although among young naturalists the tendency is apt to be in the other direction.

We shall always welcome the appearance of this *Journal*, and hope for continued prosperity to the society by which it is issued. The *Journal* can be obtained by applying to J. W. Hall, Jr., 108 Broadway, Cincinnati, O.

We have just received a paper on the Mollusca, dredged and collected by T. A. Veikruzen in 1876, in the neighborhood of St. John's, Newfoundland. It consists of a catalogue of the species, with remarks on them and brief descriptions of several new varieties.

THE BASSES.—Mr. Editor: In your columns under the head of "Natural History," of October 24, you say:

"Micropterus salmoides and M. nigricans—Under the revised nomenclature of Gill and Jordan, the big mouth, Oswego, or grass bass, as it is variously called, will be known as *M. jolietii* instead of *M. salmoides* as heretofore. As the true black bass, known as *M. salmoides*, is really the black bass, nor does it bear the slightest resemblance to any of the tribe, except perhaps it may be thought so about the head and mouth."

Sunbury, Penn., Nov. 4, 1878.

The grass bass is *M. pallidus*. The *P. annularis* is quite another fish, known as the croppie, new light, etc. The croppie is sometimes called grass bass; but fishes as well as roses are known by different local names. See Hallock's Sportsman's Gazetteer for synonyms; also Jordan's Manual of Vertebrates.—Eo. F. & S.

A CUNIOUS RELIC.—London, Ky., Oct. 19.—Editor *Forest and Stream*: In October, 1878 or '79, while hunting on Craig's Creek, in Laurel County, Ky., about seven or eight miles from Rockcastle Springs, with Isaac Storm and W. M. G. Hale, Esq., we killed a very large fat doe, in the left shoulder of which was found the inclosed flint, by Mr. Hale's wife and daughter, while preparing the venison for cooking. I see so many accounts of such things in the *Forest and Stream* that I requested Mr. Hale to let me send the flint, which was carefully saved. As there are no Indians within several hundred miles, and nearly a hundred years have elapsed since they were here, the question is how, where and when did it get there? This is no humbug, but will be sworn to by Mr. Hale's whole family, who are reliable people, if necessary.

[We regret that the data furnished by our correspondent are not sufficiently detailed to enable us to form even a conjecture as to whence the flint came. The case is a most interesting one, for the specimen is a genuine Indian arrow head, and its presence in the deer's shoulder seems to indicate an incredibly great age for the animal which bore it.]

A WHITE BUCK.—Bedford, O., Oct. 27.—Newton Waito, of this village, is hunting in the woods of Michigan. He writes me that on the 16th ult. he shot a large albino buck, weighing over 200 pounds, with five-pronged antlers. He says he was white as snow, except a few gray spots on the back of his neck, also a few on his shoulders and hips. His head and neck will be preserved and set up.

AN ALBINO, OR WHAT?—Editor *Forest and Stream*: Inclosed is a sketch of the head of a hybrid killed near Dunnville, Canada, by a friend of mine who furnishes the following description, and for whom I would bespeak a genealogical history: It measures 20.50 inches in length; tarsus, 1.50 long. Its general color light buff, the forehead speckled with buff and cinnamon-colored features. The iris buff, the wings are darker, the primaries being a dark cinnamon, the rest of the wing somewhat lighter. The coverts on the back almost white. Tail short and very light, almost white. The breast and belly darker than the back. The bill cinnamon-colored, with the nails black; the bill is peculiar in that from the point to the crown of the head is almost a straight line. The flesh was very white and tender. Such, Mr. Editor, are the peculiar points of a very interesting specimen, as I trust that I shall soon know its history.

New York, Nov. 1.

[We regret to say that we cannot give our correspondent the information which he seeks. The sketch inclosed resembles quite closely the head of the canvas back duck, but if the flesh was white it could hardly have been that bird. We should imagine the bird to be a partial albino—but of what species? Was the specimen preserved?—Ed.]

SOLITUDE ISLAND.—A new field of study has been opened to ornithologists by the discovery of a new island far beyond Nova Zembla—Eensomheden (or Solitude). It is in 77 deg. 35 min. north and 86 deg. east, and about 15 miles long. The vegetation is poor, but there exists a rich fauna of birds.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING NOV. 2, 1878.—Two cocoons, squirrel, or Tapal, *Sciurus villosus*, Hab. Malay, presented by Mrs. O. M. Miller; one doe and fawn, *Cervus virginianus*, Hab. Mobile, bought at auction at the Cotton Exchange for the yellow fever sufferers by Mr. R. Seidenberg; two opossums, *Didelphys virginiana*, presented by Mr. Louis Thebaud, N. Y. city; one night heron, *Nycticorax garlandi*, presented by Mrs. Jordan, N. Y. city; one gray squirrel, *Sciurus virginianus*, presented by Mr. F. E. Benjamin, N. Y. city; four Florida tortoises, *Testudo polyphemus*, presented by Capt. B. E. Vail, St. Augustine; one green turtle, *Chelone mydas*; two opossums, *Didelphys virginiana*, presented by Dr. Edward H. Dixon, N. Y. city.

W. A. CONNELL, Director.

CLEVELAND, Ohio, Oct. 29, 1878.

Dittmar Powder Co., No. 2 Courtlandt street, N. Y.

Gentlemen—Allow me, please, to tender to you my unqualified praise of the Dittmar Powder; its being unsolicited on your part may increase its value. I have just returned from a few days' ducking, bringing with me 164 ducks, most of which were killed with your powder. I tested as well as I knew how the comparative merits of your powder and the black Falcon Ducking, side by side, both at target and live game, and give the preference decidedly, for every reason, to the Dittmar. The Ducks I hit with the Dittmar felt, almost without exception, as if they had been struck by lightning. Not so with the black. With the latter I had frequent cases of wing broken and crippled ducks. At the distance of 40 yards, with 4 drachms Dittmar and 1½ oz. No. 6 shot, I put 53 pellets into the tail of a tobacco pail, and most of the 53 went clear through. Yours truly,

A. F. GIBBY, (Adv.)

The Kennel.

DISTEMPER.

NOW is the season when breeders of dogs who have litters of young puppies must be on their guard against the great scourge which seems fated to attack all and usually carries off the best. In fact the puppy whelped in the fall is unfortunate in many respects. The severest weather comes when he is most liable to disease, and with the faintest indication of an east wind, or indeed a change of weather of any description, his warmth, dryness and general comfort should be most carefully attended to. And then again the fall puppy is unfortunate, inasmuch as he arrives at an age when he should be taken to the field to receive his first instructions at a period when there are no birds, unless indeed his owner is so fortunate as to live near good snipe ground, which does not fall to the lot of every one, so that he is perhaps a year old before it is possible to show him birds. To be sure, in England they are of the opinion that a dog should not be broken until he is a year old; but we are strongly in favor of early breaking, and a puppy whelped early in the spring should be introduced to game during the succeeding open season.

But to return to the distemper question. We published last week a letter from a correspondent who affirmed that a seton placed in the neck of a dog was a certain remedy for distemper. Another correspondent states, with equal positiveness, that sour milk is a sure agent for the removal of worms. If these gentlemen should both be correct we have indeed found the panaceas for which we have long been looking, and each discoverer should be entitled to a monument. Nothing could be more simple than either, and we trust that some of our readers whose dogs are afflicted will test them and give us the result. We shall certainly take the first opportunity of doing so ourselves. The seton is easily applied, and is besides an excellent remedy for chorea or shaking palsy, which so frequently follows distemper. In the case of very young puppies, however, we should hesitate about applying the seton. We have been very successful when the disease was taken in time with Dover's powders, containing one grain each of ipecac and opium, the effect of which is to promote a discharge of mucus from the lining membrane of the bronchial tubes, thereby relieving inflammation and allaying cough. A grain or two of powdered rhubarb may be added to the above with advantage.

Careful nursing and strict attention to dryness and warmth are, however, the best remedies that can be applied. We have heard many old breeders declare that a small piece of garlic given to puppies once or twice a week will prevent distemper, but we confess that we have but little faith in it. The fact is, what may be a remedy or preventive in one place may not be in another. There may be unknown or predisposing causes in or about one kennel, or one strain of dogs, from which another may be quite free. One thing, however, seems almost certain, that the finer a dog is bred and the more he is valued so does his chances of being carried off by distemper increase.

We mentioned a little while ago the necessity of guarding against an east wind. The reason is obvious, as it brings with it dampness and rain, and very little exposure may bring on distemper, which will readily assume epidemic form and go through all the unseasoned inmates of a kennel. In September, 1877, the writer had at one time two litters of setter puppies, one red Irish from Elcho and Lill Hill, and one black and tan from Mr. Marble's Grouse and Lou, and also two litters of pointers, one sired by Sensation and one by Snapsbot. One litter was in a box stall, over which there was a small window with an eastern exposure. During our absence from home the man in charge of the dogs carelessly left the window open one night at the commencement of a severe easterly storm. In forty-eight hours the puppies in the stall were down with distemper, and from them it spread to the others, and in such a malignant form that nearly all were carried off.

In his latest work "Stonehenge" divides distemper into five classes, as follows: 1st, Mild Distemper; 2d, Head Distemper; 3d, Chest Distemper; 4th, Belly Distemper; 5th, Malignant Distemper. If the dog is attacked with Mild Distemper he will show first a general dullness, with a disinclination to play, and a want of appetite. Soon there begins a short cough and a disposition to sneeze. The cough and sneezing are seldom heard while the dog is quiet, but when he is brought out of his kennel into the air the coughing and sneezing begin. The nose is generally warm and the bowels disordered. In this stage it is easily cured.

Head Distemper commences in the same way, but on separating the eyelids the whites will be found covered with blood vessels loaded with dark blood. Sometimes a fit occurs at the commencement of the attack, leaving a state of torpor from which the dog can with difficulty be aroused. If the brain is not relieved the fit occurs at short intervals, and the dog finally dies in a violent convulsion.

Chest Distemper appears to be an extension downward into the chest of the irritation which produces the cough, resulting in bronchitis or pneumonia, or possibly pleurisy.

Distemper of the Belly is the result of mismanagement, produced either by the abuse of violent drugs or neglect of attention to the secretions, particularly during an attack of mild distemper. There is a constant diarrhoea, soon followed by the passage of large quantities of blood, either black or red, as it comes from the small intestines or lower bowels.

Sometimes, when the secretion of bile has been checked, the skin and white of the eyes become stained yellow from the presence of bile. When this symptom accompanies distemper it is almost invariably fatal.

Malignant distemper may follow any of the other kinds or be sudden in its attack. Generally all the dangerous affections of the brain, bowels, or liver, mentioned above, appear, and a stage of prostration is reached in which the dog is unable to stand up, his appetite is entirely gone, his gums, teeth and tongue are coated with a black fur, and his breath is highly offensive. Sometimes a very peculiar symptom appears—an eruption of the skin, consisting of purple spots or of bladders varying in size from a pea to half a hen's egg, and containing matter stained with blood. It is not, however, taken by itself, an unfavorable sign. The above descriptions of symptoms are mainly from "Stonehenge's" new work.

It should be borne in mind that the peculiarity of distemper, particularly when it appears in a malignant form, is the rapidity with which the dog loses strength and flesh, and this marked characteristic enables it to be distinguished, in most cases, from colds or disorders of a more harmless type.

As a general treatment, "Stonehenge" recommends in the early stages a mild dose of aperient medicine, such as castor oil and syrup of poppies in equal proportions, or, if the liver is not acting, calomel and jalap. After the early stage has gone by, give nothing in the shape of medicine, but keep the kennel dry, clean and airy, but warm. Change the litter frequently, and avoid exercise till the cough and running at the eyes have entirely ceased. The diet should be nourishing broths thickened, when there is diarrhoea, with flour, rice or arrowroot; or, if the bowels are confined, with oatmeal. If there is little water passed, give every night (as a drench) five or six grains of nitre, with half a teaspoonful of sweet spirits of nitre. The same authority recommends a seton to the back part of the neck for head distemper.

As Chorea or Palsy very frequently follows distemper, it may be well to say that it may be best treated by a change of air and by giving from 3 grs. to 5 grs. of sulphate of zinc in a pill every day.

HOUNDING DEER WITH DOGS.

WE approve of the use of dogs in hunting deer, and feel quite willing to indorse the position taken by our correspondents below. According to intelligent observation and experience, this method does not drive the deer out of the country. Deer are something like sheep in their habits, and we well know that a colley picks out and separates a single sheep from a flock without creating more than a temporary flurry, while a sheep-killing dog, or dogs, may race and worry a flock until they have killed off a dozen without driving the sheep far away. The bulk of the flock scatter and scurry off when pressed by the dogs, leaving the victimized and unlucky to their fate, and afterward call to each other and reunite. We see no more objection to the use of dogs in hunting deer than in coursing hares or running foxes; indeed, if they were not used the price of venison would rise in the markets.

But although we believe that dogs can be used in hunting deer without all the terrible consequences that are apprehended or predicted by some writers, still, as the laws of various States make the use of dogs a salutary offense, and as those laws are passed for the purpose of protecting deer at a time when running them with dogs really is a crime, we believe in their enforcement. The time to which we allude is when a heavy fall of snow is covered with a light crust, which, while readily supporting a dog, or a man on snow-shoes, breaks under the weight and pointed hoofs of a deer, and causes him to fall an easy victim. This mode of hunting is really not sport, as there is an absence of that element, or sentiment, if it may so be called, which gives the animal a reasonable chance for its life.

Hunting deer with dogs is followed in every country where the deer is found or the sport practiced. In England there are regular packs of staghounds, which, even to this day, are used to hunt the wild deer on Exmoor, and a half tamed one turned from a cart in districts where the wild deer is extinct. Even in Scotland the deerhound is used, although only for chasing wounded deer, the nature of the country preventing their being used in any other way, the deer being usually stalked or driven.

BANGOR, ME.

MR. EDITOR:

The method of hunting deer does not drive them out of the country, according to my experience.

Most hounds, when they find a deer's track that they can scent, will commence barking, and increase as they get nearer the deer; and the hunter can tell when the deer is started by the barking of his dogs. Sometimes there are several deer together, and they will stand and listen to the dog as he comes nearer, until he gets within a few rods of them; then they will run, but keep stopping to see if the dog means them; and where there is more than one they soon get separated, and the dog is after only one. The rest will soon stop and care no more for the dog. The one he keeps after, and as soon as he finds that the dog means him and he gets wary and wishes to get away from his pursuer, he starts for a stream or lake, and runs into the water or swims until the dog loses the track. Then the deer comes no more about the dog. I know these facts by watching them in the open land, where I could see both deer and dog, and by following them where I could track them on snow.

I have seen them let the dog keep very close to them for the first miles and in twenty minutes after he would be a mile ahead of the dog.

Our friend "Tip Top" is mistaken about our game law being en-

forced in Maine, and as it is now it is a hard matter to enforce it. The fine is to be collected the same as a civil debt, and we have thousands of men in Maine that no fees could be collected from, and no one wishes to try. So they feel at liberty to do as they choose, and thousands of deer have been killed when nearly worthless; and all that I ever knew of our deer warden of Bangor doing was to take deer from persons that he had no right to.

When the first game law was made in this State, our woods were full of deer and moose, and would be now if there had been good laws and well enforced. Deer are quite plenty now, and we may kill all we can with dogs in the fall, and they will increase if let alone in winter, after the snow goes deep; but the law will never be enforced until the hunters do it, and they never will until the law is changed.

Mr. J. Scott is of the opinion that hunting with dogs makes them wilder. I can't agree with him. I hunted one fall on the Matamoras River with dogs, and as soon as first snows fell Mr. E. McNamee, a still hunter, went over the same ground to kill deer, and made the most successful hunt that he ever made, even when deer were more plenty, and before dogs had been used in those parts; and I have often taken the same ground to still hunt on that I used my dogs on before the snow fell. I have always noticed that the opener the growth the wilder the deer were. I was hunting in Michigan up the Ausable River, above where any hound had ever hunted, and on what they called the plains—and deer on those plains were the wildest that I ever saw them anywhere; and only a few miles from there, where the woods were thick, deer were very tame. They always seem to me to be at home when they are in thick woods, but when out in open land are always on the look-out, and when started seldom stop until they reach their cover.

In still hunting on bare ground, there are a great many deer totally lost; say about one-third get wounded and die. Still hunters seldom or never wait for any better chance, but shoot at whatever part they see first, and the consequence is that a great many get away afterwards and die; and what they do get are often cut up badly and dressed in the woods, and sacked out, as we call it, and get all dirt, etc. The hardest work I ever did was to still hunt deer and moose, and get them out.

I have made up my mind a long time ago that the best law we can have would be to let us hunt from the middle of September to the middle of December, and in any way we chose. Then have a fine or imprisonment, and have the law enforced, and we shall always have plenty of deer, etc. J. DARLINO.

THE IMPROVED NEWFOUNDLAND OR LEONBERG DOGS.

A PARAGRAPH is going the round of the papers, originating, we believe, with the Boston *Traveler*, relative to the introduction into Newfoundland of the Leonberg dogs, which, it is supposed, will arrest the threatened extinction of the Newfoundland dog, or at least institute a new and perhaps more valuable strain. That this is not news will be seen from the following extract which we reprint from the issue of FOREST AND STREAM of July 5, 1877:

IMPROVING THE NEWFOUNDLAND BREED OF DOGS.—It will be interesting to lovers of dogs to know that Herr Von Kruzen the eminent German naturalist, when recently passing through Newfoundland, presented Governor Glover with three very valuable young dogs of the celebrated Leonberg (Wirtenberg) breed. These animals are almost world-renowned for their size, beauty, sagacity and fidelity. They are an improved breed, resulting from crossing the Newfoundland dog with the renowned St. Bernard dogs and the fine Pyrenean race. These dogs are the favorites of emperors, kings and rich nobility, and fetch a price as high as from £50 to £100 sterling. The Prince of Wales possesses one of them. Our valued correspondent, Rev. M. Harvey, to whom we are indebted for this information, says: "The fine race of Newfoundland dogs is almost extinct here; but, thanks to Herr Von Kruzen, we shall now possess a far superior breed of dogs, which, in the course of time, may become of much value to the country, as fine dogs are prized all over the world. He recommends that in time they be crossed with the Newfoundland dogs, the blood that can be met with. He obtained these fine dogs from Count E. S. g., who breeds them. They were brought all the way from the borders of Switzerland. At present they are but two months old, so that no progeny can be had for two and a half years. They are placed in charge of a person who understands the management of dogs, and he is furnished with written instructions regarding their feeding and general treatment."

THE TENNESSEE FIELD TRIALS—Nashville, Nov. 1, 1878.—

Preparations are going on most favorably for the coming field trials, to be held here the 2d of December. Clarke Pritchett, Esq., the able Secretary of the Tennessee Sportsman's Association, is and has been actively employed in corresponding with breeders and sporting men in all parts of the country, and he is satisfied that the attendance will be much larger than at any previous meeting. A number of handsome prizes will be awarded, amounting in all to \$1,050. Quite a number of manufacturers of, and dealers in, sporting goods have made donations of articles to be shot for, and a number will exhibit sporting goods in a place to be prepared for them in the city during the week the tournament lasts. Notably among them are the Bridgeport Union Metallic Co., St. Louis Patent Shell Co., Brow & Hilder, St. Louis; Thompson & Co., of New York, and Parker Bros., gun-makers. The latter donated a gun (value \$125), to be shot for. A firm in Casenobia, N. Y., donate two glass ball traps as a prize for the best glass ball shot. The field trials will take place at the Belle Meade Farm, belonging to General Harding, and where birds are very abundant. But to doubly insure good sport the association have turned loose on the farm a large number of birds in addition to those already there, and have placed a keeper on the premises to protect them. Some of the intended participants in the trials have already arrived with their dogs, and Mr. D. C. Sanborn, of Baltimore, Mich., is expected to day with his kennel, consisting of Nellie, Dan, Strathroy, Tempest, and a full brother to Nellie. He will go to Louisville in this State to prepare his dogs for the contest. The printed programme will be ready for distribution early next week. The largest prize is the one given for the puppy stakes. This is for \$800. J. D. H.

FROM MR. DAVIDSON AGAIN.—Editor Forest and Stream and Rod and Gun: By this week's issue, November 3, of Chicago Field, I notice its editor is waiting to hear what the judges have to say in reference to his accusation of fraud at the Minnesota Field Trials. By referring to FOREST AND STREAM and Rod and Gun of October 31, he can see what I have to say, and I will now add that whoever he has reference to in regard to changing his score in the Nursery Stakes I do not know. My score is in my possession now, and was never out of it, and the editor of the Chicago Field never saw it. The scale of points in the Nursery Stakes were taken from Mr. Whitford's score, of which fact I have positive proof. In the puppy and champion stakes the scale of points were taken from my score, and in the case of Jet, winner of the Minnesota field trials, and I further defy him to show a single case of fraud at any bench show in my decisions as judge, unless he considers it fraud to differ from him in opinion or wish. If he can show any, let us have them. Disappointed contestants can usually find redress for wrongs by proving a sufficient cause of fraud to warrant such redress. Such is the case in other contests, and I intend the same rule would apply to field trials and bench shows. So sorry to show a verdict, but I object to be tried by a judge without authority, who is both evidence and judge, and renders a verdict before the case goes to trial. Hoping you will excuse me for again trespassing on your columns, I am yours truly, Monroe, Nov. 2, 1878. JOHN DAVIDSON.

MASSACHUSETTS KENNEL CLUB DOG SHOW.—At a meeting of this club, held on the 31st ult., it was decided to hold the second annual bench show in Boston, on May 6, 7, 8 and 9, 1879. The following gentlemen will form the Exhibition Committee: T. T. Sawyer, Jr.; Jno. Fother, Jr.; J. B. Bolland; J. B. Greenough, James F. Curtis and Edward E. Hardy.

NATIONAL AMERICAN KENNEL CLUB.—In consequence of the abandonment of the Baltimore Field Trials the meeting of the Kennel Club, appointed at Baltimore November 8 current, will be further adjourned to meet at Nashville, Tenn., at the Maxwell House December 2 next. And a meeting of said club is hereby called at that time and place. E. H. LATROFF, PRES. N. A. K. C.

THE WICKED FLEA RETURNETH.—And now a correspondent, moved by the many paragraphs regarding fleas which have appeared in our columns, writes to say that Persian insect powder is sure death to fleas. Perhaps our correspondent is not aware that the basis, at least, of all insect destroyers is this same Persian powder. But according to our experience its effects are but feeble, and the fleas, although driven off, return again. If used on house dogs it is very likely to transfer the fleas from the dogs to the carpets, whence they make raids on thinly-clad persons, and in summer time increase and multiply to an alarming extent. What is wanted is something that will keep fleas from getting on a dog.

NAMES CLAIMED.—Mr. Edward R. Tallor, of this city, claims the name of Jenny for a red and white Irish setter bitch puppy, by Wengel's Jack, out of his Doe.

—A correspondent writes from Indianapolis, Indiana, that there is a regular organized gang of dog thieves in that city. He has had no less than five dogs stolen from him, and some of his neighbors have fared almost as badly. It is supposed that the dogs are run off into Illinois. A vigilance committee would be in order.

—Mr. Luther Adams, of Boston, has been added to the committee of the Massachusetts Kennel Club appointed to look out for the game laws.

Woodland, Farm and Garden.

TRANSPLANTING TREES.

FOR transplanting trees the late fall is the best season. Vegetation is never absolutely at rest. During the months of winter trees are constantly adding to the points of their roots. If they be transplanted in the fall these new rootlets are formed in readiness to take advantage of the first spring showers. We republish from the London *Journal of Forestry* the following excellent direction for the method of transplanting and subsequent care of the tree:

1. Selection.—In making this the transplant will be guided by circumstances of soil, situation, and the purposes for which such trees are required. If he be fortunate enough to command a soil which combines with the adhesiveness of the aluminous friability of the silicious, he may remove into it almost any tree he likes without much previous preparation. And if his soil be naturally loose and deep, containing a fair percentage of carbonate of lime and some alumina, he has all the chemical elements necessary to insure success.

As a rule no tree of considerable size should ever be chosen for a poorer soil than the one from which it was taken. For light sandy soils nothing is better adapted than the birch, sweet chestnut, sycamore, beech and lime; while for those of a heavier texture he may choose the oak, elm, ash, spruce, silver fir, etc. Much, however, may be done by a liberal use of composts, by drainage, trenching, etc., to adapt soils to the trees required to be planted.

As the principal objects of transplanting are the attainment

of shelter, ornament, or a screen, it will generally happen that all trees so employed will be placed in situations more open or exposed than in those from which they were taken. And just as the carefully nurtured child and warmly housed animals suffer from too sudden an exposure to inclement weather, so are the sap-vessels of the hitherto well-sheltered tree or nursery plant injured by too much exposure of the epidermis or cortical layers.

Most trees growing in sheltered situations have a thin and glossy bark, smooth and very delicate. Their stems are long and correspondingly weak, and their heads and roots less spreading. As these qualities are exactly the opposite of what it is necessary in situations of exposure, their whole nature must be changed before they can be removed with safety. To stand alone a tree requires to be possessed of abundant lignum and strong spreading branches, a fairly dense head with thick foliage, a bark thick and of the retentive of moisture nor too porous, and through which the rain slowly percolates. These have been called the "protecting properties," and no tree greatly deficient in them can be moved with any chance of success.

In making a selection for groups or clumps, or in disposing of single trees, as a contrast to the more open appearances of the oak, ash, elm and sweet chestnut, the horse-chestnut, linden and sycamore must be chosen. Most of these will flourish in any soil which is neither too retentive of moisture nor too porous, and through which the rain slowly percolates.

3. *Preparation.*—As there are but few estates upon which can be found any considerable number of trees ready to the hand of the transplant, it will in most cases be necessary to adapt such. The first step will be the gradual opening out of the selected subjects, so as to insure them the maximum amount of space, light and air, and by degrees to alter their constitutions. This may be accomplished by the removal of the sap-vessels, a thickening of the bark, enlarging the head, and thicker foliage, which will soon produce a thicker stem. The heat generated by close plantations, from which high winds are necessarily excluded, and from which there is but little evaporation, produces greater elongation of the stem. This the free admission of air and sunshine modifies.

Under the most careful manipulation considerable damage must be caused to the roots of transplanted trees, the previous increase of fibrous roots must be cut and the trunk of the tree to be cut all round the tree at a distance of from one-half to two-thirds the spread of the branches, and to the depth of the lowest side roots, and afterwards filled with a good light compost, which will soon become occupied by a mass of fibrous roots. If left undisturbed for two years in a light soil, and for three, or even four years in a moderate soil, and at the same time, a nourishing compost be spread over the unmoved ground between the trunk of the tree and trench, the root growth of the tree will be everything that can be desired for a successful removal. The trench should be kept dry by having a drain cut or laid from its lowest side. Wherever it is desirable to open or prune the head, this must be done at the time the trench is formed.

The autumn transplanting an early summer trenching of the ground is a good preparation, but the large holes should have been thrown out long before. For late spring transplanting, holing may be sufficient at the time; but it should be followed by trenching during the next season.

3. *Removal.*—To insure the successful removal of a large tree it will be necessary to preserve every root that can be taken up unjured, and also to avoid pollarding or cropping the head, beyond shortening any extravagant growth of branches. In most cases it will be impossible to retain the tap-root; nor is it at all a matter of primary importance, as young trees renew them with great facility, and older ones, as not in any way dependent upon them, except in so far as they give stability to the stem. Indeed, so soon as the leader of a tree ceases to shoot upward, and the head becomes rounded, does the tap root die away or become indistinguishable among the side roots.

As the preservation of the smaller fibrous roots, whose growth has been greatly promoted by the previous cutting round, is a matter of primary importance, a trench from two to three feet wide should now be opened out beyond the previous one and carried down to a greater depth. Into this trench the workmen charged with the uncovering and opening out of the roots will work all loosened soil, which will be kept from blowing away by the trench.

To loosen the soil from among the roots the workmen should be provided with a light hand pick, every blow of which should be given as the man faces the tree. Such an implement was invented by Sir Henry Stewart, who named it the "tree-picker," and who describes it as "resembling the pick used by miners, but with only one point or prong. The head was 15 inches long in the prong, and extremely light and slender. The handle was 2½ feet in length, and the entire implement weighed only 4½ lbs. Armed with such tools the workmen commence to pick out the soil from among the roots, carefully gathering up the latter as they proceed. When from the different sides they meet within a few feet of the collar of the tree, the trunk is pulled on one side by means of ropes which have been previously attached near its upper forks, the tap-root is then severed, and the raised side is bolted up with soil. The same process is repeated for the opposite side, and the tree is then placed in a favorable position for removal in its upright form, or for being lowered upon the ordinary transplanting machine.

With the ordinary transplanting machine, when all is made ready it is brought alongside the tree, which is lashed firmly to the pole, and by means of the leverage which this affords the tree is at once brought into a horizontal position, after which the horses are attached, the ropes applied, and the tree, with its roots carefully packed up and protected, is conveyed to its new site.

4. *Planting.*—The fallacy that the safety of a transplanted tree depended upon its being fixed in its new quarters in precisely the same relation to the points of the compass that it had occupied in the old has long exploded. And, on the other hand, no more experiments have shown that the general outline of such a tree can be considered as improved by its reversal. For, as the greatest spread of its branches, etc., is always upon the warmest side, such a process tends, in a few years, to restore the equilibrium.

Before lowering the tree into its hole see that the soil upon which it is to be placed is thoroughly consolidated, as upon this will depend greatly its future stability. A slightly concave bottom, with a raised mound for its sides, will afford the greatest support.

The workmen entrusted with the laying out and uncovering of the roots should well feather them out between their fingers, and arrange them in tiers according to their position upon the tree, avoiding all crossings and interlacings. Those again who are employed to throw in soil should see that it is finely pulverized and laid on in small quantities at a time. To fill up all interstices immediately under the collar, or neck,

Pontey recommended dashing on water or pouring it from a height—a system which will be found much more efficacious than any amount of treading or ramming at the time of planting.

In finishing up the mound the greatest depth of soil should be near the stem, and over the whole surface allowance should be made for a gradual subsidence.

Much of the success of the tree will depend upon a thorough pulverization of the soil in which it is placed, and a proper mixing of the added compost. Without going to the lengths of Jehu Tull, who maintained that a thorough pulverization of the soil entirely superseded the use of manure, and whose want of chemical knowledge blinded him to the fact that there is such a thing as exhaustion of the soil, it is scarcely possible to overrate the beneficial effects of a complete mixing and comminution of the particles of soil placed in contact with the roots. For a sandy or gravelly soil a compost of peat and clay will be beneficial; for a clay soil, a compost of sand with peat.

5. *After Treatment.*—As soon as the tree has been fixed in its new quarters return the turf or give the ground a good mulching with half rotten straw, moss, long manure, or any substance which will afford protection and prevent evaporation. Even stones afford shade and promote consolidation. Every precaution should be taken to ward off the effects of drying winds, and later on the evils of frosts. Praying wire, or a temporary netting, in the case of the oak, beech and birch, whose roots are very susceptible of drought. A good ramming during the first spring or early summer will be serviceable, and this should be followed by liberal waterings till the end of June or middle of July. Afterward fork in a good compost lightly round the stem. An admixture of coal-ashes and good mould will prove most effectual.

The leaves of a transplanted tree are often fewer and smaller during the first season after removal, but they soon recover themselves. Very little attention is afterward required by a tree which has been carefully selected and prepared, well got up and re-planted, and attended to during the first summer. But under no circumstances should water be allowed to stagnate around its roots.

It may scarcely be necessary to add that every operation of the transplanters should be performed with care; there should be no unnecessary mutilation or laceration of roots, though injured ones should be carefully pruned; no damage done to the bark, and no mutilation of the branches.

THE UNITED STATES TIMBER SUPPLY.

MR. JAMES LITTLE, a merchant of Montreal, has taken a thorough examination of the sources and extent of our timber supply, and has embodied the results of his labor in a letter to Hon. David A. Wells. He presents an array of facts touching the lumber resources of the United States, the rapid rate at which the present system of forest devastation is carried on, the near approach of the day when the supply will be exhausted, and the consequent ruinous effects upon the wood industries of the country. Mr. Little is doubtless an impartial party; he has long been engaged in supplying the United States with Canadian lumber, and probably winces under the weight of duties imposed by the existing non-reciprocity treaty. But his personal business relations to the lumber traffic, whatever they may be, have no relevancy as affecting the facts he furnishes. His statements are based upon statistics and other accessible data, supplemented by observations gained in fifty years' experience and acquaintance with the public with a force and perspicacity which should secure to his figures the twenty-six States comprising the New England, Middle, Western and Northwestern to the Rocky Mountains, only four are now able to furnish lumber supplies beyond their own requirements. These four are Maine, Michigan, Wisconsin and Minnesota. Maine is now almost stripped of her pine forests, and lumbermen are forced to the headwaters of every river in the State in quest of spruce, fir and hemlock; their mills with sapling poles of six and seven inches diameter, and this slaughtering of young trees is carried on to such an extent, to supply the neighboring States and for shipment abroad, that in a few years the people of that State will have neither white pine nor spruce for their home consumption. The northern sections of Michigan, Wisconsin and Minnesota are the principal localities of the whole twenty-six States that are able to furnish lumber, and the wants of the people of their own respective States, and the demand on them is so heavy for all sections of the country that it will not be possible for them to respond to it for more than five or six years longer. The main streams are all stripped, and the lumbermen are now operating at the headwaters of their tributaries, banking logs in dry gullies, and depending on spring freshets to float them. On the lower peninsula of Michigan the millmen have exhausted their timber within ten years, and are building railways on their own account to enable them to reach the outskirts of their supposed inexhaustible timber resources. Take any ordinary U. S. map and the sections comprising the white pine supply for all the country east of the Pacific Slope could be covered by the palm of one's hand if brought together at one point. With the exception of the early settlers in the several States, and the pioneers of the West, no one, we in this country, has never really felt the inconvenience occasioned by absence of soft wood. However high in price, the thousands of manufacturers requiring its use manage to secure it, because they must have it; and the consequent advance in the costs of their products falls upon the whole people; so that the question of supply becomes one of interest to every individual, high and low, rich and poor. What we are threatened with now is not merely a scarcity, but an absolute dearth of the most essential kind of wood used in a vast number of industries. According to the census of 1870, there are no less than 178,450 industrial establishments, and 1,093,202 operatives engaged in furnishing the wood materials and articles indispensable to modern life. It would require some \$500,000,000 to send abroad and purchase an amount of lumber equal to our country's requirements for a single year, and the combined tonnage of the whole world would fall far short of being able to freight it from the Pacific to the Atlantic seaboard. The impression prevails that when our supply fails, as it inevitably will, within the next ten years, at the present rate of consumption and reckless waste in lumbering, we have but to look to Canada, where can be found enough to last for centuries. But Mr. Little asserts that there is not, from Manitoba to the Gulf of St. Lawrence, as much pine, spruce, hemlock, white wood, and other commercial lumber supply in the United States for a period of three years; and the whole accessible pine localities have besides been run over for boardwood timber suitable to supply the English demand.

It takes a century to grow a standard pine log, yet lumbermen may now be found in the forests of Michigan cutting off, on an average, three trees to one on which they are relying to supply the market, and having the other two on some trifling defect, to rot in the woods. It is not clear, however, what the Hon. David A. Wells or even the United States Government, can do about it. Mr. Little would probably be satisfied with the removal of the duties now imposed on Canadian lumber. The removal of the present tariff obstructions would bring to us the lumber for which the Dominion is now compelled to seek a foreign market, and would thus increase our supply and save off the forest a little longer. But what is needed is the adoption of some effective measures looking to the careful husbanding of our forest wealth, and its preservation from spoil and waste. It is, of course, useless to appeal to the great lumbering interests to restrain their cupidity by sparing the young trees, and by carefully avoiding to overstock the market to the injury of all legitimate operations. However rare and certain the impending calamity, little will be done for forest or soft pine timber; it is directly upon us; such is our headlong, day-by-day method of doing—or not doing. But the enactment by Congress of the bill to encourage tree-planting on the prairies, referred to in these columns yesterday, may have some effect in mitigating the hardships which will be felt when within a few years pine lumber is so scarce and costly as to be practically beyond the reach of the soldiers on the prairies. The planting and care of ten acres of cottonwood or Norway spruce will itself be a valuable experience in the art of forestry, and will naturally lead to the cultivation of other and more useful commercial woods.—St. Paul Pioneer-Press.

FURS AND TRAPPING.

HABITS OF THE HUDSON BAY FUR TRADERS.

THE boatman himself, or voyageur if an Indian, is generally a young man, heavy set, copper-colored, and highly ornamented. His black hair is greased, and planted in small braids, from which depend bright colored ribbons or feathers. About his thick neck there is a broad band of wampum, from which he hangs, suspended over the throat, a huge silver medal, which is not presented, and is not valuable, if rendered, however, but can be purchased at the Company's stores. His capote is open at the throat, and reveals a broad, uncovered chest, corded with muscle. In lieu of the sash he wears a broad leather belt, in which is slung his flint bag, headed or quilled, containing a pipe and tobacco flue and steel, and serving also, upon occasion, as a pocket book. If the voyageur be half breed, he is a little above the median height, with little, active frame, enough of the aboriginal to impart suppleness, and sufficient of the white to add a certain solidity of frame lacking in the savage. His features are regular to a fault; complexion not brown; black eyes, and long hair hanging down in a straight mass over his shoulders. He wears a tasselled cap, and is also *en capote*, but of fine blue cloth, ornamented with two rows of silver gilt buttons; variegated sash, corduroy trousers, and moccasins of course. He is quiet and nervous in manner, and volatile in temperament to a degree.

The crafts in which these men labor are called "inland boats." They are built of the usual pattern of whale boats, and have a carrying capacity of about three and one half tons. They possess one sail, which is square and large. Each boat is worked by nine men, of whom eight are rowers and the other the steersman. Brigades of from two and a half to four men, these crafts are kept plying in various directions throughout the season of open water on the inland lakes and rivers. Their cargoes, destined for the interior, are composed of goods intended for the Indian trade at the various posts scattered over the territory. Their return freight is made up of furs and other country products for shipment to England. These brigades generally traverse the same routes for consecutive years, occupying the same waters, and the same season. The boating season generally commences early in June, and continues until the middle of October, when the ice begins to form on the northern waters. At the extreme limits of the course traversed by the boats going north and west inland, they are met by other boats traveling south, bringing the furs already traded. At this point of meeting an exchange of cargoes is made, and each brigade returns to its winter quarters. The way the whole season, from the forty-ninth parallel of latitude to 67 degrees 30 minutes, is supplied with goods and drained of furs. On the rivers traversed by these brigades there are many interruptions to navigation of so serious a nature that the boats have to be unloaded, and together with their freight, carried by their crews occasionally for a considerable distance overland, to be re-launched at the nearest spot where the obstruction, at an end, or the waters of another stream running in an opposite direction. This process is called "making a portage."

The vast amount of handling necessary in passing goods over the numerous portages which intervene between the depot posts, and even the nearest inland districts, renders the packing of the merchandise a matter of great importance. The standard weight of each package used by the Hudson Bay Company is called an "inland piece." Each of the above described boats is supposed to be capable of containing seventy-five pieces as a fair cargo. The facility with which such pieces can be handled by the muscular trimmen is very perfect; a boat can be loaded by its crew of nine men in five minutes, and the compact, orderly appearance presented on completion of the operation is beyond praise.

The arrangement of the duties of the various grades of men belonging to these brigades is well calculated to suit its purpose. The steersman attached to each boat is the captain. Seated on an elevated flooring in the stern of the boat, he steers with the common helm, or, if the situation is critical, with a long and powerful sweep, with one stroke of which an expert workman will effect an entire change of direction. The backs of the trimmen at the portages. The process of raising seventy or seventy-five pieces, each weighing one hundred pounds, from a position beneath the feet to a level with the shoulders, is one requiring a man of considerable strength to perform efficiently and with expedition.

Of the eight men comprising the crew, one is called the bowsman. The special duty of this person is to stand at the bow of the vessel at all portions of the route abounding with rapids, shoals, or sunken rocks, and while advising the steersman by voice and sign where such obstructions exist, himself, with the aid of a long light pole, to add the motion of the boat into a safer channel. When not occupied with this

distinctive duty, the bowsman does duty at an oar like any other man of the crew.

The "middlemen" are the rowers. When a favorable breeze blows their duties are relieved by the substitution of the sail.

At portages they transport the boat and goods overland. Each man is competent to carry two pieces on his back at a time. They are maintained in position by a leather contrivance, termed a "portage trap," by which the weight of the burden is brought to bear upon the forehead of the porter.

Over each brigade there is placed a guide. This functionary may be termed the commodore of the fleet. His special duty is to show the route in all parts where it is doubtful or lead the way where rapid or other obstructions intervene. He supports the authority of the steersman, and transacts the business of the brigade at points where it touches on the route. He is an important official, and when properly qualified, exceedingly useful. He is generally advanced in life, having necessarily risen from the position of middleman to that which he now occupies. His knowledge of every rapid and shoal throughout the long course of his run is generally perfect—so much so that, even on a dark night, with a favoring breeze, they will press forward through treacherous waters with economy of time and money on an object. The guides of the brigades making the long trips, occupying the four summer months, the pay of a guide is \$35, of a steersman \$40, bowsman \$18, and middleman \$16. When efficiently performed the work done, though of a healthy nature, is extremely severe.

In addition to the money they receive, the boatmen are furnished by their employers with provisions.

TIME ALLOWANCE.

Most of our readers are aware, the apparently complicated and ever-recurring subject of time allowance, its quantity, as well as the grounds of difference among yachts upon which in theory as well as in practice such allowance should be granted, seems one of the most difficult to settle once for all to the satisfaction of the variety of interests likely to be more or less affected by any change toward a more logical and just means of equalizing yachts of different sizes for the purposes of testing the value of their models for speed. The question among Americans should admit of very ready solution, for there is but one theoretically sound principle which can enter into consideration when contemplating the construction of a scale of allowances. Without at present delaying with this part of the question, we will content ourselves with saying that size is the basis and the only one which will satisfy the demands of clear logic and the rules of equity. But it is perhaps not so much upon the theoretically correct basis that different minds are most wont to split, but rather upon the purely practical application of the same. As a short cut to measurement of size, all sorts of rough and ready means have been substituted in compliance with the very natural call among amateurs who do not wish to bother with "lines" and "cubic contents," for a "tape-line rule," one which can be readily applied by the country yokel who sails a dug-out quite as well as the measurer or an individual member of a club of some pretensions. Now, as long as the real object of such rules and the causes which led to their birth are kept in mind, the rule can be no harm in applying it. But it is a rule which has in actual sailing been found to give satisfaction to all coming to the line. Under such circumstances there need be no fear of any rule having an evil effect by bearing upon model or design in any one direction, be it length, depth or beam, for, as soon as such tendency were discovered, the rule would, in America at least, be at once discarded and another acceptable short cut adopted in place of the actual and more complicated measurement of size. Moreover, the very existence of a great variety of rules representing, and for practical reasons displacing size or tonnage measurement, is a safeguard against drifting into any particular type of vessel as a direct consequence of the tendency of the rule; for what might be of advantage under the accepted mode of one club would turn out a heavy handicap when sailing in the matches of another. In this view, at least, our various methods of measurement are only makeshifts, and, however unsatisfactory, misleading and imperfect it may be in other respects. Sooner or later, when yacht racing is brought to a more perfect system, as it has been in England, we look upon the adoption of a more scientifically correct method as a foregone conclusion. Just at present the systems in vogue may serve well enough, but the fact must not be lost sight of among the leading spirits in yachting circles, that all such makeshifts of measurement which are not or do not sufficiently approximately represent size are only makeshifts, permissible not in theory on any grounds, and in practice only upon the strength of the greater facility of their application and the ready manner in which their workings can be understood by one and all. This, so far as the general run of American yachts in our smooth and sheltered waters are concerned.

Under special conditions, or with some particular object at stake, measurement of size or simply tonnage, may be to advantage supplanted by a more or less modified basis, which, while not strictly correct in theory, may nevertheless be subservient to the attainment of certain desirable points in yacht design; or, in other words, may tend in a direction actually opposed to a perfectly free and untrammelled field in which the designer can work. By limiting him in such direction which seems desirable, through the means of imposing an extra heavy tax upon size if placed in position detrimental to the sea-going qualities we wish, or should wish, to preserve to a rational extent in every yacht, it is certain that such qualities are less likely to be sacrificed in the pursuit of speed than if extensions in the objectionable direction were allowed free scope, thereby bringing forth, as we even now witness in our own

waters, a class of yachts unfitted for the sea and possessing little else to recommend them than great speed in smooth water. Such a course of reasoning is the only one upon which the well known "Thames rule," recently adopted wholly in principle by the Yacht Racing Association of Great Britain, can be defended. But even admitting the excellency of its purpose, there is not the least doubt but that, for the sake of encouraging a sea-going form, the Thames rule goes too far and has too powerful an influence upon design, by compelling each successive racing craft laid down to be built to deeper and narrower moulds, until at last the British cutter has reached the abnormal shape of five and six beams to the length, with apparently no inclination to desist as yet from the extravagantly spun out forms of the otherwise well known and favored while craft of recent date, for which the British racing fleets are so distinguished in comparison with our own. That the same views are gaining ground in England, even among the most persistent defenders of the Thames rule pure and simple, is evident from the periodical outcroppings of murmurs and even rebellion against Rule 3 of the Y. R. A. sailing regulations, becoming more and more frequent of late and assuming something like the shape of a mutiny. The mutiny, however, is not a mutiny, but a protest, however much he may in justice give preference to his typical racing clipper over the unseaworthy American sloop, cannot shut his eyes to the fact that the length of the race rendered possible by the R. Y. A. rule of measurement for the construction of excessively narrow vessels has by no means been reached yet, and that there can be but little question but what its ultimate limit will prove to be only then attained, when long length will have been so overdone as to have seriously marred the many excellencies of the present type of cutter. The majority of yachtsmen abroad, no matter how conservative by nature, will not be slow to change the rule when once they become convinced of the truth of these remarks. In common with all desiring the preservation of a sound sea-going model in opposition to the alternative of a racing machine, devoid of the essential elements of seaworthiness, directly upon the elevation of the sport to a higher standard than that of competition for wagers only, we view the probabilities of a change in tonnage rule in Great Britain with profound satisfaction, and need only add our hope that our cousins abroad may by a timely change for the better be restrained from sacrificing the sea-going qualities of their yachts by rushing headlong in the direction of length, similarly as we have undertaken headlong in the direction of the beam. The proposed change in the Y. R. A. rule will lead to the production of something more in harmony with the dictates of naval science, and will contribute toward the preservation of speed and ability combined, which, when met with together only, must after all be taken as the legitimate aim of yachting in its highest stage. Since the matter of time allowance is one which in this country is likely to continue to come to the surface, a knowledge of what has been and is being done in England will help to clear up the mystery so often and needlessly woven about a subject very simple and elementary in its nature; and upon this plea our entering into a consideration of a rule not in vogue with us in its entirety may be considered justified. As at present the rule of measurement in vogue in this country is the "lineal measurement" system, in which the length of the hull, measured on deck, from foremast to stem to aftermost of sternpost; from this deduct the breadth, the remainder multiply by the extreme breadth, and this product again by half the breadth, divide again by 94, and the quotient shall be deemed the true tonnage. The modification proposed by Dixon Kemp, Esq., of London, which will soon be acted upon, is as follows: From the length subtract twice the breadth, multiply the remainder by the extreme breadth, and the product again by half the beam, and divide by 70, the quotient to be deemed the true tonnage. Applying this rule to yachts in existence it will be found to remit some of the penalty now put in force against beam, while at the same time it does not in any way interfere with depth, thereby averting the danger of a sacrifice of that important element of sea-going qualities, otherwise likely to be attempted by designers in their effort to secure a sailing ship. But in regard to the actual workings of the proposed alteration, we cannot do better than quote the author of the amended rule: "It is desirable to get a rule which, if possible, will remit some of the penalty now put upon beam without in any way interfering with depth, which is of such importance to the sea-going quality of yachts. The effect of the rule on almost all racing yachts will be to keep them at their present tonnages, but some will be found to be more or less increased, but are comparatively long or comparatively broad." By way of illustration we add the measurements of several characteristic representatives of different types:

Yacht.	Length.	Beam.	Rule.	Proposed Rule.
Albatross.....	40.51	8.83	14 75-94	15 16-70
Maggie.....	35.0	8.83	15	16 16-70
Marigatta.....	45.52	9.65	19 93-94	20
Frederick.....	44.0	11.14	23 69-94	18 38-70
Bluehound.....	51.6	11.86	33 69-94	28 97-70
Christine.....	47.25	14.5	61 82-94	61 92-70
Neva.....	49.53	17.3	61 84-94	46 54-70
Vindex.....	56.4	17.3	61 84-94	46 54-70
Vision.....	56.4	17.3	61 84-94	46 54-70

Yachts with star are American.

To quote Mr. Kemp again: "The operation of the rule can best be seen by taking as an example the effect of the proposed amendment on *Maggie* and *Albatross*. The *Maggie*, by the Y. R. A. rule, is exactly 15 tons, while *Albatross* is 14 75-94. Under the proposed rule *Maggie* is 15 16-70 and *Albatross* is 15 16-70. The latter of these two figures is evidently much more fair than the former, for it is a more nearly correct representation of the actual tonnage of the vessel, and consequently the possible powers of the vessels, whereas the Thames rule, by handicapping beam excessively, almost reversed the true condition of things. Even more plainly will the greater equality of the new rule appear if we glance at *Enriquez* and *Frederick* or at *Bluehound* and *Christine*. The latter is an excessively long craft, and the former a cutter in a stiff breeze and sea, but not a dangerous affair in moderate weather. Does not her superiority in a blow clearly result from her greater size, displacement and power, which is so telling in a seaway, and which under the Y. R. A. rule *Christine* smuggles in at the starting line unpaid for? She races *Bluehound* on even terms, though in reality she more nearly outruns her on the sixties than on the thirties. The latter is an excessively long craft, and the former a cutter in a stiff breeze and sea, but not a dangerous affair in moderate weather. A. rule *Christine* smuggles in at the starting line unpaid for? She races *Bluehound* on even terms, though in reality she more nearly outruns her on the six

29. Second race, for four-oared barges, won by Neptunes in 17m. 40s. St. Georges second and Columbia third. Third race, for single-sculls, won by J. Sullivan, Pioneer R. C., in 9m. 56s., beating R. Barry, Columbia R. C.

40. Quaker Rowing Club.—The first annual regatta of the Quaker Rowing Club, on Oct. 24, consisted of two miles with turn, double-scull skiffs, won by J. Tisdale, beating J. Clark. Double-scull skiffs, won by Denison and Tisdale, beating German and Ponton. Double-scull hydrocauls, won by Tisdale Brothers, beating German and Ponton.

INSTITUTE BOAT CLUB.—The officers of this recently organized Newark, N. J., club are: John Fee, President; Thos. Price, Vice-President; John W. Tobin, Secretary; John E. Murphy, Treasurer.

SIX-WEED-CAKES BOAT CLUB.—This club, of Monroe, Mich., has been reorganized with the following officers: President, Gen. C. Spaulding; First Vice-President, E. D. Price; Second Vice-President, J. T. Hoffman; Secretary, D. R. Crumpton; Treasurer, H. A. Constant.

St. Louis Rowing.—The four-oared race for the Pina Cup came off at St. Louis, Mo., Oct. 37, over a course nearly four miles long with a turn. The six-oared tug boat, followed by the Marys, St. Johns, Resolutes, Romeos and Tempests, finally winning by about one minute. Romeos and Tempests were distanced. Winning crew was composed of members of the St. Louis club, as follows: B. F. Brant, bow; David Herrel, Louis Shaker, and Louis E. Mel, stroke.

HARVARD-YALE.—At the recent meeting of the Harvard University Boat Club the challenge for a four-oared race from Yale was accepted.

CORNELL HARVARD.—Cornell University has challenged Yale to an eight-oared race for four miles straight away.

HOWING HIFLES.

Hanlan, the American champion, will be sent to England soon and will try his luck with the best men there....A sum of money is being raised in St. John, N. B., to get up matches for Wallace Ross and other scullers of that city....Anastasia B. C., of Washington, have paid off their debts incurred for boathouse, and are happy....On the Upper Moongachara course, Oct. 20, Al Shafer and Pat Powers pulled in single sculls. Course, three miles with a turn. Powers won in 24m. 35s....At St. Mary's, Ont., Oct. 24, Wm. Adair won, defeated by John Barclay over a mile course. Time, 7m. 11s....Harvard has accepted challenge from Yale for a four-oared race. It will take place Nov. 9 over the New London course....The Harvard eight of 1878 are in training for a possible race with the English University crew of Oxford. At present it does not seem likely that the race will be brought about....Potomac B. C., of Washington, will join the N. A. A. C. about this time....Atalanta and Neutilus pairs row, Nov. 9, over a two-mile course on the Harlem for a prize offered by a stranger....W. H. Downs and J. E. Eustis, of the Atalanta B. C., whose shell was run down by the tug *Peter Orary*, Oct. 17, 1877, have recovered damages to the extent of \$316. Tugs will hereafter be more careful. Next let some of the pestiferous steam launches be arrested for harassing racing boats, and courses will be kept clear....Evan Morris challenged Warren Smith, of Halifax, but his boat was put off till next spring....W. Elliott, champion of England, and J. Higgins, ex-champion, will row over the Tyne championship course, Feb. 17, 1879, for the championship, £400 and the cup, presented by the London *Sportsman*, now held by Elliott....At Troy, Oct. 24, over a two-mile course in turn, Tompkins, of Greenbush, beat Kennedy, of Cohoes, in 10m. 49s....About \$1,000 was raised at a benefit at the Howard Association, Boston, for Reagan's family.

CORINTHIAN CRUISERS.

NEW YORK, Oct. 25, 1878.

EDITOR FOREST AND STREAM:

In answer to your objections to my former letter, let me quote Maret, a standard English authority on yacht designing. He, in speaking of English yacht clubs, says that they "are at this time (1872) placed in an anomalous position. The members individually are unanimous in opinion that the present class of clipper cutters are deficient in every requisite of a good yacht except speed. Even those who possess such vessels are frequently afraid to trust themselves in their own craft; but, collectively, they agree in shutting their ears to any improvement whatever. Virtually, no rig but the cutter, with its immense and ridiculous beloon sails, is to contend in their races; nor is any but the most exaggerated form of hull permitted to enter the lists with any chance of success."

Again, regarding breadth, he says: "A vessel relying on constructive qualities (i. e., breadth) for stability has many advantages over the deep-formed yacht. She will, besides drawing less water, require less ballast, be lighter, easier and drier at sea, have greater platform space, will work quicker, and will sail with less inclination. On the other hand, the deep, heavy yacht will have greater height of cabin, will perhaps be faster to windward, and, in a match in narrow waters, her weight will give her an advantage over her lighter opponent, and she will shoot farther in stays. It is, however, difficult to believe that the narrow form would have been countenanced but for the tonnage law, which gives such great advantages to a narrow vessel, and has prevented the wider yacht from receiving that attention which its qualities demand."

Again, in speaking of the extreme center, he says: "Their chief characteristics were the raking stern post, great flatness of the water lines at both extremities, great draught of water, a reduction of breadth, lead ballast and enormous sails. Although the object of speed was attained by these means, it was met by serious countervailing evils. There is little comfort at sea in such vessels; the great weight of ballast makes them plunge heavily, they are wet, require a numerous crew to work the sails, and there is comparatively little room below for the owner."

Yon say: "To drive his enormously wide and deep boat at fast speed, assuming for the moment that such were attainable, he will require an immense spread of canvas, a necessity which we cannot by any means approve, much as 'Corinthian' seems to glory in the big sails his ideal cruiser will stand up to. On the contrary, does it not become higher skill to so model a craft that she can be easily driven and will call for short canvas only?" While I glory in the enormous spread my vessel can carry easily, I claim that she can be driven faster than your cutter type of vessel with the same spread of canvas, especially to windward, since I propose to have always an American-shaped vessel for my large bulk, viz., large bulk with small displacement, the very antipodes of the cutter. Moreover, let us look what vessels have developed

great speed in these waters: first, keel schooners, the famous *America*, and the *Sappho*, after being bipped by Robt. Fisher; then centerboard schooners, the celebrated *Comet* and the *Palmier*; of sloops, the *Arrow*, *Gracie*, *Marla* (old *Vision* before alteration) and *Tizen*. What do we find in their construction? Simply great beam and bulk with small displacement.

Let us see the speed developed by your cutter type with this class of vessel. When the famous *America* visited English waters and met their celebrated clippers she was first. Who next? In fact, the race was a farce. The *Sappho* also was first in their own waters. When the plucky Ashbury brought his cutter yacht *Cambria* to these waters, he found himself and yacht out-sailed by our whole fleet in rotation. What was the consequence? When he returned he brought the *Livonia*. Was she a cutter? No; all who ever saw her would not hesitate a moment in pronouncing her an *American* type of vessel, of the usual characteristics—large bulk and small displacement. That she was speedy there was no doubt; and even to this day, in thinking over her race in these waters, I doubt that the *Livonia* could be beaten by any keel vessel of her size in our possession, unless by the *America*; and the result of all her matches for the Queen's Cup proves simply, in my mind, that she was over-matched in size by the *Sappho* and out-rigged by the *Columbia*.

We have, of our native cutters, the *Vindex*, of purely English type, large displacement, small bulk, with enormous sails, everything perfect in your mind, no doubt, in hull and rig. This much-raced vessel, if she has ever shown any speed, except by herself and on paper, remains to be vindicated. Also the *Muril*, *Volante* and *Petrel*. These vessels I have never seen sail, and cannot speak of their performances personally; but I am informed by yachtsmen who have often sailed in company with them that they are remarkably slow for their length.

Further, in your comments you tell me to lop off three feet of beam and add six feet of length to my ideal cruiser. I answer I do not want a 40-foot yacht; such a vessel requires an extra man before the mast, which I cannot afford. Besides, I do not wish to go beyond my class, which is limited in my club to thirty-five feet. While I admit that I would rather for speed have six feet more length than three feet of beam, provided always she was not cutter shaped, I positively deny that three feet lopped off the beam of my chubby little ship, as you designate her, with same length of keel, would improve either her room or speed. On the contrary, my wider vessel would walk away from the same vessel with three feet less beam, from a calm to a gale.

Yon say more length and less beam would admit of more freeboard without deteriorating from her beauty. I admit such to be the case, providing I take as my standard of beauty the English cutter. But I must say I cannot do so, but regard the *America* type as my beau ideal of beauty in a yacht. But as "handsome is that handsome does," I will say that when it happens underweigh that I meet a vessel about my size, which from leeward gradually approaches my vessel, it is astonishing how soon I, as a yachtsman, can see fine points and lines of beauty about a craft which would be but ordinary, provided she approached in an opposite direction. As to the multiplicity of gear which you say, harasses "Corinthian," I must say that I cannot believe you have ever been aboard of a full-fledged cutter to make the sea eteant "that it consists of one halliards and a light down-haul," over and above ordinary sloop rig. By count we find in a 30-ft. sloop with four sails, 3 double blocks, 17 single blocks, 17 halliards and sheets. A cutter of the same size, with five sails, requires 4 double blocks, 44 single blocks, 35 halliards and sheets.

You condemn the unsightly cockpit, and mention the *Mohawk* as an example. In this connection I will say, if I am not much mistaken, the unfortunate mishap to that yacht is *inappropos*, she having a flush deck with wash-streak as you advise, and no cockpit.

Having answered your objections, Mr. Editor, to my ideal cruiser, I will say, now in conclusion, however much I would like to convince you, mathematically and theoretically, as well as practically, that the English type of vessel is all wrong, either for speed, comfort or sea-going qualities, and that the modern type of American vessels approximates correctness. Also, to demonstrate the fallacy of statements given as facts in a late issue of your valuable paper, "that the shoaler a vessel is the less she will sail upon her bottom." Also, to give you greater respect for what is known among yacht builders and "ubiquitous experts" as a long floor, etc., by demonstrating its utility and necessity to speed, and by showing you how easily obtained in any type of vessel. Also to demonstrate, why some vessels cannot be steered with a tiller, and many other items of interest to yachtsmen, upon which you comment without offering any other remedy than your panacea for all ills—the English cutter. All this would take time and space, so I will only, on some future day, describe a short cruise in my ideal cruiser in company with your cutter.

CORINTHIAN.

"Corinthian" is hardly logical in comparing the performances of two yachts of the same length, one much smaller than the other, and claiming the right to put unlimited beam on his boat. He cannot deny a competitor the privilege of putting the same bulk in length should he so desire. Equal size must form the standard of comparison between different types, not any single dimension. The facts brought forward by "Corinthian" conclusively show the fallacies and tendencies of all length measurement rules, a matter for which our valued correspondent is fortunately not responsible. P. Maret is obsolete as an authority. But our readers will be happy to get under-way with him and take the promised spin in his craft as soon as he is ready to pipe, "All hands up anchor."

CORINTHIAN CRUISERS.

EDITOR FOREST AND STREAM:

NEW YORK, Nov. 1, 1878.

I have read with much interest the communications that have appeared of late in my favorite paper, FOREST AND STREAM, in regard to yacht models. Some three or four years since I used to air my views in company with "Polders," "Big Topmast" and others in a contemporary, but of late I have been experimenting in a (at least to me) new direction, viz., in a small keel boat twenty-five feet long, with a modification of the cutter rig,

In fact I can say that I am the first who appeared in New York Bay with a fore-stay and jib to my craft, except *Vindex*; but as she is a "big gun," as Rip says, "we won't count her time."

Now, I have owned boats of various kinds for twelve years last past, and have sailed all the water from Cape May to Nantucket and I have now a notion of building me a craft suitable for such sailing, a little longer, about 23 to 30 feet over all, in which my self and a boy will constitute "captain, crew, midshipman, mate and bos'n's tail."

I want a craft that is suitable and safe for the sailing I can do in a three weeks' vacation, and that at the same time can go down the bay in a Corinthian or club race as fast as any small boat that carries stationary ballast. Fellows that shift weight are no boatmen anyhow, and I care nothing for their opinions and do not wish to hear from them; but I should like to hear further from "T. C." and "Corinthian," as the one has had much experience with the "hindman's" boats, and the other is an advocate both width and depth; and, undeniably, Mr. Editor, if we can combine those two qualities in a small boat it will add to our comfort when on a cruise. So, by all means, "Corinthian," let us out your cruise and let's see what you can say for your side of the question, and I promise, after election, to give my experience in "pan-cakes," "rattle-traps" and small cutters.

NOTES.

(a) Some loss of time occasioned by this continuation, and therefore a demand for the opening advantage.

(b) Which offers to give up P at K4, and see nothing to compensate. It is possible that Mr. Thorold, in writing out the game, transposed his sixth and seventh moves. This is rendered the more likely as White does not take the P.

(c) This spendthrift advance may lead to a disaster on hushes. (d) Having given up his position for an attack, he is obliged forthwith to give up his attack in order to save his P.

(e) Not purposeless, though obscure. One of the motives may be to invite the advance of the Kt P, with the idea that it may then be induced to go a step further to K5, after which Black may hope to bring his Kt Q4 by the way of K3 to B4. Another purpose may be to provide against K5 Kt K5; for if it be played there now, B ack answers with P-B5, followed after Kt5 by R-B, and withdrawing the K when the Kt chs. It is probable also that Black proposes, if allowed, to pay the K-B4, and then sacrifice it for the K K4.

(f) Good, but certainly not reckless; for if White go for the P, then R-K-B4 intimates a hopeful attack afterward. Moreover, some time or other—viz., when the Q P is sufficiently secured—P-K4 would have its say in the matter.

(g) This well conceived sacrifice must be looked upon as a part of the main idea, for the adverse Kt P was always a factor to be reckoned with Black, who, as will be perceived, obtains thereby a most formidable centre.

(h) This may seem to be a mistake, but in all probability it is played in order to get rid of that menacing P at K4. A dreadful broken up position is the consequence undoubtedly, but he would have a knotty mattress to lie upon whatever course had been adopted.

(i) Had the K moved, Kt-Q5 would have proved troublesome; and, for that matter, to might Kt-K6, the latter being more particularly in point of K-B.

(j) There is nothing to be done—the game is palpably lost. (k) A neat finishing touch. One does not often see such a gay game issue from the Scillian Defence.

The special trains for Mattford, Springfield and the North, running to and from New Haven, in connection with steamers leaving Pier No. 25 E. R., have been withdrawn for the season. The New Haven steamers (which are heated throughout by steam) will leave as usual at 3 p. m. and 11 p. m. Passengers can connect with trains for North and East by taking horse cars from steamboat dock to railroad depot—(44s.

A WEEKLY JOURNAL.

AL FRESCO.—We received a brief visit a few days since from Dr. Chas. J. Kenworthy, of Jacksonville, Florida, popularly known as "Al Fresco," a gentleman whose efforts in behalf of his adopted State have been fully recognized by residents and non-residents. Dr. Kenworthy has acted as the special representative in Florida of FOREST AND STREAM ever since he took up his residence there. Through the book known as Camp Life in Florida, and through the columns of this paper, he has probably done more than any single man to promote agriculture and settlement in the State, and to hold up its attractions and advantages to invalids, tourists and sportsmen.

We have now on hand two more papers by Dr. Kenworthy which will be speedily printed in our paper, being the third and fourth of the series entitled "Marooning." These charming sketches are descriptive of the scenery and sport to be found along the coast; and among the Keys of the Peninsula, and contain much information altogether new and attracting. The Doctor will continue his explorations during the coming winter, and our readers are promised the benefit of them.

A YACHTSMAN'S OPINION.—A gentleman well known in Canadian yachting circles writes: "I must thank you for your two last articles, viz., 'Corinthian Sentiments' and 'Is the Sloop Seaworthy?' It is my belief they are just the thing and much wanted, as we have been gradually drifting into a style of yacht altogether unfit for actual service; a fact which has been proved so often of late."

AND ANOTHER.—We have received the first number of a new eight-page sporting paper printed in the German language simultaneously at Chicago, Milwaukee and St. Louis, entitled "The Western Shooting and Hunting Gazette." It has an engraving of the American wild turkey, which is just in season for our coming Thanksgiving festival.

THE HARVARD-OXFORD RACE.

THOUGH the proposition of sending an "right" from Harvard University to England to row Oxford has been mooted, it is still so early to consider the question that the probabilities of anything definite being arrived at for some time yet are exceedingly slim. There are so many obstacles in the way that an arrangement, unless by accidentally good fortune seems almost out of question, and we do not expect to see an American eight on the Thames for a long while yet, much as everybody is anxious all of a sudden, after Columbia's triumph at Henley, to see our former defeat by Oxford in 1869 fully avenged. Hardly, however, has the matter been broached than a number of claimants to the championship of America spring up all over the country and claim the privilege of going abroad to show their British cousins that they don't know how to row. If their anxiety to pull were only a test of their skill we would be the last to cry: Caution, gentlemen, one swallow does not make a summer and one victory does not make us masters in the art of rowing. If Harvard has an inordinate desire to try her luck again with the best men of England's Universities let her go and win or lose upon her merits, always providing Oxford will be able to accommodate them, or they Oxford. But what connection the championship of America has to do with the matter we fail to see, and why every crew that wishes to pull some foreign club must needs first go picking all over the country demolishing claimants to the championship, with or without a claim, is logic which it is hard to divine. If foreigners jump without reason to the conclusion that every itinerant American crew holds the title to the championship of this country it is because the wandering crews have too often sought cheap glory to be reaped from every thin disguise of a championship resting on no sounder foundation than that of a record of many years past, when different men were seated in their boat and when a variety of "ifs" and "buts" were strained to their utmost to make out a case where none existed. The offhand manner in which the Shoe-was-see-mettes were labelled with the championship of America, because forsooth they managed to reach the line ahead of a couple of fair crews in a country regatta, will not be repeated by a crew of such standing as Harvard would be likely to send abroad. By this time the English press has learned to look to American sporting journals for the record and rank of their visitors and not to trust the unprofessional, or local papers in which the great American spread-eagle is sure to get the better of the bucolic reporter's wits, and send off some boat load of barnyard heroes to flaunt the red banner of American championship in the face of the unsophisticated foreigner. Let sporting papers in this country give the cue and it will soon be sent broadcast over the British Isles that the crew about to land upon their hospitable shores is undertaking its work upon its own responsibility; and if victorious, let us have modesty enough not to lay claim to aught else than we deserve—an individual victory and nothing more.

TYRANNY: BRUTE AND HUMAN.

AMONG the many traits of character common to man and the lower animals is the spirit of tyranny—the oppression of the weak by the strong. In man this is most often, perhaps, exercised by strength of mind; but in many of the animals it takes its most obvious form, the strong going to the extent of killing and eating the weak, even though of the same species. There is scarcely an animal to be found, if we watch closely, who does not manifest some form of tyranny where it is able. Even the insects show it. Beetles will assault one another in the fiercest way, and compel submission, or forbid access to a morsel of food which the stronger one has obtained. In the London Daily News two or three years ago, a writer who had been at the Brighton Aquarium gave a detailed account of the wrangling among the hermit crabs, which, as everybody knows who has observed them at all, are exceedingly pugnacious little rascals. These crabs have recourse to the cover of a whelk or other shell, into which they back, and which thus serves as a protection to their soft and weak hinder extremity, leaving their mailed heads and formidable claws out at the front door to resist all intrusion. This gentleman's attention was attracted to a great commotion among the hermit crabs in a certain tank, and he kept his eye upon them. Suddenly, one of the number, a large specimen, whose adopted dwelling was of somewhat narrow dimensions, gave chase to a small crab which occupied a shell much larger. The little one, apparently quite alive to the sinister intentions of his big pursuer, took to flight, and struggled to escape until the effort became hopeless, dodging around and behind the oysters, in and out of every shelter in the most amusing way. At length he was overtaken, and then a regular pitched battle ensued. The little one resisted manfully, but was finally overcome, the more bulky combatant succeeding at last in forcing his claws between the body of his weaker opponent and his shell, and with most frantic exertion, in turning him out. Then followed an exchange of shell.

Here was manifested a keen discernment of the size and kind of shell which suited him on the part of the larger one, a determination in following it up, and a perseverance in the hard fight by which he possessed himself of his neighbor's house, that are not at all different in kind from human qualities.

Tyranny is invariably seen among gregarious animals, the herd or flock being always under command of one individual

who has fought his way to the front, and who will rule with imperious sway until he becomes old and in turn is ousted by a younger and more vigorous rival. John Burroughs dilates delightfully upon this characteristic of the bovine race in one of his late essays, "Our Rural Divinity;" and it is to be seen every day in our poultry-yards, where, no matter how many may be the number of the birds, one cock invariably assumes the leadership. He must keep fighting to retain, as he had to fight to win, his prestige; for younger and ambitious cocks are growing up, but he generally wins. If he loses, however, whether or not his life goes with his defeat, the conqueror not only takes his sceptre but his whole harem. The same condition of things exists among ducks, especially those grumblers, the Mandarins, who are always fermenting a row in the aviary.

In allusion to this matter we find some instructive stories and wise comments in the Rev. J. G. Wood's latest work, "Man and Beast." This pleasant and accurate writer points out the analogy between these barn-yard birds and human, especially in the less civilized ages and portions of the world in the exercise and profit of tyranny. "Substitute human beings for birds," says this author, "and the country at large for the poultry yard, and the resemblance is exact. There are many petty chieftains, but among them is sure to be one more mighty than the rest, who holds his place by superior force, either of intellect or military power. If challenged by one of the inferior chiefs and is victorious he retains his post, while if he is vanquished his conqueror takes his place, his property and his wives. And it is another curious point that, whether with men or birds, the members of the harem seem to trouble themselves very little about the change of master."

The Scripture history of the Jews is full of allusions to this custom among the Oriental nations at that time, as, indeed, it still is for the most part. David had no hesitation in taking possession of the household of the conquered Saul, wives and all; and afterward, when Nabal died, after his defiance of David, the latter, as a matter of course, appropriated to himself the subjugated wife and servants. Similarly, when Absalom rebelled against David he publicly took possession of his father's harem as a sign that he had assumed the kingdom. The putting to death of Adonijah by Solomon, and the banishment of his supporters, with confiscation of their property, belongs to the same class. This obtained not among the Hebrews alone. It was regarded as a most noteworthy act of magnanimity on the part of Alexander, when, having conquered Darius, he was polite to the women in the retinue of the fallen hero, and declined to adopt them into his own family. A thousand more examples might be drawn, both to show how constantly tyranny is manifested among all classes of animals from lowest to highest, and how close is the parallel between brutes and men under the control of this domineering disposition. In both there is a single despotic ruler who allows no rival; and in both an attempt to gain the affections of one of the harem is tantamount to a challenge for sovereignty, and is treated accordingly.

GRAND DEER STALK OF THE BLOOMING GROVE PARK ASSOCIATION.

BY OUR SPECIAL REPORTER.

PIKE COUNTY, Pa., Nov. 5, 1878.

Thirty good men and true, fully armed and equipped, left the Erie Railroad Depot on Friday morning last in a special car, to take part in the grand hunt which had been advertised to take place on the following day, in the breeding preserves of the Association. The following are the names:

Roland Thomas, Dr. A. Russell Strachan, C. A. Grymes, R. Redmond, W. F. Wharton, Louis Snyder, T. W. B. Hughes, D. G. Croly, late of the Graphic, E. N. Johnson, Col. G. W. Wingate, J. F. Durant, M. H. Burns, J. T. Burns, Dr. S. M. Nash, Dr. F. J. Bumstead, E. Wallis, P. Van Valkenburgh, all of New York; F. Hardy, Otto Fruecke, H. F. Eames and C. Hallock (Furter and Struett), Brooklyn; H. F. Anderson, Rahway, N. J.; T. C. Clarke, of Philadelphia; J. M. Stellenwerf, of Islip, L. I.; N. B. Bumstead, Boston; Count B. Mouzelly, of Paris, France; E. O. Beach, of the New York Sun; C. M. Ogden, N. Y. World; and two dog-handlers.

The day was bright and sunny, the air bracing, and the promise of sport assuring. The beautiful scenery along the line of the Erie Railroad, especially through the valleys of the Delaware and Lackawaxen rivers, was much enjoyed. The party reached Millville, on the Honesdale Branch, about one o'clock, and after a substantial meal provided at the Club Halfway House by Mr. John Deming, found comfortable transportation to the Park, seven miles distant, where they arrived in the middle of the afternoon. The road to the Park was built by the club last spring, and is most excellent. The first two-and-a-half miles follow the valley of Blooming Grove Creek, one of the finest natural trout streams in the world, broken into falls, rapids and pools, for the entire distance, and affording many views of wild and charming scenery. It is crossed four times by bridges. Only three small shanties are passed. The whole route is through a forest whose primitive beauty has been much impaired by the lumber-cutters, and great open spaces of scrub oak and hemlock, and glimmering through the trees the quarters of a mile away may be seen the blue waters of Lake Giles, where the Club House is located on an eminence of about one hundred feet. Strangers are always agreeably

National Pastimes.

ATHLETICS.

COLUMBIA COLLEGE ATHLETIC ASSOCIATION.—Mott Haven, Nov. 2.

100-yards Dash—Fifteen entries.—Won by Breton, class of '79, in 11m 12s.

1-Mile Walk—Three Entries—Gold, 1st, 5m 39s; Romano, 5m 47½s.

1-Mile Run, Handicap—H M Moore, 100 yards start, won in 2m 54s; 2d, 55 yards start, 2m 12s.

Running High Jump—H Saxe, 4ft 8½ in. No competitor.

Throwing the Hammer—W R Pryor, 63ft 1¼ in; J H Montgomery, 62ft 9 in.

200-yards Run—Eight entries—G H Taylor, 1st, 10 yards start, 2m 43s; T J Breton, 2d.

T H Lee walked 8ft 7 in. No competitor.

440-yards Run—Five entries—F Butherford, 15 yards start, 1st; H L Rose, scratch, 2d.

1-Mile Run, Handicap—H M Moore, 100 yards start, won in 2m 54s; 2d, 55 yards start, 2m 12s.

1-Mile Run, Handicap—H M Moore, 100 yards start, won in 2m 54s; 2d, 55 yards start, 2m 12s.

1-Mile Run, Handicap—H M Moore, 100 yards start, won in 2m 54s; 2d, 55 yards start, 2m 12s.

1-Mile Run, Handicap—H M Moore, 100 yards start, won in 2m 54s; 2d, 55 yards start, 2m 12s.

FOOTBALL.—A game of football, between Amherst and Yale, was played at New Haven, Nov. 2. Yale made the first goal in 23 minutes; time was called on the second inning without a goal, and the third goal was made by Yale, who also scored three touch downs. The players were: Yale—Forwards—Farwell, Harding, Moorhead, Lamb, Ives, Hull and Eaton. Half Backs—Brown, Badger, Peters, Thompson and Camp. Backs—Wakeman, Nixon and Hill. Amherst—Forwards—Banta, Russell, Deyo, Goodnow, Goodrich, Child, Underhill and Terry. Half Backs—Laymer, Crittenden, Gordon and Gillet. Backs—Alden Chickering and Hill; Referee, George Clarke, '80. Judges—Yale, Miller, '79, Amherst, Thurston.

THE DANGER OF THE BICYCLE.—Probably there is no more dangerous form of amusement practiced than bicycling. The frightful fatality which accompanies the sport arises in great measure from the unexpected nature of the accidents. When the bicyclist, mounted upon his machine, is driving swiftly through space, he is all alert to the dangers of his position, and can guard against them. We rarely hear of accidents from the bicycle in actual use. It is when danger is least apprehended that the bicyclist always encounters it. Here, for instance, was an English rider, Mr. Galloway, of East Molesey, who has just fallen off from the Ramsgate cliffs. At the time of his death his bicycle was at home. Again, an Englishman named Biddlecomb, who has ridden thousands of miles upon his machine, fell the other day when simply crossing a street, and broke his leg. His bicycle at the time was reposing in the wood-shed. The bicycle is a very dangerous machine.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

J. W. M., Ypsilanti, Mich.—The black and tan, or Gordon setter is frequently called the Scotch setter.

Pinto, Baltimore.—You can get excellent quail shooting at Georgetown, Delaware. Ask for R. A. Rosenbaum.

W. E. A., Huntington.—To answer to your query in last week's issue we wrote that Frank Forester died in 1838, but the printers made it 1878.

A. H. B.—To prevent spluttering when pouring lead around a damp or wet joint, melt a piece of resin in the ladle before pouring in the liquid metal.

C. O. G., Danville, P. Q.—You will find quail shooting in Western Ontario at stations on the line of the Canada Southern or the Great Western Railroads and their branches.

E. B. S., New York.—Can you inform me of any person having insects for sale? Ans. John Akhurst, of Brooklyn, or J. Wallace, 17 North William st., City, can give you information on this point.

RUFED GROUSE, Goshen, Mass.—Can you suggest the cause of a young dog's suddenly commencing to bray off and eat twigs as though anxious to get rid of something in his throat? Ans. Worms.

H. E. S., N. Y.—Your dog probably has chorea. See article on Disemper in this week's paper. The doses there given are for full-grown dogs, and should be reduced one half or two-thirds for puppies.

H. A. R., Kennedy, N. J.—The charge for your gun is \$3.48 for powder and 1½ oz. No. 9 shot. The make is a good one. The "Sportsman's Gazette" will give you the information you want; to be had at this office.

Tiso, Ann Arbor.—Can you give another receipt for curing fleas on dogs besides pennyroyal, caribole soap, snuff and gin, coal oil, and camomile? Ans. Steadman's flea powder (see adv.) will surely drive fleas from a dog.

INQUIRE, Richmond, Va.—A Lish (mother, red Irish; sire, Gordon) is red Irish, she having resembled her mother. Ans. We should breed her to a red Irish dog.

J. J., Pittsburgh.—Why are guns sometimes full choked in the left-hand barrel, and only moderately choked in the right? Ans. Because the left-hand barrel is usually used for a second, and at longer ranges, therefore a closer pattern is desired.

F. P. R., Princeton, Me.—Do the red Irish setters stand the cold weather well? Ans. A kennel he heated in winter? 3. What is the best b-b'ing for a kennel? 4. What is the best cross with a red Irish setter? Ans. 1. Yes. 2. No. 3. Rye or winter straw. 4. The Gordon.

Worcester, Port Richmond, S. I.—About when will the best duck shooting be this month on West Mallow's, N. J.? Ans. The season, cold northerly winds which prevailed the early part of this week should make the shooting good now, but we cannot tell at what particular date the ducks will choose to stop.

W. L. W., Spencer, Mass.—Can you inform me where I can get a book that treats on tanning skins with fur, on such as mink, otter, fox, etc., and the price of one? Ans. Buy "How to Hunt and Trap," by J. H. Batty, of Orange Judd & Co., 245 Broadway, New York; price \$1.50. Or "Fur-dressers' Manual," \$1.

RABBIT, Ithaca.—Would the following be a good target with 4 drs. Dittmar powder, 1 oz. No. 9 shot; 10 gauge, 8½ lbs. gun; 30 in. circle shot barrel—30 yds. 22 pellets; 40 yds. 12 pellets; lead barrel—30 yds. 30 pellets; 40 yds. 14 pellets? Ans. The pattern made by the left barrel at 40 yds. is fair only; the others are not.

R. M. B., New York.—Where in the city can I have a bitch spayed? What will be the probable cost? Also, at what age is it best to have it done? Ans. We know of no one in N. Y. who performs the operation. Horace Smith, 33 Park Row, can tell you of some one near by who does it. It should be done when the bitch is between six weeks and three months old, the younger the better.

J. M. G., Washington, D. C.—Please inform me what it will cost to import a dog from Ireland, and if I would have to pay duty on him at the Custom House? Ans. The freight will be 2½, with a small fee to the butcher. There will be no duty if the shipper is careful to get a certificate from U. S. Consul at point of shipment that the dog is intended for breeding purposes; otherwise there is a duty of 20%.

G. E. P., Pittsburgh, Pa.—Will you please let me know why the Dittmar Powder Co. is in its circular that the brands A, B and C should not be used in rifles? Also, what brand of Dittmar, if it is safe to use, is best for use? I have fired about 25 rounds of Dittmar C in .30 cal. Maynard rifle, and was much pleased with the way it shot. Ans. You cannot do better than to continue to use C. This is Captain Bogardus' choice.

S. M., Reno, Pa.—My dog is suffering from chronic diarrhea. What shall I do for him? Ans. Presuming that you have given him, without stopping it, a dose of castor oil with a few drops of laudanum, we would suggest the following: Dilute sulphuric acid, 3 drs., tinct. opium, 2 drs.;

compound tincture of bark, 1 oz.; water, 6½ oz.; mix, and give two teaspoonfuls every four hours. Feed only on broth or milk thickened with rice or arrowroot, and give rice water only for drink.

H. S., and H. L. F., Monroe, N. C.—Are the balls in Dr. Carver's shooting thrown from a trap? If so, how far from the trap does he stand? Are the balls thrown in any direction, like they are for shotgun shooting? Has he ever written a book on the subject? Ans. The balls are thrown up by hand, the tosser standing 15 or 18 feet away, or even less. They are hit about 8 feet above the thrower's head, not to the right or left. He has written no book.

J. M., McVeytown, Pa.—The head of the fish which you sent us recently, stated to have been caught in a lake in the interior of Pennsylvania, belongs to what is commonly known as the lake lawyer, dogfish or mudfish. It belongs to the order of Ganoids, and is known as *Amia calva*, family Amiodont. For very full description see Hallow's "Sportsman's Gazetteer," pages 824-6.

DESK, Arcola, Ill.—Do you think a little dent in my gun barrel about 6 in. from the muzzle could be taken out without injury to the gun? If so, who would be a good smith to send it to in my vicinity? 2. Is 120 grs. of powder by weight too great a charge for a 12 gauge, 5½ lbs. gun for ducks? 3. What will ¼ doz. decoy ducks cost? Ans. 1. It can be easily taken out by any gunsmith. 2. It would equal 4½ drs. We should not use over 4 drs. 3. \$5 to 10.

G. W. R., Georgetown.—1. I want to purchase a Shelton Auxiliary rifle barrel. What is the best calibre for turkeys, geese, ducks and quail? 2. How far will it kill? 3. Is there any better make? 4. Will it hurt the gun in any way? 5. What is the most suitable way to carry shells for shotgun? Ans. 1, 23. 2. We do not know, probably as far as an ordinary rifle if held straight. 3. We do not know of any. 4. We think not. 5. There are several better, etc., advertised. We have always found the pockets of our shooting coat to answer well enough.

H. C. B., Rocky Hill.—Some time since I registered at your office the pedigree of five dogs at a cost of \$5. Subsequently it was announced in your paper that the money would be refunded or applied to the subscriber's credit in payment for a copy or copies of the Kennel Stud Book. I preferred the latter alternative, but begin to be anxious. Will some one please rise and explain? Ans. At the earnest solicitation of the National American Kennel Club we handed over to them our Kennel Register, with the understanding that they would print the Stud Book. We are now endeavoring to get our book back, as there appears to be no immediate prospect of the other being published.

Brown.—I think I have read in your paper articles relative to the damage that might be incurred by the State from cutting the Adirondack forests, and thereby destroying the springs and sources of the Hudson, and diminishing its volume. Can you refer me to any public call on the subject? Ans. See Hough's "Reports on Forestry" in the U. S. Department of Agriculture for 1878, for complete information. Book can be obtained from the Government printer at Washington. We can furnish you the articles from our paper if required.

A. S., New Orleans.—I have a setter dog about a year old that se soon as he hears the report of a gun it is almost impossible to make him do anything. Ans. You may possibly cure your dog of his gun-shyness by a customing him to the report at feeding time, using very light charges at first, and gradually increasing them. Then take him to the field or hedge-rows, and kill some small birds, allowing him to shoot at first. As he first let him to you with a r'd from his collar. If, after a few attempts, he shows any interest in the proceedings, he can be permanently cured.

E. W. C., Germantown.—Can you tell me of any place within three or four miles of Philadelphia where I can get good shooting either at ducks or quail on Thanksgiving Day? What is the best place to Jersey. Also, can you give me the name and address of some gun or sportsman with whom I can correspond? Ans. Address Capt. Allen, Ocean City, Worcester County, Maryland. You will find both ducks and quail. Or write to R. A. Rosenbaum, Georgetown, Delaware. No residents cannot shoot at ducks in Delaware.

E. N., Cambridge, Mass.—1. Won't the shot cartridges which are made for rifles ride the rifle? 2. What is the best English sporting paper, and what is its price per annum; where can I get a specimen copy? 3. Is there such a carbine as the Ballard, and where is it manufactured? 4. 1. There are no shot cartridges made for rifles, except for the little Hobbart parlor rifle. It would run a rifle to shoot on it. 2. The London Field. Subscription price 23s. sterling, probably \$10 per annum in this country. Specimen copy can be had from Brentano, Union Square, N. Y. 3. Yes, made by Schoverling & Daly, New York.

C. D. M., New Rochelle, N. Y.—1. To what dealer or dealers in N. Y. should I go to obtain a reliable auxiliary loader, d. b. shot costing not more than \$10? 2. It is wanted for general use. What gauge, length and weight is best for this? 3. Does weight, as given in your catalogue, mean weight of barrels only? 4. Can a good gun for the use named be purchased for about \$25? 5. Ans. 1. You must read the advertisements. 2. 12 gauge, 30 in. barrels, \$10s. 3. It means weight of entire gun. 4. No, not a new one.

BECKSTON, Brookburg, Ind.—1. A few weeks ago you said to load choked guns with buckshot by chambering shot at muzzle. Last week's paper says that it is not safe to shoot buckshot from a choked gun. Is it not safe to load as first directed? 2. What is the largest No. of shot that can be used with perfect safety in a choke-bored gun? 3. Is it safe to use the Auxiliary rifle barrel in a choked gun? 4. Is it not safe to use buckshot in a choke-bored gun unless the charge will chamber in the muzzle, for the reason that if a larger charge will, although ninety-nine times in a hundred they might pass out safely, the one hundredth they might "chamber," or attempt to pass out in that form, the result of which would be to injure the gun. 2. Any size can be used. 3. Yes, because the bore of the rifle must necessarily be much smaller than the bore of the gun.

IL, Norwich, Conn.—1. Does the Brooklyn Entomological Society consist only of entomologists of Brooklyn and vicinity, or is its membership open to all? Do they accept young naturalists as members? Could I procure a monthly bulletin, particularly Nos. 1, 2, 4 and 5? 2. How can I procure a copy of the "Insect Hunter's Companion," by Rev. Joseph Green, London, 1850? Could you procure a copy for me? Could you procure me copies of the following works, viz.: "Fifth Annual Rep. of the Insects of Missouri," 1878, by G. V. Riley; "Entomological Notes," by S. H. Scudder, being from the proceedings of the Boston Society of Natural History, Vol. XIX, 1877-78. Ans. 1. The Brooklyn Entomological Society consists of active members who pay \$2 initiation fee and 60 cents monthly dues, which are used to publish the Bulletin. The membership is open to all. It holds meetings the first Saturday of each month at 8 P. M., at No. 9 Broadway, when papers for publication are read, and communications among the members are exchanged. If our correspondent could possibly be present at any time, he would be gladly welcomed. Young naturalists are very welcome, as is any one interested in this branch of Natural Science. The Bulletin costs sixty cents for twelve monthly numbers. 2. For the first name work write to J. Sabin & Son, 8 Nassau st., New York. For the others write to the authors, who will perhaps supply you. They are not for sale, we believe, though you may be able to obtain copies from the Naturalists' Agency, Salem, Mass.

WABASH MERRY BOWMEN.—Crownsville, Ind., Oct. 29, 1878.—Four feet target, 60 yards, 30 arrows:

INTERNATIONAL SIX DAYS' WALK.—The English six days' walk at Agricultural Hall, Islington, was finished at 10:30 o'clock last Saturday evening. The contest was to make within the specified time, by running or walking, the greatest distance on foot. There were 24 starters, the eight who made the best record being: William Corkey, Bethnel Green, Eng., 62 miles; H. Brown, Fulham, Eng., 60½ miles; C. Rowell, Cambridge, Eng., 60 miles; J. Hibbert, Bethnel Green, 440 miles; John Ellis, Chichester, 410 miles; A. Courtney, Burnet, Eng., 404 miles; S. Day, Northampton, Eng., 400 miles; Richardson, America, 380 miles. It will be remembered that O'Leary's score in a former contest was 519½ miles, in 21m 59s. The difference in distance is 1½ miles, and in time 2½ hours. O'Leary's time is, therefore, to all practical intent, not beaten by this record. London papers state that the American walker must beat Corkey.

OUTWALKING O'LEARY.—William Crawford, the pedestrian, finished his fifty-mile walk at 9:20 Tuesday evening, at Washington, in nine hours and five minutes.

BOSTON LACROSSE.—A game of Lacrosse was played at Boston, Nov. 3, between the Coughnawaga Club, of Montreal, the champion Indian team of the Dominion, and the Union Athletic Club, of Boston. The game was to have been the best four out of seven, but owing to the long time required to play the usual number of games the contest finished with the third game, which was won by a hard struggle by the Union Athletic. The Canadians won the first two.

Send on request designs, estimates and particular information in regard to working up special Silver into articles of use or ornament. Their designing rooms and workshops are organized with reference to the production of works having a distinctive character, and persons wishing to have heir-looms, or silver from mines in which they are interested, wrought into forms, may be certain of receiving their own metal. Correspondence invited.

Gunpowder,
THE
HAZARD POWDER CO
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder,"
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
64 lb. kegs. A fine grain, quick and clean, for
upland prairie shooting. Well adapted to shot
guns.

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. casisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great*

penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25.

12½ and 6½ lbs, and cans of 6 lbs. of FFG is also packed in 1 and ½ lb. c-nisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard bird-shot for the coast.

Superior Mining and Blasting Powder.

Last week of the wonderful performance of GERALDINE and M. LEOPOLD. Shot from a cannon thirty feet. Admission, 50 cents. Reserved seats, 25c. extra. LIVING ST. BENOIT TWINS on separate exhibition.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 22, 33, or 44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 33, extra long, and No. 32 and 33. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P. O. Box 715

NEW HAVEN, CONN.

221. "OLD RELIABLE" 221. STILL TRIUMPHANT.

In Fall Meeting of N. R. A., at Creedmoor, Sharps Rifles were entered in sixteen matches; took first prize in twelve of them, and good prizes in the other four. Among them the

Inter-state Military Match.

The New York State team, with the Sharps Military Rifle, won with a score of 974. Best score by any other rifle, 960.

The International Military Match.

New York State team, with Sharps Military rifle, 1,044. Best by any other rifle, 903.

The Inter-state Long-Range Match.

Average per man with Sharps Rifles, 213. Other rifles used averaged respectively 193 and 197. The WIRLEDON CUP, won by Mr. Frank Hyde with a Sharps Rifle with a score of 143 out of a possible 150 at 1,000 yards. The LEIGH CUP, won at Spring Meeting with a score of 204. Best other rifle, 197. For the Grand Aggregate Prize at Fall Meeting Sharps competitors each, with Sharps Rifles—Mr. Frank Hyde, Col. W. H. Hyde and Capt. V. H. Jackson—led on a score of 3,000 points.

THE LONG-RANGE MILITARY CHAMPIONSHIP, won by Capt. J. S. Barton, with a Sharps Military Rifle. All prizes in the matches were won with Sharps Rifles.

AMERICAN TEAM WALK-OVER (First Day)—J. S. Summer made, with a Sharps Long-Range Rifle, the extraordinary score of 221 points out of a possible 225 at 800, 900 and 1,000 yards.

New York Warerooms, 177 Broadway.

W. & C. SCOTT & SON'S

FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS

FINE TRIPLEX 12 GAUGE BREECH-LOADER, MADE BY

W. & C. SCOTT & SON.

(From CAPT. A. H. BOGARDUS.)

W. & C. SCOTT & SON: Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with extra 12-bore barrels; also a light 13 and 20-bore; all of your make, which cannot be excelled in the shooting qualities, and impossible to beat in the solidity and power of your patent Triplex Action. I used your gun in my two recent matches with Mr. Pennell, June 28 and July 25, at which time I scored 79 and 71 in each match, winning by two birds; also in my match with Capt. Shelley, July 19, at which time I scored 84, "the highest score on record," and in the International Match with a superb Coventry, Esq., at Brighton, Aug. 6, for 21,000, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 50 yards rise. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is still in good condition.

Believe me, yours very truly,

A. H. BOGARDUS, Champion Wing Shot of the World.

(From COL. JOHN BODINE, New York.)

W. & C. SCOTT & SON: Gentlemen—I have received the Premier quality choke-bore gun, No. 8,656, in good order, and am pleased to say that its performance exceeds my expectations, while its symmetry and finish is all that most of us could desire. It fully comes up to specifications of order, both in finish and shooting qualities. I have disposed of my two guns by other maker.

SILVER MEDAL AWARDED PARIS EXHIBITION, 1878.

ESTABLISHED, 1811.

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Sport Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.
Every ball is weighed and examined, then packed with the greatest care, in barrels of 800.
Send for price list. Special inducements to the trade
HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Balls are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.
The **ROUGH BALL** was the first to introduce the **ROUGH BALL** and at a price far below the smooth ball at that time.
Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the trade.
On the option of the shooter, it is now ready for market. Price \$5. Old style, \$6.
Parties buying glass balls will receive, in each barrel containing 250 balls, score book and rules for glass ball shooting, containing 40 pages.

WAYDOWN BEBEE'S FALL SONG.

SEE de leaves a fallin' down—
Hear de breezes blowin';
See de skies a lookin' like
De clouds would soon be snowin',
Chorus—Wake up, call 't' folks—
Hustle in dat wool;
Git in your meat and 'taters,
For summer's gone for good!

See de frost on top de grass;
An' 't' har de chil'en cryin';
De ivy green has got a chill,
An' 't' base ball am a dyin',
Chorus—Wake up in de mornin'—
Make dem black bee's fly;
Summer's gone, an' winter cold
Won't pass de darkey by;

De 'possum wanders all alone,
De woodchuck sadly cals;
De hickory nut it can't hold on,
An' 't' de groun' 't' falls,
Chorus—Lift up dem feet, brudder—
Make 'e cabin tight;
De winter will be long an' cold,
Kase summer was so bright!

Marooning—No. 3.

(Continued from Oct. 10, 1878.)

MONDAY morning I rose at 5 A. M., cooked breakfast, and started at 7 A. M., for Pavillion Key. This island is a prominent object, for it is the most westerly land south of Cape Romano, and about twenty miles in a northerly direction from the Chickalascoo River. When crossing the grassy mud flats, several miles south of Pavillion Key, we passed near and over large numbers of small-sized green and loggerhead turtles. If disposed we could have captured numbers with the grains, but we refrained from injuring them. I proposed passing to the eastward of the Key, but as it was the last of the ebb tide, I grounded on the mud and grassy flats, and was forced to retreat and find deeper water. I steered for the southwesterly point of the island, where I made a landing at 11 A. M. Tramping around the westerly side of the island, I noticed a coon experimenting upon the exposed oysters. As I was between him and the bushes, he endeavored to escape observation by squatting. On the island coon tracks were visible everywhere. Wherever coon oyster-bars exist, there will be found plenty of raccoons. Looking ahead, I saw a collection of hundreds of white pelicans seeking shelter among the bushes. I approached within forty yards of them. In front of me was a channel, fifty feet wide, and on the opposite side a grassy point of about an acre in extent, backed by mangrove bushes, and literally packed with pelicans. This appeared to be a sort of general rendezvous, where they collected to sun themselves and arrange their feathers. I loaded one barrel with TT shot, emerged from my hiding-place, shouted, and, as the birds rose, fired, and six beautiful specimens succumbed to the destructive effects of powder and lead. Some of your readers will accuse me of inhumanity and pot-hunting; but I entertain different views regarding the utility of sea birds, and pelicans in particular. Before man appears on the scene, sea birds seem necessary to maintain the balance in nature; but when man steps in with nets, hooks and grains, and in some instances the wanton destruction of fish, the services of destructive pelicans can be dispensed with. While I am opposed to pot-hunters, and the useless destruction of useful birds, I am forced to the conclusion that the destructive services of sea birds can be dispensed with on our coast.

At each inlet, pass, bar and shoal along the coast south of Sarasota, large numbers of pelicans will be found, and at a rough estimate I would place the number at half-a-million. Pelicans generally feed on small fish, and from my observations I have reason to believe that they will at the lowest estimate destroy 100 daily. If my conclusions are correct the pelicans along a coast line of less than 200 miles will destroy 20,000,000 of young fish daily, and yearly 18,250,000,000. Many of the young fish consumed would not attain a large size; but if we assume that the average weight of all the fish consumed would reach a half pound, we will find that the pelicans destroy what would amount to over 400,000 of tons annually. If the fish consumed could attain maturity, their progeny would materially add to the quantity of fish on the coast. Add to the fish consumed by the pelicans, those that are destroyed by other sea birds, and it is strange that the existing quantity

should be so great. While many of the fish captured by birds could not be used as food, the day is coming when men-haden will become scarce on our northern coast, and these waste fishes may be required for oil and manural purposes.

About a quarter of a mile north of Pelican Key will be noticed a sandy key, with a few mangroves. Around this island will be found luscious clams, whose home in the sand can be ascertained by treading with the heel. In addition to the clams, crawfish of large size, sheepshead, channel bass and sea trout can be captured in great quantities. Around any of the keys the shootist can readily fill his bag with snipe and curlews. In the channel opposite the grassy point previously referred to, a land-locked anchorage will be found with four feet of water at low tide.

Tuesday morning, turned out at 8 A. M., cooked breakfast, and got under way at early day, course north and by east for two miles. About two miles north of Pavillion Key I crossed a wide and deep channel running from east to west. With my glass I noticed what I had reason to believe was high land. I felt assured that this channel is the outlet of the Fah Kanhatchee River one of the large streams formed by the everglades. From this point I steered WNW across Gallivans Bay, for Cape Romano. In the light of this bay E by N, fifteen miles from Cape Romano, empties Gallivans River. Vignolles examined this stream about the year 1820, and describes it as "a noble stream, with eight feet of water on the bar." He also remarks that it is a "beautiful stream, with high banks and rich and luxuriant lands on each side." He likewise states that the river heads in a "lake or large lagoons in the everglades." Judging from my own observations was a powerful glass, and the statement of Vignolles, the banks of this river present many attractions for the sportsman. The Colliers and Roberts, who live fifteen miles to the eastward of the mouth of the river, have frequent communication with Key West, and, through these parties, supplies could be obtained. Having read Vignolles' book, I became interested in Gallivans River, and have made it a rule to question every coaster I have met in my cruises regarding Gallivans River, and I have yet to find one who has entered it. As with Gallivans River, so with the rest of the country south of this point—a terra incognita.

Being unacquainted with the navigation of this section, I bore away for Cape Romano, intending to leave it to star board, and enter Big Marco Inlet. If I should visit the locality again, instead of rounding Cape Romano, I would steer for the easterly end of Hons Island five miles ENE from Cape Romano. On Hons Island will be found a settler named Roberts, who is extensively engaged in the cultivation of bananas and vegetables for the Key West market. By leaving Hons Island to port, a deep channel will be found leading to Marco Inlet, and by following it, nine miles of outside navigation will be avoided. I reached Cape Sable at 11 A. M., and endeavored to round the point close to shore, but was disappointed. At the pitch of the cape I found a shoal extending to the S. W. A heavy sea was rolling in from the N. W., and the dust was flying to an unpleasant extent. I stood out to sea and crossed the shoal a half mile from the land. Having rounded the sea shoal I encountered a heavy sea, which made the motions of the little *Dont* anything but pleasant. One mile and a half north of the cape will be found a pass with a good harbor. Three miles farther north will be noticed Gaximino Pass with a good entrance, deep water and a land-locked harbor; and three miles north of this Big Marco Inlet. This is a wide inlet with twelve feet of water. If the tide is low and any sea running a shoal will be noticed on each side of the entrance extending a full quarter of a mile to sea. The distance from Cape Romano to Big Marco is only seven and a half miles, with two harbors, but it is an exposed locality, with ugly shoals, and I would prefer taking the inside route in the future, unless there was no sea running.

One mile from the entrance I took a right-hand channel for a mile, turned to the right, and, after following it for another mile, I sighted Collier's schooner, and landed. Running the boat on the shore, I discovered a well-beaten trail, which I followed, and soon found old man Collier planting cabbages. I received a hearty welcome from him. Key West, the population of Key West is about 14,000; the island is almost a barren rock, and everything consumed has to be imported. Hence the productions of more persons than Collier could be sold at the Key to advantage.

I accompanied the old gentleman to the house and was urgently requested to make myself at home. The house is a large one, well arranged, and scrupulously clean. For several winters Mr. C. has accommodated transient sportsmen, and could make room for a few more. The island contains about six square miles, and is capable of supporting quite a population. In a direct line this island is but ninety miles from Key West. Early tomatoes, potatoes and vegetables could be produced and shipped to New York by the Galveston steamers touching at Key West. As far as my observations extended the soil in many places was a deep, dark loam, con-

taining an excess of vegetable matter, and remarkably productive. On this island, cocoa nuts, pine-apples, bananas, limes, oranges, lemons, coffee and all the tropical fruits can be cultivated. The climate is cool in summer, and the islands in this locality are remarkable for their salubrity. The land on this and the adjoining islands is open for pre-emption; and is worthy of the attention of those who are desirous of settling in a mild, temperate and healthy climate. Adjoining Marco is Hons Island, settled by several parties named Roberts. This island contains about two square miles, and is capable of supporting quite a number of families. Twelve miles from Collier's to the eastward on a small stream will be found a large grove of royal palms—one of two still remaining in the State. The waters about Marco abound with mullet, sheepshead, channel bass and tarpon, the latter ranging from 50 to 200 pounds. These fighters can be captured by using a float and mullet bait. They are, without any exception, the most powerful, active and artful of the fish family. They have the knack of jumping, and while in their air shaking out the hook. With their knife-like jaws they manage to cut off hooks and escape. The best snood is a piece of strong bass wire, or a chain, such as is attached to small-size shark hooks. They are becoming plentiful in the St. Johns river near the bar. Each summer many are hooked, but to land one is the exception. Last summer several of my friends were fishing in the surf on Pelican bank near the bar. In the party was a youth of sweet sixteen. He fastened his line around his waist, entered the surf and threw out his bait; there was a bait, a yank and the young piscator started seaward; three friends went to his rescue, seized the line and walked the fish ashore. They had captured a tarpon weighing eighty pounds.

A few weeks since, two friends and self were fishing near the bar for channel bass. B. had a bite, the line went humming through his fingers until a hundred yards had disappeared. Then a tarpon six feet long was seen in the air, and all was slack—the fish had cut the line. To those who are fond of capturing large fish we would say try tarpon fishing; for I care not how skillful the piscator may be he will find that he has one of the most artful of fish to circumvent.

I left Roberts at 4 P. M., and before sunset entered Little Marco pass, three miles to the northward. At the entrance I found a shoal on each side, and the channel hugged the right shore. In the centre of the entrance was an uprooted mangrove of large size. I anchored a short distance from the mouth of the pass, and prepared for the night. I looked forward with impatience to the morning, for I fully expected to be rewarded with a sight of one of the main objects of my cruise—an ancient canal, reported to exist across the peninsula to the north of Doctor's Pass, the latter being four miles north of my anchorage.

From Big Marco to Doctor's Pass a boat passage inside of the islands will be found, but as I preferred open sailing to mud flats, tortuous channels and oyster bars, I kept outside. In rough weather the inside channel might be followed. I questioned the Collier family regarding Doctor's Pass and the ancient canal, and was assured that no one in the settlement had ever entered the pass or heard of the canal. The few who reside on this coast never seem to leave home or become acquainted with their surroundings.

Wednesday morning, before sunrise, I was under way and steering to the northward, with a fair wind. Three miles north of Little Marco I passed a narrow but navigable pass, which the colliers informed me was called John's Pass. One mile and a half to the northward of John's Pass I sighted the promised land and the entrance to it, Doctor's Pass. In explanation of the word "pass," which I so frequently use, I may remark that it is used along the coast by residents and coasters instead of the word inlet. To some it may appear unnecessary to give distances from points to pass, but to sportsmen and tourists who are dependent for their safety on small and unseaworthy crafts, such information is valuable. By possessing such knowledge they will know when to seek a harbor and where it can be found. The majority of the passes are not shown on any of the maps of the State. I have compiled from actual surveys a map of two inches to the mile, showing every channel, pass and island from Florida to Cape Romano; and the tourist or sportsman can depend upon the correctness of my statements regarding distances.

Doctor's Pass is about eighty feet wide, with six feet of water at low tide. Inside of the entrance, to the right, will be observed a narrow channel, which is the commencement of the inside passage leading to Marco. To the left will be noticed a passage fifteen feet wide, leading into a circular bay 200 feet wide, with four feet of water at low tide. To the west this land-locked bay is separated from the gulf by a narrow sand bank. In all my wanderings I have never met with an anchorage to equal this small but beautiful harbor. Following the pass to the eastward for three-quarters of a mile, it ended in a wide lagoon, one arm extending to the north and the other to the south. At a point half a mile from the gulf the navigation becomes difficult in consequence of the existence of shoals and oyster banks, and the explorer must keep to the left as the law directs. The north lagoon is about three miles and a half in length.

I was anxious to find the ancient canal, and air and sun the contents of the boat. I steered to the north for two miles, when I noticed a monstrous-sized bear take to the water from the left bank. Opposite where the animal left the land the lagoon is divided into two arms by a narrow, projecting point,

There seems to be a strong disposition now to enforce the new game law, and if it is rigidly enforced, that part of Iowa will team with prairie chickens in a few years. We staid over part of a day at Freeport to look at some very handsome Gordon puppies that had been added to Dr. Mills' kennel while we were absent. They were as glossy as satin, and are pure stock. Near Clear Lake, at a farm house, I saw a great curiosity—a tame prairie chicken. It was fully grown, associated with the barnyard fowls, and was tamer than any of them. We stood and admired it within three feet. After so many fruitless attempts to domesticate these birds, it will be a matter of interest to know that there is at least one tame prairie chicken. NIMROD.

Fish Culture.

NEW ENGLAND BROOK TROUT IN NEW ZEALAND.—At a meeting of the American Fish Culturist's Association last February (1878) it was stated that "the longest distance ever successfully overcome in the transportation of fish eggs was between Charleston, New Hampshire, and Christchurch, New Zealand, being upward of eleven thousand five hundred miles. This was in the case of a lot of *Salmo fontinalis* eggs which were shipped for New Zealand by Messrs. Stone & Hooper, Charleston, New Hampshire, in the fall of 1876."

An article in the *Christchurch Press*, New Zealand, of Aug. 19, 1878, has the following interesting allusion to the trout which were hatched from this lot of eggs:

"Mr. Johnson is now hatching out the ova of the American brook trout already mentioned. This is a fish of remarkable liveliness and beauty, rising more freely to the fly than the well known brown trout of the English north country streams.

"These trout were originally imported by the proprietor from the Eastern States of America about eighteen months ago.

"They recently spawned and the eggs are now being hatched out, being the first from the parent fish in New Zealand.

"Altogether the boxes contain about 15,000 trout ova in every stage, which are being hatched out daily. Mr. Johnson captured one of the American trout weighing about half a pound, for a more minute inspection than could be obtained by viewing him in his native element. There is no doubt of the remarkable beauty of the variety, which is perfectly prismatic in colors, which are very bright and exquisitely blended. The specimen reminded one of the enchanted fish in the "Arabian Nights" which objected to be fried and jumped out of the frying pan."

It is extremely encouraging to know that our New England trout have not only been imported to New Zealand, but that the fish culturists are actually taking eggs from them, the ultimate result of which will undoubtedly be that all the suitable waters of the Southern Pacific will be stocked with the *Salmo fontinalis* in due course of time.

—Trout and trout eggs are advertised in another column by Palmer & Sons, of Boscebel, Mich.

Woodland, Farm and Garden.

THE SANITARY VALUE OF FLOWERS.

Wordsworth sings that

"Every flower
Enjoys the air it breathes;"

whilst the chemist adds (as far as the leaves are concerned) that, by its breath, it purifies the air for the service of man. Not content with this, modern chemical research is engaged in determining other and unsuspected uses for what have hitherto been considered, in their forms of grace, their various hues and fragrance, to minister only to the æsthetic wants of mankind.

When these researches, two or three years ago, first began to attract the attention of those interested in sanitary science, the writer, then connected with the health department of a large city, found a fitting field in the low, swampy surroundings, filling the air with malaria, and in the neighborhood of the numerous slaughterhouses, reeking with animal exhalations, in which to test the value of their deductions. Here, in the vicinity of some of the most beautiful natural scenery in the world, rendered almost uninhabitable—as at Staten Island, at numerous points along the Hudson and elsewhere—by the presence of malaria, there is abundant incentive for urging the speedy carrying out of a measure of reclamation at once inexpensive, attractive and effectual—namely, the cultivation of odorous and aromatic plants and shrubs in all regions where either animal or vegetable miasms abound.

That our readers may be able to judge of the probable effectiveness of such a measure, we present the following resume of the researches above referred to, as well as the collateral evidence of the long recognized hygienic and sanative value of perfumes in general.

It is to the investigations of an Italian *savant*, Professor Paolo Mantegazza, of Pavia, that we are indebted for the information that this great atmospheric purifier (ozone) is generated in larger quantities by certain plants and fruits possessing spicy aromatic odors than it is by the action of electricity upon the air, the potent influence of which in purifying the atmosphere we all recognize and are grateful for after a thunder storm. This ozone is developed in some plants by the direct rays of the sun, while in others, the action, once commenced in solar light, is continued in darkness; Cherry-Laurel, Clove, Lavender, Bilot, Lemon, Fennel, Narcissus, Heliotrope, Hyacinth, Mignonette, etc., as well as some perfumers, spicy aromatic odors, all of bergamot, extract of colliferous essence of lavender, and some aromatic tinctures, all produce ozone largely on exposure to the sun's rays. Mantegazza has further pointed out that the oxidation of the essential oils, such as Turpentine, Nutmeg, Aniseed, Thyme, Peppermint, etc., under the influence of light and air, is a

convenient source of ozone, as they, even in small quantities, ozonize much of the atmospheric oxygen.

He finds also, that while the ozonogenic properties of flowers reside mainly in their perfumes—the most odoriferous yielding the largest amount of ozone—certain others, possessing no particular perfume, have extraordinary ozonogenic power; as, for instance, the Sunflower, broad belts of which were planted by the late Commander Murray around the grounds of the National Observatory at Washington, and the effect of which he attributed the after immunity of his family from intermittent fevers, previously quite prevalent in that neighborhood. Dr. Cornelius Fox also states in his work on ozone and antozone, that the cultivation of this gaudy plant in malarious districts has been especially urged, as it is said to possess the property of purifying the air laden with marsh miasm, and of exhaling ozonized oxygen.

Professor Mantegazza demonstrates in his report on the action of essences and flowers in the production of atmospheric ozone and their hygienic utility, that the instructions of Empedocles, in the second book of his didactic poem on Nature, to plant aromatic and balsamic herbs as preventives of pestilence, were founded on a close observation and shrewd, though empirical, insight. The historian Herodian relates that, in a plague, which devastated Italy in the second century, strangers crowded into Rome were directed by the physicians to retreat to San Lorenzo, then called *Laurentum*, from the bowers of Laurel which surrounded it, that by a cooler atmosphere and by the "odor of laurel" they might escape the dangers of infection.

The practice of burning aromatic woods and herbs, as well as odorous gums, spices, etc.—not to speak of the use of tar smoke, the antiseptic properties of which are attributed to carbolic and other acids—as a means of arresting the spread of, and extinguishing epidemics, is of the highest antiquity. Numerous instances are cited of the extinction of the plague by means of fires of odoriferous wood, green Laurel, Wormwood, Chamomile, etc., in the market-places, and even in the houses both of the healthy and the sick. Their efficacy, it is now claimed, was due to the production of ozone, by which the pestilential constituents of the atmosphere were purified.

Within the last half of the century it is directed by the physicians at the sources of information, and this only to give weight and authority to the practical suggestions of measures affecting the great problem of the prevention of disease and the preservation of health. These suggestions, in the present case, are obvious, and will in some degree supplement the recent recommendations of Dr. Stephen Smith concerning the cultivation of shade trees in the streets of cities as a means of diminishing the high temperature of summer, by modifying the temperature and by purifying the atmosphere.

What we would here urge is the cultivation of plants and flowers possessing these desirable ozonogenic properties, alike in city and country, within doors and without; in cities, because the air of cities always contains less ozone than the air of the surrounding country, and the denser parts of cities less than the more sparsely built, or than the air of parks and gardens; in the country, because very few regions are entirely free from malarial taint.

They should be cultivated in and around schools and all other places where animal exhalations abound, especially in the districts where slaughtering and kindred occupations are carried on, and in graveyards and cemeteries. The swamps and flats and "meadows" of Staten Island, those around Jersey City and Hoboken, in the vicinity of Brooklyn and in the upper part of Manhattan Island, should be made to blossom as the Rose.

Aside from the poetical and æsthetic aspects, the florist and the nurseryman and the seedsman may put in a plea for consideration on purely utilitarian grounds. Instead of such disinfectants as those that have been described as chiefly of value because "they smell so badly that people open the windows and let the fresh air in," they will furnish us each

"To bud and flower and here that grows on ground,
To bud and flower and throw sweet smells around."

And it may yet come to pass that he who makes two flowers to blossom where only one bloomed before shall receive the encomium Dean Swift suggested for the successful corn or grass grower.—*Hygiene: a Journal of Sanitary Science.*

[While heartily assenting on general grounds to the opinions here set forth, we must add a word of caution as to the value of ozone. Far too little is yet known of this element and its relations to plant life to enable us to dogmatize upon it.—Ed.]

BLOWING UP STUMPS.—Late experiments by Mr. John O'Donnell, of Jamaica, L. I., have shown that by the use of dynamite, the cost of stump eradication can be surprisingly reduced. An oak stump, two feet in diameter, costs by hand labor at least \$1 to remove. Dynamite will send it flying at a cost of about a third of that sum. Dr. O'Donnell recently invited a party of farmers to see its effectiveness. Five stumps were attacked. The first was of oak, partly decayed. The men employed punched a hole with a crowbar between two projecting roots, but not being experts, did not insert the instrument fully under the stump. Consequently, only two-thirds of it was blown out. The partial decay of the wood was another hindrance. It did not offer the necessary resistance. A partially rotted chestnut stump was blown in fragments. The crowbar was badly inserted under an apple tree stump, and that, like the oak, was shattered to the extent of two-thirds. With a sound and sturdy oak stump, however, the dynamite was fully triumphant. The stump was blown out utterly. A charge was placed under a rock weighing about two tons. It was thrown from its bed and shattered to pieces. A rock half its size was thrown twenty feet, but not broken. A hole about a foot deep was then drilled in the well-combed rock, and charged with four ounces of dynamite. It was much broken, and the pieces not dislodged were easily pried out with the crowbar. About two inches of a cartridge an inch in diameter had hitherto been used upon the stumps, but the closing experiment was made with an entire cartridge eighteen inches long upon a fresh oak stump twenty inches in diameter. Many of the fragments were thrown 125 feet. Mr. Palmer, Superintendent of Maple Grove Cemetery, near Jamaica, has been successful in the use of dynamite upon both stumps and stones. He drills a hole from six to twelve inches deep, according to the size of the stone, and speedily meets with success. In sinking a well a flat rock was found at a depth of over sixty feet, but it was quickly shattered, and the pieces were hauled up in buckets.

The dynamite chest was then filled with oil of muslin, shaped like a candle, and impervious to water. One end is opened, and a hole is made in the powder with a stick for the insertion of the percussion cap, which is an inch long, and loaded for half its length with fulminate of mercury. A fuse is inserted in the cap, which is squeezed with nippers that it may

fit tightly. The little interesters must be filled with soap, to render the cap waterproof. After the cap is in position in the powder, the top of the cartridges must be tied tight round the fuse, so that no water may enter. On the cartridge being placed against the stump, water must be poured into the hole and the ground around thoroughly soaked and pressed, that it may offer a strong resistance. A little semicircular dam should then be heaped around, within which more water should be poured, by way of adding to the resistance. The fuse, which should project outside of the dam, is then lighted. It reaches the cap in less than two minutes, which affords ample time for the operators to reach a safe distance. The explosion makes little noise, and after viewing a dance in the air of a myriad of fragments, spectators find a large hole, with a few loose rocks around, and the ground ready for the plow.—*New York Sun.*

VICTORIA'S BIG TREES.—Australian papers of late date give us the measurements of some Eucalyptus trees recently discovered in Gippsland, Victoria. The State Surveyor of Forests, who we presume must carry a long tape line with him, has been exploring the Watts River, and found there a fallen tree, which measured 435 feet from the roots to the point where the branch was broken off. It was estimated that when standing the tree must have been over 500 feet in height. An *Eucalyptus amygdaloides*, or almond leaf gum tree, now standing near Fernshaw, Victoria, measures 380 feet from the ground to the first branch, and 450 feet to the top of the topmost twig.

Natural History.

ABOUT OUR GROUSE—NO. 3.

QUITE different in appearance from the dusky grouse is the sage grouse or Cock-of-the-Plains. This species, which is the largest of all the American members of the group, is exceeded in size only by the capercaillie, and attains a weight of from seven to ten pounds; is, in fact, as large as a hen turkey. Bonaparte, the original describer of this species, having but a single specimen of the bird, a young male, which he supposed to be a female, fell into the natural error of comparing the size of this grouse with that of the Cock-of-the-Woods, and named it *Tetrao urophasianus*, the scientific name of the great grouse of Europe being *Tetrao urogallus*. He says: "The Cock-of-the-Plains is precisely equal in size to the Cock-of-the-Woods; at least such is the result of a comparison of the female with the corresponding sex of the European bird, both lying before us. Each part exactly coincides in form and dimension, excepting that the tail rather gives the superiority to the American, so that if the male bears the same relative proportion to his female, the Cock-of-the-Plains must be proclaimed the largest of grouse." This error, however, did not long remain uncorrected, and at present the sage grouse is, to many of our sportsmen, a well-known bird.

The plumage of this bird is of a pale grayish cast, which harmonizes well with the sage brush and the alkali soil, and enables it to frequently escape notice, when if it were differently colored it would be quite conspicuous. Above it is varied with gray, black and buff, the combination resembling, at a little distance, the color of the pinnated grouse; there is a large patch of black on the belly. The male has on each side of the neck a large yellowish naked air sac, which capable of great dilatation in the breeding season. Beneath each of these naked spaces is a patch of white, scale-like feathers, the ends of which look as if they had been worn off by rubbing against the ground, and these terminate in long hair-like bristles.

The sage grouse inhabits the high dry plains of the Rocky Mountain region only where the sage brush (*Artemisia tridentata*) flourishes, but it is not, as has been stated, confined to the Great Interior Basin. Its diet consists very largely of the leaves, buds and seeds of the shrub from which it takes its name, although insects and the buds of different plants form, at certain seasons, a very considerable portion of its food. Although it inhabits a region celebrated for its aridity, it must not be imagined that it especially delights in a dry and, waterless country. The reverse of this is true, for the birds go to drink twice each day, and the most likely spot to find them is in the vicinity of a little spring or stream. They usually come down to the water an hour after sunrise and a little before sunset, and, having slaked their thirst, move slowly off toward the hills, feeding by the way. It is in the breeding season that the sage grouse appears to the greatest advantage. Throughout the winter the birds have kept in large packs of many hundreds of individuals, and in the early spring, before these assemblages have broken up, the wooing and winning of the not too coy females is accomplished. Admirable accounts of the antics which the males perform to please their future mates are given in several ornithological works, and, judging from all that is told us, the sight must be a very fine one. Males, sometimes to the number of several hundreds, collect on some high, bare piece of ground, and there go through a variety of evolutions, which would put to shame the oldest gobbler of the farmyard. The ample air sacs of the male are at intervals filled with air, and are swollen into great orange-colored masses nearly as large as a man's fist. The tail is widely spread and somewhat elevated, and the wings are lowered and brush stiffly against the ground. Some days spent in these performances, varied by an occasional tattle, in which one of two combatants loses a few feathers and receives several hard knocks from the wings of his opponent, enable the winners to make their choice, and shortly afterward the nest is constructed. This is of the simplest description, consisting merely of a slight hollow scratched out at the foot of some

sage brush, and lined perhaps with a few bits of dried grass. Here the female deposits her eggs, from ten to fifteen in number, of a greenish drab color, and scantily marked with dark spots, which she broods with unremitting care. The young are usually hatched in May, and by the middle of July are well grown, and at this age are better for the table than at any other. About the edible qualities of the sage grouse, however, perhaps the less said the better. We have eaten them under many different circumstances and cannot recommend them. We once believed that if the birds were drawn as soon as killed they would be free from the taint of the sage, which is the only disagreeable thing about the flesh; but recent and more extended experience has shown us that this is not the case. The flesh of the young sage grouse, when about the size of a domestic fowl, is white and tender, though, like that of all immature animals, a little lacking in character; but even at this early age it is strongly impregnated with the sage. We have seen the time in camp when a single young sage grouse, cooked in the same frying pan with some ducks and mountain grouse, gave such a flavor to the whole dish that those who objected to the sage were unable to eat any of the other birds.

During incubation, and while the broods are only partly grown, the male birds remain alone or in pairs; but at the approach of winter, and often as early as the last of September, the birds commence to flock together until, as already remarked, they form immense packs.

There appears to be a considerable diversity in the time at which the sage grouse lays her eggs, for we have sometimes come upon birds so young as to be barely able to fly late in July, while at this date most of the broods could not be distinguished by their size from their parent. These young birds are very gentle and unsuspicious, and usually pay no attention whatever to the report of a gun. They seem to think that there is no cause for alarm until the mother flies. As soon as the flutter of her wings is heard, most of the young take to flight, and the few that remain at once squat, make themselves as small as possible, and in a moment or so they, too, take wing. While feeding they utter a plaintive, peeping cry, calling to one another constantly, like the young of the dusky grouse. As an instance of the tameness of these young grouse, we may remark that we have seen a flock of them walk unconcernedly along in the road, a little in advance of a wagon, while the teamster emptied his revolver twice at them; and we have often seen a flock move along in the same nonchalant fashion, while one or two men on foot walked behind trying to shoot the birds' heads off with their rifles. It seemed as if nothing could disturb the equanimity of the little brood. At each report the birds would stretch up their necks and look about, evidently wondering what the noise meant, but they never manifested any sign of uneasiness unless one of the number was wounded and fluttered over the ground. That seems to be the signal for all to be off, and is never disregarded. Heads may be knocked off right and left, but so long as their owners lie still the alarm is not taken.

We saw this past summer in the town of Medicine Bow, in Wyoming, an albino sage grouse, the first that has ever come to our notice. It was almost pure white, but some of the darker markings could be traced on each feather. The specimen was regarded by the local sportsmen as a white-tailed ptarmigan, but was really a good-sized sage hen. When killed it was said to have been in company with another one similar to it in all respects.

It seems a great pity that so large (and, in some respects, fine) a bird should be so worthless for food. Nevertheless they are killed in great numbers, an acquaintance of our own having, as he told us, killed ninety-six in a morning. To us the sport of killing these birds has always seemed very tame. They get up slowly and heavily, and present a very large mark, and a man who shoots at all quickly will find little difficulty in knocking over most of his birds. They are tough, however, and an old cock that gets under good headway will often carry off a whole charge of shot.

(To be continued.)

THE LAMPREY.—Lake City, Minn., Nov. 5, 1878.—Blaise your correspondent, B. O. Clark, mentions the fact of seeing one of these singular fish in Lake Pepin, I am induced to submit that they abound in this lake and many of our springs and brooks. It is a very common thing to find them adhering to the polyodon and pickerel, and often to other fish. The scaleless surface of the polyodon affords them "green pastures," and the pickerel, when they are seen, seem to revel in drawing the last drop of blood from their bigger relations. The polyodon is one of the greatest jumpers in the lake, and it is a common belief among fishermen that they jump out of the water to free themselves from this ugly parasite. It is quite usual to find the dead polyodon on our shores, and many of them, I have no doubt, have been killed by the lampreys, but have never been one attacked to a dead fish since the one mentioned by Mr. Clark, which I well remember. I have often seen them let go as soon as the fish is dead, and often before. When thrown on the sandy beach they will then squirm about until they find water. More than once I have found them fastened to the gills, here they are soon satiated or kill the fish outright. If found on the pickerel it will be close to the base of the caudal fin, where the scales are few and small, and where, as is well known, blood is easily drawn. I have allowed them to fasten on to my hand, but they won't let go, that's the trouble, and one don't care to handle the little bloodthirsty squirmers but once. At one time, having pulled hard to detach one which had firmly attached himself to my left hand, and failing to induce him to let go, I took out my knife and cut off his tail, and he immediately let go, and who would't?

More than twenty years ago I met Prof. Louis Agassiz in the city of Albany, and he showed me specimens of the lamprey which he had himself obtained from Lake Pepin.

In two spring brooks not far from Lake City, just thousands of them are found. Out of these same streams I have taken many trout, but have never yet seen one attached to this fish. I have seen, probably, two dozen at a time all attached to pebbles on the bottom where the current was quite strong, their heads all up stream and their bodies keeping up an everlasting swaying and wriggling below. Grasp one and try to lift him out of the water, and if you can hold on you will bring him out, and also the pebble to which he is attached, throw him to land and he soon will let go. Now if you want to save him, split a stick and straddle his neck, or just behind his saucer-shaped mouth, take him up, and after examining him put him into your whiskey flask. The whiskey will keep him first-rate until you get home, and if, meantime, you want to take a "snifter," you needn't remember where you put your specimen. Who cannot forget that there are snakes in his whiskey? Another season I shall be pleased to furnish specimens of the lamprey to any who desire, and who will pay the small expense of bottling.

Dr. D. C. ESTES.

DECATUR, ILLINOIS, Nov. 2.—Besides the sea lampreys which often ascend rivers along the coast, there are at least two species known to inhabit the great lakes and the Mississippi River and their tributaries which have never been found in salt water. Unlike the sea lamprey, these rarely attain to more than a foot in length, whereas the former often reach three feet or more. These small lampreys or lamprenas are by no means rare in the larger streams of Illinois, and I learn the same is true of other Western States. They are frequently brought up in seines attached to the spoonbill (*Polyodon*) and other smooth skinned fishes. From one haul of the seine in Peoria Lake in July, 1875, several specimens were taken, and others were seen, but escaped by dropping off the fish into the water before they could be reached. A number taken at that time are now in the museum of Cornell University.

Yours,

A NATURALIST.

GRAYLING OF COLORADO.—Our valued correspondent, Wm. N. Byers, of the Denver News, who finds time, apart from his manifold and varied duties, to send occasional Rocky Mountain sketches of the most reliable and interesting sort to the readers of FOREST AND STREAM, wrote us a letter recently which contains some fresh information respecting the grayling of that section. These fish to which he refers are found in a tributary of the Yampah River. He says, speaking of a member of the camp:

"Leaving the river he went to a large creek, a tributary just above its mouth, which he reported literally full of grayling of small size, crowding up stream. We caught no more fish. In one week, and including the days referred to, five teams, of two, three or four horses in each, and with two or three men to each wagon, came on by night to load gray fish. All got some, but only one secured a load—about 1,200 lbs. These were grayling, caught near the mouth, in a creek which they were crowding up. They are not protected by law and are netted and trapped mercilessly. In this case the fishermen (two) so arranged in the bed of the stream that in passing up a swift shoot, the fish were turned back into a trap, from where they were packed on by night. The grayling were generally some six or seven inches long, and were partially so or just beginning. Their method seems to be to move in schools of seven-sized fish out of the main stream, up some tributary, where they remain but two or three days, when they again swarm back down stream. Oct. 12 nearly all the fish moved on down the river—the grayling in immense crowds, the trout more leisurely and scattered; in fact, the movements of the latter extended through several days."

THE GRAYLING.—Oct. 29.—Mr. Editor:—In an old copy of "Mackenzie's Voyages," in the volume containing his voyage down the Mackenzie River to the Arctic Ocean, I find this description of a fish presented him by the Indians at about latitude 69 deg. north, on July 9, 1789:

"They presented us with a most delicious fish, which was less than a herring and very beautifully spotted with black and yellow. Its dorsal fin reached from the head to the tail in its expanded state it takes a triangular form, and is variegated with the colors that enliven the scales. The head is very small, and the mouth is armed with sharp-pointed teeth."

Query: Is not this the grayling? and if so, is not this the first mention of the fish in American waters? I do not remember, however, any notice of the grayling in so high a latitude elsewhere.

Your fish is what is known as Back's Grayling, *Thymallus signifer*. It is referred to in all modern works on ichthyology.—Ed.

THE SEA SERPENT IN ENGLAND.—We take the following from Nature. A great many of the sea serpent stories rest upon even less foundation:

On Monday, August 5, a number of geologists crossed in the Folkestone boat to Boulogne, to study the interesting formations of that neighborhood, and, when about three or four miles from the French coast, one of these gentlemen suddenly exclaimed, "Look at that extraordinary object passing across the bow of the steamer, about a mile or a mile and a half in advance of us!" On turning in this direction there was seen an immense serpent, about a furlong in length, rushing furiously along at the rate of fifteen or twenty miles an hour; it was blackish in front and paler behind; its elongated body was fairly on the surface of the water, but it progressed in an undulating or quivering manner. The *specimen* was immediately surrounded by many small boats, and they quickly changed and settled into the fixed idea that the object before them could be nothing less than the great sea serpent himself; for—

"Prone on the flood, extended long and large,
By casting, mark, the head, in air, it rose,
By whom the fables name of monstrous size,
Leviathan; which God, of all his works,
Created last, this was the swimmer."

The writer fortunately had with him a pair of the best opera glasses, and, after a few moments' use of this little instrument, the wonder was satisfactorily resolved. The first half of the monster was dark and glittering, and the remainder of fainter hue, gradually fading toward the tail. The glass did not determine the matter until the extreme end was reached, and then it was seen to consist of a mass of birds in rapid motion; these the leaders, and so make the head appear thicker and darker by their numbers, while those that had not such power of flight were compelled to settle into places nearer the tail. Doubtless the birds were shags (*Pelecanus distans*) returning to their homes for the night from the distant waters in which they

had been fishing during the day; perchance it may be wrong to assert positively as to the variety of the bird, but inasmuch as the writer has often seen shags on the Cornish coast in smaller numbers returning in single or double file to their roosting-places, and since it is stated in works of natural history that they have been noticed occasionally flying in this manner to the number of a thousand or more, it does not appear an unwarranted liberty in supposing that they really were *Pelecani cristati*. It is to be feared some of the geological gentlemen still doubt the interpretation of the long-nette, preferring the fond deceit of a large and unknown serpent; but, as in this case, individual birds (scores of them) were distinctly seen flapping their wings, the writer has thought it his duty to report the circumstance to you that your readers who voyage across the seas may keep their opera glasses in their pockets and verify for themselves, on the first opportunity, this interpretation of the great sea serpent.

JOSEPH DREW.

DOMESTICATION OF THE MALLARD DUCK.—The following very interesting letter is from Mr. Jacob M. Wimer, of Niagara Falls, New York. We are delighted with his most favorable report. Actual experiments have proved that the wood duck and spring-tail ducks and the Canada goose can be domesticated, and we should think it might pay our friend to raise ducks exclusively for use as decoys:

Mr. Editor: I received, January 27 last, one drake and three ducks from "Jardine," on Will Hall's marsh, below Detroit, Mich., and Feb. 27 they laid one egg, and up to the 17th of this month those three ducks have laid 379 eggs, and I have hatched out under "ben mothers" 167 little ducks. I have now got 150 odd wild mallard duck, which I wish you could see come out of the pen as I saw them this morning. I let them out on Niagara waters all day long. About five or half-past five o'clock they come to their feed in front of the mill, and then they go to the pen for the night. And it is a sight. Such racing and dancing as they have when first let out in the morning is wonderful! And the most wonderful part of the whole is the young ones have commenced to lay within the last week. I wish you could see them. But next Wednesday morning I am going to take thirty of them and start off for "Jardine" to use for decoys, and hope to have a good duck shoot.

CORRECTION.—Mr. Editor: The report of the Linnean Society, of October 28, that the meadow lark taken by Herrington was given as *Pipilo erythrophthalmus*, it should be *Pipilo americanus*. Mr. Brewer in his note on the subject, the following week is therefore perfectly correct. FRANKLIN BENNER.

ANOTHER OPINION.—Editor Forest and Stream: A few weeks since an article appeared in your columns entitled "Spare the Sparrow," wherein its writer, Mr. Robert B. Roosevelt, attempts to answer Dr. Coues' able article in the American Naturalist. I differ with Mr. Roosevelt concerning the insectivorous habits of the bird. He says that the sparrow is more insectivorous than any of our native birds. I have seen this bird and the object of special study, and I have always found it to prefer grain—especially maize—to any insect I could procure. In fact, I never, except in one or two cases, could discover one even attempting to procure insect food.

I differ from him also when he asserts that we have no song birds in America. Any one that has heard the melodious notes of the warblers and the thrushes will need no argument to convince him on that point.

I would not have any one infer that I wish the bird driven out of the country. I merely wish to have the laws prohibiting their destruction repealed and to have people stop feeding and petting them. They will then be kept under like any other bird, and will cease to become the nuisance they now are.

Washington, D. C.

RICHARD HOVET.

POWERS OF SIGHT IN BIRDS.—So keen is the sight of the condor of the Andes that if a carcass be exposed where the naked eye can detect none of these creatures in the horizon, yet in few minutes they are seen streaming from all directions straight toward their hoped-for meal. But, though birds be long sighted, it is also highly necessary that they should see minute objects at a short distance. No entomologist will deny that an insectivorous bird must have keen eyes for a short distance if it is to get its living with ease. A microscopic sight is scarcely less requisite for a grain-feeding bird. The swallow, which plunges with such reckless impulse through the air, will nevertheless seize a small insect as it dashes along with almost unerring certainty. Usually the prey is so small that the wonderful powers of the bird displayed in the chase cannot be observed, but sometimes, when the insect has large wings, this dexterity may be seen. The writer has seen a swallow seize, while in a headlong flight, the beautiful, scarlet, swallow-tailed butterfly, and shear out its savory body from between the wings, and let them float severally down; and then, not satisfied with a feast so little proportioned to the splendor in which it was disported up, alone swooped and seized the several pieces before they could reach the ground. How then, is a long sight and a keen short sight to be obtained from the same eye? This is done mainly by the aid of bony plates so disposed that the edge of one is capable of sliding over the edge of its neighbor; so that when the fibres of the muscles which unite them contract they compress the eye all round and make it more tubular, while the humors of the eye, thus subjected to the pressure of the cornea to protrude them, also the retina to be removed further from the lens.—Cassell's Popular Educator.

A CANARY BIRD'S SONG.—Newark has a canary bird that whistles waltzes. He has been in training for nearly a year, and now goes through the whole music of a German waltz. Whenever there is a false note Dick warbles a while, and then begins again. When the bird was just off the nest his mistress put him into a dark room, where he saw no light and heard no sound. Then daily he played the waltz to him, two or three times a day, for fifteen or twenty minutes every day. The instrument was an organ, with the shrill stops out. At the end of a month or two the bird began to sound a note of the waltz, then another. Soon it combined them, and after a time he whistled an entire strain. It was nearly a year, however, before his education was complete. Mocking-birds may also be trained in this way. A music-box is very useful, and saves much labor in the long course of the bird's musical training.

THE BIRDSHIP. — Boston, Nov. 7. — How common is the following incident: We found in the marshes near Fresh Pond, Cambridge, Mass., a full-grown male American Bittern in a dying condition, from what proved on dissection to be a large specimen of horned pout, firmly fastened by the spines across the crop and gullet, from whence the struggles of the bird would have dislodged it. We should have thought that the bird would have been "known better," according to hereditary traits (Darwin), or experience in a minor degree of severity.

BREAKING DOGS ON RUFFED GROUSE.

SINCE expressing in a former letter the opinion that this bird is the worst for the purpose of initiating a setter or pointer on game of all that are shot in this country over dogs, there has been considerable discussion upon the subject. And although the majority of sportsmen who have had practical experience in shooting ruffed grouse over these dogs agree with my opinion, yet there are some who advocate this bird as the one for excellence upon which to break young dogs.

One writes to a contemporary from Massachusetts: "I will agree to place you at ten yards rise to the wildest birds that you can find in this vicinity. Not always, perhaps, but we will finally succeed in making the birds lie to a point and allow us to approach very often within a yard." It is presumable that the birds in that well-populated district are frequently shot at, especially as we know that Springfield abounds in good sportsmen and dogs. But if the birds will lie to a point and suffer one "to approach very often within a yard," in the open season, autumn, the ruffed grouse in the vicinity of Springfield differ in their habits to an extraordinary degree from all others of the species similarly located. A yard rise may be instanced as one extreme, yet six rods rise, a large range in cover, would probably be the average, but the other extreme. But that fine shot might be had where rise shots are to be obtained in one day if the coverts are open enough for one always to see the bird at six or more rods distance. The habits of ruffed grouse, as of many other birds, vary much according to locality. So many seemingly incongruous statements have been made regarding the habits of these birds in Maine that I will give a brief explanation. Throughout the entire range of this State the ruffed grouse are to be found in comparative abundance. But a statement might be made regarding their habits in one portion of the State that would be untrue as applied to another portion. It is partly owing to great extent of territory that there exists so much confusion as to what would be the most desirable game law. For the majority of those interested in the game laws of any State know little of the habits of birds outside of their own immediate vicinity. This is especially true of Maine, where some species of birds breed in one portion of the State and are never even seen in another portion. While at Augusta during the last session of the Legislature, and using my humble efforts toward securing the passage of such a game law as would be most desirable and practical for the whole State, one that would be observed by sportsmen and easily enforced if violated by others, my attention was called to various portions of the State. In regard to the close season for ruffed grouse, some desiring the season to be August 15th, and others not until October 1st. But the law as passed fixed upon Sept. 1st, thereby wisely maintaining the previously existing law and a date not only uniform with that for woodcock and snipe, but one that is well known to all our sportsmen. In the more thinly populated portions of the State the grouse are so unacquainted with man their tameness is shocking to me. They are usually in thick woods, where they will suffer a near approach but seek safety by running or by going to the branches of the nearest trees. Even here they do not lie well to dogs, and but little sport can be had with them. Many can be shot, however, and for the table they are unexcelled by any of the grouse family. A method that has been much resorted to in obtaining these birds is to drive them from their haunts. In such times they may be seen, singly or in families, scratching and nesting in the road in a manner similar to common barnyard fowls. This habit is known by the term "dusting." Besides the gravel and occasional food found there, it is probable that the warmth retained by the dust heated by the noonday sun is a source of attraction to the birds when the nights begin to be frosty. With little or no cover, they are easily taken, and one may be killed from the wagon, and pausing only to retrieve the bird or birds each time, the gunners drive on, until perchance they halt by some lake or stream to pass the day in fishing. While driving home in the evening with a fine lot of trout or pickerel, perhaps both, in the bottom of the wagon, more grouse and it may be a hare or two will be added to their game score. But now let us, kind reader, drive over the same route, and instead of trying to see how many birds we can kill, we will tarry by the wayside now and then and watch their movements. Soon we see a covert in the road ahead of us. Drive right on but don't shoot. As we approach they scatter and run or walk to the side of the road, most of them disappearing in the wood either side. But one may keep in the road ahead of us for a while, and you may see and hear him halting at the edge of the wood as we pass by the side of the road.

Alighting from the wagon and entering the woods you may hear them running before you. With a sudden rush and noise put them to flight if you can. With a great flurry they will rise all about you. Flip-dip they go into the trees, and then silence reigns supreme. Now look about and try to find them. There is one in that spruce tree nearest to you. "You are calling him," you say, "on a branch as close to the trunk of the tree?" Well then, stop down on a stump and remain perfectly still and motionless while I walk away. The birds are not much frightened, and after a short time you will hear a call from one in the near vicinity. "Putt," answers the one in the tree watched, and you are now convinced that a bird is there, although you fail to see it. "Putt," answers the one in the tree, then you may hear rustle and one walks cautiously forth from beneath the branches of a fallen tree and looks about. Do not move a muscle now, not even to turn your head for a better view. Bye and bye down from its perch in the tree comes your valiantly looked for bird. Don't shoot now, but if you have a cautious dog by your side try him on the birds. As he approaches they steal away with rapid steps and lowered heads to an old tree-trunk. By the dog strikes the ground, and following up finally comes to a point. Keep-

ing close upon his heels so as not to lose sight of him, you now "shoo" to the well concealed birds, but with effect. Hurling a club into the treetop or underbrush where you suppose them to be, a flurry is heard but not a feather seen as they rise. But listen! Flip-dip, you hear one alight, and with dog at heel you approach, carefully scanning the trees. Suddenly you catch sight of your bird on the branch of birch not more than a dozen yards away.

Now, take good aim, and if you feel nervous from the excitement of the occasion, rest the gun over the limb or against the trunk of a tree. Bang goes "Old Reliable," and the bird is yours. By looking about carefully you may procure several others of the same cover in like manner. Try to break your young setter or pointer first on these birds, and you will find that as much or more time will be required to prevent his acquiring faults than for the teaching of virtues elsewhere. After he is taught to chase the birds he will learn to find them without flinching, but the bird that is most successful, a slow, pottering gait, with head carried low, hunting for the foot scent. When this is found he will trail the birds until they reach thick underbrush or some favorable cover, and lie to a point. In favorable places they will occasionally lie well to a dog, but almost always will run at the approach of either dog or man.

Any better dog would hardly ever dispute the passage of a pedestrian in the autumn, they will frequently do so in spring and summer, when accompanied by their young broods. I have often come upon them unawares, when trout fishing, in May or June. The hen would dart at me, or place herself with ruffled plumage and drooping wings before me, whichever way I turned. I have often tapped her across the back with my rod, but always failed to make the affectionate mother seek safety by flight. Once she was satisfied that her little ones had escaped, I have found her, but with great diffidence, often where they were a day old. But nowhere in the autumn need any one fear being bitten by these birds.

As a locality where the habits of the ruffed grouse differ from those of the same species whose habitat is such as to render them comparatively unacquainted with man and his cunning devices, I select, for the sake of comparison, the vicinity of my house, Portland, Me., situated in the best woodcock county in the State. Instead of suffering a near approach, and taking to the nearest trees when flushed, they are very wary, and when flushed go straight away as if shot from a cannon, sometimes crossing the open to another coope, and flying a half mile ere alighting. When taking these long flights they usually alight on the ground. They are swift runners, and usually take leg-bail the moment danger is suspected.

Seldom lying well to a dog, they too often take wing out of range. In open hardwood growth I have frequently flushed them so far away as to render a shot useless. Birds that habitually run before the dog cannot be justly said to lie well, and ruffed grouse, whether unusually wary or otherwise, do not lie well, even if they finally lie close enough for a point and shot.

Ruffed grouse abound throughout the Northern and Middle States as well as in the Canadian Dominion, and for many sportsmen they are the most available birds to break dogs on. This is almost their sole recommendation for the purpose.

Considering the subject from a general and not a local standpoint, we must regard the dogs as intended for use on various sorts of game.

Therefore, the more varied a dog's experience the more useful he will become, if the experience be of such nature as to teach only virtues.

In alternately hunting various sorts of game, various qualities are alternately brought into most prominent use, and there will be a proportionate development of such qualities. If a special quality is desired consider how it may be developed without the incidental acquisition of faults or any sacrifice of interest or acquired virtues.

It is easier to teach an old dog new tricks than to break him of a bad one learned. A dog cannot be kept constantly in sight when in covert, nor can a check cord there be used to advantage. More time, patience and perseverance would be required to obtain a well broken dog if ruffed grouse should be selected for the purpose than would be required if some other game should be chosen; and very much more than is usually developed in the more varied work which results even under other and more favorable circumstances.

This will especially apply to sportsmen who break their own dogs from the beginning. Too many of them are unwilling to make a season's shooting secondary to the education of their dogs, and the result is that such sportsmen shoot all through life over dogs but half broken. They seldom arrive at a higher stage than stamp pointing and fair retrieving, caring little whether a dog carries the head and stem high or low, nor for the style of action, so that the game sought is found and not prematurely flushed. And others would quite as soon shoot without a dog if as much game could be bagged, since they go into the field solely for the game or the pleasure of shooting it, having no regard for contributive accessories. These are the ones that care not to pause, even for a moment, to admire the graceful movements of a dog when hunting, or the rigid form, eager eyes and quivering nostrils of the animal when pointing, but hasten on for a shot lest delay should occasion a smaller score to the gun for the day. Such persons, however, measure the pleasure of the day by the "bag," and regard the dog as they do the gun, merely as a useful servant, and not as an agreeable companion whose presence contributes a large share of the pleasure obtained.

Finally, no dog is more fitted for entering the ruffed grouse (a bird that in some localities affords the sport to a good shot) as the worst of our game birds upon which to break setters and pointers, are: 1. Because they are found in coverts, frequently very dense ones. 2. Because they are habitual runners. 3. Because their strong foot scent and habit of running leads the dog to become a trailer. They sometimes resort to the fields, but cannot be approached there except by a stealthy advance, and when once they are in the open, they who have shot in the old country, any one advocating the pheasant as the best bird to break a setter or pointer on; and of American game birds shot over these dogs the one that nearest approaches the pheasant in habits is the ruffed grouse. But after your dogs have been broken on other game and have become steady, then teach them to hunt ruffed grouse. In localities where the birds are scarce, and the game is shot at, if found in hard wood growth most excellent sport can be had, and I think that you will allow that clean killing shots at ruffed grouse give a pleasure to the sportsman that is not derived from a similar number at that game so over-rated for sport, the woodcock. Of all our game birds the woodcock ranks number one when in the bag. But will not many woodcock shooters agree with me that when indulging in

their favorite sport more pleasure is derived from a successful shot at a grouse than at a woodcock? Although no doubt you would rather bring home a dozen woodcock than an equal number of ruffed grouse. Although affording much the same ruffed grouse is not a desirable bird upon which to break young setters and pointers.

ETHELLE SMITH.

FROM MR. DAVIDSON.

MONROE, November 9, 1878.

EDITOR FOREST AND STREAM:

That some tales are lies from end to end was never more fully demonstrated to me than on reading in the Chicago Field of November 9 an article entitled, "He Who Excuses Himself Accuses Himself." The whole article is one continuous chain of falsehoods, malicious and base, with the slight exception of, in part, what he says of the dog Charm. When Mr. Whitman bought the dog from me, he did so with full understanding that I did not value him as a field dog. What he paid for him, whether fifty or five hundred dollars, is no more Mr. Rowe's business than it is my business that he should now be soliciting orders for pups out of Blanch and Peg Gloucester-Dart's at fifty dollars each. Or his business that I should have sold him for one-half that sum. I take no exception to his combining the business of dog-breeding with that of editing and peddling a newspaper.

That Mr. Whitman has bred a puppy by Charm not only good looking, but good enough to win fairly second place in the nursery stakes at the Minnesota Field Trials, is a thing of the past, notwithstanding Mr. Rowe's futile attempts at showing any fraud, in which he has ingloriously failed. The mere assertions of Mr. Rowe are no proof whatever of anything farther than a malicious action, or a whole motive being "rule or ruin," unless when he is leading to a duce or position—then his dependent, servile nature crops out. When I am shown by some competent authority, not the Chicago Field, that the Minnesota Kennel Club cannot take care of its own affairs, and that the National American Kennel Club is the proper place to bring this matter up, then I come to his aid, and I will bring it to the proper place.

Mr. Rowe has no control over the business of me, and is perfectly independent of him, and can go with whom I please and where I please without asking his consent, and will not allow him to dictate to me in matters which are purely my own; and decline any further controversy with one whose paper is notoriously known for stirring up strife and ungenerous feelings against sportsmen, and I will not be drawn into personalities by him. Knowing his own weakness, I am pleased to learn that he has become possessed of a capricious and unjustly maligned, and toward which his friends ought to have contributed long ago, with the motto of "Concentrated Infamy" inscribed in large letters of brass in the most conspicuous place.

JOHN DAVIDSON.

CONDITIONING OF DOGS.

THE economy of thoroughly conditioning sporting dogs is a topic which comparatively few keepers and kennel men ever consider. How very often do we find in private kennels of pointers, setters and spaniels that keepers and kennel men have not the least system of getting their dogs in trim for their work. Of exercise they get little or nothing, or perhaps are taken out one day and are given a thorough bucketting; they come home footsore, and don't see the outside of the kennel walls for another month. The consequence is that when the shooting season comes round you have the mortification of finding your pointers and setters come to the start of a couple of hours' range, and your spaniels reduced to path-finding in an equally short space of time. It is not always the keeper's fault that the animals have such scanty preparation, as the former's sole attention and labors are often devoted to the all-absorbing endeavors to get up a good head of game, but they might well do a great deal more in this direction than is done by the majority of them. The number of dogs that are actually necessary are often kept merely because of the number, which would otherwise be sufficient, are simply and solely for want of condition unable to do a fair amount of work. Some of our sportsmen whose pointers and setters appear at field trials are just as particular as a M. F. H. in seeing to the conditioning of their dogs, but those gentlemen who are content to go in for field trials and to count on the fingers, and even at field trials have often been counted on the fingers in such a pathetic condition of body as would in a Chinaman or South Sea Islander give rise to thoughts which if they took shape would be likely to materially curtail the career of those dogs. Luckily for such, however, at field trials there is no sport of endurance.

The amount of work a well prepared pointer, setter or spaniel will stand is astonishing, and it is equally surprising how quickly either of them will be knocked out of time if not in trim.

It is a common practice with those who have charge of dogs to give them a lot of physic to reduce them just a week or so previous to the time they know the animals will be required for work. It saves time and they look presentable, so the master is deceived by the fictitious appearance of good condition, and when he finds the dogs being badly handled the day over is satisfied that the number he has is insufficient for the work, or, what is more likely to happen, he becomes disgusted with shooting over dogs and determines never to use them again if it can possibly be avoided. Some of our thorough dog-and-gun sportsmen lay great stress on condition and few of them, principally those of the old school, are men who never mean to have a dozen dogs to do work that they know off to be replaced by still another set of dogs. As a consequence, unless their dogs are in good trim they are obliged to take such a team as would in numbers be a very respectable muster for a M. F. H. That thorough old dog-and-gun sportsman, Mr. John Colquhoun, says that kennel expenses might be greatly reduced if proper attention were given to conditioning dogs for their work. He maintains that with proper treatment a thoroughly conditioned dog will *exterminate paribus*, do more work and do it infinitely better than fifteen prepared and trained in the usual slovenly manner. His plan is to give them little medicine and to harden them by degrees to their work. For six weeks before the shooting season begins, the course he advises is to turn the dogs out at six in the morning before they are likely to foul the kennel much, and give them a six-mile run behind a trot-

ting horse. By the time they return home the kennel should have been cleaned and the beds shaken up, so that they may have a comfortable nap if so disposed. At four o'clock they should again be taken for a walk about the same distance along the hard road, and twice a week, if pointers or setters, have a breather in the open, to give them their wind. Of course, spaniels and covert dogs generally do not require the same amount of galloping as the former, but they nevertheless require their flesh being reduced, and their muscles and feet hardened, and this can only be done by judicious exercise. Care, too, must be taken with their food, which should be well boiled. Mr. Colquhoun recommends as the best food for preparing dogs, oatmeal and potatoes, and all the house scraps that can be obtained. This diet may be improved, he says, with skimmed milk, or the gray wheyings of plates added. General Huchison, too, praises the most experienced of dog-breakers, ancient or modern, attaches great importance to the conditioning of dogs used with the gun. A good deal of ill-temper is evinced and disappointment felt by the master at the beginning, which is generally the best part of the season, and is solely caused by want of condition in the dogs. Your hunter, explains the general, is not content with the big gun, but he wants the thorough course of tolerably severe exercise, and "why expect it of your dog?" Work on the road is particularly recommended by him also, and the hardening of the feet by such exercise may be increased by washing them on the animal's return from exercise, with a strong solution of salt and water.

How many of our kennel-men and keepers observe any of the rules in the management of their charges, or how many masters trouble to give any instructions at all with reference to the conditioning of their dogs? It is as cruel to give a dog a hard day's work fresh from kennel, outside the walls of which he has not been perhaps half-a-dozen times since last season, as it is to take your hunter straight from the field where he has been summering, and give him a "last thing" across country. The still-limbed, fore-footed, and general "screwed-up" appearance after a day's work which the poor dog, whose only preparation has been six months' confinement in kennel, must (as the poor best hobbles from his bench, and expresses by most unmistakable signs his eager desire to again serve his master as well as his crippled powers will admit) surely be felt as a reproach by the latter for neglecting such a common precaution as paying a little attention to the conditioning of his dogs.—*Land and Water.*

SHEEP-DOG TRIALS.—An association has been formed in England, to be known as the Northern Counties Sheep-dog Trial Association, the object being to improve the breeding and encourage the proper training of sheep-dogs. The Earl of Sefton, who will be remembered as a large buyer at short-horn sales in this country, has taken an active part in the movement. It is proposed to hold the "trials" in each autumn at some convenient place. We hope to see the day when sheep-dog trials will be held in this country, and shall be glad to render aid to any such movement as the one mentioned above. As we mentioned in an article week before last, an American bred collie can now be seen caring for sheep in Central Park. There are, doubtless, many such in the country.

ST. LOUIS DOG SHOW.—*St. Louis, Nov. 2.*—The St. Louis Kennel Club intend giving a grand bench show here in Oct. 1879, during "Fair Week" and on the fair grounds. The Fair Association agree to erect a suitable building and fit it up properly, and the club will pay the prize money and all other expenses, and take the entry fees and a small admission to the show. The show will open Monday of "Fair Week" and close Friday night following, and the dogs will be exhibited during daylight only. The judging is to be done on Monday, if possible, not later than Tuesday, and the awards made public at once. Native classes, for field dogs, will probably be left out, and they will compete in the open classes with imported dogs. There will be first, second, third and fourth prizes in such classes. About \$3,000 in cash prizes will be given, and no special donations will be asked of any one. If any are offered they will be received and added to the regular classes. The club is composed of eight members, all rich men, and they don't expect to make money by this venture, but to foster dog breeding. Who will be the judges, of course, is not decided upon, or even thought of yet. I am at liberty to give you the foregoing information about the coming show, for the Fair Association to-day concluded to build the house for the purpose, and notified the club; and one of the members told me that I have told you. I shall notices will be sent out very soon to dog owners—to feel their pulse, as it were; for if the show can't be made a success in the number and quality of the entries it will not be given. The gate-money would, no doubt, be the same whether there were few or many dogs; but gate-money will not be the incentive. J. W. M.

HYDROPHOBIA.—Mr. Stanford, M. P., of England, has offered a prize of £100 for the best essay on hydrophobia. The prize is to be awarded by the Royal College of Physicians of London, and the Marquis of Salisbury has instructed the British Minister at Washington to bring the subject to the attention of the Department of State, that the necessary publicity may be given to the same in the United States. The essay must be delivered to the college on or before Jan. 1, 1880. It may be the joint production of two or more authors. The questions which are thought by the college specially to require investigation are: The origin and history of outbreaks of rabies, particularly in the United Kingdom and its dependencies; the best mode of prevention of rabies; the characteristics of rabies during its early and its late stages; the changes which are associated with the disease in its successive stages, particularly in its commencement; the origin of hydrophobia in man; the chemical and anatomical morbid changes observed in the subjects of the disease, with special reference to those having their seat in the organs of the nervous system and in the salivary glands; the symptoms of the disease, particularly in its early stages, as illustrated in well observed cases; the diagnosis of the disease in doubtful cases from conditions more or less resembling it; the alleged prolonged latency of the malady; the efficacy of the various remedies and modes of preventing the disease which have been proposed, and what plan of treatment, whether prophylactic or curative, it would be most desirable to recommend for future trial.

SALE OF BERKLEY.—Mr. John Potler, Jr., of the Massachusetts Kennel Club, has purchased from the St. Louis Kennel Club their fine red Irish setter dog Berkley, by Elcho out of Loo II. Berkley is now a little over two years old, and probably has as grand a record as any dog ever bred in this country. His prize winnings embrace the following events: At Field Trials, Hampton, Iowa, 1877, second prize, puppy stakes; at St. Louis Bench Show, 1878, first in open class; kennel prize with his dam, Loo II.; best brace with the same; special for best setter, any age or breed bred in America; best pair with his dam, Loo II.; best setter bred in the United States; at Boston Bench Show, 1878, champion prize and two specials; at New York Bench Show, 1878, champion prize; at St. Paul Bench Show, 1878, champion prize.

BREEDING FOR SEX.—A correspondent writing from Richmond, Va., gives the following as his experience:

Per contra about sexes. The last bitch bred by me at the very beginning of the heat took the male once, and was at once secluded. Result—eight whelps; seven dogs one bitch. The last cow I had to castrate (a short-horn) took the male at the last part of the heat. Result—a female calf. Individual cases prove nothing. Physiologists know nothing of the laws governing sex production. M. G. E.

DROWNED.—Mr. J. Hopkins Smith has had the misfortune to lose his fine setter dog, Jet, purchased at the Minnesota Field Trials, after winning second prize. Jet unfortunately fell into an old well, and was not found until life was extinct.

—Mr. Jonathan Thorne, Jr., has presented to Mr. Wm. M. Tiltson his brace of fine Clumber spaniels, Trimbrush and Fairy. Trimbrush was imported by Mr. Thorne in 1870, and was purchased by him from Mr. Brinsford, the Duke of Westminster's head keeper, who regarded him as one of the best Clumbers in England. Fairy was bred by Mr. Thorne, and is by Duke out of Floe, both bought by Mr. Thorne from Llewellyn F. Heaton, Esq., and imported to this country.

—Mr. C. E. Lewis' setter bitch has been bred to Rob Roy. Mr. Arnold Burges' newly imported setter bitch Nilsson whelped on the 27th instant six bitches and two dogs, by Mr. Llewellyn's Lofly. On the 6th instant Queen Mab whelped four dogs and two bitches to Druid.

—Mr. Luther Adams' English setter bitch Countess Ada whelped, on Oct. 11th, eight puppies, five dogs and three bitches, to Dash III.

NAMES CLAIMED.—Mr. G. A. Barber, of Packersville, Conn., claims the name Bennie for his black, white and tan setter puppy.

Mr. Henry A. Wilson, of Silver Lake, Kansas, claims the name of Grouse for his black, white and tan dog pup, whelped June 10, 1878, out of H. T. Irwin's trial bitch, France I, by C. N. Whitman's Pedigree, now dead. Also the name of Lady I, for his red setter bitch pup, whelped July 4, 1878, out of H. T. Irwin's Carrie I, by St. Louis Kennel Club champion Berkley.

Mr. T. H. Wyman, of Sebec, Me., claims the name of Dash for his liver and white cocker spaniel, whelped March 18, 1878, bred by Mr. McKoon, of Franklin, N. Y., out of Bess by Captain.

Mr. H. W. Huntington, of Brooklyn, claims the name of Duke for a black and tan dog puppy, whelped Sept. 7, out of Mr. Tiltson's Lou by Mr. Jerome Marble's Grouse.

THE TREASURY REGULATIONS.

AWAY back in 1793 and 1849 our representatives in Congress assembled, in their wisdom passed "an act" for licensing of American yachts at that time entitled to be enrolled as American vessels. The act was designed to facilitate the ownership of yachts, thereby encouraging their construction and aiding in educating a large portion of the community to a seafaring life, who otherwise might never have been attracted to the deep. The intentions of our forefathers were alike praiseworthy and to the point, and in accord with the spirit then animating them the well known subjoined act, Chap. 141, sections 1, 2 and 8 of the laws of the United States, was unanimously passed:

An Act to authorize the Secretary of the Treasury to license yachts, and for other purposes—Chap. 141.

Sec. 1. *Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled,* That the Secretary of the Treasury be and he is hereby authorized to cause yachts used and employed exclusively as pleasure vessels, and designed as models of naval architecture, and now entitled to be enrolled as American vessels, to be licensed on terms which will authorize them to proceed from port to port of the U. S. without entering or clearing at the Custom House. Such license shall be in such form as the Secretary of the Treasury may prescribe. *Provided,* such vessels so enrolled and licensed shall not be allowed to transport merchandise, or carry passengers for pay. *And provided,* Further, That the owner of any such vessel, before taking out such license, shall give bond in such a form and for such amount as the Secretary of the Treasury shall prescribe, conditional that the said vessel shall not engage in any unlicensed trade, nor in any way violate the revenue laws of the United States, and shall comply with the laws in all other respects.

Sec. 2. *And be it further enacted,* That all such vessels shall, in all respects, except as above, be subject to the laws of the United States and shall be liable to seizure and forfeiture for any violation of the provisions of this Act.

Sec. 3. *And be it further enacted,* That all such licensed yachts shall use a signal of the form, size and colors prescribed by the Secretary of the Navy, and the owners thereof shall at all times permit the naval architects in the employ of the United States to examine and copy the models of said yachts.

Approved Aug. 7, 1878.

This act was in 1870 amended in Chap. 170, sec. 1, to the effect that under the license granted in accord with the above a yacht could sail by sea to a foreign port or ports, and in sec. 2 that yachts belonging to foreign nations extending like privilege of entering or leaving any port of the United States without entering or clearing at the Custom House thereof, and without paying tonnage tax. In sec. 3 it was provided that for the proper identification of yachts the Secretary of the Treasury shall issue a commission, and that the latter shall be a "token of credit" to any United States official and to the authorities of any foreign power for privileges enjoyed under it. In sec. 4, however, it is provided that any yacht upon returning from abroad to a port of the United States shall make due entry at the Custom House of the port at which she arrives. This act was approved June 29, 1870.

In complying with the above act the Secretary of the Treasury issued in his regulations of 1874 a number of articles bearing upon the documents which yachts are obliged to carry by law. In Art. 68 he states that, pursuant to an act of Congress Feb. 18, 1793, ss. 1 and 2, no license can be granted to a yacht of less than 20 tons burden, and that before granting a license the yacht must have been duly enrolled under existing laws governing the enrollment of vessels in general. Art. 50 requires the owner to execute a bond with one or more sureties to the satisfaction of the collector, or proper officer of customs in a penalty in each case in proportion to the tonnage of the yacht, as set forth in article 35 of the Treasury Regulations of 1874. In it the owner, with the master and one or more sureties to the satisfaction of the collector of the district making such enrollment, are required to become bond to the United States; if the yacht shall be of burden not exceeding 50 tons, in the sum of four hundred dollars; if of burden above 50 tons and under 100 tons, in the sum of eight hundred dollars; and if above 100 tons in the sum of twelve hundred dollars. The Secretary in Form No. 10 has issued the legal shape into which the bond must be entered, and in Form No. 17 the regular license papers to be granted the owner after having had the bond made out and the other provisions mentioned above properly complied with. In article 61 of the same regulations the yacht ensign is described as: The American ensign substituting in the field a white fou anchor surrounded by thirteen white stars in a circle, in lieu of a star for each State. In article 63 the officers of the customs are reminded that each yacht must have her name and the port to which she belongs painted on her as required by existing laws.

These laws call for letters on the stern not less than three inches in length; penalty for non-compliance, \$20. Originally the law of 1793 read, white letters upon black ground, but in the Act of June 23, 1874, the rule has been so modified that colors are optional with the owner. This same article distinctly states that, while amenable to the laws of the United States in all general respects, the custom officers will not require duty or clearance at the Custom House of yachts proceeding from port to port within the United States (yachts of 20 tons and over, presumably, as none of the above special regulations can apply to smaller yachts, in consequence of the limits set by the original Act of Feb. 18, 1793, still being in force, except wherein subsequent legislation contradicts it). It is further expressly stipulated that yachts must be provided with certificates of their enrollment and with their license, and such papers must be exhibited upon demand of any collector, surveyor, or inspector of customs, and examination of the yachts by these officers submitted to for the due protection of the public revenues. Yachts are not liable to tonnage tax, Act July 14, 1870, sec. 25. Article 64 of these regulations limits the period of duration of a license to one year, and at the expiration of that period it must be renewed. Upon enrollment an official number is awarded to the vessel, and together with the tonnage must be carved on the main beam, or the vessel will not be recognized as belonging to the United States.

Such are the various acts of Congress and the corresponding regulations and interpretations of the Secretary of the Treasury governing the ownership of yachts. It will be seen that they are not only pretty thoroughly antiquated and difficult to unravel, but that instead of fostering the interests for the benefit of which they were originally framed they absolutely hamper yacht owners and masters with a mass of more or less intricate and inapplicable verbosity and red tape, the natural result of patching and tinkering a law devised a century ago and which has so long become obsolete that a new one should long ago have displaced it. Add to this the various regulations of the Supervising Inspector of steamboats and boilers, and no one can wonder that the average citizen has honored the laws regulating his pleasure more in the breach than in the observance.

We reserve for subsequent consideration a review of the laws in their present state, what should take their place and how the change can be brought about.

THE FOSTER YACHT MODEL.—We are in receipt of a number of letters calling into question the speed made by the new yacht *Undine*, of East Gloucester, Mass., as stated in these columns. To all of them we answer that a number of gentlemen, disinterested witnesses on the occasion of her trial, are

prepared to substantiate our statement. The speed logged was 10½ knots, on a bowline, fresh breeze and rough sea. FOREST AND STREAM is not in the habit of going off half-cocked. If any of our readers happen in the neighborhood of the yacht's hailing port, Mr. Foster is prepared to give them the privilege of seeing her do the same thing again. The speed which long, narrow and deep vessels are capable of at sea, seems little understood on this side of the Atlantic.

YACHTING NEWS.

NEVERA YACHT CLUB.—This new organization held its first regatta on Tuesday, November 5. The course was from Captain Decker's boat-house at 151st street to Tenth street buoy, East River, and return. *Queen Mab*, a staunch little buoy, catboat, with a large displacement and some 800 pounds of iron under the flooring, won the race handsomely in 1h. 43m. 50s., beating *Rebecca*, of the flat-and-wide model, 8m. 20s. *Alice*, a little sharpie, came in third and *Annie* last. The club is officered as follows: Commodore, Chas. Coughtry; Secretary, Thomas I. Miller; Treasurer, Lewis M. Moler.

OAR AND PADDLE.

HARVARD-OXFORD.

WE are pleased to see the liberal and fair-minded spirit in which Harvard is pursuing the project to send a crew to England to pull the winner of the next University race on the Thames. Though there can be no question as to the perfect right of our University to go abroad upon its own account, the gentlemen of Harvard are willing enough to try their hand with all-comers in America before shipping their shells for Europe, and a number of interesting events between the best eights in the country are therefore in prospect. The challenge of Cornell has been accepted, upon condition of pulling at New London on the Thames. Yale will be disposed of as customary, and any advances that Columbia chooses to make will meet with favorable response. It is to be hoped that no trifling crochets or petty pique will crop up and interfere with the definite arrangement of the races in question at an early date. If Harvard prefers the course at New London, claimants to the championship will do well to avoid postponement and possible disappointment by accepting without hesitation a course which has proven more acceptable to the public in general and better adapted to shell-boat racing than almost any other water in the country. When the home races have been disposed of to the satisfaction of all concerned, as we believe they readily can be, then will the most important and the most difficult question come to the front, and that is how to arrange a suitable date with the English crew, in the event of a challenge to it being entertained on the other side of the water. But until Oxford is heard from, and their views obtained in a preliminary discussion of the proposed race, nothing can be done by Harvard of a definite character beyond settling upon the men who will compose the crew, get them to work and raise the necessary funds. It is pleasant to note that an offer of assistance has been made from Yale, and there is little doubt but that the wherewithal will be forthcoming upon short notice as soon as it is evident that the efforts of Harvard to bring about a race with Oxford will be crowned with success.

ATALANTA VS. NAUTILUS PAIR.—What will probably prove the last race of the season on metropolitan waters was rowed on the Harlem, Saturday, Nov. 9. The race took the form of a somewhat intense rivalry which has been in existence for a long time past between the Nautilus pair, Messrs. Walsh and Levein, and all other similar crews in the neighborhood. It will be remembered that they were disqualified by the N. A. of A. O., and recently re-instated. Since then Mr. Walsh has withdrawn from the pair, his place being filled by Mr. Wm. Childs, a change which did not affect the reputation of the pair as unquestionably strong. The defeat of the Nautilus pair in the recent Harlem regatta was a matter of surprise to many, and it was hardly expected that the Atalantas could so readily repeat their performance on that day. The water was rough and the day cold. Odds were against Childs and Levein among the betting fraternity, and by the time the start was effected had actually reached the figures 4 to 1 in favor of the Atalantas pair. The Nautilus men the choice of position and went over to the Westchester bank. They caught the water first and obtained the lead, but in three strokes Rustis and Downs were up to them, and with a long effective swing began to walk away from their opponents in steady style, pulling 32 against the 43 of the Nautilus men. At the quarter mile there was a length of clear water between the two, and it soon became evident that the Atalantas were more than a match with their powerful stroke for the ancient "dip and a jerk" of Messrs. Childs and Levein. By the time Alacomb's Dam Bridge was reached the leaders had gained something like a dozen lengths, which they spun out to almost fifty when they crossed the line, winning in 14m. 10s., Nautilus 15m. 30s. Distance two miles, from High Bridge down to the Columbia College boat house, with the last of the ebb in their favor. Mr. Jasper Goodwin, of the Columbia crew, acted as referee.

HARVARD FALL RACES.—The fall scratch races of the Harvard Boat Club took place at Cambridge, on the Charles River, Nov. 9. First race for Freshmen sixes, entries: No. 1—Torrey, bow; Kiser, Hoar, Kane, Chaffin; Harlow, stroke and captain; No. 2—Perkins, bow; Denn, Guitierrez, Baldwin, Lawrence, Babcock, stroke and captain; No. 3—Warner, bow; Dickson, Eldridge, Townsend, Bowen, Hoyt, stroke and captain. Bartlett's crew took the water first and maintained the lead, making the best turn and finishing first in 7m. 12s.; Hoyt's crew a good second, and Babcock's a good third. Second race for University sixes, entries: Peabody, L. S., captain and stroke; Bancroft, L. S.; Freeland, '81; Hammond, '81; Watson, '79; Thomas, '79; bow; Brown, '81, coxswain. Jacobs, '79, captain and stroke; Smith, '79; D. Trimble, '80; W. Trimble, '79; Brandegee, '81; Atkinson, '81, bow; Agassiz, coxswain. Peabody's crew went head, but dropped even at the boat house with the other crew. They lost by a bad turn, and Jacobs' boat lost got

home first with a good lead, time 6m. 40s. In the single sculls, Goddard, of '79, had a walk-over. Time 6m. 46s., with the water very rough. He will row no more this season, but keep in training for his race with Livingston, of Yale, next spring. Last race for scratch University fours, entries: No. 1—Atkinson, '81, bow; Brandegee, '81; Trimble, '80; Jacobs, '79, stroke and captain; No. 2—Hammond, '81, bow; Goddard, '79; Peabody, L. S.; Bancroft, L. S., stroke and captain. This was the best contested race of the day. Bancroft's crew gained a length by spurring to the front at the start, and increased it to the stake, but the tide and wind having driven the outside stake down the river, Jacobs' crew turned first and were off for home with a lead of three lengths. Bancroft's crew spurred magnificently and reduced the gap, but so that when the line was crossed they were but one length behind. Jacobs' crew won in 7m. 30s. Had not the stake drifted out of place the prize would have gone to Bancroft and his men. As there can be no trouble in securely anchoring a stake, it would seem that those in charge have shown neglect in placing them, and it is a question whether the race should have been given to Jacobs, instead of its being pulled over again.

PROBIA BOAT CLUB.—The following officers have been elected for the ensuing year: President, Thomas Cratty; Vice-President, Charles S. Cockle; Secretary, M. E. Bergen; Treasurer, R. House; Coxswain, W. R. Cockle; Vice-Coxswain, W. R. Townsend; Captain, Herbert Walker.

PAIR-OARED MATCH AT ORILLA.—At Orilla, Can., Nov. 8, a match was rowed between the Gander brothers of that town and Elliott and McKen, of Toronto. The race was for \$200 a side, two miles straightway, in lapstreak skiffs. The day was cold and the water rough. The Orilla pair took the lead at a stroke of 35 and maintained it throughout, their boat being apparently the better of the two. The Toronto pair were well used up at the finish. The winners came in six lengths ahead. This result was not expected, and the Ganders have risen in the public's estimation as a formidable pair.

ROWING RIFLES.

The boats used by Wallace Ropes, of St. Johns, N. B., were sold off at the rate of \$30 and \$15 apiece. Pretty cheap..... Three six-oared gigs of the N. Y. Rowing Club pulled a private match, Nov. 3, one mile. Won by Cornell's crew..... Mr. Close, of England, advises "caution" in any letter Harvard may send to an English crew, whatever that may mean..... A second eight will probably be formed at Harvard should the University crew be sent abroad..... For the championship of Prescott, Can., Hubbard came in first, McKillen second and Dalvin third..... Mr. Goddard, '79, is coaching the Harvard freshmen..... It is proposed to form a regatta association at Lake George and give public races next year..... In a double-scutt race at Orilla, Can., the Gander brothers, of Atherly, beat John Adair and John Haalan, of Toronto, in a two-mile race for \$400..... Trickett's time is being calculated round the world. The "times" in question are probably the result of some imaginative brain.

A NEW SYSTEM OF TIME ALLOWANCE.

WE all know of the many attempts that have been made to obtain some better basis for time allowance between yachts than length alone, and we also know that they for the most part are inferior to length as a criterion of speed. But although the merest tyro can at once perceive the importance of length as an element of speed, the benefits of a time allowance based upon this single quality are not so certain. Take, for example, two yachts whose speed is as nearly as possible the same; we will suppose also that on length measurement there is no time allowed between them. Now let the sides of one of them be raised a foot or so, and she will at once develop in stiff breezes a greater speed than before, because her greater freeboard keeps her decks clear, and gives her a smooth side to sail on at an angle of keel at which the other boat is dragging along with her chain-plates and rail under water. And yet length measurement takes no account of this change—the yachts sail together on even terms as before. The result is the same if either should be widened or deepened; it might be an improvement, and it might not—depending a great deal on the previous model of the boat—int whether she is improved or injured by the change, the regatta committee takes no account of it—she sails as before on length alone.

A measurement based on length alone must be set aside as inadequate to place upon an equality yachts differing in size. But although this system of allowance is set aside, length, as an element of allowance, cannot be overlooked, as it is a most important factor of speed, and must be taxed accordingly.

The principal objection—and to my mind a vital one—to any system of allowance based on cubical contents, is that it taxes the model too much, making the high-sided and heavy-bilged boat pay too dear for her seaworthiness, and letting lean bows, hollow floors and low sides pass by without paying proper toll; thus placing an over widening gap between cruisers and racers, and giving premiums in the shape of silver cups to bathing machines and boats of the skim-dish pattern. A measurement based on area has also its objections; for in taking length and beam as factors to produce area, a foot of beam is placed on an equality with a foot of length—an equality which certainly does not exist—thus placing an unfair premium on the latter dimension.

If a yachtman wants to build a boat, he ought not to be confined to any particular style of model; and yet, by the rules of most of our clubs, although the yacht might be extended to infinity in a lateral or vertical direction without any notice being taken of it, the moment he adds one foot longitudinally the regatta committee pounce on him with their tables of allowances. Now, as no two yachtmen are of the same mind in regard to the proportional dimensions of a yacht, such partiality is neither fair nor right. Beam is worth something as well as length—not so much, it is true, but still something. Depth, too, should not be allowed to go scotfree, for it is valuable also. Hence, to sum up, the system of allowance is roughly as follows:

1. That the time allowance of any yacht be obtained by summing up the time allowances from each separate dimension.
 2. That the allowance of each dimension be determined from a separate scale or table, based on the relative value of that dimension.
- For example, assume the following ratios: Length divided by depth equals 3, and beam divided by depth equals 2; therefore, length : beam :: 3 : 2. That is, if three minutes were allowed per

foot of length on a given course, two would be allowed for each foot of beam, and one for each foot of depth. Thus, if two yachts, A and B, were to sail over the above course, A being one foot shorter, one foot wider and one foot deeper than B, by this system of allowances there would be no time between them; that is to say, they would sail on even terms. For, supposing their dimensions to be—

	Length.	Beam.	Depth.
A.....	59ft.	31ft.	10ft.
B.....	60	30	9

A allows 23 (60-38) 3-m.; B allows A 2 (31-30) 3-m. (10-9) 3-m.; 2-3=0

Hence it will be seen that by this system yachts of all models may be raced together without undue partiality to any type in particular, and with a fair tax on the merits of each.

If we desired ultimately to dispose of our yachts as brick lighters, there might be some excuse for taxing length alone, and thus encourage beam, and with it, deck room; but it is hardly supposable that such an idea ever enters into the heads of our yachtmen. Nevertheless, the yacht of the period continues as buoyant as ever; it is true so is not very beautiful, but then she wins lots of mugs by sailing entirely on her poor, ill-used, stunted length.

What must have been the feelings of that much-abused dimension during all the years in which it has been taxed and discounted in every possible way, while beam has been patted on the back and encouraged! Oh, patient and long-suffering function of a truth, if it had not been that imperative geometrical duty compelled you to remain, you might doubtless have disappeared long ago out of sheer disgust.

MARTIN GALE.

NO DEEP KEELS WANTED.

ROSLYN, L. I., Nov. 3, 1878.

EDITOR FOREST AND STREAM:

If an English smackman, accusing a New Haven oysterman, should attempt to prove by talking that the Fairhaven sharpie is unsuited to the catching of oysters on New Haven date, and that a Scarborough fishing-smack would be preferable for that purpose, the oysterman, if he thought it worth the while to reply at all, might with reason remark, "My friend, the waters in which we rake are at times but three feet in depth, and yet—are deeper than thy loig."

In like manner we American yachtmen, who, after sailing our own craft for years, experimenting on models, sails and rig; beating our good cousin, J. B., every time he has had the pluck to try conclusions with us, even successfully bearding the sea lion in his den, have come to the opinion that the sloop is just what we want for ordinary cruising. We, I say, are constrained to tell our English friend that though his cutter be deep, his argument is shallow. We use our yachts for other and, I must assert, pleasanter purposes than eternally bucking at that hackneyed "head sea, twenty miles from the nearest land," although even there the sloop is, as can be theoretically and practically proved, a better boat than the cutter.

What is the cutter? Simply the English fishing-smack decked over, and whittled down to a fine point. And in truth they have whittled away most of the smack's really good qualities, gaining nothing by the process but speed, and not too much of that very desirable article.

That the cutter does dive like a loon I know, for I've seen her do it; and that more depth and weight are not essentials in the making of a sea boat, all who can read and reason must be capable of understanding, for one of our lightest and shoalest of working craft—the common whaleboat—ranks among the best and driest of sea boats, either under sail or propelled by muscle.

The cutter's great fault is that in order to offset her unscientific lack of self-poise, her ballast must be stowed too low down, and consequently, when she is in motion her centre of gravity is in the wrong place, either for speed or buoyancy. Any old coasting skipper will tell us that if he wants his schooner to make good time in head weather, the heaviest part of his cargo must not be stowed at the bottom of the hold.

There is—or should be—reason in all things. It is not reasonable to build a topheavy concern, set a stick in the middle of her, poke another awkward pole in one end; then, to prevent her obeying nature's law by tumbling over, spike lead on her keel, as the schoology does with his toy schooner. But, setting these manifest absurdities aside, the cutter, with her great depth, can never be a useful and pleasant boat to cruise in on our coast.

I am tolerably well acquainted with all the harbors, big and little, between New York and Nahant, and by reputation with the rest from Maine to Florida; and will assert that not one-third of them can be safely entered by a boat drawing over five feet of water without the aid of an experienced local pilot. I make this statement advisedly, and the disgusted owners of several keel boats that we have occasionally left ingloriously sticking in the mud, or sawing a rock, could bear me out in the assertion. So I say to intending yacht owners: Rig your boat as pleases you, for the rig you can change; but do not be beguiled into building an extremely sharp and deep craft with a keel, or she will be for sale shortly after her trial trip, like that wonderful Gloucester jack-knife which "made ten and three-quarter knots, close hauled, in a heavy sea." Did she?

T. C.

Rather a doubtful view our correspondent takes of the cutter. Certainly not one in accord with the unprejudiced testimony we are in possession of from gentlemen who have tried the cutter in our own waters and who exhibit not the slightest inclination to part with their keel cutter, but on the contrary could not be cajoled back into the unseaworthy sloop on any account. It must be borne in mind that the FOREST AND STREAM has always and will always maintain the patent superiority of the sloop for smooth water sailing and that our efforts to aid in the introduction of the cutter are directed in the interests of that class of yachtmen who either have not the means, or do not choose to sink a large sum in a costly craft of heavy tonnage, but are content, or even prefer, to do their sailing in small boats of the Corinthian order without, however, in the least circumscribing the sphere of their cruising ground. A twenty-ton cutter is fit to cruise from one end of the year to the other, up and down the coast, among the West Indies

and off Labrador. The person who goes to sea in a shallow sloop should forfeit his insurance policy. To say that we use our yachts for other purposes than Englishmen is unfortunately too true, but we trust the time is not far distant when the same laudable spirit of adventure and love for manly sport which carries Englishmen to sea by the thousand will animate amateurs along our coast as well, and we feel confident that sea-cruising will eventually become not, as now, the exception, but the rule. Every year adds many to the lists of gentlemen who have learned of seamanship and navigation something more than merely trimming a sheet and running for the nearest port. They need a different vessel from the sloop, and they begin to know it.

"T. C." and others seem to overlook the fact that we do not countenance the substitution of the cutter for the sloop, but rather the addition of the cutter as better adapted to a new phase of the sport hitherto scarcely indulged in on this side of the Atlantic, cruising at sea in yachts of moderate tonnage within the reach of the many.

CORINTHIAN CRUISERS.

BINGHAMTON, N. Y., Nov. 5, 1878.

EDITOR FOREST AND STREAM:

In relation to small yachts I am induced to give you my experiences as follows: I began with an oak yacht 25 ft. over all, 6 ft. beam and 5 ft. deep; drawing 18 in. light and 2 ft. ballasted, after more vertical keel had been bolted on, which was done to prevent drifting, as her bottom was almost flat. She was as slow as a brick loop, for there was timber enough in her to construct a first-class sloop-of-war. It was impossible to get any speed out of her when hauled on the wind unless she careened to her beam ends. If we cracked on before the wind she would go very well, but for all that, owing to her builder's well-known vagaries, who made as many mistakes in construction as I had perpetrated in designing, she was about as slow and unsatisfactory as your correspondent's sloop will be.

My next attempt was an improvement. It was a 23 ft. boat, 5 1/2 ft. beam, 3 1/2 ft. deep inside, and drawing about 3 ft. of water when ballasted. We had eight 20 lbs. blocks of iron dovetailed into her keel, and an iron shoe weighing 70 lbs. under all. Even then she was so crank that her 13 in. of freeboard would not keep the water out in fine weather unless the crew were up to windward. But she would sail! There was considerable concavity in the latter yacht, and when we changed her to a schooner—she was at first a cutter—we found we had reduced the angle of sailing, although we possessed more canvas. Of course, the philosophy of it was that the hump of the sail came nearer the deck. But she was always uneasy, because her ballast was stowed too low and her keel too thick—2 in.—1 in. would have answered just as well. While I was yachting off New York, her builder changed her rig again to that of a cutter, and one day, during a heavy squall, she capsized and drowned his father.

I agree with you that the cutter rig is far better than that of the sloop; but I go farther, and advocate the schooner rig for all yachts of 30 ft. and over unless they are as wide as a saucer. The Boston yachts are nicely canvassed, and when they have been lengthened without any increase of beam they never, so far as I know, fail to develop speed and weatherly qualities. The utmost limit for a ship is 26 sq. ft. of plain sail for every square foot of immersed midship section. But yachts often carry 100 to 1, and for cruising yachts 75 to 1 is considered very moderate. The reason is at once apparent, and lies in the concavity of yachts and the absence of it in ships. The latter often drift to leeward, while the former do not. Especially is this true of keel vessels.

During the prevalence of light air, when club-topails, balloon-jibs, jib-topails and square-headed mainmast-stayails are set, the proportion as per rule is doubled; and yet yachts of moderate capacity and proper model, like the *Dawnless* and *Wanderer*, are seldom injured at sea to any great extent, or capsized in port unless by ignorant or reckless handling. It was, unquestionably, all of these faults combined which enabled the *Mohawk* to turn turtle as she did, and since that disaster I am glad to see that centreboards have been falling into disfavor, so that the newest and finest yachts are keel vessels of sharp lines, possessing considerable deadrise and increased draught of water, which last does not, to a very great extent, affect unfavorably the important, if not indispensable, item of speed.

My observation and experience have taught me a great deal, and on the strength thereof I have ventured to draught a 30 ft. yacht, which Mr. A. Cary Smith has approved. He saw it last summer, and his worst criticism was that it would be likely to draw more water than I have indicated. For yachts of 30 ft. and less there is, in my humble opinion, nothing so well adapted as white cedar, with light iron bracing and copper fastenings, for the simple reason that minimum weight is indispensable to maximum speed. DEJA DUGO.

Sea and River Fishing.

FISH IN SEASON FOR NOVEMBER.

FRESH WATER.
Black Bass, *Micropterus salmoides*; Pike or Pickerel, *Esox lucius*.
M. gulosus. Yellow Perch, *Perca flavescens*.
Muskalonge, *Esox nobilior*.
SALT WATER.
Sea Bass, *Scombera ocellatus*.
Striped Bass, *Morone saxatilis*.
Weakfish, *Cynoscion regalis*.
Bluefish, *Pomatomus saltatrix*.
Cero, *Cybinus regalis*.
Bonito, *Caranx pelagius*.
Kingfish, *Menticirrhus nebulosus*.

FISH IN MARKET.—Bass, 13; smelts, 25; bluefish, 12; salmon, 20; mackerel, 18; weakfish, 15; white perch, 15; green trout, 20; tarragon, per doz., \$12 to \$30; round fish, 8; halibut, 20; haddock, 6; codfish, 6; blackfish, 12; flounders, 8; sea bass, 20; eels, 10; lobsters, 10; sheephead, 20; frogs, 40; scallops, 61 per gallon; oyster clams, 90 to 75 cents per 100; white-belly, 12 1/2; pickarel, 12 1/2; salmon trout, 12 1/2; red snapper, salt water, 15; hard crabs, \$2.50 per 100.

The first arrival of red snappers, *Lutjanus Blackfordii*, came in on Monday from Savannah. The average weight was

from ten to eighteen pounds. Squid are in active demand for food, at 75 cents per dozen. They are of an India rubber consistency, and have a peculiar flavor disagreeable to most people. The taste for them is an acquired one. We noticed on the slabs seven fresh caught salmon from Halifax, N. S. They are the stragglers which always come in out of season and find a ready sale. Smelts very scarce. Cod have made their appearance in large schools off Long Island shore. Two very fine specimens of bluefish weighing 15 pounds each were brought from Martha's Vineyard Sound.

MOVEMENTS OF THE FISHING FLEET.—The weather has continued unfavorable for fishing operations much of the time the past week, and the Shore fishermen have averaged good prices for the small amount taken. The winter school of codfish are said to have struck in on the Cape Cod shore, and good fishing may be expected soon. The Shore master-elm have done little the past week, and will soon tack out the stock on board and haul up for the season. The Bay fleet are arriving slowly, but the season will soon close. The number of fishing arrivals reported at this port the past week has been 27, as follows: 7 from the banks, 1 bringing 40,000 lbs. codfish and 6 bringing 84,000 lbs. halibut; 15 from Georges with 250,000 lbs. codfish; and 5 from the Bay St. Lawrence, with 1,500 lbs. mackerel. Receipts of Shore mackerel, about 2,500 lbs.—*Cape Ann Advertiser*, Nov. 8.

WANTED.—An order for a 10 lb. striped bass with six fathom line attached. The life-saving station crew at Barnegat Inlet have been very successful with the striped bass, catching from 200 to 600 lbs. per day. In their haul this morning, Nov. 8, with the rest of the fish taken, was one bass weighing 10 lbs. with a cuttyhunk hook in his mouth with six fathom of blue braded line attached. Should this meet the owner of said line, hook and fish, he is respectfully asked to prove property, pay expenses, etc. For further information inquire of G. W. Kinsey, Ashley House, Barnegat Inlet, N. J.

MARYLAND.—*Baltimore*, Nov. 9.—We are having a very exciting time over the taking of rockfish on the long bridge at Ferry Bar. They have been taken from ten to eighteen inches in length for the past three or four weeks by our amateur fishermen. This is something very unusual for these fishing grounds, and affords rare sport for the disciples of old Isaac. The quarry with all is where they came from, as they have been a rare fish in our waters for years past. Mr. A. J. Miller and myself took thirteen on the 6th inst. from ten to seventeen inches. *GREASER*.

WEST VIRGINIA.—*Ronceverte*, Nov. 8.—Mr. Graham, who has charge of the W. Va. State Hatching Establishment, came here on Tuesday last and placed in the Greenbrier 70,000 California Salmon. He had just put in 90,000 at Howard's Creek, five miles above, and sent from here 60,000 to be put in the Elk River at Charleston. These were a part of the 600,000 obtained from the Government establishment and hatched out at the State concern at Romney.

KENTUCKY.—*Stanford*, Nov. 5.—Major Duncan and I spent the last week of October on the Cumberland River, and my section boat and equipment for camping, but lodged with our oarsman, and didn't take tent from depot. Had a large lot of excellent minnows, but the bass and salmon took a spoon so greedily that we used scarcely a fifth of our supply. Many large bass and three salmon, weighing 7 to 7 1/2 pounds, were taken. Small fry by scores. Water low, but clear and pure; and the success of our first fall trip determined us, *Dawnless*, to make an annual excursion there or elsewhere till 1879, when we shall probably waive the fun for a visit to the "Centennial display," wherever that may be. *KENTUCKIAN*.

TENNESSEE.—*Nashville*, Nov. 7.—Our market is overtaken with fish, mostly from the Gulf of Mexico, are getting some rare northern fish as well. At Hemphill's I saw to-day a lake salmon of about ten pounds weight. Sheephead and red snappers from Pensacola are beginning to come in also. Bass and jack are being taken every day in the Cumberland. The river has been rising slowly for a few days, which has put the water in fine condition. Major Burr, a great sportsman of this place, is fond of large game, and is trying hard for a big jack, but he thinks is loitering about the head of the island, but he has not hooked him yet. *J. D. H.*

MISSOURI.—*St. Louis*, Nov. 2.—Fishing is fine. A party went up the Illinois River last week and brought home their catch, amounting to about 700 pounds of bass and croppie. Several bass weighed from five to seven pounds each. *J. W. M.*

MICHIGAN.—*Detroit*, Nov. 9.—Whitefish business poor this year and not profitable.

CALIFORNIA.—*Los Angeles*, Nov. 2.—Frank Crittenden caught, at the South Monica Wharf last week, a Jewish weighing 320 pounds. Sea trout, bonito, mackerel and halibut are abundant.

FISH DYING OF COLD.—We were much struck on the occasion of a visit to Shinnecock Bay a few days since with the fact that the migratory fish, such as the bluefish, which had come into the Bay at the time when the Inlet was open, were all dying. The Inlet having closed, the fish were unable to find their way to the sea, and the water becoming rapidly fresh from evaporation and the supply from the streams, they became so benumbed with the cold as to be perfectly helpless. The natives were taking large fish, weighing six or seven pounds, from the shallow water with their hands and with pitchforks, and of the smaller fish, or "snappers," there were immense quantities. The fish were very fat and in excellent condition for the table.

We may add that very large bluefish, 18 pounds or so, have been taken off Nantucket within a week. Usually bluefish go South with the first frost.

BARBLES HOOKS.—*Chicago*, Nov. 2.—*Mr. Editor*: I noticed in the *FOREST AND STREAM* some comments on the Edgar barbless hooks. While fishing this season up north with Mr. Holabird, I used them for trout and bass. I prefer them in the brushy streams of Northern Michigan, where one must be quick as a flash to pull out my fish. I sent one of them sealed to Mr. Orvis, asking him if it was possible to tie them to make good flies. He sent me four handsome flies which I think would deceive even the

very elect of the salmo tribe. I intend having some made up to try them for fly fishing if spared another season. Mr. Holabird has my sample or I would send to you for your opinion. *W. DAY TOMLIN*.

SHARKS AND TORPEDOES.—English naval officers find much sport in firing explosive bullets at the sharks which follow in the wake of their ships. One good quality of this submarine bass is that he is not frightened by the crack of the rifle, but follows on undisturbed until the bullet strikes him. Then he disappears—down the maws of his fellow-sharks. A new mode of sport is to bait a hook with a good-sized piece of pork, in which is incased a torpedo. This is then carefully lowered and instantly snapped up by the expectant man-eater. The effect is instantaneous. The head and jaws of the monster are blown into fragments, and a bubbling circle in the water marks the spot where, a few seconds before, his dorsal fin was shown above the waves.

THE HELGRAMITE.—*Deatur*, Ill., Nov. 2.—The helgramite described by "Isaak," of Dayton, Ohio, on page 293 of the *FOREST AND STREAM* as "the most killing bait for black bass" is the larval state of the horned corydalis (*Corydalis cornuta*), an insect belonging to the sub-order, *Neuroptera*. The males, in the winged state, are provided with long horns, whence the insect receives its specific and common names. As it exists several years in the larval state before taking on its winged form "Isaak" may readily have found different sizes at the same time. If he will take the trouble to search for them early next spring, and send me just above the water's edge, he may find them, and I have done, undoubtably, their transformations. Both forms, larva and adult, are figured in "Tenney's Elements of Zoology," p. 233. *A NATURALIST*.

We have given the history of the helgramite a great many times in the past few years; but there is nothing like refreshing the memory, and we thank our correspondent who has just favored us. But ten to one, some innocent inquirer will ask us next week what the dobson is, and whether it is any relation to the clipper, helgramite, etc., and whether it might not prove a likely bait for some kinds of fish.—*ED. F. & S.*

BALLOTS AND BAIT BOXES.—When the angler, casting his fly just there in the pool where he knows that famous big trout is lurking, is suddenly disturbed from his repose by the headlong onslaught of Sir Surly Proprietor with shot-gun and bull-dog, prudence suggests that with all speed he take to his heels. But let him rest content when the fence is between him and the dog, nor vex his spirit with needless wrath. There is a surer and sweeter revenge than reviling the man or shooting the dog. The mills of the Gods grind slowly, but for those who bide their time they grind exceedingly fine. It is the unlooked for that always happens. Sir Proprietor may run for Congress some day. Upon the road from his farm with its trout brooks to that coveted seat in Washington he will come unexpectedly upon a man with a fish-pole in his hand, a bait-box in his pocket and a smile of triumph on his face. He goes no farther. The bull-dog welcomes him home and the old trout still resides in the pool. All of which is not fancy; thus saith the daily paper:

It was urged as a fatal fault in a Congressional candidate in Virginia that he had prevented the people from taking "the free and vagrant fish of the Chickahominy," where that river flows through his estate.

TENTING ON KING'S LAKE.

ST. LOUIS, Mo., Oct. 17, 1878.

EDITOR FOREST AND STREAM:

Our party, consisting of Judd Bame and John Shockey, assistant engineers of the Department of Geology, Sec. J. J. Cross, Broadway Bank; John Wimer, our ex-mayor's son; Messrs. John Kayser, of John Furber and Theo. Scheele, with T. Shockey and Edw. Toombs, of the Fire Department, left St. Louis, per steamer *Lake Superior*, for fishing grounds north. We found the midnight hours on the river decidedly cool. Landed at Buchanan's warehouse at 1:30 P. M., an even 100 miles from St. Louis up the Mississippi River. Several years ago the river, at the point opposite Clarksville, Mo., inundated valuable lands, doing great damage, particularly in high water seasons; and in order to redeem this land a levee was built, called the *Lake Levee*. This levee, in turn, caused another overflow in the opposite country. The citizens of Osage County, Ill., remonstrated against the continuance, so a connection was made between the waters of the *Lake* and those of *King's Lake*. Since that time these waters have held great attraction, and been the favorite resort for fishermen of the *Jeau Watson* school.

Hired an old man to haul our things to the lake, about one-half mile from the river; but when he brought a away-back horse fourteen hands high, and a little mare no bigger than a half a minute, we felt rising doubts as to the ability of the team to draw our heavy load. The doubts finding expression, they were met by the old man, who threw a knowing look into his disfigured face, saying, "Never mind; these yin kin pull any thing their looms at both ends." When harnessed it looked as impossible a feat as for kids to draw our Court House down the levee. But with a *gargon* to do duty at line-jerking, accompanied with great damage, particularly in high water seasons; and in order to redeem this land a levee was built, called the *Lake Levee*. This levee, in turn, caused another overflow in the opposite country. The citizens of Osage County, Ill., remonstrated against the continuance, so a connection was made between the waters of the *Lake* and those of *King's Lake*. Since that time these waters have held great attraction, and been the favorite resort for fishermen of the *Jeau Watson* school.

Our netting at King's Lake, carpenter with disappointment, reminded us of the *Jeau Watson* definition of fishing—"A pole with a worm at one end and a fool at the other." But some fishers had been there before us with nets, which rather damaged our sport. About a mile east of our camp was a body of water, harmoniously named "Cow-Head Slough," and thither we wandered our way in search of piscatory sport. We took some time ones there, but the place, superfluous, some distance to the south. Our informant was the old Governor, president of the transfer. He acted as guide to the small basin named

Mormon Lake, and we were soon enriching our stock with splendid bass and croppie. Mr. Wimer captured one weighing five pounds. Some distance east of this lake is the bed of an old creek, fed by back water from the river. About every spring, and during the summer and fall, the deeper portions are filled with one fish left there when the water recedes. The fishing spots are quite deep, and some are entirely isolated from any other body of water during the dry season. We could find no name for this old creek, so we dubbed it "Sausage Creek" on account of its many hooks. Mr. Kuperle here captured five bass within ten minutes weighing from two and a half to five pounds each. Our first day at this place was so very productive that we were all tired enough when we reached camp with our heavy strings. The next day we had a wagon to assist in the "toting," as our strings were even heavier than those of the day previous.

Our cook, Geo. Washington, Esq., had some disquietude on account of his color. People of Caucasian ancestry, ill, will not take a negro to live in their country. George was made acquainted with this fact on our upward trip. He first thought it a joke, but subsequent inquiries proved it the truth. One of our party had a large revolver, and, as we must have butter and milk, it devolved on George to go to the nearest neighbors for these articles, an undertaking he did not relish much, but happening to see the revolver in Thorne's pocket, he said: "Mister Ed, 'em me dat pistol and see if I don't go for milk and butter." He got the "pistol," put a double-barrelled shot-gun on his shoulder, took his hat, and looked like a walking arsenal as he wended his way toward Anderson's for the desired articles.

Ten or a dozen men in one tent, and no guard over them, no enemy near, can make a heap of muscle on the evening air, and the trees in our neighborhood were serenaded in strains sweet as the owl breathes on the coon: "Awno, awno, who are you, sir?" Cords of wood were consumed, and as the logs shot out their sparks it flitted through my mind how many poor would rejoice to gain possession of the fuel we fed to the flames.

Mr. Shockey performed a Jonaah feat. His line became fast below the water, and in his frantic endeavors to loosen it he mislaid his footing on the tree top upon which he stood, made a few expressions that wouldn't chime well with a choir, and took a dive below. After entertaining us with an exhibition of aquatic athletics, he pulled ashore, and we put him to bed while we dried his clothes. For his heroism and skill he was promoted to the captaincy, Mr. Bame being our commissary, Mr. Wimer lieutenant, and Mr. Thorne corporal. The chief humorist was our lieutenant, who held as much fun as a box of monkeys; but our commissary was the premium singer. We broke camp on Friday, and on our way to the five bank, and were soon aboard the boat that "fetched us here," homeward bound. Stopped at Falmouth with freight to unload. One of the party went out on the bank for exercise, and jumped a standing jump for fun. A member from the country, rather lengthy as to limbs, built like a "grandfather-long-legs," staked along: "I 'low you jumped on Sunday. No? Purry good jump, I can beat it by two foot; do it far two bits." Challenge not accepted, he continued: "I'm the darndest fellow you ever seen. Why? I can play a tune on an instrument you never saw any one else play but me. And he played Crotch. Jim, in snapping his fingers, making clear, distinct tones with perfect time and expression. As his moist finger struck the palm of his hand the tones sounded out clear and round. Acknowledged I never heard the instrument before, and was much interested in the unique character of the performance, and learned that the young man was a 'ner-do-well' fellow named Dougherty, but was truly the owner of rare musical talent. Reached St. Louis in rare spirits, considerably enriched in avoirdupois.

CORPORAL.

Rational Pastimes.

ARCHERY SCORING.

THE good sense of the following communication will commend itself to all archers. It is unnecessary for us to repeat here what we have already said concerning the desirability of some uniform standard for marking scores. One chief element of interest attaching to published scores in contests of all kinds is the opportunity afforded the reader of comparing them with his own work. To this end a common standard is indispensable. That proposed by our correspondent, and already adopted by a number of clubs, is reasonable and convenient. We shall keep our columns open for expressions of opinions from others:

CHAMFORDSVILLE, Ind., Oct. 29.

EDITOR FOREST AND STREAM:

I am rejoiced to see so many archers responding to your kind invitation to send in their scores for publication, still some of them neglect the most important point connected with score publication, *i. e.*, to give the size of the target, and the number of arrows shot by each archer for a score. In England there are two scores shot generally, one of seventy-two arrows at 100 yards, forty-eight arrows at 80 yards, and twenty-four arrows at 60 yards, known as the "York Round," and one of forty-eight arrows at 60 yards, and twenty-four arrows at 50 yards, known as the "National Round." The gentlemen in publishing the scores in the *London Field*, and in the *Archery Register*, all explanation is obviated by simply saying "York Round," or "National Round." We have yet no regulation round in this country, and I am certain (after much experimenting) that the English York Round is not suited to general use in this country, because of our lack of leisure, and the great length of time necessary to shoot a match, where say twelve archers shoot 144 arrows each. Such a regulation score is unwieldy, for the further reason that it necessitates the shooting at three separate distances. It seems clear to me that a score should be a certain number of arrows at a given distance. This number, however, should be fixed, understood and adopted by all archers in America. Some young clubs will desire to shoot at 100, 80, and 60 yards, or twenty or thirty arrows at each distance, and some advanced clubs will prefer forty to sixty, while some experts will prefer 60 to 100 or 120 yards. So be it, but at whatever distance the shooting is done, let a certain number of arrows constitute a score. If this is accepted and acted on, then it will only be necessary in reporting scores to give the names of archers, the distance and the scores. I see that it is recommended by the editor that the number of arrows be given also. To do this it would require the further adoption of the number of arrows to constitute an end. This, in England, is generally three arrows. I think it makes very little difference whether we adopt and use this, or any system of "ends" in reporting, as it is of very little interest to archers how many arrows are shot at an end. There is a trifling advantage in shooting an end of many arrows, over shooting less arrows at an end, for the reason that one gets the range, power of the wind, and length

better after a few shots, but this advantage is slight in shooting a score. The "Wabash Merry Bowmen" have adopted, and always used, an end of five arrows, and a score of thirty arrows, and have found each very desirable. They have also adopted a four-foot target for all distances, and find it meets every want. In correspondence with the Highland Park and Chicago Clubs, I find they have adopted the same target and score. The "Kokomo Archers," perhaps the second best club in America at present, have also adopted the same score and target, and have started a manufactory of the most excellent targets I have ever seen, four feet in diameter, ten inches thick, and almost as firm as wood. They are formed of rolls of hay placed lengthwise, bound firmly together and sewn through with hemp twine. The faces are then cut down perfectly smooth. Over this the target face proper is sewn, leaving said so much as to the desirability of uniformity in size of target, number of arrows to an "end," and to a score I now propose the adoption of the score of thirty arrows. The "end" of three arrows, and the four feet target at all distances. Will archers, generally, respond? If the score is not desirable, then what number, so as to the end? If these suggestions are adopted, how easy to report scores so that any reader can tell at a glance how the shooting compares with his own. Thus:

W. Holberton..... 130 Capt Webber..... 118
Or if more desirable to give the ends, score and golds, report it thus:

Ortiana Archers.		Hills Scores, Golds.	
Hills Scores, Golds.	130	7	118
W. Holberton.....	29	7	118

Of course until some such rule is adopted, we should report the number of arrows, distance, hits, score and size of target, or other archers will derive no benefit from our communications. I read some weeks ago in the *FOREST AND STREAM* Mr. Holberton's statement of how many arrows constituted an "end" with the Ortiana Archers, but one taking up last week's paper would not know how many arrows were shot in the score reported, unless he had been a subscriber heretofore. Let us get uniformly better next spring's contests begin.

ARCHER.

HIGHLAND PARK ARCHERY CLUB.—*Editor Forest and Stream:* It is with great pleasure I note the active interest in the glorious sport of archery taken by your paper. In this quiet little suburb, in the outskirts of our Western empire city, Chicago, we have organized a very thriving and healthy archery club, comprising upward of 60 members, ladies and gentlemen. Professor Elisha Gray, inventor of the telephone, is our President, and has done much toward developing the interests of the association and bringing its members together in friendly competition and social intercourse. Next to the Wabash Merry Bowmen, of Crawfordsville, and the Kokomo Archers, our club is the oldest in the West (organized last summer), and has developed some modern degree of skill with the bow. During the past three months our team, composed of H. C. Carver (Master Bowman), F. P. Hall, C. B. Weston, W. M. Goodrich, have shot five public matches, winning three and losing two, and making creditable scores. The highest individual scores made at the different ranges were as follows: 30 yards, 204; 40 yards, 150; 60 yards, 126. At our club range on November 7 and 8 there was a handicap contest, the result of which I give you below. All our shooting is at a regulation 45-inch target:

	Arrows.	Hits.	Yards.
H. C. Carver (60 yards).....	30	24	94
	30	23	84
	20	20	82
	30	23	103
	30	22	86
	30	17	72
	180	127	520
W. B. D. Gray (50 yards).....	30	16	62
	30	20	72
	30	19	63
	30	26	116
	30	18	84
	30	22	104
	180	121	517
H. C. Carver (80 yards).....	30	11	67
do (100 yards).....	30	4	22
O. B. Weston (50 yards).....	30	4	10
do (100 yards).....	30	3	30
H. C. Carver (60 yards).....	120	80	355
A. J. Orr (50 yards).....	120	56	244

Our desire is to stimulate the general interest in archery and to induce other organizations to make public their doings from time to time, that this royal and most beautiful pastime may take firm and enthusiastic hold upon every refined and enlightened community in our land. Let every one realize that there is no medicine so health-giving, no pleasure so delightful and so fascinating.

H. P.

Highland Park, Ill., Nov. 9, 1878.

THE BEST ARE THE CHEAPEST.—A member of the Brattleboro, Vt., Archery Club writes to a New York dealer concerning the Aldred bows: "We are very much pleased with the goods you have sent us. They are admired by all who see them. Some claim that cheap bows are as good as our fine ones, but I find, when the two grades are used side by side, that our bows are very much more satisfactory."

DANCING AGAINST TIME.—Two professional dancing masters have just contested an "International Waltzing Match" in this city. They glided through the gliding waltz for twenty hours. This is four hours better than the performance of a man who danced sixteen hours last year in the same hall. We are willing to match a man against all comers for a great international endurance match of standing on one's head.

THE BICYCLE.—A race recently contested between an English professional and an amateur rider, resulted in the defeat of the former, the amateur's time being: One mile, 2m. 09s.; two miles, 6m. 1s.; three miles, 9m. 03s.; four miles, 12m. 21s.; five miles, 16m. 12 3/4s. That's a great deal better than some railroad time we know of.

COLLEGE FOOT BALL.—In the foot-ball match between Yale and Trinity, at New Haven, last Saturday, Yale won with a score of two goals and ten touch downs to nothing. The teams were made up as follows: Trinity—Forwards—Starks, Perkins, F. P. Wilcox, Elbert, Kneeland, Williams; half-backs—Potwin, Nelson, Boske, Appleton, Washburn, F. Wilcox. The following Yale men played with Trinity: Crouch, forward; Hill, half-back; Bacon and Wilson, forwards. Yale—Forwards—Farwell '79, Lamb '81, Ives '81,

Morehead '79, S. S. S. Eaton '81, King '80, Hull '81, Harding '80, half-backs—Brown, P. G. Peters '80, Thompson '79, Watson '81, S. S. S. backs—Wakeman, Medical, Nixon '81, Badger '81, Referee, S. C. Bushnell, Yale '74. Judges—Trinity, Russell, '80; Yale, Clark, '80.

—The game between Pennsylvania University and Princeton College, played at Philadelphia, last Saturday, was won by the Princeton boys. They scored two goals and four touch downs to one goal for their competitors.

—Harvard defeated Amherst at Cambridge, Saturday, with three goals and six touch downs to nothing. The Rutgers College and Stephens Institute game, at Hoboken, the same day, resulted in one goal for the Stephens club.

BROOKLYN ATHLETIC CLUB.—Fall games at Prospect Park, Nov. 7. Summary as follows:

Two Hundred and Twenty Yards Run—First heat—F. B. Bourne 1st; W. Fisher, 2d. Time, 29 1/2 s. Second heat—Joseph Baker 1st; H. Lansdell, 2d. Time, 29 s. Final—F. B. Bourne, 1st; Joseph Baker, 2d. Time, 25 1/2 s.
One-mile Walk—Charles Mackrell, 1st; W. D. Baker, 2d; B. Richardson, 3d. Time, 9m 25s.
One Hundred Yards Dash—Joseph Baker, 1st; W. Fisher, 2d; H. Lansdell, 3d. Time, 11s.
Running High Jump—John Baker, 4ft 9in; W. Armstrong, 4ft 8in.
Running Broad Jump—Q. C. De Grove, Jr., 16ft 5in; John Baker, 16ft 3in.
Quarter-mile Run—J. G. Hudson, 1st; B. Richardson, 2d; W. D. Baker, 3d. Time, 6m 34 s.
Putting the Shot, 16 pounds—W. Blair, 27ft 1in; J. G. Hudson, 24ft 7in.

Lacrosse (ball) Throw—F. H. Logan, 330ft.
7m of War—Team 1—F. Maxwell, F. H. Logan, Rev. T. S. Siler, H. Lansdell and J. G. Hudson; Team 2—W. D. Baker, John Baker, Joseph Baker, Q. C. De Grove, Jr. and W. Blair. Won by Team No. 1 in 1m 10s.

The games ended with a lacrosse match, the captains being F. H. Logan and Q. C. De Grove, Jr. Captain Logan's side won. Score, 1-0.
Judges—Mr. Barclay and Mr. Wilkinson.

TUFT'S COLLEGE ATHLETICS.—Mythic Park, Boston, Nov. 7.—Following is the summary of the fall sports of the Tuft's College Athletic Association:

One Hundred Yards Dash—Eaton, '80, 1st; time, 12s. Gowing, '81, 2d.
One-quarter-mile Run—Foles, '79, 1st; time, 6m 2s. Friend, '81, 2d.
One-mile Walk—Klinghammer, '79, 1st; time, 8m 37 1/2 s. Presho, '81, 2d.
Five-mile Run—Gowing, '81; time, 5m 5 1/2 s.
Throwing Heavy Hammer—Perry, '79; distance, 84ft 1in; Hic, '81, 53 1/2 ft.
Potato Race, distance, 25 yards—Donovan, '80; time, 2m 45s. Friend, '81, 2m 55s.
Kicking Football—Hall, '81; distance, 144ft 3 1/2 in. Perry, '79, 143ft 8in.
Throwing Base Ball—Donovan, '80; distance, 255ft 6in. Donovan, '80, 280ft 1in.
Three-legged Race—Hall and Mack, '81, 1st, in 14s; Donovan and Friend, '81, 2d, in 16s.
Running High Jump—Perry, '79; distance, 4ft 10in. Hall, '81, 4ft 7in.
Standing Long Jump—Hall, '81; distance, 9ft 11in. Perry, '79, 9ft 10in.
Running Long Jump—Perry, '79, 15ft 6in. Hall, '81, 15ft.
Hop, Skip and Jump—Perry, '79, 35ft 6 1/2 in; Hall, '81, 35ft.
Wheelbarrow Race—Donovan, '80, 1st; Leonard, '81, 2d.

GREENPOINT ATHLETIC CLUB.—The annual fall games of the Greenpoint, L. I., Athletic Club were held at the Manhattan Club grounds, N. Y., Nov. 9. The summary of events is as follows:

Open 100-yards, handicap—Thirty-eight contestants. Won by J. B. Voorhis, Adelphi A. C. handicapped 20 feet, in 10s.
One-mile walk, handicap—Twenty-six entries. Won by M. Chatwick, in 7m 46 1/2 s, actual time.
Four hundred and forty yards—Twenty-five competitors. F. W. Janssen, Staten Island A. C., 65 yards start, won.
One hundred yards for club championship—(Won by D. H. Steel in 11 1/2 s. This gentleman also won the 440 yards club championship in 53 1/2 s.)
Running high jump club championship—Won by B. Rothen, who cleared 4ft 7in.
Three mile walk for club championship—Won by W. H. Purdy in 23m 15 1/2 s.

New Publications.

THE WATVERLEY DICTIONARY: An Alphabetical Arrangement of all the Characters in Sir Walter Scott's Watverley Novels. By May Rogers. Chicago: S. C. Griggs & Co. 1878.

Few people nowadays go through the whole of the thirty Watverley Novels. New friends are crowding the old ones from the stage; and while Scott is read and always will be read with the interest which a master-mind can never lose, there are comparatively few persons who can accurately locate many of the Watverley characters. In the substantial volume before us, the author has attempted to give such a concise and full description of the Watverley characters that even those who have not read the books shall have an intelligent conception of them and the part they play in the fiction. The plan of the work is in conformity to the demands of the time for condensed and definite information. We think it will prove of great practical utility, and especially commend it to students of English literature.

HELENE: A Love Episode. By Emile Zola. Translated by Mary Neal Sherwood. Philadelphia: T. B. Peterson & Bros. 1878. Paper, seventy-five cents.

Zola is among the great fiction writers of the day. His books go through fifty editions in Paris, and do not stop there. Readers and admirers are not confined to France. He has many friends in this country, and their number will, we think, be largely increased by the present volume.

MAGAZINES FOR NOVEMBER.—We have received: *Popular Science Monthly*, *Popular Science Monthly Supplement*, *Electec Magazine*, *American Naturalist*, *Journal of Forestry*, *American Antiquarian*, *Scribner's*, *Harper's*, *Lippincott's*, *Appleton's*, *Atlantic*.

ANOTHER NEW HEAD.—It is said that two heads are better than one. The Hydra had more than two heads, but we do not remember to have read that it ever congratulated itself especially on that account. The great advantage of the multiple possession was that as often as one head was decapitated another took its place. It would be fortunate for some men if this condition of things could apply to their cases. Men are apt to lose their heads, and that finishes them. It is not always nice to be a finished gentleman. This week FOREST AND STREAM has lopped off its old head and put on a new one in the other's place. It may not be quite so picturesque as the one which has stood as frontpiece for so long a time, and some of our Western readers will no doubt miss the "one-eyed bull of the Republican Fork," so glowingly decapitated upon by Dr. Carver last summer. The big moose head in the centre of the diagram will no longer be conspicuous. Yet we need the space for our reading matter which presses upon our columns, and therefore do we sacrifice that which is artistic and beautiful to that which is reasonable and useful. But the paper in losing its head gains a firmer and more substantial footing, and by so much shall both we and our readers profit in a business way. We await the verdict of those who sit in judgment on us.

THE YELLOW FEVER FUND.—The total sum of money given for the yellow fever fund, excluding all private, religious and society subscriptions, and embracing only the cash subscribed through the authorities of the various cities and their committees, amounts to \$1,320,000.

NOTHING IN A NAME.—The names of the army officers who are in pursuit of Little Wolf's band of Indians out West are Lieuts. Hunter and Chase; they didn't catch 'em, nevertheless.

THE MILITARY MATCH.

THE British rifle leaders are breaking out into a vigorous attack of letter writing. All sorts of explanations are offered to make the defeat of the Scotch, Irish, United and other teams appear less as defeats and more of accidental omissions on their part, and it is suddenly discovered that Creedmoor, upon which these visiting teams made scores such as they had never approached at home, was an improper range given to favor the home team to the prejudice of the visitors. Then the conditions of the trophy, which made it obligatory upon those wishing the prize, to come and win it, is found to be irksome, and with an intimation that unless the trophy is sent abroad with an American team as an accompaniment, there will be no more matches; the British riflemen unite in sitting down to see how much the American riflemen will consent to give. These may be strong words, but they are borne out by the record, and in those letters the British riflemen have taken anything but a sportsman's position. The conditions of the Palma match have not altered since they went into it, nor would they in all likelihood ask for changes now had victory been theirs, and to ask such under defeat has a whine about it which is far from the real Saxon spirit of pluckiness which would dictate a fight to the end rather than a cry for terms.

There is a line of battle, however, in which the British riflemen may enter without meeting any preliminary impediments. It is to institute a great military match. The Americans have done nothing in this line. The avenue is clear for the English volunteers to make the first move. As the American marksmen took the initial step in the establishment of the trophy for long-range championship, it would be the entirely proper thing for the National Rifle Association of Great Britain to take in hand the more difficult task of putting in motion a match between teams of military shooters. Compared with the long-range matches, they would be of infinitely wide interest. The fancy element which will always cling about these small-bore contests would not be present in a military match. All rifle shooting has a presumable end in the culture of soldiers, and the nearer this end is brought to the means the greater will be the popular interest taken in the contest.

England, with her great force of Volunteer marksmen, can surely have no fear of any rivalry in this special line of rifle shooting. She has no end of excellent shooters to choose from, and though there might be slight trouble from the *embarras de richesses* when the task of selection comes up, it is certain that the team when chosen would be a strong one, able to shoot on any field, and with the superb regulation weapon of the British army need fear no humiliating comparison when the scores were made up. The field of interest, silent participants in the match would be so large that there would be no difficulty in securing the means necessary to carry out the match. The difficulty with the long-range matches has been the limited number of persons who were sufficiently concerned in the contests to assist in defraying the expenses connected with them. In a military competition it would be entirely proper, if necessity demanded, that government aid should be extended; but the almost certain probability is that no such demand would be made. A test severe enough to bring out the very best effort of the men, and to show in the most emphatic manner the merits or demerits of the arms used, could not fail to be satisfactory to all concerned, and the conclusions reached would be entirely novel, since no such matches have ever taken place in connection with the modern scientific target practice. The ranges should be well covered from the off-hand distances back to the longest ranges over which the military weapons are presumed to carry. Small arms commissions have been appointed in every civilized country, and their conclusions are shown in the various sorts and styles of weapons in the hands of the troop of the several nationalities. The advantages of these pieces can be shown in a marked way by a test before the butts, and to shrink from such trial would be a confession of weakness. What American militiamen lack in numbers, in organization, in experience before the targets, and in a hundred other points in which the British volunteers are thoroughly trained is supplied by an enthusiasm which will carry them over many difficulties and fill up many deficiencies. They are surely in no worse condition than were the American small-bore men in that November, 1873, when the challenge of the Irish champion eight was received and accepted. The British volunteer may rely upon it that the American militiaman will not be found the least backward when the hour for action has come.

LIGHTING THE COAST BY ELECTRICITY.

THOUGH at present the only question to be solved in relation to lighting cities by electricity consists of the hitherto insurmountable difficulty experienced in the economical subdivision of the electric current proceeding from the main centre of supply to a large number of widely distributed individual lights, the same does not obtain in bringing into practical use the electric light to advantage in many of the more prominent light-houses along our coast. Apart altogether from the intrinsic superiority of such lights, due to their greater power in penetrating fogs and hazy atmosphere, it is certain that by the use of electricity we cannot only increase the efficiency of the lighting of the 3,000 miles of coast line for which we even at present provide, but a considerable

saving can be effected in the number of light-houses and the corresponding reduction in the working force, to say nothing of a variety of supplementary uses to which a strong light can be made to contribute in different ways.

The cost of the electric light, as at present generally supplied, is still somewhat in excess of that of wick and oil, material and necessary service included. The excess is, however, small, while the range of the light is so much greater that in many instances intermediate stations, which are now required to keep up the continuity of the lighted horizon for the mariners' guide, could be done away with to no detriment. Again, lights which now serve the double purpose of indicating local dangers, channels or fairways, as well as of a link in the chain as a whole, could be reduced to a lower rank than they at present must necessarily occupy, and by substituting specially colored lenses of a low order their identification would be much facilitated.

One of the most dangerous errors, often the prelude to disaster, to which our coasting fleet is liable, arises from mistaking one light for another, especially when first making a land fall, or picking up one's position again after a spell of thick weather. As the log-slate is not to be trusted to the last mile, cases arise where the master will, for want of powerful night glasses or detail charts, fancy himself with land closer aboard or with ample sea-room between himself and shore, especially when his soundings may be by their nature misleading and only tend to confirm him in his misconception. It is, under such circumstances, a very easy matter to be misled by two similar lights, for their difference in power would be of little or no avail. A reduction in the number of lights of first and second order, and in some cases even of those of a lower class and a substitution thereof of a less number of electric lights of great range, would afford the skipper seeking his position a larger margin of safety than at present, and if a reduction of expenses be not considered a necessity, the multiplying of small colored lights of low range on shoals and dangers, and in fairways generally would seem a policy more progressive than that now persistently pursued—the accumulation of lights, under unfavorable conditions hard to place for the navigator a stranger to the latitudes.

But the electric light at an elevation can be made to subserve many other purposes than the limited functions now fulfilled by the low range wick flame. The diversity of uses to which a powerful illuminator can be put are so striking, and to the navigator along a dangerous coast, of such immediate value, that it is rather strange those in authority should have hitherto given little attention to the benefits and security that might be made to flow from somewhat more progressive ideas if put into practice. Some excellent suggestions have been made in this connection by Mr. McMullen, of London, England, in an interesting little volume describing a cruise, single-handed, in the yacht *Orion*, a craft of some twenty tons. His observations so entirely concur with what our own experience would suggest, that credit should be given the gentleman for having been the first to call the attention of the Board of Trinity to the serious defects of the electric lights at the South Foreland and Portland Bill. To craft plying near the shore they become an absolute nuisance, and it is at all times difficult to estimate their proximity.

The intensity of the light is required only for great distances, and it would seem but natural that some provisions should have been made for tempering the fierce glare when close aboard; not only would the lights thereby be rendered less blinding, for at present they virtually invite collision, but by adopting a shade of some definite color, green or red, or a combination of both, limiting the white rays from the lens to distances beyond one, three or five miles, such change of color being noted on the chart, a warning would be given to the coaster in time to turn him about before he had stood in shore too far. The range of the colored base should be regulated according to the reefs and shoals or banks off shore, and, in the absence of any dangers, will serve the end of taking accurate departures and plotting, out a position on the chart with something more than a guess at the distance of the light, too often very wide of the truth. Nor need the power of the light be materially affected by the arrangement of a colored "warning radius," for only the weakest and least useful prisms at the base of the lens, instead of lending their limited assistance to the general illuminating power at the horizon, could be thrown out of focus and their rays bent toward the base. In such position they would acquire power not before possessed, which would do efficient service in illuminating through colored glass the region of warning. The mariner who finds himself within the range of color knows what he is about and is prepared to keep a sharp lookout, whereas, without such warning sign, he may be rushing on to destruction in a fancied security born of a faulty estimate of the sea-room left him.

With our rapidly advancing knowledge of electricity, it is a satisfaction to know that the Light-house Board is fully informed upon all that may in the least affect the thoroughness of our service, and to it we commend the foregoing for consideration should the introduction of electric lights be contemplated.

ANCIENT CANALS AND MOUNDS OF FLORIDA.—In his interesting article on Marooning, which we print to-day, Dr. Kenworthy says:

"It is to be regretted that some of our scientific institutions

or publishers of magazines or newspapers do not take steps to have a thorough exploration made of the canals and mounds of the South Coast."

While admitting the propriety of the worthy doctor's appeal, we beg to submit that he seems to have forgotten, or at least he has made no reference to the fact, that *FOREST AND STREAM* published, Dec. 30, 1875, a very lengthy article, giving maps and diagrams of mounds and canals throughout a large portion of the interior of Florida, though not strictly of the "South Coast," and supplemented the same this year, June 28th, by a record of other discoveries in the same locality of considerable geographical and historical value.

How Old Slugs was Fished Out.—Old Slugs was not so young nor quite so active as he used to be. It was hard to acknowledge it, but young he no longer was. With advancing age his form grew stouter and his joints stiffer. To sit cramped in a boat waiting for the ducks once was fun; then it became weariness, and now positive agony. Besides, after all the painful crouching he never could rise quickly enough to get a shot. By the time he was in position the ducks were half a mile off quacking with fiendish glee at the clumsy old fool there in the boat. So Slugs set to work to supplement nature by art; to devise something which should supply the place of rusty old knee pans. Long weeks of study finally evolved the Compound, side-lever, self-acting, vertical-impelling, self-adjusting, anti-rheumatic duck-seat, with automatic button attachment. The principle was that of the glass-ball trap which served as a boat seat upon which the hunter could sit while awaiting the ducks, and the theoretical working was this: When the hunter wished to stand up he touched a button; the spring was released, the seat suddenly rose, and the man was shot up, the shot off, and the birds shot down.

Behold, then, the happy Slugs! His boat anchored and decoys out, his patent in his pocket, loaded shells in his gun, fire in his eye, and an anticipatory savor of roast duck tickling his nostrils, seated upon his automatic duck-seat, "calm, silent, imperturbable," waiting for ducks. There they are! The welcome quack strikes upon his ear, and, all unconscious of their fate, they come whirling down among the stupid decoys. Slugs brings his gun to the shoulder, fixes his eye upon the sights, puts his finger on the trigger, touches the button, and—The rest must be gathered from the deposition of the small boy at the inquest. This boy had played hockey that day, and happened to be robbing a bird's nest in a tree on the shore just as our duck hunter touched his button. From his excited testimony it appears that Slugs, clutching his gun, was seen to shoot violently upward some thirty feet into the air, describing a parabolic curve, turning in mid-air with all the grace of a sky-rocket, and plunging with a dull *chud* into the water. The time which elapsed between the catastrophe and the arrival of a boat bringing men must have been, owing to the dazed condition of the lad, about five hours. There, among the lily pads and decoys, they found Slugs sticking straight up, with his head in the mud and his feet in the air. He was in firm, and it took a derrick to hoist him out. Some distance off was found the sunken boat with its bottom torn out, and the vertical-impelling duck-seat missing. The jury decided that it must have gone up; no man ever saw it come down.

The small boy returned to school next day. In consideration of his exploit he escaped a trouncing, and for a whole week was the lion of the school. As he passed through the streets people would say: "There goes the boy who saw Old Slugs go up."

NOTE.—The patent was found in the pocket; Slugs's widow is destitute. If any sportsman would like to help a deserving woman let him purchase the right of the duck-seat, which is warranted to be rapid in action, effective in space, and in all other respects guaranteed as represented. Address "Slugs's Widow," this office.

GAME PROTECTION

TRAPPING RUFTED GROUSE IN NEW HAMPSHIRE.—*Editor Forest and Stream:* The law with regard to snaring grouse is of no practical benefit, as for every bird shot ten are snared. The substance of the law is as follows: No person shall at any season trap or snare any ruffed grouse or partridge under a penalty of ten dollars for each bird so taken, unless it be upon his own land. The last clause upsets all that goes before, as many men making a business of snaring birds can have for a nominal consideration the privilege of setting snares on the land owned by their neighbors. It is reported that there are hundreds of birds trapped every week in the towns of Gilmanton, Pittsfield and Bow. While in Boston recently I was surprised to find at a game dealer in Faneuil Hall Market that he received over a hundred birds daily from New Hampshire. I had the curiosity to examine fifty-eight birds which came in while I was in the market from Exeter, N. H., and of the whole number failed to find one which had been shot. If the dealers could be fined for having trapped birds in their possession it would greatly help the cause. As it is, they say that trapped birds command a higher price than those which are shot. This, of course, encourages the trappers. Should the trapping continue (as it certainly will under the present law) ruffed grouse will be as rare in most parts of New Hampshire as they are at present in the immediate vicinity of Boston.

O. M. S.
North Dunbarton, N. H., Oct. 30.

There should be no difficulty here in putting a stop to this trapping. A man has no right whatever to sell the privilege of trapping upon his lands. It cannot be sold. The men who set snares on the lands of other men are liable to arrest and conviction; the payment of a sum for the privilege does not make them the less violators of the statute. A clause making

the possession of trapped birds a punishable offence would prove an excellent addition to the present law.

WILD RICE AND WATER LILIES.—A Massachusetts correspondent writes us that, through the courtesy of the president and another member of the Vinton Point Shooting Club (Ohio) he has been enabled this season to scatter broadcast through his section of country in the Old Bay State the seeds of the *Nelumbium luteum*, or giant North American water lily, and in getting some wild rice in splendid order, both of which it is expected will show good results next year.

WHAT IT COSTS.—To shoot quail, as we recently showed, costs something when we reckon simply the cash expended for powder and shot, ruined pants, etc. But when a man, in addition to all other, drains on his purse, is obliged to pay a good round sum into the public treasury, his quail shooting expenses and the game bagged begin to assume strangely ill-proportioned relations. A prominent Philadelphia merchant paid out \$47.50 as a fine for shooting three quail in New Jersey out of season. This is more than they cost in market.

THE DISCRIMINATING GAME LAWS OF CANADA.

The subject which is again revived in the following letter is one which has been repeatedly ventilated and explained through our columns. The remedy for the evil will be found after self-protection ceases to be necessary. For special reference to Canadian discriminating laws see files of *FOREST AND STREAM* for 1877:

PORTLAND, ME., NOV. 11, 1878.

EDITOR FOREST AND STREAM:

Would it not be well to call attention, through the columns of your paper, to the attitude of the New Brunswick people in attempting to exclude American sportsmen from shooting in that province. It has been my good fortune for a number of years to enjoy, in company of friends (both Americans and Provincials), the varied sport, both over dogs and decoys, which New Brunswick affords; but on my arrival in St. John this October, I learned, much to my regret (and I am happy to say to the regret also of my shooting companions there), that various people of influence had succeeded in passing laws imposing an annual tax of \$20, to be paid by all Americans shooting there. And worse than that, that these measures had been taken for the "purpose of excluding American sportsmen" from participating in the sports of the Province. It is also announced that 239 game wardens are to be immediately appointed, and the law rigorously enforced. Twenty dollars is, of course a mere bagatelle; but in view of the immense amount of game killed annually by Her Majesty's subjects throughout our Western States and Florida, and the not very generous discrimination already made against our people in the matter of leasing salmon rivers, would it not be well for our State to consider the question of returning the compliment by imposing a similar tax on all British subjects? I know my friends in this State will not be slow to join me in taking the initiative here, and showing to the people of New Brunswick that we set as much store by our field sports as they. And furthermore, Mr. Editor, if we are to be taxed \$20 for shooting, may we not next expect a tax of \$100 on every American canoe fishing there?

Yours truly,

REMARKS.—We trust that the United States will emulate their neighbor in appointing proper paid guardians to enforce the game laws over our own territory, and to drive out Canadian poachers and violators thereof by fine or severer measures, if need use. We do not think the discrimination on the part of New Brunswick as against Americans as unjust (if it be unjust) as similar discriminations between some of our own States against each other. We do not take the part of Canada, further than to allow that she has the right to make what laws she pleases, and to enforce them; and to encourage her in making such laws efficient as are in regard to common sense and common amenities between men and men.

The Rifle.

MASSACHUSETTS.—Medford, Nov. 7.—The third and decisive contest between the Medford and the Medford Amateur Rifle Association and Harvard University took place to-day on Bellevue Range. With cool, pleasant weather there were a good many spectators present, and good work was done by the several competitors in the match, the Medfords winning the third by four points. The first match was won by the Harvards on a tie, the Medfords having an "outer" in their score, and the second contest was won by the Medfords, 251 to 227. Following is the result; distance 200 yards:

Medford Rifle Association.									
H H D Cushing.....	5	4	4	4	5	4	4	4	4-33
J B Osborn.....	5	4	4	4	5	4	4	4	4-33
J K Richardson.....	5	4	4	4	5	4	4	4	4-33
J W Vinig.....	5	4	4	4	5	4	4	4	4-33

T Russell.....	4	4	4	4	5	4	4	4	4-33
A B Denney.....	4	4	4	4	5	4	4	4	4-33
P B Simpson.....	4	4	4	4	5	4	4	4	4-33
T C Lee.....	4	4	4	4	5	4	4	4	4-33
C A Parker.....	4	4	4	4	5	4	4	4	4-33-240

To-morrow a team from the Massachusetts Rifle Association will visit Walpole, where they will shoot a friendly match at 800, 900 and 1,000 yards.

BELLEVUE RANGE, MEDFORD.—During November the Medford Amateur Rifle Association will hold contests each Wednesday. Match No. 1 was at 200 yards, seven rounds, any rifle and position within the rules, all comers, re-entries, 70 per cent. of total entrance to go to best rifle at close of month.

Match No. 2 is at 500 yards, seven rounds, any rifle and position, open to members only, re-entries, cartons used, 65 per cent. of entrance money to go to four highest scores on the 6th instant. The scores stood:

Two Hundred Yards—J B Osborn, 81; H K Richardson, 30; H H D Cushing, 25; J H James, 27; J Grady, 26.	
Five Hundred Yards—J W Vinig, 81; H H D Cushing, 35; H K Richardson, 31; J Grady, 28.	

A special match is announced for Thanksgiving Day. Distance 200 yards; rounds, ten; open to members of M. A. R. A.

only. Shooting to commence promptly at 9 a. m. Sides to be chosen from members present by Messrs. Richardson and Teel.

ATLANTON vs. WALPOLE.—The return match between the Walpole Amateur Rifle Association and the Atlanton Rifle Association was shot at Walpole on the 9th inst., with the following results: distances, 800, 900 and 1,000 yards:

Walpole—F B Mann, 204; B Reader, 37; 204; R S Gray, 197; T H Gray, 125; F Wesson, 125. Total, 291.	
Atlanton—F B Hazard, 200; E L Freeman, 165; B F Crawford, 177; B J Angell, 161; William Hart, 151. Total, 905.	

After the contest was over, the members of both associations repaired to the residence of William H. Pray, where a bountiful collation was served and a general good time enjoyed.

The first match was shot at the Tyler Mountain range on Oct. 26, the scores standing: 921 for Atlanton and 873 for Walpole.

The Walnut Hill marksmen are anxious to have a shooting shed for use during the winter, and have instituted a match to secure the money for its purchase. The contest was at 200 yards, and the first shoot took place on Saturday last, with scores as follows:

T Sias.....	4	4	5	4	—32	J Nichols.....	3	5	4	4	—20
E B Souder.....	4	4	5	4	—23	H Miles.....	4	4	4	4	—19
J H Williams.....	4	4	5	4	—23	R Bennett.....	4	4	4	4	—19
E Bennett.....	4	4	5	4	—23	H Tyler.....	4	4	4	4	—19
H E Lord.....	4	4	4	4	—21	O Burgess.....	4	4	4	4	—17
J N Tye.....	4	4	4	4	—20	E Rosworth.....	4	4	4	4	—16
J J Jones.....	4	4	4	4	—20						

The shed that is to be erected is to be sixty feet long, with openings on the side toward the targets, for the shooters, and will be furnished with a stove and other conveniences for winter practice.

The twelfth competition in the long-range classified match at Walnut Hill took place on the 6th inst. The wind was reasonably steady during the shooting, ranging from a "9 to 10 o'clock" easterly breeze, not so strong as to materially interfere with the work of the marksmen, who made excellent scores, with a remarkably high average, considering the uncertain light that prevailed.

RING TARGET SHOOTING.—The ring target match which opened on the Bellevue Range, Oct. 21, closed on the 6th; 175 entries and re-entries had been recorded, and from first to last the strongest interest was felt in the match. The conditions of the match were as follows: 200 yards; rifle and position, any within the rules; rounds, five; targets, 24 inches in diameter, divided into inch rings, and counting from 12 (centre) to one on the extreme circumference; shots not to be spotted, but each target to be removed when finished. The leading scores were as follows, odd-numbered men winning the prizes offered:

1 J B Osborn.....	45	43	94	11	J T Tule.....	23	29	67
2 W H Jackson.....	45	43	83	12	D W Allen.....	33	25	66
3 J A Lowell.....	45	41	86	13	B S Southern.....	34	26	66

8 D Kukund.....	33	36	74	18	J H Harris.....	23	20	49
9 L W Farrar.....	35	37	73	19	S B Riggs.....	21	22	43
10 N W Arnold.....	33	32	65					

Gardner.—A team of four from the Massachusetts Rifle Association went down to Gardner, Mass., on the 31st ult., to show the provincials how to do it, and managed to come out victors of the closest sort of a rub. After a fifty mile railroad ride, the Walnut Hill marksmen took a drive of a mile over to the Gardner range, where a hospitable company and a warm shooting have made them full welcome. The range covered was 200 yards, thirty shots per man, the scores counted on the paper targets after each ten rounds. The scores stood:

Boston Team.									
Hubbard.....	46	45	134	Lowell.....	42	42	42	157	
Osborn.....	46	45	131	Jackson.....	43	42	41	124	
Total.....									517

Gardner Team.									
Pratt.....	42	43	46	181	Benton.....	43	40	125	
Knowlton.....	42	42	126	Robbins.....	43	42	43	126	
Total.....									615

Brockton.—The Brockton Rifle Association members fired at 800 and 1,000 yards on the 31st ult.; ten rounds per distance, the scores standing:

Fales.....	80	1,000	71	Borden.....	500	1,000	71
Packard.....	33	21	57	Holman.....	29	18	47
Cleveland.....	37	19	58	Snow.....	15	10	25

Worcester.—On the 6th inst. the seventh contest for the F. Wesson prize was shot at Pine Grove Range. The following scores were made at 500 yards out of a possible 150: A. L. Rice, 121; Steadman Clark, 207; Frank Wesson, 120; Nathan Washburn, 135; C. B. Holden, 122; Curtis Jenkins, 113; E. A. Bartlett, 133; A. P. Plimpton, 105; H. L. Wesson, 112; H. S. Ball, 121.

CONNETTQUIP.—New London.—A match between teams from Company M, 1st Artillery, U. S. A., under command of Col. Langdon, and Company D, 3d Reg. C. N. G., Lieut. St. Clair, took place on the Government range, Fort Trumbull, on the afternoon of the 8th. The range is located in a meadow to the left of the track of the Shore Line R. R., a short distance from the city, and is inferior in location and in scoring to that of Company A, 3d Reg. C. N. G., at Groton. Ten rounds per man were fired off-hand at 200 yards, the regulars using the Springfield new model, cal. 45, the militiamen the old model Springfield, cal. 60. The

effect of regular practice by the regulars, under the supervision of Lieuts. Cotton and Ingalls, was seen in the clean victory they secured, though a cold, chilling five o'clock wind blew over the range. The full scores stood:

Battery M, 1st Artillery, U. S. A.

New York.—*Oswego*.—The Remington Rifle Club carried through on the 25th ult. and two succeeding days a very successful initial prize meeting. The majority of the members are old military shots, and gave a liberal list of prizes for military weapons. The Forty-ninth Auburn men, who might have enjoyed a lively contest on the Fort Range at Oswego, remained away, so that the battling really occurred on the individual matches, where the scores for leading places ran very close indeed. A haze on the second day delayed the shooting a little, but the marksmen did not care, and there were no spectators to speak of, so that no one was seriously discommoded.

The meeting opened with the Winchester Repeating Rifle Match, at 200 yards, any rifle, open to club members, seven prizes, the first a Winchester Rifle. Scores:

J. Barton.....	5 4 5 4 4 5 4 31	Hamilton.....	24
W. G. Post.....	4 5 4 4 5 4 4 29	Wooten.....	24
Post.....	4 5 4 4 4 4 4 29	Maltry.....	23
Wagner.....	4 5 4 4 4 5 3 29	Hagwin.....	22
Barnes.....	4 5 4 4 4 4 4 29	W. G. Post.....	22
Houghton.....	4 5 4 4 4 4 4 29	P. Rams.....	22
Wellington.....	4 5 4 4 4 4 4 29	Swetticham.....	22
W. G. Post.....	4 5 4 4 4 4 4 29	Clemings.....	22
Chas. Barton.....	26	Baty.....	16
Ward Ames.....	23		

A 1/2 subscription match at 200 yards followed, with four prizes, and 33 out of a possible 35 was a good leading score:

W. G. Post.....	31	J. G. Barton.....	23
E. G. Post.....	23	C. O. Loughlin.....	23
Ward Ames.....	23	E. A. Swetticham.....	21
E. Plank.....	21		

Another subscription match, at 500 yards, gave the team shooters a chance for some mid-range practice, with four prizes. The score here stood:

L. S. Barnes.....	30	P. Y. Perkins.....	24
C. O. Loughlin.....	23	Geo. White.....	23
E. G. Post.....	23	P. Y. Perkins, re-entry.....	23
J. G. Ward.....	21	L. S. Barnes, re-entry.....	21

The team contest was confined to representatives of the Forty-eighth Regiment, four companies with a staff team making up the list of entries. The men used their State model weapon, and with excellent shooting in several of the teams, the victory went to the officers, with 190 points in the possible 250:

Forty-eighth Field Staff and Non-commissioned Staff.

NEW HAVEN.—The annual prize meeting of the New Haven Rifle Association took place on the Quinnipiac Range on the 9th inst. with a good attendance, and in several of the matches very close shooting. At 200 yards, all comers, any rifle, the winners were: J. E. Stetson, 31; F. J. Colvin, 31; G. Nichols, 31; F. Allen, 31; A. Allen, 31; H. Nichols, 30; W. Gunn, 30; E. Whitlock, 30; W. E. Stetson, 30; S. C. Kingman, 28. In military shooting at 200 yards the scores were: E. W. Whitlock, 32; H. Nichols, 31; W. Gunn, 31; F. J. Colvin, 30; G. Nichols, 30; J. E. Stetson, 29; W. C. Dole, 29; William Lyons, 29; A. S. Downs, Jr., 28; P. O'Connor, 28; A. Allen, 28; W. F. Murphy, 28; R. M. Walker, 26; W. W. Wetmore, 26; S. C. Kingman, 26. All comers, any rifle, 500 yards, J. E. Stetson, 35; A. S. Downs, 35; W. W. Wetmore, 35; W. C. Dole, 35; R. M. Walker, 35; W. H. Layne, Jr., 34; W. E. Stetson, 34; S. H. Hubbard, 33; H. Nichols, 33; S. C. Kingman, 32. In shooting off the ties of 35 the scores stood: J. E. Stetson, 33; E. A. Folsom, 31; W. W. Wetmore, 31; W. C. Dole, 31; R. M. Walker, 31. At 500 yards, military rifle, and position, the winning scores were: W. Gunn, 33; R. M. Walker, 33; E. W. Whitlock, 33; W. E. Stetson, 33; G. Nichols, 31; E. W. Whitlock, 31; F. J. Colvin, 30; J. E. Stetson, 31; S. C. Kingman, 24; S. R. Smith, 24. The "Bale" match at 200 yards was not a fizzle by any means, and fair scores were made as follows: J. O'Connor, 29; J. McAlpine, 27; H. Hitchens, 27; O. S. Goodell, 26; P. O. Spencer, 26. At the long-range, in winding up, W. H. Layne, Jr. W. C. Dole and S. H. Hubbard were the winners at 900 and 1,000 yards, J. E. Stetson securing both badges of the association.

NEW YORK RIFLE CLUB.—The members of this organization have been contesting for the Blydenburgh badge in weekly competition, at Conlin's gallery, from Nov. 22, 1877, until last Thursday evening, Nov. 7, 1878, when the trophy was finally won by W. H. Dunlap. During this time there were thirty-three competitions there was at all times a lively interest taken in the matches, and the rivalry existing between those who had one or more claims, having won the badge in one or more competitions, was very great. Probably the splendid average shooting of the club in the entire match can be accounted for to a considerable extent in these facts: The terms on which Mr. E. B. Blydenburgh gave the badge to the club were for the effect that the badge would be open to the members of N. Y. R. C. for weekly competition. The members to be handicapped according to the system proposed by Captain Blydenburgh, and adopted by the club. The badge to be won four times before becoming the property of the winner. Conditions of shooting were: Rifle, 32 calibre; position, off-hand; distance, at 200 and 300 yards; targets, proportionately reduced for distance. The badge to be at each target; two sighting shots allowed; rules of the N. Y. R. C. to govern. There were 10,178 shots fired in the competition for the badge. This amount has seldom or never been exceeded. The following is a list showing the number of times the members have won the badge in the competitions: W. H. Dunlap, 43; J. A. Ward, 3; F. H. Holton, 3; Thos. Ritz, 4; J. H. Meeker, 3; N. O'Donnell, 2; F. G. Fullgraf, 2; C. W. Wern, 2; Fred. Alder, 2; M. D. Cleaver, 1; E. Duckworth, 1; Frank Lord, 1; V. Daly, 1; S. W. Sebelly, 1; J. B. Blydenburgh, 1; J. S. Conlin, 1. The system of handicapping used in the match is acknowledged to be the finest yet invented. In fact the large number of winners and the closeness of their total winnings is sufficient proof.

Ogdensburg.—The Ogdensburg Rifle Club has set out to select a team of six to meet any other long-range shooters, and on the 20th ult. the last practice for the selection was held on the Oswego range. The scoring was extended to 1,000 yards, and the Ogdensburg and the Boston riflemen offered to bring out something steep in the way of long-range scores. On the practice day mentioned the scores stood:

Ives.....	800	900	1,000	Tot.	560	900	1,000	Tot.
Hastings.....	74	72	72	218	69	69	69	207

CLOSE OF THE CREEDMOOR SEASON.—The last day of the season of 1878 at the Creedmoor range is set for Saturday the 23d, when there will occur the sixth competition for the Remington prize, \$300 gold, all comers, any Remington Breach-loading rifle, 10 shots, to be fought at the Creedmoor range, cartridges as furnished from factory of E. Remington & Sons, which will be supplied on the ground, 900 and 1,000 yards, twenty shots at each distance, no coaching or spotting allowed. Fifth competition for the Gildersleeve Medal, 200 and 500 yards, for members of National Guard in uniform. Fourteenth competition for *Swift, Field and Farm* Challenge Badge, members of N. R. A., 200 yards, military rifle, 10 shots, ten shots. Tenth competition for Smiths' Badge, members N. R. A. and N. G. S. N. Y. in uniform authorized military rifle, ten shots for 200 yards. Trains leave Hunters' Point and Brooklyn for Queens at 10 and 11:15 A. M. Returning leave Queens at 4:15 and 6:15 P. M.

—The Board of Directors of the National Rifle Association have decided that in the determination of ties the entire score shall be considered in counting "outers" and "inners" instead of the string at the longest range.

—Another of those sad fatalities, which have no place on a properly conducted range, comes to us from Lansingburgh, where a marker named Edward Lusignere was killed while busy at his duty. The Troy Citizen's Corps was at the range shooting for a company medal. It was nearly dark when the company began to shoot at the 500-yard target. Two men fired one immediately after the other. As soon as the first man had shot, the marker got up without displaying his red flag, when the bullet from the second rifle passed through the wrist of the right hand and then through the pit of the stomach. He lived but a few moments. At Creedmoor the markers, by wearing a pair of stout buckskin gloves, are protected from the possibility of a scratch, and for five years not one serious accident has occurred. There is a perfectly safe butt construction, and none other should be tolerated.

NEW JERSEY.—Brinton Range.—With a cold, raw wind the 31st contest for the Remington Rifle was hurried through on the 9th inst. The distance covered was 200 yards, any rifle, all comers, ten shots. The leading scores stood:

VIRGINIA—*Richmond*.—The annual match of the Deutsche Schuetzen Gesellschaft took place on the James River Brewery Park on the afternoon of the 7th. There was an extraordinary attendance of shooters and with close competition the

water-proof. I had a pair made this fall, weighing three and one-half pounds; have varied for hours through mud and water, and have yet to report damp feet. They can be delivered at the express office in Montreal for about four dollars and a half. The price depends somewhat on the length of limb of the party ordering.

J.E.A.S.

AN IMPROVING GUN.—*Montreal Nov. 9.*—The enclosed extract from the letter of one of my chance correspondents is too rich to be hidden from the light of day: "The gun I had from you two years ago proves all right as far as shooting qualities go. It is not as good for grouse on the wing as when sitting still, but it is improving in that respect."

R. H. K.

RABBIT EARS.—During the four years past in which a bounty of two cents per pair of rabbits' ears has been offered by the government of Idaho, the receipts of ears up to date have been 19,968 pairs. Wanted, some smart Yankee to devise a use for rabbit ears. Apply to Idaho County Commissioners.

THE DITTMAR POWDER.

WILKESBARE, Pa., Nov. 5, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Enclosed please find a letter from Mr. Tomblee, which gives particulars of the Dittmar accident at Catusaqua. The gun referred to as Mr. Fuller's is the one I supposed belonged to Mr. Eberhart. I have no interest in this powder, but am anxious that sportsmen should not be led by those in whose opinions they put confidence to use an unsafe article. The question is not which is safe, but which is the safer. Everybody knows that without great care black powder is not safe, that it is a very dangerous compound. What Dittmar powder is I do not know, nor would I say that it cannot be as safe as black powder, but that five drachms of it should explode with sufficient force to kill a man, and that it is so much more likely to be sufficient to make ordinary mortals hesitate before using it, and I think dear you from pronouncing it perfectly safe. If Mr. Dittmar wants an authenticated case of an accident with his powder, I think this will fill the bill.

Yours truly,

B. F. DORRANCE.

B. F. DORRANCE, ESQ.

CATUSAQUA, NOV. 5, 1878.

Dear Sir—Your letter has been received by Mr. Eberhart, and he asked me to answer. So, in regard to the Dittmar powder, I would make the following reply: We have nothing but Dittmar's measures. We had a gauge at five drachms and stroked it off at five drachms, and then put on two five drachms and tapped it about as hard as black powder, and then put in 1 1/2 oz. No. 8 shot, and on the top of that a common pasteboard yad. Gun No. 1 was a Parker, weight 8 1/2 lbs., owned by Mr. Schaffner, of Bethlehem. It was broken off clear at the locks. My gun was a Scott & Son, and weighed 9 lbs.; it was so badly bent in the body that it could not be made as it was, nor as safe, so I traded it for a Daly and paid to give \$45 to load. Mr. Fuller's gun was also a Scott & Son, and weighed 10 lbs.; it was not so badly wrecked as the others, but is also damaged. This is about the extent of our experience. I would write more, but owing to my weakness I am hardly able to write this much. I was in bed with fever for two weeks, and this morning is the second time I am out.

Yours truly,

D. A. TOMBLEE, JR.

A TRIP TO SUSSEX COUNTY.

JERSEY CITY, NOV. 5, 1878.

EDITOR FOREST AND STREAM:

Thursday, the 31st ult., the 8:45 train on the Delaware, Lackawanna and Western Railroad found your correspondent with Dr. C., of Jersey City (a good shot and No. 1 companion), en route for the game section of New Jersey. We were on a tour of investigation, hoping to combine pleasure and information in regard to the best sections in the northern part of the State for grouse, quail, woodcock, etc., for your valuable paper.

Our objective point at first was Bridgeville, in Warren County, directly across the State. We had been properly orientated through the courtesy of Mr. Hollivill, the gentlemanly passenger agent of the road, and we found everything pleasant on the way. Mr. Heffernan proved all that could be asked for in a first-class conductor, giving us valuable information. The same can be said of Messrs. Bruce and Fountain on the other branches.

We soon found on entering the smoking car (most all sportsmen said that we were not the only lovers of the rod and gun desiring to be among the first in the field on the opening of the season, as the guns in several corners, and mysterious looking packs in the racks, amply proved. Upon visiting the baggage car to locate our canine, we found several fine specimens of the setter, with there a pointer, already in the baggage-master's charge. As we sped along, stopping only at intermediate stations in Hudson and Essex counties, our company was very matter-of-factly met by the sportsmen of the road. Newark and Morristown furnished large delegations, and the smoking car soon resembled an arsenal, and the baggage the kennel club show in New York on a small scale. We had no less than thirteen dogs in the baggage-master's charge before we left Morristown. Upon inquiry we found the objective points of the different districts of the trigger to be widely scattered. Some got off at Stanhope, en route for Lake Hopatcong, for grouse, quail and hare. Among these was our friend, Dr. L., of the Jersey City Hunt and Gun Club. We have since learned that he had good luck with Ben Ingram, the shot dog of that region. Some went to Budd's Lake got off at the same station. Others left at Madison, bound for Pine Brook and its celebrated spring resort for snipe. A few continued with us toward Hackensack and the Big Piece, so famous for its game region. Others stopped at Andover and other stations. The Delaware, Lackawanna and Western road passes through the best game section of northern New Jersey, and is the direct route to Pike and Monroe counties in Pennsylvania, so renowned for their wild bird and animal territories.

Upon talking with the conductor and others on the road we concluded to vary our route, and instead of continuing on to Warren County and its rugged, upland grouse, to take a run for quail upon old Sussex, so famous for its grand farms and rich old homesteads. So we were introduced to Conductor Bruce, and, switching off at Waterloo, took the train toward Newton. We got off at the Junction and met with a cordial reception at Farmer Conner's that night, who, with a neighbor, Joe Snyder, left their work and hunted with us the next two days, showing us every attention. We found quail quite plenty, a few grouse and woodcock; and as for hares (rabbits, so-called), we could have shot a back-load, we think, without exaggeration, either day. But we had an invitation from another prominent farmer and famous politician of that section, Hon. Zachariah Price, some six or eight miles beyond. Also from Mr. Henry Osborn and his brother Ned, sons of ex-hon. ex-internal revenue collector, etc. Either we were assured, would never forgive us did we fail to give them a call. At both these places we found everything as pleasant as we could wish. Game in quantity sufficient, with good company at the house and in the

field. The joys and incidents of our stay here I need not dwell upon. How these whole-souled farmers gave us greeting, took their teams from their work and drove us around, showing us the best places for game, and were as much pleased as we at our good shots and successful bags. This feeling among the farmers of Sussex County, we ascertained, was almost universal, very few objecting to gentlemen shooting over their grounds, especially if permission has been first asked. Surely that is worth having is worth asking for, and a polite refusal is rarely otherwise than politely answered. It is these half-grown boys and pot hunters from the cities, that leave the fences down and kill the young turkeys and chickens, that excite the farmers' ire. Human nature is human nature the world over. And the ladies of the households, the farmers' wives and their rosy daughters, how pleasant they made our stay. Those splendid hot biscuit for supper, and the light buckwheat cakes and, especially, such coffee and cream for breakfast. "Never, never shall we forget!"

Of the many happy incidents of our trip—how the Doctor made that snap-shot in the swamp at "the biggest partridge he ever shot at," which upon being retrieved proved to have feathered horns and eyes of far greater magnitude than the ordinary *Junco umbellus*; how the same Doctor wiped the eye of your correspondent at that grouse going down the mountain side at the rate of seventy miles an hour at sixty yards; or the double shots of my humble self at quail, or the double shot of 31 miles, and others of no less interest than these, I do not urge. Suffice it to say we had a grand time, but election day approached, and we had promised to exercise the right of freemen in behalf of our friends, and homeward we bent our way, arriving at Hoboken on the 9:40 train, Nov. 4, well pleased with our trip, and firmly resolved to accept the invitations so cordially extended, and some time, not far in the future, go again. JACOB STAFF.

THE ABUNDANT GAME OF COLORADO.

HOT SULPHUR SPRINGS, CO., Oct. 23, 1878.

EDITOR FOREST AND STREAM:

Early in September we came from Italian territory here, and I went on a tour of 31 miles, which resulted in a treaty of peace and assurances of neighborly friendship. Then came on our way, and on October 1 I set out for a little contract of Government surveying—partly on the Yampah River and the balance here. Have finished the former and just got back. My work was a township about thirty miles below the head of the river, where the stream is about seventy-five feet wide and two feet deep in the current, but there are many deep pools, eddies, etc., which make it a choice fishing locality in the latter part of the season. The country is mostly level, and the river is about four miles wide and twelve or fifteen long; but my work extended eastward from the park, from two to three miles, into very rugged mountains to the west slope of the Gore range. The first elevations are covered with scrubby oak timber and a dense growth of raspberry, sarvia berry, cherry, red hawthorn and other brush, mostly fruit-bearing. The crop had been immense, and great quantities yet remained on the bushes, dried to the consistency of raisins. Here were abundant signs of bear and the long "stump" of the chainman. It was not until we had passed the country much as cattle do a populous pasture. Further back, the mountains rise higher; the slopes and summits are covered with pine, spruce and fir timber; the intervals occupied by aspen groves and little open parks, each with its rivulet of clear, cold water. Here elk were as plentiful as the deer on the other hills, but I observed that although immediately contiguous, they did not seem to range or graze over the same ground. With the constant noise of a surveying party, "a stump," or "a chain," of the chainman, it was not until we had passed the country much as cattle do a populous pasture. Further back, the mountains rise higher; the slopes and summits are covered with pine, spruce and fir timber; the intervals occupied by aspen groves and little open parks, each with its rivulet of clear, cold water. Here elk were as plentiful as the deer on the other hills, but I observed that although immediately contiguous, they did not seem to range or graze over the same ground. Foxm.—In the Kingston (Canada) poultry exhibition the judges had some of the game fowls washed in a bucket of water, and it was discovered that they were only common fowls painted.

Faking is much practiced in Europe, and very ingenious devices are sometimes employed to make show animals appear to be what they are not. We have heard of a large rat being transformed into a diminutive black and tan terrier, and painted fowls and song birds are very common.

—A man at Fulton, N. Y., recently laid his finger on the line in front of a buzz saw to feel the momentum of the air. The saw was going so fast that the teeth could not be seen. His finger was taken off. While he was looking at it the firemen came up with the question, "How did you do it?" "Why, I put my finger down so," answered he, placing the other finger down, as he thought, well away from the teeth. To his horror, the saw took off that one too, at the second joint.

—Why is good wine like a bird in the hand? Ans. Because it is worth two in the bush. Shakespeare says good wine needs no bush.

—To cure a tendency to periodical intemperance, use a farinaceous diet, and relinquish animal food.

Messrs. TIFFANY & CO., invite public attention to the **AMERICAN PEDOMETER**, a remarkable invention of Mr. Benjamin S. Church, the well-known Engineer of the Croton Aqueduct.

This instrument accurately measures the distance a person carrying it walks, showing the amount of daily exercise taken in and out of doors.

Its mechanism is a marvel of simplicity, and can be readily adjusted to any length of step. It is strong and durable, and the size of a small watch. Ladies, Professional and Business Men, Students, Pedestrians, Sportsmen, Farmers, Surveyors and others, will find it very useful. A Table accompanies each Pedometer, giving the number of steps taken in a mile, second, minute, hour and day.

PRICE \$5.

SEND FOR CATALOGUE OF 1878.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb. 1878, the Grand Prix de Casino, an object d'art valued at £100, and a money prize of £200, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Choimondy Fennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 13 at 23 yards and 1 foot and 9 3/4 yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, being 17 guns by the best London makers, and winning the silver cup, valued at 60 guineas, presented by Mr. J. Purdy, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 58 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful of all period. Patented in the United States, Oct. 3, 1877; No. 163,982. BEWARE OF INFRINGEMENTS OR IMITATIONS.

NEW YORK HERALD, MONDAY, OCTOBER 7, 1878.

PARTELLO'S TARGETS.

The Washington Marksman's Wonderful Score—Diagram of the Shooting at 800, 900 and 1,000 Yards.

Joseph Partello's score of 224 out of a possible 225 is the theme of discussion and the subject of admiration throughout sporting circles here in the national capital. The modest clerk of the War Department suddenly finds himself a lion of immense proportions. Subjoined are diagrams of the three targets made by Mr. Partello. They show wonderful shooting. At 800 yards he opened with a one o'clock "bull," about eight inches in, but did not group his succeeding shots in any particular order until he reached the ninth, which he put to the right of the true center, landing the tenth in the exact center, the eleventh a little to the left, and the twelfth again to the right. At 900 yards he opened with a ten o'clock "bull" well in, and grouped his second, third and fourth to the right of the center. The most remarkable thing on this target is the string of shots from the upper edge of the eye down the center. These are the eighth, ninth, tenth and eleventh of the string, with the twelfth a few inches to the left of the first. At the third he almost put his bullet on the true center. The two shots high left are the fourth and eighth. The fourteenth was a "hipper" at two o'clock, showing the same tendency as at 900 yards to drift to the right. Altogether the score is one that is not likely to be equalled for some time.

Send three cent stamp for illustrated catalogue and price list for March, 1878; also Treatise on Rifle Shooting, Record of the International Rifle Match, Hints and Hints in the Choice of a Rifle, etc.

Address, E. REMINGTON & SONS, 251 AND 283 BROADWAY, N. Y.

Gunpowder.

GUNPOWDER.

DUPONT'S Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE. Dupont's Gunpowder Mills, established in 1801, have maintained their great reputation for 72 years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong and clean Powder of very fine grain for Pistol shooting.

DUPONT'S RIFLE, FG., "SEA SHOOTING," FFG and FFGG.—The FG for long-range rifle shooting, the FFG and FFGG for general use, burning strong and not too fast.

SPORTING, MINING, SHIPPING AND BLASTING POWDERS of all sizes and descriptions. Special grades for Shot, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 WALL ST. N. Y. N. B.—Use NONE but DUPONT'S FG or FFG Powder for long-range rifle shooting.

Latfin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6 1/2 lbs. each, and canisters of 1 and 1/2 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Packed in FG and FFGG, the best of the finest. Sizes, FG in wood and metal kegs of 25 lbs., 12 1/2 lb. and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb. All of the above give high velocities and less residue than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER AND ELECTRICAL BLASTING APPARATUS, ALL ITALY POWDER of all kinds on hand and made to order. Safety Fuse, Frictional and Platinum Fuses.

Rampralls, showing sizes of the grain by wood cut, sent free on application to the above address.

THE

HAZARD POWDER CO GUNPOWDER.

MANUFACTURERS OF

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 1/2 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean. Shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 lb. and 6 1/2 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1/2 lb. canisters. Burns strong and rapid. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER. ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city or warehouse at our office.

88 WALL STREET, NEW YORK.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With the Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into an accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle .32, .38, or .44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 33, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

W. & C. SCOTT & SON'S FINE BREECH-LOADERS

Are Hard to Beat for Quality, Finish and Shooting Powers.

CAPTAIN BOGARDUS HAS WON A NUMBER OF GREAT MATCHES IN ENGLAND WITH HIS FINE TRIPLEX 12-GAUGE BREECH-LOADER, MADE BY W. & C. SCOTT & SON.

[From CAPT. A. H. BOGARDUS.]

W. & C. Scott & Son:

Gentlemen—Before leaving England for my home in America, I wish to express my fullest satisfaction in the terrific shooting power of your choke-bore guns. I now possess two heavy 10-bore, each with extra 12-bore barrels; also a light 12 and 20-bore; all of your make, which cannot be excelled in the shooting qualities, and impossible to beat in the solidity and power of your patent Triplex Action. I used your gun in my two recent matches with Mr. Pennell, June 23 and July 23, at which time I scored 70 and 71 in each match, winning by two birds; also in my match with Capt. Shelley, July 19, at which time I scored 38, "the highest score on record," and in the International Match with Aubrey Coventry, Esq., at Brighton, Aug. 6, for £1,000, which I won by killing 79 out of 100. All of the above matches were at 100 birds each, 50 yards rise. As evidence of the durability of your gun, I have shot one 10-bore over 50,000 times and it is still in good condition.

Believe me, yours very truly,

A. H. BOGARDUS, Champion Wing Shot of the World.

[From COL. JOHN BODINE, New York.]

W. & C. Scott & Son:

Gentlemen—I have received the Premier quality choke-bore gun, No. 6,636, in good order, and am pleased to say that its performance exceeds my expectations, while its symmetry and finish is all but the most fastidious could desire. It fully comes up to specifications of order, both in finish and shooting qualities. I have disposed of my two guns by other makers.

POOLER & JONES,
PATENT BOSS

Cartridge Holders and Belts.

The only practical cartridge holder in use. Will carry brass cartridges, and positively prevent wads from starting on shot. Suitable for either paper or brass shells. These cartridge holders can be easily attached to any hunting vest or coat front. A vest will hold 50 of the cartridge holders. Two dozen of these holders attached, only weighs one pound. The belts can be perfectly adjusted to fit either a slim or large man. Will deliver to any address, and prepay postage, on belt or any number of loose holders on receipt of the following prices: Spring brass cartridge holders, per dozen, \$1.25; adjustable belts with 50 spring brass holders, complete, \$4. Elegant nickel-plated holders and buckles, the gayest and nicest belt in use, \$3. We solicit correspondence from dealers. All our belts are made of the finest Russell leather, and have Buck-Straps on (not shown in cut). Cash must accompany orders. Send money by registered letter on Serena, Ill., or P. O. Money Order on Ottawa, Ill. Send 10 cent stamp for sample holder. Address all orders to POOLER & JONES, Serena, La Salle Co., Ill.

Card's Patent Rotating Glass Ball Trap.

EXCELS ALL OTHERS. Throws in every possible direction. No screen is needed, as no one, not even pulley, can tell the direction the ball will take. Made stationary if desired. All metal. WORKING PARTS NICELY FITTED. Send for Circular.

United States Cartridge Company,

LOWELL, MASS.,

MANUFACTURERS OF THE

BRASS, SOLID HEAD, CENTRAL FIRE, RELOADING SHELLS, AND CARTRIDGES.

Adapted to all military and sporting rifles and pistols, and in use by the ARMY AND NAVY OF THE UNITED STATES and several Foreign Governments. Rifle-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

Send for Illustrated Catalogue.

FOWLER & FULTON, General Agents, 300 Broadway, N. Y.

CHIPS.

A New Expansive Concentrator, with wire wad, for use in breech and muzzle-loading guns, making straight-bores shoot as well as choke bores are supposed to. Cheap, convenient, safe and sure. For sale by gundealers generally at \$1.25 per hundred for 10-gauge, and \$1.10 for 12-gauge; 10 and 12-gauge now ready; other sizes to follow. Packed 50 in a box.

Sent by Mail, Postpaid, for 75c. per Box.

A. B. KAY & CO., Newark, N. J.

Buck and Heavy Drop Shot Cartridges for Long-Range, Deer, Duck and Goose Shooting.

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 500.

Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

A. H. BOGARDUS.

My Patent Rough Glass Balls are now made even, and carefully packed, with 200 in each barrel, and by having a rough surface strengthens the ball for shipping, and prevents the planing of it. While the smooth ball has to be made so thin to break successfully when hit by shot, and is sufficiently strong to prevent breakage by shipping, and the feather-filled ball is the same. Now,

I will Warrant my Balls Against Breakage by Transportation,

and will pack 10 extra. I have had 5,000 shipped out West since my return from England, and used them myself, and sometimes would not find a ball broken, and never over three or four in a barrel. My traps are the best to practice from, and where class use them you can readily see which is the hardest shooting. In matches reported in papers, saying Bogardus' rules and traps used, you do not see all the balls broken. Amateurs and young boys who want to learn to shoot will follow the instructions laid down in my book, "Field, Cover and Trap Shooting," will become crack wing shots, and, further, patronize the man who introduced this sport to the public, and who has been to England twice and upheld the American flag. My "Field, Cover and Trap Shooting" is the only book that has ever been written and published by a market hunter and experienced man. I will return the money to any one who has bought the book and thinks they did not get their money's worth. Each barrel of balls contains a score book with Bogardus' Rules for Glass Ball Shooting, and also his New Rules for Pigeon Shooting.

Price of Balls, 1,000, \$14; by single barrel, \$3; "Field, Cover and Trap Shooting," \$2. HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Platt Street, N. Y. City.

Address CAPT. A. H. BOGARDUS, Elmhurst, Logan Co., Ill., or can be had from him wherever he shoots. DISCOUNT TO THE TRADE.

INDIRECTION.

FAIR are the flowers and the children, but their subtle suggestion is fairer;
Rare is the rosbud of dawn, but the secret that clasps it is rarer;
Sweet the exultance of song, but the strain that precedes it is sweeter;
And never was poem yet writ, but the meaning out-mastered the metre.

Never a daisy that grows, but a mystery guideth the growing;
Never a shrike that dows, but a majesty sceptres the dowing;
Never a Shakespeare that soared, but a stronger than he did enfold him;
Nor ever a prophet foretells, but a mightier seer hath foretold him.

Back of the canvas that throbs, the painter is hunted and hidden;
Into the statue that breathes the soul of the sculptor is bidden;
Under the joy that is felt life the infinite issues of feeling;
Crowning the glory revealed is the glory that crowns the revealing.

Great are the symbols of being, but that which is symbolized is greater;
Vast the create and beheld, but vaster the inward creator;
Back of the sound broods the silence, back of the gift stands the giving;
Back of the hand that receives thrill the sensitive nerves of receiving.

Space is as nothing to spirit, the dead is outdone by the doing;
The heart of the wooer is warmer, but warmer the heart of the wooed;
And up from the pits where these shiver, and up from the heights where those shine,
Twin voices and shadows swim starward, and the essence of life is divine.

—RICHARD REALE, in *Atlantic Monthly*.

For *Forest and Stream* and *Rod and Gun*

Marooning—No. 4.

(Continued.)

I REACHED our camp at noon, and after paraking of lunch, consisting of a royal bird stew, I started for Punta Rassa, trusting that the message of "All well" would reach me by telegraph. Eight miles from Doctor's Pass I noticed a narrow pass, which may be entered at high tide; one mile and a half further, a small but navigable one. At the end of two miles I reached and passed an island one mile and a quarter long, with a good channel at its southern end, and at the northern end a wide pass, after which an island three miles long, bounded to the north by a wide and deep pass, named Estero. I entered this pass, and followed it to the eastward for half a mile, and anchored under the lee of an island. Mosquitoes proving troublesome, I decamped and anchored near the sandy point of an island on the north side of the pass. I retired early, and about 9 p. m. I was disturbed by my dusky companion with the exclamation "My G—, Doctor, what is dat. Ain't it something coming to catch this nigger?" I left my blankets and noticed the outline of a large gater on the beach. I seized my Winchester and administered a half dozen doses. In the morning I found a dead gater eleven feet long—a victim of keeping bad hours. From this pass (Estero) a navigable inside passage exists to within twelve miles of Doctor's Pass, and a survey in my possession shows a narrow inside passage, extending two miles further to one of the narrow passes previously referred to. As to its navigability, I cannot express an opinion. To the north a wide and deep inside channel leads to Bowditch's Pass, distant from Punta Rassa two miles. Estero Pass is one of the main channels leading into Estero Bay. Corkscrew River, a stream laid down on all maps, enters the bay at its southeasterly end. Owing to the isolated position of the country on each side of this river, the absence of inhabitants, and its never having been visited by sportsmen, I deem it worthy of notice.

Early in the morning I departed from Estero Pass, and left Big Hickory Island, two and a quarter miles long, in the rear, next Little Hickory, one mile long, and then Estero Island, six and a half miles long. Two miles from the northern end of Estero Island, I landed at Punta Rassa. At half-past four I received a telegram containing unwelcome news, necessitating me to depart immediately, and make all haste for home. The weather was threatening, and unless a severe gale set in I felt assured that I could find my way with the lead to the island of Uspiti, at the northern end of the bay. Before dark I passed Boca Ciego Pass, and as darkness set in I was favored with a severe gale from the eastward. The rain poured down in torrents. It was very dark. The bay extended six miles to the eastward, a heavy sea soon rose, and the desirability of finding a harbor suggested itself, more especially as the lead was my only guide to track a tortuous channel. In most of the bays and in shoal water along the coast a thick coating of broad-leaved grass covers the bottom, and whenever the water shoals there is an end to waves and

breakers. I was on the leeward side of the channel, with inky darkness and unknown country to windward. I put the *Dovi* before the wind, and as I entered the breakers dropped the anchor and luffed. I dropped sail, and as soon as the cable felt the strain I was in skulloo but calm water inside the breakers.

I was up by daylight, and found that the gale had abated, and after attending to the wants of the inner man, I steered north. Boca Grande entrance is nearly a mile wide, with one of the strongest tidal currents in the United States. Before I reached Boca Grande a fresh hand took a turn at the billows, and the wind fairly howled. The wind was easterly, tide and half flood. At this point the bay is twelve miles wide, and a very unpleasant, chopped and irregular sea presented itself. I had confidence in my little craft, fancied that her captain knew a thing or two, and as I was anxious to reach home I determined to attempt the passage. I shall never forget the peculiar motions of my boat, or the shaking up to which I was subjected. My dory had never been in such a lumpy and dusty place, and I made him sit to windward. It was amusing to see him present his bare cocoon as the seas would break over the boat. About mid-channel the performance became decidedly unpleasant, and, with an elongated visage, Mr. Darkey remarked: "The old woman will never see this nigger again; may the Lord have mercy on us." The channel passed, I bore away for the shoals to the east of Big Gasparilla, and then for my old anchorage at Little Gasparilla Pass, at the northern end of Gasparilla Island. I retired early and prepared for to-morrow's work, a trip outside for a distance of thirty-eight miles to Little Sarasota Pass. By following the inside passage to the northward, leaving Charlotte Harbor at Kettle Pass, and entering Sarasota Bay at Casey's Pass, the outside, or sea trip, can be made in about thirteen miles. As I dislike beating about among mud flats, sand bars and oyster reefs, I determined to take the outside track.

Last fall two young gentlemen consulted me regarding a cruise along the S. W. coast of Florida. They had an open but able boat. I advised them to provide her with a moveable cabin, but they fancied that a tarpaulin cover would answer. I recommended them to leave Sarasota Bay at Casey's Pass and enter Charlotte Harbor at Kettle Harbor Pass. I suggested the advisability of starting at daylight, so that if the wind died out they could reach their destination by the assistance of an ashken breeze. They started a little before noon; it became calm, and, instead of using their oars, they waited for wind. In the afternoon a black cloud appeared in the west, and very soon a stormy breeze set in, and instead of making for Kettle Harbor, they anchored in eighteen feet of water near the shore. They pitched a tent, turned in and left their Fifteenth Amendment in charge of the boat. The latter slept like a top and paid no attention to his lodging place. During the early part of the night their bateau parted her painter, and landed on the beach. About midnight the cable parted, and the next morning their boat was in the breakers and swamped. With great difficulty they saved their firearms and other impedimenta in a damaged condition. The wind abated, but, as they were unable to free their boat of water, they were compelled to send a messenger to Sarasota Bay for assistance. Between Casey's Pass and Kettle Harbor the beach is very steep, making it dangerous to beach a boat. With a fair wind and an early start no trouble need be experienced in making the trip between the two passes referred to. I have made three trips along this portion of the coast and found them pleasure trips.

I left Little Gasparilla Pass at 6 A. M., reaching Kettle Harbor Pass. I entered it and found it one hundred and fifty feet wide with six feet of water in the channel. Crossing Tampa Bay, I had to contend with a severe northeast, and found the road very lumpy and dusty. Leaving Halley's Keys I had to beat to Cedar Keys in the teeth of a severe norther. The second night at dark, after leaving Halley's Keys (islands), I was in sight of the light of the stab heap fire at the mill at Cedar Keys. Satisfied that if the weather did not get too thick, and I could keep the fire at sight, that I could make Cedar Keys about eight miles distant. After dark the rain, wind and darkness increased, and I lost sight of the fire. I was eight miles from land and a stormy norther was blowing, and I deemed it advisable to make a harbor. It was blowing so heavy and the boat cut so many capers I could not utilize my boat compass. Aware that the wind was north, I resolved upon steering east and trust to luck. After waiting for some time I heard the surf breaking on what I had reason to believe was an exposed oyster shell bar. Eyes were useless, so I trusted to ears. Listening to the break on the bar, I steered a course parallel with it for several hundred yards, when I detected a point where there was an absence of breakers. I steered for the quiet spot and soon found myself at anchor under the lee of an exposed oyster bar. When day appeared I examined my surroundings and found that I had passed safely through a channel not over fifty feet wide between the points of two exposed oyster shell bars or reefs, very numerous between Cedar Keys and the Withlacoochee.

Between Cedar Keys and the Ancilote Keys, a distance of sixty miles, the trip can be made inside the reefs in shoal and calm water. From the latter islands the inside route (inside the reefs) can be taken to Casey's Pass in Sarasota Bay, a distance of eighty-five miles. From Casey's Pass to Estero Harbor is thirteen miles outside reef. From the latter to Estero Pass (with the exception of about two miles between

Punta Rassa and Bowditch's Pass) the inside route can be followed to Estero Pass. From this to Doctor's Pass, thirteen miles, the outside route must be taken; and from the latter the inside passage can be followed to the southerly end of Eons Island, and from this point to Cape Sable, by keeping in shoal water over the grassy flats, a mill pond surface will found. Hence in a distance of 280 miles there are but two points of thirteen miles each where the sportsman would be compelled to go outside. If he was provided with a suitable boat, and if wind and weather were studied, these outside trips would be a mere bagatelle.

The southwest coast of Florida is remarkable for the absence of rain and storms during the months of November, December, January, February and March. Last winter was an exception to all rules, more rain having fallen than during the winter months of the preceding thirty years. Last fall I was favored with very rough and rainy weather for at least half the time, and when I had the most exposed places to navigate I was, as a general rule, favored with gales. On my first trip on the southwest coast I saw no rain for fifty-three days. In the morning it was calm, as the sun rose the wind would set in from the eastward, working to the southward and westward. During fifty-five days of cruising we did not reef a sail. The rough weather of last winter was exceptional and may not be experienced again within the next half century.

Fancying that some of your adventurous readers may not attempt a cruise on the S. W. coast, a few suggestions may not be out of place. I made the trip in a boat sixteen feet long, carried fifteen gallons of water, supplies for six weeks, gun, rifle, fishing tackle, stove, bedding and other plunder. It is surprising how much can be stowed in a small boat, and yet ample room saved for sailing her and sleeping at nights. For a party of two or three who are disposed to enter the passes and navigate the inside passages, I would recommend a cat or sloop rigged boat from 20 to 22 feet long, with 8 or 6 feet beam. The boat should be supplied with a light, moveable cabin to protect at least two-thirds of the cockpit. In addition to this a canvas awning should be provided to place over the boom and fasten on each side. This will keep out rain and wind and supply sleeping quarters for a fifteenth amendment if one is carried. A small bateau or Bond boat would prove very convenient. I have tested Bond's boats on the southwest coast and can recommend them. Owing to their light draft and ease of handling they are peculiarly adapted to the coast and requirements of sportsmen. A bateau fourteen feet long with oars can be purchased in Cedar Keys at a cost of about \$14. If any party should contemplate taking a trip "down the coast" they could have such a boat purchased or built by communicating with Doctor Robt. McIlwaine, the obliging host of the Island House, Cedar Keys. From New York to Jacksonville by schooner the freight is \$20 or 25 cents per ton, but would be about twelve dollars, and by steamer say twenty-five to thirty. The freight by rail from Jacksonville to Cedar Keys on a boat was \$1.03 per cwt., and I have reason to believe that this rate will continue. Boats adapted to the cruise may be purchased in Jacksonville. If the purchase and transportation of a boat proved objectionable, crafts from two to six tons can be chartered in Cedar Keys at from four to six dollars per day. When not under way the captain would assist in cooking, and his assistant or chief officer, a sort of ship's "Jimmy Ducks," can be utilized in any capacity—more especially in the consumption of make antidote lying around loose. The crafts referred to are comfortable, and as a general rule the captains are acquainted with the shoals and the larger entrances. The great objection to be urged to craft of from four to six tons is their drawing too much water to enter many of the passes and lagoons, or navigate many of the smaller streams, the very localities sportsmen wish to visit. The boat for the sportsman south of Punta Rassa must be one adapted to enter shallow lagoons and run over mud flats—a craft of light draft, and one that can be rowed in an emergency or propelled by a pushing pole.

If parties have the time to spare they could run down the coast from Cedar Keys to Cape Sable and return. Without a pilot they would find many troublesome places. I worked the coast on several occasions between Cedar Keys and Punta Rassa and have reason to believe that I am posted with reference to the location of every sand bank, oyster reef, and mud flat along the coast—the result of an intimate acquaintance with these objects. The best course would be to transport a boat by steamer to Manatee, and thence avoid the intricate navigation north of this point. From Manatee to Charlotte Harbor with favoring winds is about two days' sail, and about two more to Doctor's pass. In my notes published in the *FOREST AND STREAM* and afterward republished in "Camp Life in Florida," I have given more directions for working the coast from Cedar Keys to Punta Rassa.

If the tourist shipper has favoring winds and could work to the northward. After reaching Manatee, Tampa or Cedar Keys the boat could be sold at auction, and would probably bring two-thirds of her cost. If Key West should be made the point of departure I would advise parties to engage a pilot to guide them to Hurricane Key. The charge might be \$10. Or else purchase a portion of the series of five charts showing the Keys from Key West to Bay Honda channel. A pilot or good man is absolutely necessary, for there is but one channel leading through the Keys. The map of Florida published by the War Department and reproduced in 1878, is the largest

With the right hand take the arrow by the middle and pass it under the string and over the bow; when the pile reaches the hand the forefinger of the left hand may be clasped tightly over it; the right hand now glides back to the neck, and grasps it with the thumb and finger, the cock feather is looked for and the arrow slid down the bow and arranged with the cock-feather upward and in a line with the handle of the bow; during this maneuver the bow may be held horizontally; it is brought by a semi-circular sweep of the arms into an almost perpendicular position, the forefinger of the left hand entirely detached from the arrow, and the whole of that hand grasping the bow at the handle, while with the right the arrow is adjusted to the string. By the time the bow is raised to the proper position and the arrow brought to a level with the ear, it should be nearly three-quarters drawn. The position of the body should be facing at right angles to the target, the face being turned directly to it, the eye looking straight at the gold. Aim should now be taken, and the bow kept fully drawn for more than a second, or it will be injured, but the arrow loosed at once.

A celebrated *premier danseuse* once affirmed that of all the attitudes she ever studied not one was so graceful or displayed the form to better advantage than that which the body assumed at the moment of drawing the bow. As almost every archery club has its own special rules for the practice of the pastime, it is not necessary to enter on those points which are merely technical; besides, there are now several works published which contain everything of value and importance in this direction. A few suggestions as regards dress, however, may be pardonable. In a variable climate like our own all out-door amusements must be pursued with some caution, if one would preserve the health. Hence it is evident that some costume should be chosen that will not only be graceful and effective, but which will preserve the body from chilly winds, dampness of the atmosphere, etc. The shade of green is especially handsome, and a handsome shade of the now popular myrtle-green in cashmere or camel's hair, or for late autumn an all-wool light ladies' cloth or heavier camel's hair cloth of some kind. The walking dresses of today are, many of them, quite as pretty, tasteful and appropriate for archery costumes as anything that could be devised. The shoes should be strong, double-soled French calf, or kid. The hat must be appropriate for this costume is a jaunty felt Derby, in color to correspond with the dress; if possible, of this, however, is unimportant, as indeed may be said of the costume in general, provided rules of comfort and good taste are followed.—*Detroit Free Press.*

Four years ago, when archery had not become as popular in the United States as it now is, we published in *FOREST AND STREAM*, very full information relating to the whole subject contained in the series of articles on pages 153, 248, 262, Vol. II. [which see].—Eds. F. & S.

Fish Culture.

SEASONABLE FISH CULTURE.

AT this season of the year owners of water are, be-
gunning to think, if they have not been wise enough to think of it before, of the improvement of their subaqueous territory, or of its maintenance in a thoroughly satisfactory state. If a farmer does not sow seed, he does, surely, not expect to receive a crop from his land; but people seem to expect, fish or even not how they may, that an inexhaustible natural supply will just be good enough to make up the amount deducted from the strength of the river or lake.

Firstly, then, as to the question which a proprietor of water often asks himself, Shall I order eggs or fry? Of course, under some rare circumstances, it becomes a matter of impossibility to hatch on the spot, and then fry hatched elsewhere, and brought, it may be from a long distance, must be turned in and left, which is naturally inclined to, to fight the battle of life. Generally, however, it could be so arranged that a box or two can be rigged up somewhere on an estate; but people are afraid of losing some of the eggs, and so forth. Well, one cannot go to an insurance office and effect an insurance, or even have an open policy, on fish eggs; but it must be remembered that the difference in price between eggs and fry will cover some loss, and the pleasure and interest with which the progress of development is watched would in most cases quite repay any slight loss. The cost of an apparatus, whether the old-fashioned trough or the new metal box is very slight, and when once fixed it is there for a long time, always ready, and wanting very slight care and attention to keep it in good working order. It must be remembered, however, while giving full credit to the hatching capability of the new California box, that ample provision must be made for the transfer of the fry when hatched to a place where they may spread about, or overcrowding will bring its sure result; for young fish require, in proportion to their size, just as much freedom for development and oxygen as any other animal. This is of course a matter for settlement by each individual according to his own circumstances, and needs no more attention from the writer; but the general principle must be stated that, wherever conditions will permit, the egg should invariably burst in the water which it is intended to inhabit as a fish. Long and extensive personal experience has taught the writer that, in spite of all care, parcels of fry get left at railway stations, having to change trains, etc.—all against them, especially if left on an open platform, with a bright April sun shining down upon them. Again, people do not perhaps realize that when on arrival for two or three hours, or won't, and think they have justifiable cause of complaint in thus losing their fry. All this is avoided by purchasing ova, and more, for ova in large establishments are often overcrowded; whereas in the smaller apparatus, where the needs of one stream or part of a stream are concerned, there is no excuse for such a state of things.

Having said so much, it will be well at once to proceed to a review of the various species. Two much care in the selection cannot be taken, as the bad strain is not so easily eradicated when once introduced. Monetary considerations should never be allowed to stand in the way of the owner of water; a good strain is never dear, a bad one never cheap. A man wants but a few thousands of ova to start with, even in a perfectly sterile water; and a yearly supply of one or two thousand will keep the place well stocked, so long as the rod only is used. Where poisoning exists, of course no eggs are to be taken; but in all cases where artificial culture is adopted, the poacher will have been carefully looked after beforehand.—*London Field.*

SCREENS FOR OUTLETS TO TROUT PONDS.

New York, Nov. 12, 1878.

EDITOR *FOREST AND STREAM*:

I desire to call the attention of fish culturists and those interested in the same to the importance of erecting proper screens at the outlet of all lakes which have been stocked the last few years. The young fry of the shad especially, in searching for running water, will more or less escape. The expense is trifling. Put down a post on each side of the tank, a cross piece top and bottom; nail on clove one inch wide, one inch thick, and half an inch apart. This will prevent them from escaping if the cleats are two feet or two and a half above high water. Leaves will also work through.

T. E. PORTER.

The remarks of our correspondent are well-timed and well worth considering. No doubt many breeders, especially farmers and amateurs, lose many fish in this way, and attribute their losses to any other cause but this.—Ed.

AMERICAN FISH IN ENGLISH WATERS.—We copy the following statements from the *London Field* regarding the success which has attended the transplanting and culture of American fishes in English waters. The recital must prove most interesting and encouraging to every person whose attention has been directed to the subject:

The American brook trout, (*Salmo fontinalis*), perhaps the handiest of the *Salmonidae*, has been extensively imported and widely spread throughout English waters. Without any doubt or exaggeration, it must be admitted to be one of the best fishes to grow in lakes well supplied with springs, where it can have a wide range and abundance of natural food. It cannot bear being cooped up in a small space; and that, it seems to us, is the only fault about it. Some friends of ours, however, never cease railing at it, declaring it to be as savage as a pike or *S. ferus*, and that, when let out of a grated confined space, it would down pretty near to the sea. Now, of course, these things did not happen. Why? The fish, in our humble judgment, pined for liberty and a diet congenial to their nature; not finding either suitable range or food, they became irritable with their companions, devoured them, and, when they once had a chance of liberty of action, had "a good fling," as the saying has it. We almost daily pass along a little stream in which *S. fontinalis* and *S. fario* have co-existed for some time; it is perfectly open for escape, but they seem perfectly happy together, and increase in numbers, living cheerfully and happily side by side, growing at a very fair pace, though not artificially fed, simply because the natural food is round about them and sufficient for their needs. They can go into the main stream whenever they like, and do so; but they usually return after a short excursion.

This is certainly a proof that, under certain circumstances, the *S. fontinalis* is a stay-at-home, perceivable, well-disposed creature; but it must have range, and be kept in boxes for any length of time after feeding, irritability and cannibalism set in; and one will certainly be observed with the tail of another protruding from its mouth, and spinning round and round, suffering from the effects of its rash meal.

S. vincolati and *guinnati* are but little known from experience in this country; they are reported to be true salmon, which can, and do, exist without entry into salt water. It would seem that they are well suited to our larger waters. *Coregonus albus* (the fish of the American continent). This is admitted on all sides to be a fish of great interest, more especially to our Scotch friends. The Lochs of Scotland are declared by competent authorities to be the places best adapted to its requirements, and it is very much to be hoped that the attempts to be made this season to acclimatize it in them will meet with great success. In its Canadian and American homes, it ranks high in the estimation of all who know it, and it must be remembered that they know what fishes are about there quite as much as we do. It must be borne in mind, however, that only certain waters would naturally suit for its introduction. It is therefore unlikely that this fish will ever attain the same wide-spread popularity as its compatriot the *S. fontinalis*.

Salmo thymallus (grayling).—This fish possesses one great advantage, namely, that it affords sport to the fly fisher at a time when he has lost the rod would have to be laid aside. On the other hand, some persons assert that grayling tend to drive away trout; so that, where the trout are of a quite satisfactory character, it may be good policy to exclude this fish. However, we see the two co-existing and flourishing in Derbyshire and many other places.

AMERICAN FISH EGGS ABROAD.—Salmon eggs sent by Prof. Baird in charge of Fred. Mather to England, France, Germany and Netherlands, arrived in most perfect condition; no fungus. Herr Haack, Director Imperial Establishment at Hünningen, reports them the finest that he ever saw. Reports from England mention American black bass received by the Marquis of Exeter, who has also given a large order for eggs of brook trout to Mr. James Annin, Jr., of Caledonia, N. Y.

FISH HATCHING IN CANADA.—Mr. Sam'l. Wilnot, of the Dominion Hatching Establishment, at Newcastle, Ontario, writes, Nov. 10th:

"I am wonderfully busy just now filling up the several fish breeding establishments under my supervision; returns from my assistants already show upward of eight millions of salmon ova laid down. The season for gathering salmon, trout and whitefish eggs is now at its height, and I anticipate the pleasure of shortly heralding the quantity of ova taken from them at fully four fold over the salmon."

MICHIGAN—*Detroit*, Nov. 11.—Mr. Editor: Mr. E. R. Miller, the President of our State Fish Commission, is now taking the whitefish ova at Mr. Gray's, at Gros Isle, and intends to hatch from fifteen to eighteen millions of white fish, two hundred and fifty thousand brook trout and three to five millions lake trout this year. Mr. Jerome is now at Milwaukee superintending the getting of the lake trout. The whitefish will be hatched as usual at Detroit. The other varieties will be hatched at Pokagon.

KEE TASI.

WHITEFISH IN MICHIGAN.—*Niles*, Nov. 18.—We are just through laying down upon the trays of our Detroit Hatchery between fourteen and fifteen millions of whitefish eggs, and a better lot we have never secured. They were obtained at the fishery of Thomas Gray at Gros Isle, fourteen miles from Detroit. The outlook for a successful hatch was never more promising.

GEO. H. JEROME.

Natural History.

ABOUT OUR GROUSE—No. 4.

BESIDES those grouse, of which we have already spoken, there remains to be considered the genus *Lagopus*, which includes nearly the various species of ptarmigan. Of this genus we have in North America only three representatives, and about them, for reasons which are obvious when we consider the region which they inhabit, but little is known.

The ptarmigan differs from all the other grouse in having the feet heavily feathered quite to the claws, in turning white in winter, and in having but fourteen tail feathers. In many of their habits, too, they are strikingly different from their nearest relatives. While most, if not all, grouse are polygamous, the ptarmigans mate in spring, and the pairs remain together throughout the summer, the males manifesting scarcely less affection for the young than the female, and being equally courageous in defending them on the approach of danger. They are Arctic in habitat, and the only species which is found in more moderate climes is our white-tailed ptarmigan.

This bird is the only one of the genus found regularly within our borders, and is confined to the loftiest peaks of the Rocky Mountains, where, amid the eternal snows that lie deep on the sterile and storm-swept summits, it finds a climate well suited to the necessities of its existence. In the depth of winter, when the ground is deeply covered with snow, even these birds find it impossible to remain on the mountain tops, and at this season descend to the timber line, where they feed on the buds of the willow, quaking aspen, and other shrubs and trees. At this season many of them are killed, for, being rarely disturbed by man, they are very tame, and are easily approached.

The white-tailed ptarmigan was first described by Mr. Swainson, in the "Fauna Boreali-Americana," from specimens procured in the Rocky Mountains by Mr. Douglass, but it is said to occur as well among the high mountains of the Sierra Nevada Range. It is found sparingly on the highest mountains of the former chain, but is nowhere sufficiently abundant to make it worth the sportsman's while to procure it. How far to the southward its range extends is not definitely known, but there is little doubt that it exists in New Mexico and, perhaps, even further south. Northward it probably occurs as far as Alaska, although we know of no record of it having been taken in this latitude.

During the summer these birds are found in pairs on the tops of the high mountains, and here their nests are prepared and the young carefully tended until they are old enough to look out for themselves. The nest is usually placed in a little hollow at the base of a rock, and is scantily lined with dried grass. Here the female deposits her eggs—how many is not yet certainly known, but, judging from analogy, they should number from eight to twelve. They are covered with dark blotches and scratches of wine color and purple, and so numerous are these markings that the ground tint is quite obscured by them. The young chicks leave the nest as soon as hatched, and follow the parent birds over the great gray rocks to the spots where the choicest food is to be found. Should an enemy approach the little brood, one of the old birds at once attacks him while the other attempts to lead away the young to a place of safety, or, if this is impracticable, signals them to hide. When in company with the young, both male and female are very bold, and are said to fly into danger without the least hesitation. A writer tells us, too, that on discovering a nest of eggs which a female of this species was brooding, the bird refused to leave her position, and when he lifted her up to see what was under her she pecked at his fingers like a common hen under similar circumstances. The young in a few weeks are able to fly, but the family remains together until the succeeding pairing season.

When started from the ground the white-tailed ptarmigan flies swiftly, and for a considerable distance, but it is usually very tame, and usually prefers to walk a few steps from one's path, and there conceal itself.

In summer the white-tailed ptarmigan is varied with dark brown and tawny bars, but the tail is white at all seasons. The superciliary membrane is bright red in the breeding season, paler at other times. The bill is more slender than in our other two species of this genus.

This bird is the smallest, as well as one of the most beautiful, of all our grouse, and it is also one of the rarest. Comparatively few sportsmen know it, and the specimens which are obtained go almost altogether to enrich the naturalist's cabinet. It can never be confounded with any other species, for it is the only one in which the tail is always white.

The rock grouse (*Lagopus rupestris*) is the most boreal in its habitat of all our grouse, and on this account less is known of it than of any other species. It occurs very sparingly in Newfoundland, where it is called the mountain partridge, but occurs more abundantly in Labrador and in the barren grounds of the interior north to Melville Peninsula. From the highest latitudes they perform a partial migration southward in winter to the timber lands, where they feed on the buds of the stunted trees which grow in this desolate region. In Labrador they collect during the winter on the highest ground, where the wind has swept the snow from the earth, and there feed on the scanty vegetation which grows on the rocks.

They breed in the open country of the interior, and are in many places extraordinarily numerous, having large broods. The flesh is said to be dark, and much inferior in taste to that

of the willow grouse. The rock grouse is intermediate in size between the white-tailed and willow ptarmigan. Its plumage in summer is black and yellow barred, and in winter it is white, except the black rectrices (tail feathers), and a line of the same color through the eye.

The largest of our ptarmigan, and a bird which affords no little sport to the residents of Newfoundland and the Fur Countries is the willow grouse (*Lagopus albus*). This species is abundant in the British Possessions east of the Rocky Mountains, but only occurs in the United States as an accidental visitant. One instance is on record of its having been captured in Massachusetts, but it is possible that this may have been an escaped bird.

The Hudson Bay region seems to be a favorite locality with this bird, and Hearn says that they are enormously abundant there, and that he has seen as many as four hundred in a flock. Their food in summer consists chiefly of berries, but in winter they feed almost entirely on the buds of the willow, birch and alder. The change of plumage in this species, as in the other two, takes place very gradually, and the summer garb is usually not completely assumed before June. It is hardly necessary to say that both the summer and winter dresses are admirably adapted to the circumstances of the ptarmigan's life, and are in the highest degree protective. The narratives of Arctic travelers all bear witness to the difficulty of discovering the birds when the ground is covered with snow, and even when they alight among the willows it is often difficult to distinguish them from the masses of snow which cling to the branches. In Newfoundland this species is hunted almost altogether with dogs, but in the Fur Countries, where they are so abundant, they can generally be found without the aid of a canine assistant. Many of these birds are shipped in a frozen state from St. John's to England, though happily this has not yet been done as a matter of business.

(To be continued.)

EARBONES, OR BRAIN IVORY OF FISHES.

ORNITHOLOGISTS and fish-culturists, when investigating the anatomy, physiology, and habits of the various kinds of fishes, sea or freshwater, have paid hitherto but very little, and not sufficient attention, to the auditory powers of these water animals.

Fishes, especially deep-sea, live under circumstances so very far removed from human ken that it is almost impossible to gain a definite knowledge of what they do in the depths of the ocean. I think, therefore, that we fish-culturists should begin to study the earbones of fishes as helps to ascertain their habits.

I acknowledge with gratitude that I owe this suggestion to Capt. P. Jackson, of the "Oasis," Barnstable, who, when we were there on an official inquiry, most kindly presented me with a most beautiful collection of the earbones of fishes, "brain ivory," as he so appropriately calls them.

We must, in considering this matter, go back one step. Mammals, birds, etc., live in the air, and they receive impressions of sound by means of the vibrations of the air; fish, on the contrary, live in the water, and through that medium, therefore, receive any impressions of sound. Accordingly, we find that the great Creator has given to animals, whether aquatic or terrestrial, an ear admirably suited for the conditions under which they live. Our own ear, for instance, is highly complicated. Sound causes a very delicate membrane called the tympanum to vibrate. These vibrations are communicated by means of three small bones; strange to say, these bones resemble objects in daily use among ourselves. The first bone is called the malleus, or hammer, the second the incus, or anvil, and the third the stapes, or stirrup. The sounds are collected by the external ear, and in connection with this external ear there are muscles under the skin; but these muscles are not much used by ourselves, though it is possible that if we took a baby, and taught him to use the muscles of the ears, that after a time he might be enabled to cock his ears in a doglike manner. "The muscles that move the ears can be seen in full work in such animals as the horse.

The eye of the horse is crepuscular, or semi-nocturnal, and all common men will tell you that horses go better at night than in the day. During daytime they trust principally to the ears, and horses in a listening mood may be observed with one ear cocked forward, the other backward. To creatures such as fishes, external ears would be of no use, but would be a hindrance and obstruction; nevertheless they have bones in the ears, and these of a beautiful character.

John Hunter, with his usual sagacity, examined into this subject. He writes: "The organ of hearing in fishes is placed on the sides of the skull, or cavity which contains the brain, but the skull makes no part of it, as it does in the quadruped and bird, the organ being a distinct and detachable part. It varies much in the different genera of fishes, but in all it consists of three curved tubes which unite one with another. The whole organ is composed of a kind of cartilaginous substance, and in some fishes is crusted over with a thin lamella to keep it from collapsing. The canals terminate in a cavity, in which cavity there is a bone or bones. In some there are two bones, as in the cod. The Jack has two cavities. We find in one of them two bones and in the other one."

Let us now examine the beautiful preparations made with so much care by our friend Capt. Jackson, of Barnstable. These otoliths, or ear-bones of fishes may, I think, at once be classified, and I place together in order of size—First, the bones of the cod. Secondly, those of the hake. Thirdly, those of the haddock. Fourthly, those of the whiting. Fifth, those of the conger. Sixth, those of the turbot. Seventh, those of the sole. Eighth, those of the gurnard. Ninth, those of the smelt or sparring. Tenth, those of the salmon. Eleventh, those of the trout. They all seem to be composed of substance which Captain Jackson properly calls osseous ivory, or brain ivory, but they differ much in shape and appearance. For instance, the otolith of the conger is exactly the shape of a small sole; it is an inch and two-eighths in length and three-eighths in width. The cod's bones are as nearly as possible the size of a common horsebean split, the bone is curved upon itself, reminding of a caterpillar in progression. The haddock and whiting are much

the same as the cod, but smaller. The ear-bone of the conger is small, thin, and glasslike. The turbot's ears are the shape of a ballotis or Venus's ear shell, but deeply dentated at the margins. Sole's ears remind one, on a small scale, of the cowrie shell, as used as money by some of the tribes in Africa. Gurnard's ears are saucer-shaped. Filchard's ears consist of a bone folded on itself, very like a shrimp after boiling, only white. Salmon's ears, strange to say, consist of two parts. I can liken them to nothing better than a young salmon, with the umbilical sac attached, just come out of the egg. Trout's ears are of a somewhat similar shape, only smaller. I am of firm opinion that if Captain Jackson will continue his inquiries, it will be of immense practical use to all fishermen. No one knows better than the herring fishers of Loch Fyne that herrings are greatly affected by noise. I give samples of the witnesses' evidence:—"The herrings are retarded in their progress by trawls. The noise is of more consequence than the nets; the herrings, as soon as the boat is struck, go away. The fisherman strikes the gunwale of his boat on dark nights to see where the herrings are." Another witness described the noise made by the fishermen to the hammering in a Glasgow ship-building yard. Witnesses told us that the fish were kept away by the firing of the Volunteer Artillery.

The first general observation that I draw from Captain Jackson's specimens are, that the floating fish have different otoliths to flat fish, and the flat fish have different ears to mid-water fish, such as salmon, etc. In studying the economy of the ocean, the evidence of the fish themselves is of the highest importance. I wish, therefore, to advise our friends to study the ear-bones of fishes. It is only necessary to boil the head carefully, and "the brain ivory," so called, may be discovered. This brain ivory, Mr. Seale aptly observes, is very like very strong porcelain, such as used by the dentists for artificial teeth. This porcelain is made into the shape of the teeth, burned in a very strong heat, and has superseded all kinds of ivory.—*Frank Buckland in Land and Water.*

In no fish are the ear-bones more conspicuous or strikingly beautiful than in the sheephead of our interior lakes (*Lepidodotus*). To most persons they are known as "lucky stones" and are prized as pocket pieces, being often carried for years to insure good luck. They are shaped something like a tamarind seed, and have the appearance of milk quartz.—*Ed. F. & S.*

BIRDS OF DOMINICA AND ST. VINCENT.—The collections in ornithology made in these islands by our correspondent, Mr. Fred A. Ober, have been submitted to Mr. Geo. N. Lawrence, the eminent ornithologist of this city, and the new species discovered have been described by that gentleman, mostly in the *Annals of the New York Academy of Science*, and have been duly noticed in the columns of *FOREST AND STREAM*. The complete result of Mr. Ober's explorations, however, have only just been published, and we have to thank Mr. Lawrence for two pamphlets—one, "A Catalogue of the Birds of St. Vincent," and the other of the "Birds of Dominica." Both papers are replete with interesting matter, containing not only the results of the study of the ornithologist, but also the notes of the collector made on the spot.

Of the birds of St. Vincent, fifty-nine species of which are mentioned in the catalogue, six new ones have recently been described by the author of this paper, besides several new varieties. The catalogue of the Dominica birds gives about the same number of species found as at St. Vincent, but there are several birds inhabiting each of these islands which do not occur on the other. Perhaps the rarest bird in the whole list is the Imperial Parrot (*Chrysotis augusta*), of which several specimens were secured; other parrots and several rare humming birds were noted and secured. One striking feature of these islands is the entire absence of birds of the woodpecker family, although, as Mr. Ober remarks, all the conditions favorable to their existence would seem to obtain. Neither are there any squirrels, although the woods produce thousands of nut and seed producing trees.

These papers will be read with eagerness by all ornithologists, and the notes which are furnished by the collector are of great value. The territory explored is but little known, and Mr. Ober's letters (soon to appear in these columns), narrating his travels and labors, will prove of the greatest interest to our readers.

We understand that this indefatigable worker is not altogether satisfied with the material that he has collected, and that he proposes to visit these islands again for the purpose of completing his collections.

SCIENCE NEWS.—While each month that goes by sees the death of some newspaper or periodical, there are constantly appearing courageous individuals who do not fear to enter the journalistic field and to father weak yet hopeful offspring, which, after a short struggle, perish through inanition and give place to others of their kind. A better fate than this, and a long and prosperous existence is what we hope for the *Science News*, a fortnightly journal of science, whose first number appeared November 1. It is edited—and, knowing the gentlemen who have it in charge, we can say ably edited—by Messrs. W. C. Wyckoff and Ernest Ingersoll, and is published in Salem, Mass., by Mr. S. E. Cassino, of the Naturalist's Agency.

The peculiar features of *Science News* are to be the prompt publication of scientific news and information on current scientific literature; there is also a correspondents' column, in which, under the heading *Notes and Queries*, much valuable information will no doubt be collected.

This new venture in scientific literature has our best wishes.

KID GLOVE CULTURE.—What we wrote the other week about certain efforts being made in Minnesota to raise a breed of long-legged frogs for market, has attracted the attention of

a Boston servant who recalls to mind some notable attempts to grow kid gloves, described by Max Adler, who furnished a Boston paper with an outline of the scheme as follows:

"We are engaged now in developing a scheme for growing kid gloves upon the original animal. Our old friend Darwin teaches us that you can do almost anything with breed by judicious selection, and we are convinced that, with little care, it will be possible to produce a beast whose skin, when stripped off, will make a seamless kid glove. Our first experiments are with lizards. A lizard has four legs and a tail. Now we believe that eventually the off fore-leg can be developed into a thumb, while the three other legs and a tail can be arranged as fingers. We are crossing lizards with short tails with those with long legs, and we are now looking around for a variety of lizard with a button or two on his neck, for the purpose of breeding it in with the others, whose eyes will answer for button-holes. The ultimate result promises to be startling. It will break up the old glove trade and drive Jouvin to suicide. Thus it is that human ingenuity advances human civilization."

The foregoing ideas indicate a state of scientific progress which is very gratifying. The frog scheme dwindles into insignificance.

THE GRASSHOPPER MOVING SOUTH.—A recent letter from Panama informs us that the grasshopper plague has reached Columbia, and that great distress has ensued from the damage done. The locust, which has ruined the crops of so many years in the West, has, we think, never been known to occur so far south, and if the animal referred to in the advice is the true *Caloptenus spectus*, his presence in Columbia calls for a word of explanation from entomologists. The locality visited by this calamity is the fertile valley of Cauca, one of the most populous portions of the district. The injury done by the insect is summed up as follows: All growing crops have been completely ruined—sugar-cane, corn, wheat in the upper portion of the valley, and all sorts of grasses—so that the cattle cannot subsist, except in a half starving condition. The prices of provisions are exorbitantly high, and as the sugar estates and large haciendas have suspended work, the poor are unable to purchase the necessities of life. The government, with a view to furnishing them with means of support, is pushing the construction of the Cauca Valley Railroad, which will give employment to thousands.

LINNEAN SOCIETY.—The meeting of October 26 was characterized by the election of four new members, and by the reading of three very interesting papers by Mr. Merriam, Mr. Pearsall and Mr. N. T. Lawrence. That of Mr. Merriam was on habits of the yellow-bellied woodpecker, *Sphyrapicus varius*, taken in Lewis County, N. Y. He said that in this locality they far outnumbered all other species of their kind. They gratify their taste for noise by drumming on its roofs, leaders and like resonant substances, and appeared to take great delight in it. Each has its own particular place, which is frequented at all times of the day. They would go to these places, and then striking in quick succession for a moment on the old stone hitch-post, the driving vibrations of the females join in this amusement, but not so extensively as the males. By the middle of May all this is ended, and the duties of incubation occupy their time. They denude trees of their bark, which mischief has been attributed to the porcupine and the larger woodpecker. They feed on the inner bark of trees, cutting a circular hole and drinking the sap as it runs out; but they do these places afterward as a trap for unwary insects, which come to the punctured places to drink and are got caught in the exudations, and afford a fine feast for them. This drinking of the sap was corroborated by Messrs. Pearsall and Huyler. Mr. Pearsall, in his paper entitled "Notes on Grand Menan," spoke of the early nesting of birds there the present season. June 3, found most of them well advanced; nests and eggs, however, were taken from the yellow-bellied flycatcher, the red-breasted nuthatch, black-throated blue, and black-capped warblers, *Dendroica cerulea*, *striata*, and *maculosa*. The peculiar accumulation of gum on the edge of the hole inhabited by the red-bellied nuthatch, *Sitta nana-boracensis*, probably placed there by the feet, to which it sticks, when the bird is running up and down the pine trees. Puffins' eggs were taken on the Seal Islands, which is about their most southern breeding limit. Mr. Herrick also stated that he had found them there, but that it had been accidentally left out of his list of the "Birds of Grand Menan." The question of the southernmost breeding habitat of Leach's petrel, *Gymnophanes leucorhoa*, was discussed in this connection, and it was strongly maintained that they would yet be found breeding on Long Island. Their habits are so quiet, and as they only approach their nests at night, they would only be observed by a very close search. As an instance, Mr. Pearsall said he took a nest from under the stone forming the lower step to the light-house at the Seal Islands, N. B. Both Leach's and Wilson's petrels are found all summer in Long Island Sound. Mr. Lawrence spoke of a visit to the Schoodic Lakes in Maine in June of this year, and also noted the early nesting of birds, and of the apparent scarcity of birds in the heavy timber. The Indians, he said, were scandalously robbing the "birds' nests" and when they were caught were rapidly driving them back to the most unfrequented parts of the State.

FRANKLIN BENNER, Secretary.

THE "ROCK" BASS OF BEAR LAKE.—The *Weekly Territorial Enterprise*, of Nevada, has, Nevada, describing a fossil fish which is on exhibition in that city. It is of a rich warm brown, and unless closely inspected, is liable to be mistaken for a painting or drawing. The fish is exactly one foot in length by four and a half inches in width in the widest part, and in shape closely resembles the common perch. It has one dorsal fin, which is spread to its full width. There is no second dorsal fin, nor is any ventral fin shown. The anal fin is on the side of the body, and is very close to the head, or tail, which is forked and beautifully spread. These fins are as perfect as could be drawn by any artist. Every bone, large and small, in and connected with the vertebrae is perfect and beautifully delineated. The gills are also handsomely shown, and the eye is quite lifelike, both the dark and the white parts being well preserved. The fossil appears to be that of the whole and perfect fish so compressed that, except that the backbone resembles a drawing. The backbone is the only part raised above the general surface of the stone, and it stands out to about what would be the natural size of

the vertebrae of a fish of the size mentioned. This splendid fossil came from Bear Lake, Idaho, and was presented to Mr. Cole by Daniel Cook, the well-known mining man. Mr. Cole has what appears to be an exact copy or made to this fossil.

ECCENTRICITIES OF THE RUFFED GROUSE.

EDITOR FOREST AND STREAM:

I would seem from the various accounts given by your correspondents of the ways of muffed grouse, each giving the result of his own observations, that there must be a wide difference in the habits of this bird in different parts of the country. The fact that people see the same thing differently, and that some see more than others with the same opportunity, will not explain all the variations in their statements, though they will some of them, such as the performance of the act of drumming, hanging on the wing, or not, when rising, the difficulty or ease of shooting and such matters, but not such as that the bird always drums on a log and never on a rock, nor stumps; that he always drums on a hollow log, that he never drums in the fall, that he drums more or less than in spring, that there are in some regions overgrown cooks of eccentric habits known as "king partridges," while in others such royal fowls are quite unknown, though grouse of ordinary rank and habits abound therein. If we accept this explanation of these discrepancies we shall be much more likely to get at interesting facts than if we are so unwise and impolite as to deny the truth of every statement of which we have not had ocular proof.

I never have noticed, the conditions of the atmosphere being equally favorable, that the drumming was any louder when the bird was on one object than when on another, but this has doubtless been owing to lack of close observation, and when another spring comes I shall try to satisfy myself on this point. Last spring I thrice dashed a grouse from a rock on which he was drumming, to which I was led by the sound, which seemed to me no different from ordinary, but did not succeed in seeing him in the act. Logs are their usual drumming places here, but hollow ones are not often chosen than those which are decayed almost to mold, and so can add nothing to the volume of sound made by the birds wings.

I cannot see that "Penobscot's" explanation of the grouse being in unusual places in the fall is a whit more reasonable than the old hunters', for why should partial migration be more likely to take place at this season than in winter, or in spring, which last would seem the likeliest time, the instinct which prompts them to replenish the earth being then most active.

They become accustomed to showers and the noise of the wind early in life, but the falling of the leaves comes but once a year, witnessed there for the first time by the birds of that season and forgotten perhaps by the next one. Are not all the wild inhabitants of the woods wilder then than at other times?

The statement with which "Penobscot" prefices his explanation, namely: that the ruffed grouse chafes pertinaciously to its chosen location, "a flock, unless frequently hunted, scarcely moving over ten acres of ground in a season," is another proof to me of the difference in habits, for here they are of all birds the most uncertain to find in any particular place.

You may flush a score in a piece of cover to-day and find not one there to-morrow; and the next day, and on some days a bird may be plenty in a certain wide range of woodland, and on others almost none can be found there, I remember hunting over a hilly piece of woodland containing some four hundred acres or so in which some grouse are almost always to be found, but on that day we did not find a bird till, at last, coming to a hollow through which a small brook runs my companion and I dashed certainly not less than fifty on a quarter of an acre. This, I think, was in September. In November of another year I hunted over the same ground with a little success, till in the afternoon, when I was clearing where there were a number of small, barberry places from two to five feet high I started a grouse from the sunny side of almost every other pine. On both occasions all the birds in the tract seemed to have gathered, for some reason, into close companionship. In the first instance I surmised that they had come to the brook to drink and by chance all to that particular part of it. In the other I was quite at a loss for a reason for the unusual congregation.

No more can I account for the scarcity and wildness of ruffed grouse this fall. Last fall they were unusually plenty, continuing so through the winter and spring, and remained themselves great sport in the woods then for years before and, I cannot remember any storm that could be supposed to have seriously affected the eggs or young birds, nor have beasts and birds of prey been plentier than usual. Can any one help to clear up the mystery? While asking questions I wish to inquire if there are any muffed grouse in New Jersey, or in Martin's Vineyard, where Herbert speaks of the being carefully preserved at the time he wrote his "Field Sports." I should very much like to see the experiment tried of re-stocking their old haunts at the East, and also stocking parts of New England where they are not known to have existed. I see no reason why they might not thrive even here, now.

A. W. H. S. S.

Woodland, Farm and Garden.

AN INTERESTING CHAPTER ON BEES (1718).

BY PAUL LUDLEY, F. R. S.

A Method Lately Found Out by a New Bee for Discovering Where the Bees Hide in the Woods in Order to Get Their Honey.

THE hunter takes a pistol or trencher with a little sugar, honey or molasses spread on it (in a clear sunny day), and when got into the woods sets it down on a rock or stump in the woods; this sweetener the bees soon scent and find out, for it is generally supposed a bee will scout honey or wax above a mile's distance. The hunter secures in a box or other convenient one or more of the bees as they fill themselves, and after a little time lets one of 'em go, observing very carefully the course the bee steers, for after he flies in the air he flies directly or upon a straight course to the tree where the hive is. In order to do this the hunter carries with him his pocket compass, his rule and other implements, with a sheet of paper, and sets down the course. Suppose it to be west; by this he is sure the tree must be somewhere in a west line from where he is, but wants to know the exact distance either south or north (we'll suppose north) a hundred paces or rod (if it be more it will be more exact, because the angle will not be so acute) then he takes out another bee and lets him go, observing his course also very carefully: for he

being loaded, will, as the first (after he is mounted a convenient height), fly directly to the hive. This second course, as I must call it, the hunter finds to be south, 54 degrees west; then there remains nothing but to find out where the two courses intersect.

The foundation of all this is the straight or direct motion of bees when bound home with their honey, and this is found to be certain by due observation and experience of our hunters every year, and especially of late years, since this mathematical way of finding honey in ye woods has been used with such success.

An ingenious man of my acquaintance ye last year took two or three neighbors that knew nothing of ye matter, and after he had taken his bees, set the courses the first and second bee steered, made the offset, and, taking ye distance from the two stations to the intersection, ordered them to cut down such a tree, pointing to it. The laborers smiled and were confident there was no honey there, for they could not perceive the tree to be hollow or to have any hole for the bees to enter by, and would have dissuaded the gentleman from felling the tree, but he insisted on it and offered to lay 'em any wager that the hive was there, and so it proved to the great surprise of ye countrymen.

I cannot dismiss this subject without acquainting you with the fact that all the bees ye have in our gardens or in ye woods, and which now are in great numbers, are the produce of such as were brought in lives from England near a hundred years ago, and not ye natural produce of this part of America, for the first planters of New England never observed a bee in the woods until many years after the country was settled; but that which proves it beyond question is our Aborigines (the Indians) have no word in their language for a bee (as they have for an eagle, a turkey, a deer, &c.), and therefore proper to ye country (and) therefore for many years called a bee by the name of Englishman's fly.

Our people formerly used to find out honey in ye woods by surprising and following one bee after another by eyetill, at length they found out where the bee breed.

AUTUMN LEAVES.—Lamp shades made of autumn leaves are very beautiful. To make them, cut the shade the proper shape in stiff white paper, when the leaves, which have been previously dried and pressed, are arranged on it in a wreath, and fastened securely by gum. The whole is then covered with a very coarse net, and the edges bound with gilt or colored paper. The effect of the light shining through the shade is exceedingly pretty, and it is one of the cheap decorations which all persons, possessed of a little taste and ordinary skillful fingers, may make for themselves.

DISCOURAGING TO FLORIDA FRUIT-GROWERS.—The Key West *Key of the Gulf* says:

The experience of this year seems to be extremely discouraging to the prospects of the extreme southern portion of the peninsula ever being settled up and utilized as a fruit-growing region.

The Kennel.

HUNTING IN GREAT BRITAIN.—When an Englishman speaks of hunting he means following hounds, either on horse, back or on foot, in pursuit of deer, foxes or hares. For hunting the deer there are in England 14 packs of stag-hounds, and in Ireland 4 packs. For hunting the fox there are in England 141 packs of foxhounds, in Ireland 20 packs, and in Scotland 9 packs. For hunting the hare there are in England 95 packs of harriers and 18 packs of beagles; in Ireland 43 packs of harriers, and in Scotland 3 packs. This makes a total of 346 packs; 25 couples to each pack would be a low estimate, as some of the packs of foxhounds run up to 60 couples, and one—the Duke of Beaufort's—has 78 couples. We therefore find the total number of dogs used in Great Britain for "hunting" alone (not shooting) to exceed 22,000.

AFTER REYNARD.—Nashville, Tenn., Nov. 13.—Col. W. H. Johnson, one of our most indefatigable fox hunters in this country, has been out lately with his excellent pack of six and a half couples of hounds, with Bumble as their leader. His first day's run was after a gray fox, which, after a sharp chase of two hours, succeeded in getting to his hole. The next day, however, we were successful. This time he started a red fox, which, after a very break-neck pace of some two hours was kept up, they managed to kill in the hills near the White Creek Turnpike. Since last year the colonel has added several fine hounds to his pack. One of them was bred in North Carolina and the other in Virginia. J. D. H.

OBESITY IN DOGS.—One of the most common complaints of old dogs, but more particularly household pets, is excessive fatness. An inordinate development of adipose matter, no doubt, is highly satisfactory in a pig, or in a South Sea Islander's dog, but in the Western hemisphere, at least, where the dog is used for entirely different purposes, such a condition of body is entirely objectionable. A proper plumpness of appearance denotes health; but when the animal oil, called fat, becomes ordinally disproportionate to the rest of the body, it proves a source of numerous diseases. Blaine, who wrote sixty years ago, and whose works on the diseases of dogs have not been surpassed for the sound practical knowledge they evince, says that the natural tendency of dogs to obesity is caused, not only for any dog may be fat by excessive feeding and little exercise. Provided the accumulation has been quick, the dog may be reduced to his former state without prejudice; but when a dog gradually accumulates fat from indolence, then the obesity becomes so completely a disease, that even exercise and abstinence will not always wholly reduce him; for the generation of the adipose substance is so habitual a work of the constitution that, however little food the animal takes, short of starvation, still little forms fat. That this is true may be shown by the notorious fact that many fat dogs eat but little. There are two sources of fatness; one is overfeeding, the other is want of exercise, and when, as is very frequently the case, both causes happen to meet in the same subject, the accumulation is certain. When the dogs are overfed, whatever is taken into the body more than the general secretion requires, is either converted into fat, or forms some other unusable secretion, as an matter in the case of canker, or scabs on the skin in mange. Exercise increases all the usual secretions; hence, under strong exercise, more nutriment is required, and thus in such cases, full feeding does not

produce fat; but even in full exercise, provided some of the usual secretions are stopped, though the others may be in full force, yet an over-accumulation of animal oil is apt to take place; thus, spayed bitches and castrated dogs become fat, however they may work. Fat more readily accumulates in middle-aged and old dogs than in the young, and the fat of old dogs is more hurtful to them than that in the young, the reason of which appears to be, that all aged animals have their fat piled more upon the surface of the body. A state of excessive fatness is an almost certain forerunner of asthma. It is also the parent of mange, canker, and other eruptive diseases, and not unfrequently it occasions fits, from the pressure it produces on the vessels of the head and chest. Furthermore, the authority we quote says that he has also seen the excessive accumulation of it produce disease of the heart and large vessels, terminating in the rupture of one or the other of them.—*Land and Water.*

BIRMINGHAM DOG SHOW.—This important English show was held on Oct. 21 and three following days. The judges were: For fox and wire-haired terriers, Mr. J. A. Doyle; for bloodhounds, deerhounds, grayhounds, mastiffs and St. Bernards, the Rev. G. F. Hodson; for Newfoundland, sheepdogs, Dandie Dinmonts, Bedlington, Pomeranians, Dalmatians and non-sporting puppies, Mr. Matthew Hedley; for retrievers, pointers, setters, spaniels, dachshunds and sporting puppies, Mr. Wm. Lort; and for bull dogs, terriers, all except fox and wire-haired terriers, pugs, Italian grayhounds, Glenhead and King Charles spaniel, Mr. J. Percival. The following is a list of the winners in the pointer and setter classes:

Pointers.—Large—Dogs: 1st, W. Arkwright's Tramp; 2d, J. Mayon's Bob. Com., W. M. Bryant's Bang. Bitches: 1st, J. H. Whitehouse's Reine; 2d, J. K. Bartram's Nell. High com., W. H. Brewer's Princess Bon Bon, and R. P. Leach's Alma. Com., E. Bullock's coll and E. S. Burdson's Pan. Small—Dogs: 1st, E. P. Leach's Basso Whitehouse's Whiskey's Wray. Very high com., H. Reece's Rock. Com., H. T. Veitch's Don. A very good class. Bitches: 1st, J. H. Whitehouse's Lady Pearl; 2d, W. Arkwright's Prude II. Very high com., S. D. Hine's Helen. High com., J. Edwards' Nellie and S. D. Hine's Leda.

Setters.—English (other than black and tan)—Dogs: 1st, Major Richard's Ned; 2d, J. Richardson's Bruce. Very high com., J. E. Platt's Rock II. and J. H. Whitehouse's Cave. High com., J. T. Jackson's Dash. A good class. Bitches: 1st, Major Ireland's Ruby; 2d, J. C. Fauntleroy's Puff. Very high com., C. J. N. Gray's Jess III. and S. W. Wildman's Kate. High com., W. Cooper's Dutchess and E. Platt's Daphne. Black and tan—Dogs: 1st, J. T. Richardson's Duke; 2d, H. Mapplebeck's Blossom. Very high com., T. H. Salter's Rex. High com., C. Fauntleroy's Prince, T. Jacobs' Marquis, and J. R. Trevithick's Monarch. Bitches: 1st, H. Mapplebeck's Mona; 2d, J. H. Salter's Countess II. Very high com., J. T. Richardson's Bee and R. Trevithick's Stella. High com., S. D. Hine's Mae. Irish—Dogs: 1st, J. T. Richardson's Pam; 2d, C. Osborne's Count Fosco. Bitches: 1st, withheld; 2d, J. T. Richardson's Peggy.

THE NATIONAL DOG SHOW, BIRMINGHAM.—The prizes to be competed for at the show to be held in Curzon Hall, on the 2d of December and three following days, as appears from the schedule, amount to more than £1,000, being an increase of £84 over last year. Four £5 silver cups will again be presented by Messrs. Elkington & Co., as will also three other silver cups of £5 each by Mr. J. H. Whitehouse, Mr. J. H. Jones, Messrs. Marshall & Co., and in addition Messrs. Spratt, Patent Dog Biscuit Manufacturers, a silver cup value £25 for the best dog or bitch in the blood-hound, deerhound, grayhound, pointer, setter, and retriever classes; and Mr. R. L. Purcell Llewellyn, a silver cup value £10 for the handsomest dog or bitch in the show used with the gun, the competition being limited to pointers, setters, retrievers, clumbers and other than "fancy" spaniels; the Mayor of Birmingham (Alderman Kenrick) gives a silver cup, value £5 5s, for the best sheep dog of all classes, and Mr. A. C. Ashwin a silver cup value £5 for the best spaniel of all classes. A champion class is provided for deerhounds (dogs and bitches), and one for rough sheepdogs (dogs and bitches) the prize in each case being a silver cup value £5. There is likewise a new class for Irish terriers, with two prizes of £5 and £3; and there will be two classes for smooth sheepdogs, one for dogs of last year, and one for dogs of this year, of £3 and £3, and for bitches £4 and £2. For fox terriers not exceeding 18 lbs. there will be a third prize of £3, and for bitches not exceeding 16 lbs., a third prize of £2. All prizes amounting to £7 will be paid in cash, and not in silver cups as heretofore. Among the new regulations is one to the effect that the dogs of exhibitors residing in this locality, and those which are accompanied by keepers, may be delivered at the Shirley, M. E. fox and wire-haired terriers, Mr. J. A. Doyle, Skyes, Dalmatians, Bedlington, Yorkshire and Irish terriers, Rev. G. F. Hodson; bull dogs, Blenheim and King Charles spaniels, Mr. J. W. Berrie; dachshunds, Rev. G. F. Lovell; poodles, Italian grayhounds, Maltese rough-haired dog, not decided; pugs, Capt. E. Digby Boycott.

ALEXANDRIA PALACE DOG SHOW.—The following are the judges appointed for this show, which is to be held near London on Dec. 13 to 16: Bloodhounds, mastiffs, St. Bernards, Dandie Dinmonts, black and tans (English), smooth-haired toy terriers, and non-sporting puppies, Rev. W. J. Mellor; Newfoundlands, spaniels and sporting puppies, Mr. W. Lort; deerhounds, grayhounds, not decided; foreign dogs, Rev. G. F. Lovell; pointers, Mr. J. H. Whitehouse; setters, sheepdogs, retrievers, bull terriers, pug and dog puppies, Mr. E. Shirley, M. E. fox and wire-haired terriers, Mr. J. A. Doyle; Skyes, Dalmatians, Bedlington, Yorkshire and Irish terriers, Rev. G. F. Hodson; bull dogs, Blenheim and King Charles spaniels, Mr. J. W. Berrie; dachshunds, Rev. G. F. Lovell; poodles, Italian grayhounds, Maltese rough-haired dog, not decided; pugs, Capt. E. Digby Boycott.

ROSS DOG SHOW.—The seventh annual exhibition of dogs took place at Ross, Herefordshire, on Thursday, the 24th ult., under the able secretaryship of Mr. Frederick Cooper, Mr. W. Lort judged single-handed, and with his wards, says the *Hereford Herald*, we entirely enjoyed it. The following were the winners in the sporting class: Pointers—1st, H. Reece (Rock); 2d, W. Evans (Lady). High com., J. Pearse, (Bob). Com., J. H. Mayo (Till), W. E. Hancock, S. P. Marfell (Belle), H. L. Lutwyche (Raik), and J. Birmingham (Shot). Setters—1st, H. Mapplebeck (Mona); 2d and very high com., C. J. N. Gray (Jess III. and Ranger).

—The next dog show of the Westminster Kennel Club in this city will probably be held in April next. The date will be fixed at the next meeting of the club.

—A dog show will be held at Troy, N. Y., in January next.

FOUR MILK FOR WORMS.—Under date of Nov. 16 a correspondent gives the following as his experience with sour milk for worms in puppies:

About a week ago I noticed that my dog's coat was getting dull, appetite voracious, feces black, and several other symptoms of worms were apparent; also a gradual desire to lie down after a run. I accordingly gave him a dish of sour milk on an empty stomach for three consecutive days, and this morning discovered that he had passed a large, round, white worm, about six inches long. Whether this result is due to the milk I cannot, of course, say. At all events, it has in this instance shown the presence of worms. H.

NAMES CLAIMED.—Mr. Treat Potter, of Manchester, N. H., claims the name of Maggie for his red Irish bitch pup (Rufus-Cigarette), whelped June 27, 1878.

—Mr. John P. Barnard, Jr., of Boston, Mass., claims the name of Ruby for his black and tan setter bitch, by Allison's Ruben (Lang-Rubin), out of Mr. T. T. Sawyer, Jr.'s, Nellie (Stokes' Shot-Nellie).

—Mr. D. P. Bosworth, of this city, has bought from Mr. John C. Dowling his imported cocker spaniel bitch, and claims the name of Gip for her.

—Messrs. Lincoln and Hellyar have sold of their litter of pointer puppies, by Snapshot out of Gypsy, one brace to C. O. Damarin, of Portsmouth, Ohio, who also purchased from them the imported setter dog Frank II., one to S. T. Hammond, of Springfield, Mass., one to J. E. Moody, Brooklyn, Conn., and one to E. B. Austin, of Cherrifield, Malco.

—Mr. D. M. Sharpnook, of Petroleum, W. Va., has sold his cocker spaniel dog, Dom, to Mr. E. F. Beardslee, of Gouverneur, N. Y.

—Mr. E. F. Mercillott has sold to Nelson J. Place, Jr., of N. Y., one dog puppy, lemon and white, also one to Robert Spitzer, of Brooklyn, L. I., one dog puppy red and white, both by Quail out of Mr. Morford's kennel, out of Grace, winner of first prize at N. Y. Bench Show.

—H. F. Tates (Greensboro, N. C.) red Irish setter Ruby-Tippoo-Ruby (Ducat stock)—whelped, on Nov. 10, sixteen puppies, ten dogs and six bitches, sired by champion Joe. Ruby has been very prolific, her two previous litters being fifteen and twelve respectively.

—Mr. Geo. P. Webster, of Columbia, Tenn., lost his red Irish setter bitch Nell a few days ago. The supposition is that she was stolen.

—Mr. H. H. Winslow, of Kokomo, Ind., has bred his English setter bitch Pocohontas (Rock-Dora) to Mr. L. H. Smith's Leicester.

—Mr. Smith's Pearl has been bred to Paris.

DOG POISONING.

The following description of the manner in which a correspondent's dog was saved from the effects of what was very evidently a case of poisoning will be valuable to those who may be so unfortunate as to have dogs treated in a similar manner:

CHICAGO, Nov. 11, 1878.

EDITOR FOREST AND STREAM:

On Sunday morning, Oct. 27, I was out walking with my dogs, and as I returned home I noticed one of them acting strangely. She seemed to be trying to get something out of her mouth. This she continued until I reached home, the time being nearly one hour. After my return the symptoms seemed to grow worse, accompanied with a considerable twitching of the muscles and frothing at the mouth. Thinking that the symptoms indicated strychnine poisoning I immediately took active measures to counteract its effects. I first gave a dose of salt which acted in about ten minutes, but as she did not seem to improve I followed it by a second dose. This seemed to afford relief for a short time, but soon the paroxysms returned in an aggravated form, and we concluded that it was a case of kill or cure, so proceeded with very energetic measures. We began the course with a large dose of ipecac, but it failed to have the desired effect (as it relaxed the muscles to such a degree as to fall to vomit), but proved in the end to have been the best we could have done. This dose we followed by another dose of salt. She now began to have fits, but still having some faint hopes of saving her we gave her about a pound of lard; after this she grew gradually worse until she had had six fits, the last one continuing for nearly two minutes. This was followed by a copious discharge of the medicines which had acted as a powerful purgative.

These we followed with large and laudamum, as she still seemed to be suffering intensely. When we had administered thirty-five drops of laudamum it seemed to have the desired effect, as she gradually grew better, and in the course of a week was entirely recovered, with the exception of her sense of smell which she seems slow in recovering. A medical friend of mine (Dr. C. E. Juddes) attributes our success entirely to the use of ipecac, as it relaxed the muscles and thus caused the fits. The whole course of treatment occupied the time from 12 M. until 4 o'clock, during which time she had seven fits.

E. H. S.

STAY THE MONUMENT!

Regarding the use of the seton as a remedy for distemper and sour milk as a cure for worms a correspondent sends us the following:

WARREN, Nov. 11, 1878.

EDITOR FOREST AND STREAM:

I read in the FOREST AND STREAM of Oct. 21, under the caption "Cure for Distemper," of a new discovery, that of introducing a seton in the neck of the sick dog. Hereabouts it has been practiced for years with success. I also noticed in the same journal, under date of November 7, under the caption "Distemper," quite a lengthy article for the alleviation of the afflicted of the canine race, of a cure for worms in dogs by the use of sour milk. I called the attention of Mr. P. S. Hackett, our dog king, to that article, when he smilingly remarked, "I'll tell you a story about corn milk." "About fifty-five years ago when I was a lad my father came into possession of a deer or foxhound which soon showed signs of ill health. We did all we could for the poor fel-

low, but in spite of care and family skill he fell away to a mere living skeleton. Finally one morning my mother placed a tub containing six or six gallons of sour milk out at the door. Very soon our Sport fell to eating it and continued until it would seem he must burst; in fact, he was blown up like a bladder. Well, nothing was thought of the affair until toward night, when the poor animal's bowels commenced to move, and such a discharge of worms, of three or four different species, I do not think ever before was recorded in history. The sight was sickening and baffles description. The hound recovered its health at once and lived to a good old age." Thus it will be seen that setons and sour milk are old remedies, and you will be justified in staying the erection of a monument in memory of your correspondent.

SOMETHING ABOUT CUTTERS.

FROM Mr. J. G. Wheeler, West Cowes, Isle of Wight, England, we have received a large assortment of photographs of British yachts, including many notable racers, schooners, cutters and yawls, Mr. Brassey's two yachts, the auxiliary steamers *Meteor* and his present 500 tonner *Sunbeam*. From Mr. Brassey we learn that this famous vessel, which made a cruise around the world with Mr. Brassey in command, is now cruising in the Mediterranean, as his owner and family have by no means tired of life at sea, though they spent a year afloat not long ago. *Sunbeam* is the largest yacht ever built, is of composite build, iron frames and wooden skin; measures 532 tons, Y. R. A. R., and is 150ft. long between perpendiculars; 27ft. 6in. beam, and 13ft. 9in. depth of hold. She is rigged as a barkentine, and is supplied with engines of the compound inverted type, two cylinders, 24in. and 42in. by 21in. stroke, 70 H. P. nominal. Contrary to British custom, she is painted white. At her main peak, the burgee of the R. Y. S. has been carried abroad in every sea and climate. The *Meteor*, Mr. Brassey's former yacht, is about as homely a concern as could well be devised, and he is certainly to be congratulated upon having shifted his flag to a much handsomer vessel. Among the schooners we note the *Iris*, a new steel clipper with plumb stem and of beautifully clean model. Her stern is unrivaled. To us she looks like a good one in a stiff breeze. She, too, is painted white, a change in custom almost as heretic among Englishmen as a departure from the stereotyped sloop is among us.

Then there is among the yawls the big *Lufra*, tonning hard on to 210, an able, wholesome looking craft, which was one of the first to come to the line as a racer under this rig, and whose success at Englishmen to work up the advantages of this species for cruising and racing purposes. Of the "national rig," as our cousins abroad are wont to speak of the cutter, we have before us numerous examples. *Vanesa*, invincible among the "twenties," with her fourteen racing flags aloft, one of Dan Hatcher's famous turnouts, and a fine specimen of the thoroughly seaworthy crack of the day. She measures 48ft. 3in. from stem to sternpost on deck; 9ft. 8in. beam and 2ft. 8in. depth of hold. Noted for her power and staying qualities in a kick up, we should like to know the sloop that could hold her own in a turn to windward with this pretty weatherly clipper. *Heroine*, another wholesome ship of 50 tons, built by Vanhail in 1863, is a beauty to look at. Mr. Wheeler has chosen an excellent position in taking this craft's photo, for all the deck fittings and her rigging are shown with minuteness and a clearness hardly to be expected in the murky atmosphere of the average channel weather. With bulwarks almost waist-high, and in every way fitted to put to sea for a long voyage, she is known as a smart one among the best racers of the day, a living witness to the fact that cruising and racing qualities may be combined to no small extent in one and the same craft.

And what shall we say when we come to *Mosquito*, known the world over as one whose performances have shed lustre upon her designer, the first to give to a yacht sharp, hollow lines with midship section well aft. We have no desire to throw cold water upon good American patriots who labor under the misapprehension that Storer's work, as exemplified in the *America*, can claim the honorable distinction of having first turned the tide against "cod's head and mackerel tail," an old time dogma that had come down to modern ages with all the sanctity that centuries of custom could weave about a glaring fallacy. Long before the timber was cut for Storer's beauty, *Mosquito* had been afloat, and when our own schooner first made the British coast the iron cutter had become a ship of several years. Launched by Mare, of Blackwall, in 1848, she commenced her career as a star by handsomely beating all the stub-nosed, round-bellied craft of the day when once her tiller cut into the hands of a racing skipper. *America*, and won in her 1853 no less a craft than *Mosquito*, a clipper from her long style in a race with the sloop *Julia*, a clipper from her own yards, who has few equals even at the present time, and a sloop that could show a clean pair of heels to *Vision*, *Gracie*, *Addie*, and the whole lot of that stripe. Yet there are those "doubting Thomases" who will not be convinced that a well designed cutter and a high rate of speed are readily attainable. *Mosquito* changed hands ever so many times in her eventful career, sailed under the colors of many nations, and in the hands of British Isles, only to turn up again at the hale old age of thirty years, a smart flyer yet, and as handsome a ship as one

need wish to lay eyes on. Give credit where credit is due, *Mosquito* was a wonder for her days, a bold and most successful departure from the musty traditions of the past, and a lantern of criticism should be thrown upon the narrow-minded age and the rigid conservatism of barbaled custom, bravely cast off the fetters of imbecility, struck out in paths then untrodden, and carried through to success and victory bold innovations in face of frowning and derogatory public opinion!

This honor is claimed by both Mr. Dillehorn and Mr. Waterman. The records are not clear to whom is due the praise of would have been upon the genius and luck that brought forth a design which after thirty years of time still stands the test of the refinements since her launching day, undergone by naval science, so let the present generation, in the broad generosity of the times, meet out equal fame to the candidates alike, for to both of them probably could be traced the origin of *Mosquito*'s lines would fair Chio but unseal the past to the admiring verdict of to-day.

Not for long voyages and family cruising give us the sixty! None too large and none too small. Room enough for all on board—maid, nurse, baby and all. A sixty is a ship you can go around the world in with ease and luxury. *Iona*, a racing craft of this size, a very handsome cutter, recalls to mind the attempts of Mr. Ashbury, when disgusted with his bulky, uncomfortable schooners, he again fell back upon the narrow form. *Iona* did not fail to fulfill expectations among other British cracks, she certainly is a yacht of speed not to be despised, and a very handsome one at that. The "forties," which give such good racing sport around the water, are well represented by *Mjosett*, the photo before us showing her right abeam as near as possible, with her canvas set, giving a fair idea of a Laphone suit; but why will Englishmen in their racing craft adhere to the old rig against racing their mainmasts to the boom? Why the unnecessary roach along the foot? All well enough in a cruise, to be sure, for tricing up the tack is a paramount to shortening sail and a handy thing in squalls, when with the peak dropped the force of the wind is as good as neutralized. Those who witnessed the fall reign of the Atlantic Y. C. in New York harbor may recall to mind the predicament that schooner found herself in when struck by the fiercest gust that came lowering down from N. W. and when at the critical moment her mainsail refused to come down. A pull on the tack tricing line would have averted all danger in a moment. As it was, she barely escaped following *Mosquito*'s wretched fate. For cruising a tack tricing line is a handy affair, but for racing our cousins abroad should lace all round as taught and flat as they can.

What with a variety of reasons, the little freemasonry of our craft has assumed a British aspect to such an extent that we almost hear the cry of "traitor" from those good persons who think it base abjection to look beyond the limits of our borders. For the sake of historic truth we are willing to become a martyr, to suffer for our friends' very good intentions.

YACHTING NEWS.

A YACHTSMAN'S OPINIONS.—A gentleman, well known in amateur circles as a thorough yachtsman, who tools his own craft on Corinthian principles, writes as follows, and we are not sure but what there is considerable force in his remarks, relating to the present style of yachting in metropolitan waters:

My best sympathies do go, and always will go, with any effort you may make tending to discourage the style of yachting at present pursued by New York yachtsmen (so-called), sea-jockeys and fresh-water dandies, by whom, I am sorry to say, some very excellent yachts are owned. Yachts of this class, which I will join with you in heartily condemning. There are, however, in the vicinity of New York more good seaworthy yachts than there are true yachtsmen to sail them. So I say, with all my heart, educate the sailor, and the boat will be found ready to carry him wherever he dare to go.

BUFFALO YACHT CLUB.—Fifteen new members have been added to the club. Captain E. B. Dorr, well-known in marine insurance circles, Peter C. Doyle and Wm. A. Abell were elected honorary members at the meeting of Nov. 15. Several new boats were to be added to the fleet.

LAKE YACHTING.—*Delleille*, Ont., Nov. 11.—The yachting season being at an end, all the yachts of the fleet have been stripped and hauled out for the winter; that is to say, all but the *Danettes*, which are probably will be taken out and rebuilt in the spring. Several of the other yachts will be overhauled before they again greet the waters of the bay, some will have alterations made in their canvas, and others will be fitted with new "mainsail," so that next season all will come out again in first-class trim.

PORT TACK.

REGRETABLE ACCIDENT.—Mr. Whitlock, long and favorably known in the ship chandlery business on South street, met with an accident recently, being thrown from his wagon while out driving near his home in Matawan, N. J.

OAR AND PADDLE.

ST. LOUIS BOATING.—A four-oared race took place at St. Louis, November 17, between the *Modoc* and St. Louis crews of the City Course, from Arsenal wall up stream to stake-boat, one hundred yards below the bridge and return. Distance, about six miles. St. Louis crew won in 47m. 30s., after a close race.

NASSAU BOAT CLUB.—At the eleventh annual meeting of the Nassau Boat Club, held November 11, the following gentlemen were elected for the ensuing year: President, Robert L. Read; Vice-President, William Brookfield; Secretary, J. H. Giffin, Jr.; Treasurer, James Willis; Captain, G. G. Peterson; Coxswain, James D. Foot; Trustees, J. H. Abell, Jr., Henry P. Havens, Walter B. Wilson, William B. Kemp.

ROWING ON THE TYNE.—On the Tyne, England, November 11, John Hawdon beat William Lumsden. It is stated that Hawdon is to be matched against Hanlan, the American champion, early in spring.

A FEW WORDS TO "CORINTHIAN."

HALIFAX, N. S., Nov. 11, 1878.

EDITOR FOREST AND STREAM:

I have read with interest "Corinthian's" letters in favor of the American model and rig, and am glad to find him advocating his views so earnestly, though I entirely differ from him. At the same time, I wish his eagerness to prove himself right did not lead him into very awkward blunders, which tell against the value of his arguments. In his letter of Oct. 25 he says: "When the plucky Ashbury brought his cutter-yacht *Cambridge* to these waters

he found himself and yacht out-styled by our whole fleet in rotation. What was the consequence? When he returned he brought the *Livonia*. Was she a cutter? No; all who ever saw her would not hesitate a moment in pronouncing her an American type of vessel of the usual characteristics—large ball and small displacement." The Italics are my own. "Corinthian" has scored against himself in his anxiety to score against the cutter. *Cambria*—as I must say he ought to know, was never a cutter, but always a schooner—is a schooner now, and was one when he raced in New York. *Livonia*, again, was a compromise between the American and English types of a schooner-yacht, and though fast, as he says, was by no means at the top of the tree in England any more than *Cambria* had been. *Sappho* and *America* were the best of their class on this side—the Ashbury yachts were not in the same position with regard to their rivals in England. I would like to see the recent English schooner-yachts, such as *Colonia*, *Sea Belle*, or *Miranda*, racing with our crack American schooners of equal tonnage. I think "Corinthian" would open his eyes then. I wonder, too, the match between *Vision* and *Gracie* did not strike him as containing valuable lessons as to rig. But of this more anon. I shall return to the subject in some of my future issues. Meantime, the more discussion we have on these points the better for our grand sport. Winter is the time to write, and FOREST AND STREAM, the American yachtsman's organ, the paper to write to.

ROBERT CHOX.

CORINTHIAN CRUISERS.

SAN FRANCISCO, CALY. NOV. 4, 1878.

EDITOR FOREST AND STREAM:

As I sat myself down this evening in my old leather easy chair, with a fresh charge in the brown old meerschaum, and unfolded the last number of the FOREST AND STREAM, I felt "at peace with all the world and the rest of mankind." Turning first to the Yachting column, as is my wont, the letter of "Corinthian" on "Corinthian Cruisers" met my eye, and to its perusal I gave "marked attention," and saw in the article some very sensible ideas. Then followed your comments. I couldn't stand it, and have hung up my old "brown" and opening my desk, have just dipped my lance (pen) in ink (inkstand) to come to the rescue.

Let me premise my arguments by stating that, combined with a very decided weakness for guns, dogs and rods, last but by no means least is my fondness for boats, yachts and yachting. Claiming to be a Corinthian in the fullest sense, with thirty years' constant practice and experience in all sorts of boats, in all sorts of waters, in all sorts of yachts, from the 20ft. cat-boats to craft of 100 tons, it may not be egotistical to claim some familiarity with the question.

Beginning with a review of "Corinthian's" suggestions, I will say that in the main I agree with him, but am somewhat amused at the evident timidity with which he approaches the question of beam. He says he would give a boat of 30ft. keel 12 or 13 ft. breadth. Don't be afraid, my boy, nor dread ridicule. Give her 18 1/2 ft.—not an inch less. And you are sound also on the question of depth; give her not less than 4 1/2 ft., and you will never regret it; for if there is any one craft to be despised it is a shallow boat—a tea saucer—with your lee deck under water whenever you have a wales breeze.

With 19 1/2 ft. beam and 4 1/2 ft. depth you will have an able, staunch and comfortable boat, that will stand up and carry sail with the atomable English cutter is dragging her lee rigging in the water, and her deck presents the angle of a steep barn roof, capping everything below deck, and playing grand smash with the crockery. Give her a long floor and breadth, for of floor therein you get speed; not over 6 in. deadrise, and carry the bearings well out; sharp knuckle, so as to gain every inch possible of bearings—don't fear she will be ugly, it don't show, being under water—gives you wide view of cabin and berth, and makes her stiff and able. Don't cut your ends away; let your bearings run well aft; it adds materially to her stiffness, holds her up, and makes her buoyant in a sea-way. Don't mind her people tell you she will thrash. She won't; nor will it make her steer badly. And while on that subject, don't cut your deadwood off too short. Let it run well aft, for it insures steadiness, and takes the strain from your rudder. Now you have a good, buoyant bottom with a long floor, which means speed as well. And don't be humbugged by those who will tell you a broad boat can't sail; breadth of beam is not detrimental to speed, *malgre* the accepted opinion.

The next point is your centreboard. Your ideas are correct as to length. It is also unnecessary to build it high; 3 1/2 ft. from keels is quite sufficient. Put a water-tight cap on the top 10 in. wide, and a coaming each side, 1 1/2 in. high, to keep your lamp and dishes from sliding off when carrying a press of canvas; and attach swinging table-leaves each side of your centreboard case, with brackets to swing out to support them when in use. If you want your boat to steer like an arrow, add a small centreboard aft by building your deadwood up to the cockpit floor, with a slat for the board. Builders will tell you this cannot be done; that it weakens your boat, because it cuts off your floor timbers that should run across. Bosh! It can be done. The floor timbers that run across forward between the forward centreboard and the after one are quite sufficient for strength; and again, abaft the after board there is ample chance to strengthen. The after board is worked by an iron stiff rod, with an eye in the board, which permits of its lying flat in the groove in the cockpit floor. Now, you have the option of using it or not. It is good on the wind, and when running free. Show it down, and you need scarcely touch the tiller. Your boat will not rudder nor broach to, and all the usual strain and pressure on the rudder is relieved. I do not claim the after board as original with myself, but experience in its use I do claim, and if I was to build fifty boats would never omit it. It is no experiment, but the experience of a dozen years' standing.

Now as to rig. The sloop rig has unquestionably the advantage in speed, as it has been demonstrated over and over again that the more canvas you get in or on sail, the more speed; but it also involves labor, and as comfort and an absence of crew is the desideratum, it is sensible to make a little concession to that object, i. e., cruising light-banded. There remains, then, the choice of two rigs—that of the schooner, and the yawl or dandy—the latter originally English, but if modified in some particulars, is handy, and possesses the merit of rendering reefing unnecessary. Let your jib be in one piece—not according to the English idea, with

one coming down to the heel of the bowsprit, which then becomes a stayail; but give her a good sized jib, and the usual length of bowsprit; set your mainmast well forward; then place a second mast abaft the cockpit, with considerable rake (2 in. to the foot at least). Run out astern a binnacle, or short bowsprit—or stern-sprit, more properly—a good stout spar, properly secured inboard, requires no guy or bobstay to support it. On this driver-mast put a leg-of-mutton or Bermudian sail about one-fourth smaller than your jib, with a boom, a block on the end of the binnacle through which your sheet reeve, and comes inboard to a cleat at the foot of the mast, and easily reached from the cockpit. The boom of your mainsail should just clear your driver-mast. The sail on the driver-mast has a short jack-yard or piece of wood similar to the "sliding gunter," a block on same through which your halliards are rove, the standing part made fast to the binnacle in your topmast single block, by which means you can carry up the peak of your sail nearly as high as the truck of your topmast, in place of an unnecessarily tall mast.

The sail being shaped precisely like your jib—i. e., leg-of-mutton—the advantages of the rig can only be appreciated by actual use. When the breeze admits, you can carry all sail. When it comes on too heavy, lower your mainsail, and run under jib and driver; or you can lower both jib and driver, and run under mainsail alone. It is seldom that you cannot carry either jib and driver or mainsail, and if your sail is properly balanced your boat will work equally well under either. In coming about, if the breeze is light, or the sea so rough that it is doubtful if she will do it, a little pull on your driver to windward will throw her around immediately.

In close work, getting under way, or coming in to a wharf, you can handle your boat under the reduced sail of jib and driver easily and safely. If you want to deaden headway, haul your driver square around, like throwing a topkail back. This is the handiest rig for amateurs—in fact, the easiest handled of all rigs I ever tried, and there are none that I have not experimented with. One man can easily hoist and manage all three sails.

The schooner rig everybody knows too well to render it necessary to refer to it, it is the next best to the yawl or dandy rig; but don't you be persuaded to adopt that of a sloop when either of the others are open to you. That great thrashing boom is a dreadful affair in a blow and rough water. Your sail is too large, requiring reefs.

The San Francisco Yacht Club are adopting the dandy rig almost universally, and you could not persuade any one of the owners of yachts in our waters who have once tried it to use any other. It is strictly a Corinthian rig, and dispenses with two out of three men before the mast. The owner and one man are quite force enough to handle a yacht of 50ft. if so rigged, and is demonstrated with us constantly.

Now as to that English cutter or tapeworm. Of all the mean uncomfortable (below and on deck), wet, nasty, disagreeable crafts that ever floated, they can take the palm. If you want to take a perpetual bath—half the time under and half the time out; if you want a diving-bell, then build a cutter. They have no stability, they go down on their sides without feeling the influence of their lead keels and tons of iron until leverage is obtained, and then they stop; but by that time the lee rigging is in the water, and half the deck under. A nice, comfortable craft for pleasure, certainly! Of what use is a modeled bottom to them, when they do all their sailing on their sides? And as for safety and stability, I will take the centreboard flat-bottomed craft I have described, and down out the cutter in any weather or any sea! My flat-bottomed craft will neither dive nor thrash with 6 in. deadrise; she has buoyancy, and stays on top of the water. The prejudice against centreboards and flat-bottoms has arisen from the great defect not in their model, but the fact that they are too shallow. All they want is more freeboard; give them the same freeboard you give a cutter, and then try them side by side.

In a cruising yacht, in the Eastern waters as well as here, it often happens that you want to run close in shore, or into a shoal bay for shelter. Your long-legged cutter can't go in; or if she does, when the tide falls she tumbles down on her side, and when it rises there is a good chance for her filling if a hatch or sky-light is kept off, before she will right.

I will pass on the question of cabin comforts, the accommodations being reduced to the dimensions of an omnibus, and come to the objectionable cockpit. The Bay of San Francisco at times can show some water as rough as Long Island waters probably. Our winds are heavy, but in all my cruising—and I have kept up a pretty lively gait at it for twenty years in California—I never took a barrel of water into the cockpit. Again, I sent a schooner-yacht of 47ft. over all (centreboard, with a bottom; 16ft. beam, such as I describe; with just 6 in. deadrise) on a voyage to the South Sea Islands. Her first port was the Sandwich Islands, 2,000 miles; thence to the Navigators, 3,000 miles; thence to the Marshall group, 1,500 miles further; and in all that cruise, with all sorts of weather, she never took water in her cockpit. Another instance: I sold a schooner-yacht of 80ft. over all, with open cockpit, 7 in. deadrise; built so lightly that the wise ones said she never would get over the Bar, viz.—bent oak frames, 2x3; plank, 1 1/2 in. before plating; deck plank, 1 1/2. She sailed for the South Sea Islands, making the fastest passage ever made, with one exception, to Honolulu and to the Navigators; and was used for a year subsequently, beating up against a rough sea and strong trade winds at the Lelands; and the captain wrote me that he never pumped her or took a bucket of water in the cockpit, and seldom on deck. So much for buoyancy and flat bottoms.

We have in our bay a class of vessels called the square-toed—flat bottoms as flat as a house floor, centreboards, square bows, with simply sloping ends—that go outside all along the coast, and invariably out-sail and out-weather the round-bottom craft; and there is not a solitary record of one of them ever having foundered or come to grief. They lay to with more ease to themselves and comfort to their crews than the round-bottomed vessels; and there are several instances of round-bottomed schooners laying to in company with these vessels, losing their great leads, while old square-toes bobbed up and down, reeling gracefully from an ugly sea, saying, "No, I thank you; I am not ambitious to buck at you," their buoyancy keeping them on top of the sea all the time instead of plunging into it. The seas may occasionally strike the square bows heavily, but they are strong and can stand it, and do. The sea never gets aboard, however, and old Jock paces the deck smoking his pipe, dry and comfortable,

And now, if I have not cooked the goose of cutter advocates effectually as I hope, it is all because some people are so stubborn and obstinate that they are not open to conviction. But I say to you, my Corinthian friend, don't you be persuaded to build a cutter; build just such a craft as you describe (I will send you a drawing, showing the after centreboard and rig, if you desire), and you will not only have a staunch, able, powerful and comfortable boat, but a fast one; and you can carry sail and wear your store clothes, while your cutter friend in his oil skins will look like a chicken in a thunder storm. Take the advice of one who has tried them all, and has learned all he knows about the subject from personal experiment as a Corinthian, doing a good share of the work at that.

I omitted to say that your frames, as you give dimensions, are unnecessarily heavy, 2x3 at butts, and 2x2 at top would be ample; plank, 1 1/2. Don't make the great and usual error of loading your boat down with timber; it makes her lazy and heavy. Another point: paint every stick that goes in her as it goes in; it prevents water soaking, preserves your boat, and makes her lively and buoyant.

Now let the cutter fiend strike back and I will come at him again. PODGERS.

For Forest and Stream and Rod and Gun.

CANOEING ON LAKE SUPERIOR.—No. 2.

OUR stores for the trip consisted of 200 lbs. bacon, 40 lbs. flour, 2 bush. beans, 2 bush. peas, 3 bush. corn, with coffee, tea, sugar, lard and butter—the latter articles being considered effeminate luxuries. Also, five gallons of spirits and a keg of tobacco for the Indians. It is customary on these voyages to eat only twice a day, and it is astonishing to see the quantity the men will dispose of. They make a very nutritious and palatable soup of pork and peas, and the usual bread is made of flour, water and lard, baked in a frying-pan.

A gill-net was very useful on this lake. This is arranged with stones and floats of wood, to keep it expanded, so that the whitefish getting their heads into it are caught by the gills. The whitefish of this lake are very large, weighing from three to ten pounds, and they have been taken of fifteen. They are much firmer and fatter than those of the lower lakes. They have very few bones, but otherwise resemble the shad in appearance. They are, however, not so oily, and one can eat them for a long time without tiring of them. Mr. Agnew, the Collector of the port, tells us that two-thirds of the population subsist entirely upon whitefish and potatoes. The Indians on the lake subsist on them almost exclusively, and I have never seen a more healthy and comfortable looking tribe than the Chippewas.

It is a beautiful sight to witness the taking of the whitefish in these rapids by the Indians. Two of them propel a canoe into the midst of the rapids, and the one in the bow, when he sees a fish, directs his companion to fly by a signal, and when near enough he seizes his large-bowed scoop-net, and generally secures it. It is curious to see one of them resting his whole weight on his pole, and pushing the canoe along with his feet, apparently a part of the canoe itself. They also kill sturgeons of large size with the spear in these rapids.

Having broken camp and loaded our canoe, we started, and being relieved of about 600 lbs. of stores sent by the big *Aster*, she glided through the water with great speed. As we passed from behind a projecting rock, Pierre exclaimed, "Voilà Gros Cap!" and we beheld the lofty chain of primitive rocks jutting boldly out into the lake, and severed by the action of the descending waters from its continuation at Point Iroquois, on the southern side, by the St. Mary's River, which is here about four miles wide, although from the height of the land it appears to be much less. The bay which we had to traverse being shoal, is dangerous in rough weather, but the wind, though adverse, was not strong enough to give us any trouble. A sail was seen in the distance, which we concluded must belong to a surveying party under Dr. Houghton, who have been exploring the Upper Peninsula for copper mines. Their *Macina* boat came down before the wind at a great rate, and was soon alongside of us. We landed together on the Point, and they showed us their field books and surveys of the coast, and gave us minute directions for finding the various objects of interest on our way to the head of the lake. They had been three months in the wilderness, and knew nothing of the Harrison campaign, their going on, and were even ignorant of the virtues of "hard cider." Their dress and appearance was very rough, and their leader was so lithe that the Indians gave him the name of "Muckwa," or the Bear. It is their custom to name all strangers from their personal peculiarities, and at the Sault I myself was called "Nea-vus-keen-zhe," or Four Eye, from my spectacles.

After smoking a pipe together we parted, they going down to the Sault, and we heading northward. After a pull of two hours against a strong wind we arrived at the Cape, and coasted along its precipitous shores, which rise to the height of several hundred feet; here clothed with the deep green and massive foliage of the pine, and again showing the naked and weather-stained rocks, which, as you approach the point, are of an iron-rust color, and covered in many places with yellow moss. A tiny rivulet found its way over the mass of rock, and fell, broken into foam, from a point three hundred feet above us almost at our feet. Two small, rocky headlands inclose a beautiful little bay, which affords a complete shelter for canoes, and a safe place for unloading them, which must be done at some distance from the shore, the voyageurs getting into the water and holding the frail vessel away from the rocks.

At the farther end of this bay our voyageurs had pitched our tent, and were cooking at a blazing fire, the smoke of which curled lazily up in deep blue wreaths, which contrasted finely with the dark-green pines and firs in the background. The towering crags, rough and serrated, came down to the water's edge in successive projections, clothed with evergreen foliage, the rugged outlines of Gros Cap terminating the range. I tried to sketch this charming scene, but the mosquitoes and sand-flies attacked me in such swarms that I was glad to retreat to the tent and envelop myself in a cloud of tobacco smoke.

August 1.—Rose at an early hour, and started without breakfast, so as to make the traverse of the wide arm of the lake from Gros Cap to Point Pelee Blanc, a distance of twenty-one miles. Nine

lated, double-voiced, lead-colored felt hat, complete your costume. A three-piece rod from 10 to 10½ feet long, of split bamboo or ash and lancewood, with 40 or 50 yards of line, either all dead silk or the last 20 yards of that material; a leader of silk-worm gut six or seven feet long, with loops for drop-fly and a hook of fine tied by yourself or by some professional who has fished himself and doesn't merely profess, make you now ready for the fray; with snack in your breast-pocket, a heavy leather string for your fish, and landing net at your back between your shoulders, with a handle short while unused, but capable of lengthening when ready to be used. You must fish near natural or artificial obstructions in the streams where pools are formed, such as naturally cause the fish to rest and collect in considerable numbers. Just as a rule in any way except directly up stream, as then your line tends to drift back against your legs. Casts made obliquely up or down stream can be managed so as to let the current tighten your line before recovery for another cast. With these modifications your general progress may be either up or down stream. Keep out of sight and fish the space between yourself and the best ideal spot you have noted mentally, so as not to scare or pass over fish in unexpected localities. When wading you need not cast usually farther than 10 or 12 yards, though in open pools the longer the cast, provided always it be neatly made, the more apt you are to hang a fish. When a fish rises a slight but deliberate movement of the wrist away from the fish fastens the hook in the outer jaw, and then you must keep your line taut and give and take line according to his violence, until he is exhausted enough to be drawn over your landing net (fastened at your back with a loop knot in front, to be loosened as soon as your fish is thoroughly tired). Then you may, if not in a flurry, lift him in out of the wet. The gut of your leader ought to be single salmon gut, and your flies tied on single salmon gut upon hooks a trifle larger than trout fly hooks and of the same materials, only your bass flies may be a little more gaudy and showy. The bass will take all the trout flies, and some that the trout won't take. They must be tied on stronger gut and slightly larger and stronger hooks. Even ordinary trout flies, if tied on selected gut, will take bass of two or three pounds, and five-pounders are rarely taken with the fly in these parts. If you fish from a boat you can cast near and toward the shore on larger streams than are conveniently fished by wading in the morning or evening, when you find them feeding along the margin of portions of the stream, hardly to be called pools. The composition for your shoes is made of alligator, wax, oil and India-rubber. You may remember the ingredients by the phrase "T. W. O. India Rubbers"—equal to the initials of tallow, wax, oil and India rubbers. A ten or ten and a half foot rod was chosen, because with such you can cast far enough, and on account of its shortness you can carry it in thick woods and fish pools with branches overhead, which you could not do with a long rod. The leather string can be used in mid-stream, and should be tied when fish are on it to a leather belt at your wrist. The Ferguson fly, the Montreal, and some tied after specimens sent by the writer to Orvis, of Manchester, Vermont, are successful here on the Potomac and Goose Creek. Any real that does not overrun in casting will do. I use a Conroy multiplier with the balance handle destroyed—that is, I broke off the handle, and after filing the little brass ball opposite the handle flat, put on a handle which turns easily and well but does not overrun. A Milton Kentucky lead would, no doubt, do as well. If some ingenious mechanic would invent a multiplier, whose handle did not project beyond the circumference of the side-plates, he would confer a favor on the angling fraternity. The exact time that the black bass spawn is not known, but is supposed to be from 15th of May to 15th of June, or perhaps to 1st of July. In October and November the bass are in deep water, and casting is taken then with the fly, except from a boat, by casting not far from shore and approaching the fish from the centre of the stream. T. W.

10—Q-K5	10—Q-K5		

NOTES.

(a) Much better than P-Q4, which was formerly played here.

(b) By no means advisable, for Black could at any rate reply with K-

B2, but it is hard to find any good move for White at this point. If he plays P-Q4, Black answers with P-Q4, and B-K4; and if R-Kt, the Black Q can check at R4.

(c) White no doubt thought to make it hot for his subtle opponent by the move, but Black, as they say on 'Change, had already discounted all that.

(d) A clever sacrifice, which, in connection with the next move, shutting out the White Q from the game, well deserved to win.

(e) Leading to a forced mate, and of course far preferable to taking the R.

(f) He might also have played—

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDICATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 FULTON STREET, NEW YORK.

[Post Office Box 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, NOVEMBER 21, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS,
Business Manager.

S. H. TURRILL, Chicago,
Western Manager.

COMING ROUND.

BUT a very short time ago it would have been considered high treason to even mention the yawl rig as likely to obtain standing in America. From a letter by "Podgers" in this issue it will be seen that even one of the country's best patriots has so far disfranchised himself as to advocate a foreign rig. Modified somewhat, of course, the jump from the old time rig of the brick lighter to that of a sea-going yawl is too abrupt to expect the leap to be made at once. But it will all come in due time, and with the yawl, the cutter as well. To a sea-faring person the advantages of either rig are so patent that we venture to base a prediction upon this fact, that the day is not far off when yawl and cutter will cease to excite astonishment, for they will be common in our waters. When a stout defender of everything and anything American can so far cut adrift from the Bourbonism characteristic of yachting in America as to rig out a boomkin aft and deliberately sail with a "stub-tail" boom, there is hope indeed for better things to come. First, one step, then another, finally the last. *Ce n'est que le premier pas que coûte.* Cutters in a modified form are multiplying in these waters faster than the most sanguine advocate of a handy rig could hope. Old prejudices once pierced soon give way to nobler aims. Even such racing machines as *Vision* and other sloops, in which everything was sacrificed to speed in a mill pond, will never come back to the single jib.

The yawl in San Francisco, the cutter rig in New York and Boston: how long can the shallow sloop hold out against a model worthier the name of yacht? Such radical opinions as these will call down upon our head anathemas by the ton from the faithful. In time, though, even the most loyal will sing another tune. Our word for it, we know whereof we speak.

But the case shall not by any means be conducted *ex parte*. Our columns are alike open to all—to the sloop sailors, the smooth-water racers, to the cruisers and the patriots, who

would rather die by their flag than slack an inch to progress and reform!

In the meantime FOREST AND STREAM scores one for the yawl rig.

THE LESSER ANTILLES AS A TOURIST'S RESORT.

LET us direct the attention of pleasure seekers, and especially of our gentlemen who own yachts, to these Windward Islands. Our adventurous friend and correspondent, Fred A. Ober, has just returned from a two years' cruise among them. He is a naturalist and a photographer. He has brought home trophies, charming souvenirs, and numberless mementoes of the natural attractions of these enchanted isles, which have revived the remembrance of a hundred romances whose scenes were laid among the waving palms, the coral reefs, and mountain forests which overlook and gem the sub-tropical seas. To the ignorant and uninitiated the unfolding of his album and portfolio are like the revelations of wonderland. They recall to mind the earliest recorded American discoveries; the weird history of the Spanish Main; the savagery of barbarous races of men; the mysteries of the enchanted isles of Shakespeare's time; the outfitting of armadas, the search and scramble for precious stones and gold; and the bloody story of conquest or failure. Here is where Columbus first sighted shore; yonder is the island of Robinson Crusoe, so literally described by Defoe in all its details; there is where the Empress Josephine was born, who shaped the fortunes of Napoleon. On every little separate sea-girt realm are imperishable mementoes of ancient deeds and great achievements which seem to be forgotten in these latter days, but which are most intimately related to and interwoven with the world's past history and the fate and status of great nations.

But what other conception has the modern school boy of the West India Islands except as wilderness territory possessed by its primitive inhabitants, or long since abandoned to negroes who have become worse than savage because they have relapsed from semi-civilization to primitive savagery? The pictures he draws are of ruined estates choked up by weeds; and overrun by reptiles, who form such a horrid cordon around each sea-girt shore that all the luxuriance and wealth of tropical products and beautiful plumage of rarest birds offer no compensation for the dangers of approach; no life on shore save the screams of harsh-voiced birds, and nothing to break the monotony of the unrolled sea save the dip of the paddle and the chant of half-nude men in log canoes.

Twenty years ago Anthony Trollope wrote a book entitled "West Indies and the Spanish Main," of which two dozen pages only were devoted to the Lesser Antilles, and some four hundred to Jamaica, Cuba, Central America, etc. This is about the proportion of knowledge which most people have of the islands of the Caribbean Sea. Certainly there is no intercourse kept up between them and the continental hemispheres. Postage on letters is twelve cents, and on newspapers absolutely prohibitory. The few dingy colonial weeklies give only meagre abstracts of those events which especially interest their respective diminutive domains. There are no lines of steamers, no sailing packets, and no means of communication except by vessels which call for sugar, fruit and native wares. The aristocratic proprietors of the islands keep up their little courts and social distinctions, and drink imported clarets, Sauterne and Bass' ale to their absent friends in France and Great Britain. The French people never have seen France; generations before them were born on the islands; they have never seen other little worlds than their own; and our correspondent assures us that they thought it impossible that he could be an American. "He must be of some other nation, for he did not look rough or speak through his nose." The only American representatives the innocent Creoles had ever seen were the skippers who come to their wharves and quays from the seaports of New England.

One of these days Mr. Ober will write a book in which will appear sketches of natural scenery and photographs of art which will astonish those residents of Europe and North America who know nothing of the dwellers in the intermediate seas—nothing more than those dwellers know of us! Instead of savages and barbarians they will see noble cities like those of Basseterre in Guadeloupe and St. Pierre in Martinique, whose delightful, well-lighted stone piers with well kept steps; quays shaded by trees; pure water conduits through the streets; handsome shops and houses; and all the evidences of polite and good society; make one envious and ambitious to emulate. There are memorial temples and statues, lagoons like those of Venice on which barges float under overhanging trees, shaded avenues and iron-fenced parks. An hour's ride by carriage will convey one at any time from oppressive heat to the cool upper altitudes of the forest-covered mountains, where refreshing springs gush out of the cliffs and tumble over rocks in successive cascades on their way to the sea. On some of the very mountain tops are lakes, nay, one of them (in Dominica) boiling hot. Some of the little harbors are circular, and absolutely so land-locked and sea-washed by breakers that a vessel often has to wait for weeks for a fair wind to wait her out. All varieties of tropical fruit abound. At Barbuda is most excellent deer hunting, from English imported stock. Feathered game abounds. The natives, too, are not full negroes, but mixed people of all tints, from pale white to bronze. Even the Caribs who once ate human flesh, a hundred years ago, are comely to gaze

upon. Many of the women have beautiful long hair. They dress in modern style, and make comfortable company for lone naturalists and wanderers from home. Were it not for very venomous snakes on a few of the islands nothing would mar the beatitude of these Edenical retreats.

What place, then, more charming for a winter cruise? Last year two of our most adventurous and sensible yachtsmen visited portions of the West Indies; but they told us little, if anything, of what they saw, or how they enjoyed their voyage. When Lord Dufferin, prince of sportsmen, took his yacht *Foam* to high latitudes, he wrote a book, and that which the world knows best of the icy regions he visited is to be found between its leaves. Let our own Americans spend their leisure time in exploring this enchanting realm of peace and novelty. We have advocated the construction and use of sea-going craft, so that some equivalent besides precarious prize cups and pennants could be obtained for lavish expenditure of money and spread of canvas. Here are golden opportunities to try the merits of centre-boards and keels. We have in one of our clubs a representative of America's best nobility, and the owner of a yacht long celebrated who annually takes his family on a summer cruise to the northward. There are others who habitually winter in Florida. Let the example of our more adventurous and practical yachtsmen be followed more generally; and now that we have indicated the route for them, we guarantee that they will be more than satisfied when they have once put our advice to a practical test.

Our readers will be interested in looking at the portrait of Mr. Ober in this week's paper. We understand he will soon take another voyage in behalf of the Smithsonian Institution. Meanwhile we are encouraged to expect a series of letters from his pen, prepared from his diary and giving a general account of his two years' travels.

ORIGIN OF THE SLIDING SEAT.

THE first records we have of the practicable application of the principles of the sliding seat date back to 1857. The idea seemed to have been taken from the local customs in vogue among New Castle, Eng., boatmen. Their boats were provided with very wide thwarts, carefully greased, ("slushed") and the men working the long heavy oars had their trousers shod with leather in the seat, and slid across the thwarts at every stroke. This practice was induced by the nature of the work, the boats with heavy loads requiring long, slow strokes with sweeps of considerable weight. Before the mechanical contrivances for accomplishing the same object came into use, the long stroke was accomplished in shell rowing through means identical with those of the less scientific oarsmen of the lumbering New Castle conveyances, and one of the peculiarities of the oarsman's uniform consisted in a well greased stern to facilitate his slippery operations in a pull. When once the value of the new style had been generally accepted in rowing circles, it was not long before inventive genius was brought to bear upon the subject and a more perfect movement secured through mechanism than could be depended upon from the sources of grease, always liable at a critical moment to dry up, leaving the crew to fall back upon the old short chop or take the chances of setting something a-fire by friction. We believe the credit of first accurately getting afloat with a sliding seat is due to Mr. J. C. Babcock, formerly captain of the Nassau B. C. of this city, but he abandoned the arrangement after a short test, for what reason we cannot state, though he was in favor of its introduction. The rig was not allowed to fall into disuse, for in 1870 Walter Brown took out a patent and fitted up a six-oared gig for the New York Rowing Club with the sliding seat. This boat was probably the first one so supplied in which a regular race was rowed. But for want of experience the slide was given too great a range, and the crew did not work well together. Brown himself gave up the rig after having experimented with it for a season. His seat differed from those in use at the present day only in some of the practical details. It consisted of a stout leather bottom stretched across a frame sliding in grooves in horizontal pieces. The range was ten inches, but six inches only were found to be of actual service. In England, Mr. J. Searle, one of the best known builders of light craft about London, took out a patent for an improved slide. The seat was of wood, and supplied with metal studs at each end, cupped out at their base and grasping rods of glass, along which they traveled. At the ends of the rod were rubber buffers, intended to ease up the last of the movement and help in sending the seat off in the opposite direction. On account of the repeated breaking of the rods, copper and steel were finally substituted, and arrangements of this kind are now most common in England. A variety of patterns have come into use with us, but from the large number of accidents happening, in the way of unshipping the slide, it is certain that there is plenty of room for further improvement. It would seem simple enough to devise some plan whereby the recurrence of such mishaps could be entirely obviated. The only wonder is that the necessary precautions have not been generally adopted long ago.

THE LURAY CAVERNS.—Subterranean caverns are wonderful chiefly because they are buried and hidden from sight. Hidden things are mysterious and therefore interesting. Viewed in the light of open day, the curious rock formations, diversified contours, and broken surfaces would appear simply as counterparts of hundreds of localities above ground which attract no special attention or mention. Remove the tellurian crust which covers the Mammoth Cave, Weyer's

Cave, and scores of other celebrated great caverns, as we would the crust from a pie, and we disclose physical features which are reproduced above ground in the Yellow Stone Park, the Valley of the Rio Grande, and the canon of the Colorado, where we find broken ravines, bottomless springs, huge basins, lakes, monoliths, buttes, terraces, and innumerable fantastic shapes in rock work, weather-worn and battered by time. We do not gainsay that the wonders beneath the earth appear more wonderful to us than those above it. To geologists and the Creator they are not more so. But, assuredly, when heightened and intensified by the glare of torches thrown into all kinds of lights, shades and reflections, and twisted and transformed into all conceivable shapes, we are excusable for being held in breathless astonishment and admiration at the spectacle, and spellbound by what seems almost supernatural. The unaccustomed eye and mind become almost superlatively in their contemplation, and nervous persons find their resolution inadequate to endure it. Quite recently a new cave has been discovered at Luray, Page County, Virginia, which without doubt surpasses all others in the variety of its features, if not in its area. If the accounts in the New York *Herald* be true, there is nothing conceivable in art or nature that is not reproduced here with more or less truthfulness of detail. There are natural bridges, grottoes, springs, lakes, cemeteries, blacksmith shops, staturary, hallways, chambers, leaning towers, groups of columns, masses of ruins, cascades, stairways, corridors, galleries, pulpits, drapery, pendant monoliths, frescoes, arches, domes, colonnades, precipices, ledges, stalactites and stalagmites of most beautiful varied colors, formations of shell-work and moss, angels' wings, eagles' wings, candelabra, mosaics, chandeliers, stalactites shaped like arrows with heads complete, chasms, crystal walls, crystal basins, lap robes, cornices, busts, a theatre, fish market, bath-house, chapel, monuments, a cave with 106 separate springs, each in a distinct basin, leaves in frost work, sphynxes, centaurs, a stone vegetable garden, rotundas, bowers, pagodas, steeples, canopies, besides live bats, tracks of animals by the thousand, bones and skull of a fox, piles of unslacked lime, floors of ready-made bricks already laid, locomotive and tender of dark stone, to say nothing of a "beautiful almost transparent curtain one-eighth of an inch thick hanging in three folds, one of red, one of blue, and one of brown."

The entire explored area is computed at from 80 to 75 acres. The *Herald's* correspondent entered by a very small half-hidden hole in the side of a hill in Page County, Virginia; but he expects eventually to find his way out by the big crack in Black Mountain, North Carolina, where it was split by the recent earthquake.

Many years ago Porto Crayon printed in Harper's Magazine a very beautifully illustrated article describing Weyer's Cave, which is also in Virginia. There is no reason to doubt the existence of the Luray Cavern in the same region, but we wish to hint just here that the fancies and imagination of the *Herald's* correspondent hold clean over Porto Crayon and discount him so far out of sight that we don't expect to see or hear from him again. The *Herald* man ought to file his *Cave* at once, and place his clay model and map of the Luray wonder in the grand hall of the Patent Office. We have a full description of the cave from our own correspondent in Virginia which we shall print next week.

STEAM LINES TO FLORIDA.—The prospects for an increased travel to Florida this winter are very bright; indeed, the movement is already so heavy, that new lines and additional boats are being entered. One of the jauntiest, staunchest, and most comfortable of all the vessels is the new side-wheel steamer *St. John*, which has just been added to the Quintard line. It was built by Arthur Leary, Esq., with especial adaptation to the through route, and will run from Charleston to Savannah, Jacksonville, and Palatka, seventy-five miles up the river. Such confidence have the owners in her speed and the requirements of tourists, that they expect she will make two trips per week! As each round trip is at least 600 miles, they will have to beat the historical "Lively Sally" to do it. Her passenger accommodations are even luxurious—private parlors, double beds, suites of rooms, etc. She draws only 7 feet of water, and is commanded by Capt. Vogel, formerly of the *Dictator*.

Mallory & Co., of this city, long known in connection with our coastwise navigation, are pushing forward a new enterprise, the consummation of which a fortnight ago, was welcomed by the people of Florida with demonstrations of the greatest satisfaction. This enterprise consists in placing an ocean steamer on their line of sufficiently light draft to run from New York and cross the bar at Jacksonville. The first achievement was made by the steamer *Western Texas*, which reached Jacksonville on November 6. She was drawing 8½ feet of water, with 1½ feet on the bar. Five thousand persons visited her at her dock. The event was duly celebrated by the citizens. Capt. Hines, her commander, says there is very little doubt that regular trips can be made. These trips will be made once a fortnight for the present. It is hoped to add another vessel within six months.

The *Western Texas* is the first regular ocean steamship which ever entered Jacksonville, although many previous efforts have been made, some of which were attended with disaster.

The *Western Texas* touches at Port Royal, S. C., and Brunswick, Ga., thus affording comfortable means of communication to many who have heretofore gone by rail to those places. The trip from New York to Jacksonville consumed

about four days, including stoppages. This fine ship was built by John Roach, at Chester, Pa., last year for Messrs. Mallory & Co. She is 1,121 tons burthen and has a capacity of 3,000 bales of cotton. Her length is 235 feet. She has accommodations for 32 first cabin and 20 second cabin passengers. On her return trip to New York the *Western Texas* crossed the Jacksonville bar in a gale of wind.

From a commercial standpoint, it is expected that this steam line will divert from Middle Florida a portion of trade which has hitherto found its outlet in Savannah.

In this connection we desire to mention that Dr. F. D. Lente, one of our best known physicians and scientists, has published a timely pamphlet of 56 pages entitled the "Constituents of Climate," which all invalids should read who contemplate a visit to Florida. It is particularly full of information regarding the meteorology and endemic influences of Florida. He indicates what diseases are contracted in Florida, and what are cured by going to Florida. The first, which are of malarial type, are purely local; the greater part of the State is altogether exempt from them. Of the latter are enumerated pulmonary consumption, Bright's disease, throat and bronchial affections, dyspepsia, nervous disease, etc. It is published at Louisville, Ky., Medical Journal Book Concern, 104 Greene street.

FREDERICK A. OBER ("Fred Beverly.")

Frederick A. Ober was born in Beverly, Mass., in 1849, a descendant of Richard Ober who settled in Beverly 250 years ago. Beverly is the birth-place of Hon. Robert Rantoul, Lucy Lacombe, and other persons of note. Young Ober early imbibed a fondness for field sports and natural history, and while yet a mere boy had collected and preserved nearly all the birds of New England, and noted their habits, in the rough prosecution of which he did not spare skin or clothes. So strong was his passion afterwards that he abandoned a lucrative business in which he embarked early in manhood, and went to Florida. Indeed, he has subordinated mercantile pursuits to science ever since; and in this brief statement is contained the history of his life. He has made several trips into the unvisited parts of Florida, living for a time among the Seminole Indians, and penetrating to swamps which few others have ever been able to reach. His past two years have been spent in the Caribbean Sea, with results of the most satisfactory kind, we have no doubt that in the prosecution of his researches he will add much to the stores of natural science in future years.

MAJOR JACOB WAGNER.—This gentleman, who is well known to the "moonshiners" of the Blue Ridge and mid-county mountain ranges, if not to all our readers, favored us with a call a few days since. He is one of the best diplomats as well as fighters who have ever dealt with illicit manufacturers and revenue defrauders. It was the good fortune of the chief editor of this paper to be attached to his command for five weeks in the fall of 1876, and to inspect and participate in his operations against the law-breakers. Full testimony of his efficiency and of the adventures of the trip was published in five columns of the New York *Herald* last March, prepared by Mr. Hallowell's pen. The narrative is full of incidents. Major Wagner has been eminently successful in all his campaigns of the past six years, and while he has fought and obstructed the enemy at every point with great courage and pertinacity, it speaks well for his discretion and official amenity, to say that he has the respect and esteem of the very class of men against whom he is warring. Quite recently he negotiated the surrender of a noted outlaw and forty men who had held the Government forces at bay for months in Tennessee, walking into the enemy's camp unarmed and

unattended. His arguments convinced the offender of his folly in continuing resistance. The Major is in town on official business.

SHORT LESSONS IN WOODCRAFT.—Several years ago, under the head of "Syllable Leaves," we published many useful hints which are now incorporated in the chapter on "Woodcraft" in Hallowell's "*Sportsman's Gazetteer*." The following additional instructions may some time be of service to persons not already familiar with them. They are the common lessons of everyday life in the bush, and a knowledge thereof may be of service. Simple expedients often save much trouble and add greatly to the comfort of the rambler and sportsman:

1. Notes of the barred owl and loon indicate rain within twelve hours. In the fall wet weather follows the cry of the tree-frog.
2. Bark grows thickest on the north side of trees. Girdle a tree if you wish to tell which is north.
3. The centre of rotten stumps affords dry stuff for kindling fire in dreaching rain.
4. A torch which will last many hours is made from half-inch strips of cedar bark bound together in faggots two feet long, or more.
5. To hold a bark boat in a swift current, set the pole, oar or paddle on the bottom at an oblique angle with the side of the boat resting against it. Very little strength will be required.
6. To mend a birch canoe cut a patch of bark large enough to cover the fracture: sew it on with an awl and stout cord or hemlock roots; then apply a piece of natural spruce gum to the seams or joints with a glowing brand used as a soldering iron is used.
7. To carry a fish of two pounds weight and upwards, place it between hemlock boughs of the proper length, tied together at both ends and in the middle, with bark, roots, or cord. It will keep fresh and sweet a long time, is easily cured, and will not soil what it touches.
8. To mend a broken oar or paddle, bevel the fractured parts so as to make a neat joint, pass a wooden plug through both, and serve neatly with twine to cover the joint. Or, having made a joint, as above; bore two gimlet holes two inches apart; double four feet of wire so that the ends will pass through the holes in the same direction; then whip or serve neatly with the wire, and finish with a service of twine.
9. For night shooting, chalk the gun barrels lengthwise from breech to muzzle; or, make a foresight by lashing a V-shaped stick to the muzzle. By bringing the object within the V, a good head can be drawn.
10. When a tree breaks off, strips of hay from a load, the hay falls on that side of the tree toward which the cart is going. In summer hay is carted from the field to the barn, unless stacked where cut. In winter it is carted out from the barn to stock employed in cutting logs, wood, etc. Salt or wild hay is most generally stacked. It can be distinguished from field hay by the taste and smell.
11. An excellent moccasin, nearly waterproof, is made from the hind leg of a moose, cut above and below the hock, forming the heel. It is wholly without seam, except where sewed up at the toe. If tanned with the hair on, it is very warm when worn in dry snow.
12. The well of one's boat, when empty of fish, makes a most excellent wash tub or basin.
13. A table is easily constructed by taking a turn with a rope around each trunk of three or more trees or saplings conveniently near together; haul taut, make fast, and lay boards on top.

[FROM OUR OWN CORRESPONDENT.] OUR WASHINGTON LETTER.

PARTRIDGE SHOOTING—DUCKING ON THE POTOMAC—VIOLATION OF THE PROTECTIVE LAWS, ETC., ETC.

WASHINGTON, D. C., Nov. 16, 1878.
WHEN Charles I., in 1632, made the grant to Lord Baltimore, that distinguished nobleman two years later settled with his colony within the limits of the present State of Maryland upon the stream now known as the St. Mary's River, which empties into the Potomac a few miles from its mouth. Although the grant was for a much larger tract than the State of Maryland now occupies, this spot was selected for the colonial seat of government, and I have always believed that the controlling reasons which influenced Lord Baltimore to locate there was the abundance of fish, oysters and wild fowl found in the vicinity. St. Mary's County is a peninsula, with the waters of the Chesapeake Bay washing it on the east, the Potomac River on the south and west, while the St. Mary's and Patuxent Rivers, both navigable streams, drain its interior. The forests were filled with game; the waters were bountifully supplied with many varieties and the most desirable food fish; the soil was a rich, black mould, and everything gave promise of peace and plenty. As these things attracted Lord Baltimore and his followers, so do they attract the sportsmen of Washington and Baltimore to-day, as the county is easy of access to both cities. Adjoining St. Mary's is Charles County, with a river front of forty or fifty miles on the Potomac; then comes Prince George's County, which surrounds the District of Columbia, except on the northwest, where we have Montgomery County. Several of these counties cover an area of more than 500 square miles, over which are hundreds of acres of stubble fields, where the partridge breeds in luxurious plenty. Wheat, corn and tobacco are the staple products of these counties, but in some of them the land has been much exhausted. On the other hand, intelligent tillage has brought some sections up from almost a barren wilderness to fertile fields. But I did not start out to write an agricultural letter. I mention briefly the prominent features of this neighboring county, so vast in extent, so easy of access, and so abundantly supplied with game. I have often started out at four o'clock on a frosty November morning, driven fifteen or twenty miles from Washington, had a good day's shooting, and returned home by eight o'clock in the evening. There are not many Eastern cities which can boast of superior sporting advantages, either for field or aquatic shooting, than Washington.

In Prince George's County partridges may be shot from October 15 to December 20; Montgomery County, from October 15 to December 15; but Charles County has no local

of all this is: Don't shoot until you know what you are shooting at. It is better to lose a dozen deer through delay than to shoot one man through haste.

CANADA—Cobourg, Nov. 16.—Party got back a few days ago with eight fine deer. We do all our hunting here with dogs, as it is nearly all a "burnt country." Plenty of ducks at the lake and lots of powder burnt, but we do not hear of many big bags.

BLUE BILL.

MASSACHUSETTS—Wareham, Nov. 5.—The game laws in the old Bay State were up on the first day of November, and on the evening previous the register of the Kendrick House, Wareham, with a score of fancy bird dogs in the office, showed the unmistakable fact that a war on feathers was declared for the morrow. At an early hour in the morning the scene of professionals, with their thoroughbreds, demonstrated the probabilities of the evening before by the forward movement of six shooters in the following order: Mr. P. S. Hackett, of the Kendrick House, Wareham, and Dr. J. F. W. Wilson, of the Hub, took a westerly course from the village; while Messrs. D. F. Wilbourn, of Holbrook, E. M. Coles, of Middleboro, A. Ward, of Brooklyn, and Pete Wamsley took to the east. The result of the two days' hunt was figured up as follows: Eleven partridges, thirty-two quails, and one white hare. The aggregate of the two days' hunt was a sad disappointment to the hunters as well as the sitters around fully explained. During the entire summer the general talk has been that quails were unusually abundant, and the honest expert and sportsman counted scores of berries in the bag, so to speak; but in their stead the huntsman simply found small distracted parts of berries of wild birds, made so in the few days previous by men who hunt with bull-dogs. Another year and those poaching intruders on honest sportsmen will be looked after.

New Bedford, Nov. 12.—Since the opening of the season for quail and partridge several of our sportsmen have been on the alert with dog and gun, and several large bags of quail have been taken, as well as considerable numbers of woodcock, although for the most part the latter have about gone to the winter resorts. Black ducks and sea fowl extremely plenty.

CONCINA.

CONNECTICUT—Lakeville, Nov. 18.—Buffed goose have been very scarce with us this fall, especially young ones. I know that a good many broods were hatched, but when the season opened there were only four or five left in a brood, and in some cases they were gone altogether. Foxes are very numerous, but it don't seem as though they could kill all the birds. Woodcock were also scarce.

W. H. W.

NEW YORK—Atlanticville, L. I., Nov. 10.—The day before the act was off for shooting quail, one of our so-called sportsmen, Eugene Jackson, and his brother went out and killed seven. This any other person, being a good shot, could have done, but they are mostly law-abiding, and do not try to take so mean an advantage as this. It is worse than going out a month or so before the time, as far as the advantage is concerned. The law should be made with a heavier penalty for shooting in the last week of the act's being on. Hon. A. H. Dailey, Surrogate of King's County, and a friend of his, have been at the Balsey House, shooting ducks and quail. The latter are very plentiful, and the former equally so, but very wild.

W. F. H.

Shelter Island, Nov. 14.—The wild fowl here, so far, has not been so good as usual, though some little success with the coot has been had with the batteries. The fowl are very wild, and almost unapproachable with sailing boats, and they are shy of batteries; but if there should be a mild winter they will doubtless be plentiful and tame, as was the case last winter. Brant, geese and broadbills have scarcely appeared here, in Peconic and Gardiner's Bay. These are not their natural feeding-grounds, though they often pass over them in their migratory passages.

I. McL.

Brooklyn, Nov. 15.—Just returned from Boonton, N. J., with friend. In two days' shooting bagged eleven ducks, thirty-two quails, forty-six rabbits. Country hard and rough for tramping.

E. W. M.

DELAWARE.—The market hunters have been shipping great numbers of ducks from the Chesapeake Bay. The fall fuselage is a vigorous one.

MARYLAND.—Rabbits and partridges are plenty in Frederick County. The high tide the other day along the Choptank drowned great numbers of birds and rabbits.

VIRGINIA—Richmond, Nov. 19.—Game has not been found in even fair numbers near this place during the season so far, and I have only small bags to report, my best being twenty-five partridges and three hares to one gun, and five woodcock and two hares to two guns, all of which were made last week.

CHARGE.

Mecklenburg, Nov. 14.—Geese are now affording much sport for the boys about the Roanoke River. The guns are out and the men, too, and the geese are falling all about.

Tappanahock, Nov. 15.—The steam yacht *Lurline*, of New York, has arrived here. Her owner, Mr. Lorillard, and a party of friends are hunting on the Tappanahock. A party of Baltimore gentlemen have been hunting in the lower part of the county, and report good success.

SHIRSHALE.

TENNESSEE—Savannah, Nov. 9.—We have had several killing frosts, and shooting is much improved. Ducks have begun to come in small bunches. I killed the first snipe of the season yesterday. They were very fat, and in the condition for the table. A large gray eagle, measuring seven feet two inches from tip to tip, was killed about one mile and a half from town yesterday. He was found in a thicket of cane and vines by a party out in pursuit of turkeys, and, being unable to fly on account of the dense growth, was easily shot. Turkeys and squirrels reported quite plentiful.

WILL.

Nashville, Nov. 13.—Messrs. Willard and McCann bagged last Saturday on Captain Robinson's farm in Williamson County 41 quail, 10 field larks, 4 rabbits and a few squirrels. One of the ducks being brought from Reelfoot Lake, where the shooting is said to be better than ever known before. Gennett & Co. received yesterday over three hundred brace of ducks, mostly mallards, from there. Rabbits and opossums are being hawked about the streets and in the markets. The oldest sportsmen about here tell me that such fine sport was never known about here as this year's.

J. D. H.

Columbia, Nov. 16.—Quail plentiful and hunters numerous; good bags frequent. The best to date are eighty-eight, from 10 A. M. to 5 P. M., scored for Willis Connor and Walter Parker, each killing forty-four; Web Ridley, Jr., forty-five from 12 M. to 5 P. M. within four-mile circuit; Messrs. Chaffin and White twenty-five in three hours' shooting. The weather has been rather unfavorable for hunting, being very dry and dusty. The rain of last night will revive the good shooting. Messrs. Parker, Craig, Kiltrel, Harris, Kindel, Brooks and Brown went to Cecil's Camp, remained five days and killed four deer, Parker, Craig, Kiltrel and Brooks killing one each. Report them scarce.

VAL.

FLORIDA GAME DROWNED OUT BY RAINS.—The submerging by the heavy rains of the Everglades and Caloosahatchee region has caused great suffering among the Indians as well as among the whites. Deer and wild stock have collected on little dry knolls and black-jack cedars scattered about in that section. On some of these knolls the deer are reported so thick and gentle as to make no effort to get out of the way, and therefore easily captured or killed. The Indians are bound, if they are not already doing it, to deplete on the stock of the cattle owners of that section. Mr. Dennis O'Hickey, living near the Caloosahatchee River, some 15 miles above Fort Myers, caught the finest king fish fresh water trout with a hook and line in his yard.—*Key West Key.*

OHIO—Hamilton Co., Nov. 15.—Shooters of high and low degree are abroad in the land, and the Bob Whites are being with a fuselage in every field. Very little rest is given them even on Sunday, and some complaints are getting decidedly restless over this Sunday violation. Some complain that little attention is paid to the warning signs on "posted" premises.

W. McK. H.

Rochester, N. Y., Nov. 16.—Have returned from a successful quail shoot at Otis, O. Was accompanied by Jas. C. Hart, E. O. Sage and Chas. Hayden. Messrs. Sage and Hart are now at Jamestown, O., and to-day I received a telegram from them saying, "We have struck a bonanza," which I interpret that they have found plenty of quail.

H. H. M.

MICHIGAN—Roscommon.—The deer in this county have been badly depleted by continuous raids. It is estimated that there are not a thirtieth part of the number to be found here formerly.

Detroit, Nov. 16.—November 11 Albert Hill took a trip down the river for a little sport and bagged eleven ducks. The next 12 Charles Chappie took a run out for partridge, having very poor luck in the morning. On the 13th met the Blackley brothers, Raymond W. and Spencer returned from a four days' hunt with the following line bag: 48 quail, 31 partridges, 53 rabbits and 53 squirrels. November 13 Geo. S. Foote was up to the St. Clair Flats for ducks and bagged 13. James Battle was out on the 8th and 9th insts. and bagged 15 quail and 4 partridge. A. J. Rogers and a friend returned from a three days' trip on the 9th inst. with the following bag, 1 turkey, 6 partridges, 4 quail 7 ducks, 2 rabbits and 5 squirrels.

DAVIN.

MINNESOTA—St. Paul, Nov. 14.—The club had their last pigeon match for the season last week, but I did not attend and have not heard the result. Zimmerman probably will send you the particulars. Duck shooting has been first-rate this fall, and there are plenty of these birds here yet. Some two weeks ago Col. L. H. and two friends killed 150 in two days. Snipe, too, have been pretty plenty. I went out a short distance back of my house and got quite a number.

JOHN.

CALIFORNIA.—A letter from a member of the Wheeler Expedition, dated at San Bernardino, November 3, to a gentleman in this city, says: "Have just returned from the mountains of San Gabriel Creek, only 60 miles from Los Angeles. The country is very rocky and bushy, with an occasional deer flat, and streams in every direction abounding in trout. The trout are now spawning at the head of the streams. As a rule there was too much brush for fly fishing, and I used worms. At one place I caught 81 trout in 30 minutes, while another man took 47 in the same time. The best catch I made was one thirty of a pound. The best catch I made with a fly was 15 trout in an hour, all taken from the one pool, and the largest weighing 1½ pounds. Deer were plenty, and I killed two (a buck and a doe) one day. The country just teems with quail, and we get from two to four at every shot. So you see we do not want for game."

W. H.

OREGON—Eugene, Nov. 5.—The prairie goose shooting is very good this season, and we are having excellent sport. On Friday evening four of us chartered a wagon and team and drove about nine miles from town, camping under some oak trees and sleeping in a barn near by. In the morning we were out at our stands in the stubble fields before daybreak, and as soon as it became light enough to shoot the geese commenced coming in to feed from their mountain lakes, and our four breechloaders kept up a constant war, the old loaders sometimes sailing along within thirty feet of us. Occasionally a flock of ducks whirled past, and now and then a flock of snow geese and sand-hill cranes. As the fog rose and the sun came out when they ceased flying, and the shooting was over for that day. We came home well satisfied, with our bag of 38 geese, fifteen of which fell to me. The next Saturday the same party killed 32 geese, and last Saturday three of us made a high in 20 minutes, and took 90 in three hours. Duck shooting will be good this month when the swales are filled with water.

J. G. S.

CARD'S ROTARY GLASS BALL TRAP.—We have recently been enabled, through the kindness of Mr. William E. Crutenden, of Cazenovia, N. Y., to experiment with one of these traps, and we can conscientiously recommend it to all of our readers who take pleasure in shattering the swiftly flying glass ball.

The peculiar feature of the trap is the rotary motion imparted to the arm in pulling it off, thus preventing both shooter and puller from knowing the direction which the ball will take, and rendering the shooting much more difficult than it is in the ordinary straight-away traps. The spring is strong, and the ball is sliding and darting off always in an unexpected direction, seemed to us to resemble a ball in the speed and straightness of its flight. We can think of no better practice for the tyro than shooting at balls sprung from one of these traps, and in truth we have seen them puzzle more than one veteran.

We do not see why one of these Card traps should not be quite as useful in match shooting as the five traps that are sometimes used. Crutenden's advertisement will be found in another column.

HOW SHOT IS MADE.

PHILADELPHIA, Nov. 4, 1878.

EDITOR FOREST AND STREAM:

Dear Sir: It may not be interesting to some of your readers, especially those who indulge in shooting, to know something of the manufacture of shot, and, with your kind permission, I will give you the result of what I learned from a visit to T. W. Sparks' shot tower.

This lofty tower, which looms up 150 feet above the ground, has been a landmark in our city for more than seventy years (the works having been founded on the 4th of July, 1805) and is well worth a visit. It was my pleasure to inspect this place under the guidance of Mr. L. W. Tracy, the gentlemanly and efficient superintendent of the works.

For the purpose of showing me the whole *modus operandi*, I was conducted by a spiral stairway up to the very top of the tower, where I saw more than a city and an surrounding country is obtained; but the view from the inside looking downward between the heavy wooden railing, is not so pleasant, as the opening through which the shot descends into the well becomes so apparently narrow as it nears the bottom, that nothing can be seen but darkness. I asked Mr. Tracy where a man would go if he fell through that opening, and he answered that it depended very much upon what sort of a life that man had led. "Some," he said, "are supposed to go to heaven when they leave this mundane sphere, and others are said to go to—the other place." I was satisfied, and asked no more conundrums.

In the highest room in this tower, and also in another apartment half way up, are furnaces and melting pots, and into the latter is placed the prepared metal from which the shot are cast. The melted metal is poured into a cast iron pan, the bottoms of Russia sheet iron, perforated so small that for the No. 12 and other small shot the holes would scarcely admit the point of a pin. The melted metal oozes through these holes and enlarges, and forms in globules on the under side and drops a fall of seventy-five feet into a well containing from six to eight feet of water. The larger size shot, from No. 4 to F, are cast at the top of the tower, and have a fall of 150 feet into the water. The process is as follows: A curious arrangement, for while the smaller size, or bird shot, enlarge after they ooze through the perforated bottoms of the pans, the larger size are cast in pans with holes larger than the size shot desired, as the metal in that case contracts in cooling. Great care is necessary in mixing the metal, as, if not of the proper quality, it would run through the holes and drop in strings, and so shot could be produced.

The shot is taken out of the water, and placed in drying pans and carried up a short distance, from which it is allowed to run through an inclined trough into a receiver, which process dries it. From the receiver it passes into a rumble, which cleanses it, thence through a screen on to glass tables. These glass tables are five in number; the first one is slightly inclined, so that the shot can roll over it on to the second, which is less inclined, the incline of each diminishing until they arrive at the last one, which is perfectly flat. There is a space of about two inches between each table, and a fall of about two and a half inches from one to the other. The shot that are perfectly round roll over the first table a distance of about three feet, and, skipping the gap, fall upon the next table, and so continue until they reach the last one, from which they roll into another pan. All the shot that imperfect shot fall between the tables and are collected together for remelting. From these last receivers the shot passes by means of pipes into a cone-shaped brass cylinder perforated with holes the exact standard size of No. 12 shot, which revolves by steam. There are eighteen of these cylinders perforated from No. 12 to No. 1, and also B, BB, BSB, T, T and F, connected by pipes, and the shot flow from one to the other. These pellets that cannot pass through the No. 12 holes roll on to the No. 11 cylinder, and so on through them all up to F. Each cylinder has a zinc-lined box under it, into which the shot fall, and so perfect is this arrangement that scarcely ever is a wrong font shot (to use a printer's phrase) found among them. The boxes into which the shot fall are connected with the packing department on the lower floor by means of pipes, through which the shot pass, into iron boxes, and are carried by steam; a small quantity of plumage is mixed with the shot. A few revolutions of the box containing the shot thus mixed with plumage gives them a brilliant polish. The shot are then weighed and packed in canvas bags, marked and numbered, and are ready for shipment.

The buckshot are kept in a receiver by themselves, whence they pass into a revolving cylinder which scales and polishes them, and they are then turned out, a small quantity at a time, upon an inclined wooden table, the perfect ones roll down the table and fall into a receiver, while the flat or imperfect ones remain stationary upon the table, and are thrown out for remelting.

The chilled shot undergo the same process as the others, the only difference being in the mixture of the metal, which requires great care; for, if the metal is too hard, the shot break after leaving the gun, and their efficiency for penetration (which is really their principal recommendation) is entirely destroyed.

O.

GAME IN ARKANSAS.

VAN BUREN, Ark., Nov. 6, 1878.

EDITOR FOREST AND STREAM:

It would seem that the fact of our having the finest small game country in America, and the best of the world's waterfowl, is not generally known. Nevertheless, it is certainly true that we have quail in such abundance that small boys often kill them with stones. The country literally swarms with them in and on stubble fields, prairies, woodlands, etc. Our lakes and sloughs in the great bottoms on the Arkansas River swarm with ducks of all kinds ever found in the Western country—mallard, teal, buffalo heads, black and gray ducks, broad bills, twenty-five miles from the Little Rock and Fort Smith Railroad, which runs from Little Rock to the Indian Territory, a distance of 170 miles, tracing the river valley through the entire distance, crossing numerous large, bold, running streams of water which afford as fine fishing as the most sanguine Waltonian could desire. Black bass, croppie and bream are numerous, and bite at almost every kind of bait. If these facts are known to sportsmen here in the old Southwest, it seems strange that so few of them come out to hunt and fish

where the game is so plenty. We have, however, an occasional visitor, and very recently one of marked distinction—an old veteran sportsman whose name is illustrious as a profound jurist, poet and philosopher—I mean Gen. Albert Pike, now of Washington, D. C., but whose name has long since been identified with the early history of our own dear old Arkansas. The old general, together with a traveling companion, Mr. W. M. Ireland, arrived among us some five days ago, fulfilling a long promised visit of the former, who at once announced his desire for a trip to the woods and a snooze among the owls and catamounts on the banks of McLaughlin and Rose lakes or Bayou Maize, in short, a camp hunt amid the deep solitudes of primitive forests visited by himself and friend twenty years ago. A single day was required to prepare for the trip and we were off, and a four hours drive found us on the banks of the beautiful land among the boats in readiness, which consisted of a couple of small batteaux each capable of accommodating two shooters and retriever, one of which could only be used for shooting and the other engaged in a piscatorial pursuit. It being desirous to have both fish and ducks for supper, each boat was soon under way—one to the ducking grounds and the other to the best fishing water. Myself and Chas. Dreessen went for the ducks. One half mile drifting landed us among the Little Louis and Flag Islands of McLaughlin Lake, a region consisting of two to three feet water interspersed with alternate islands of high flag and lotus or manocan plants. The ducks come to this place to roost, and about one hour of the finest shooting that can be desired was had, and the result excellent. Fifty mallards and a few teal fell around us in one hour; a couple of brecht-loaders did the work in short order. On arriving at camp we found that the fishing party had returned with abundance of fish, consisting of black bass, croppie and bream. Our cook was not long in preparing a sumptuous supper of fat ducks broiled, and fried bass and croppies, which needed no appetizer to stimulate the palate for a square meal, which was partaken with little ceremony. Thus ended the first day. The night was clear and a sharp frost greeted the eye on the following morning. We remained five days, but a spot brought to big over two hundred ducks, squirrel and quail not counted, fish in such quantity as could not be eaten by the whole party, three darkies included. The party consisted of nine all told, besides divers visitors amounting to fourteen at one time. Our two visitors, already mentioned above, were entirely delighted with their short excursion and the company which kept augmenting to the last, and by the final arrival of the far-famed hunter and crack sportsman, Maj. W. M. Ireland, was as Bill Gil and I, and well known by all Western Arkansians. OLD SPORT.

A LETTER FROM FRANK SCHLEY—HIS HUNT WITH GILL SCHLEY ON THE FIRST DAY OF THE OPENING OF THE PARTRIDGE SEASON IN FREDERICK CO., MD.

EDITOR FOREST AND STREAM:

The fifteenth of October opened beautiful, warm and clear. I felt my spirits rise with the glorious day, and proposed to my brother Gill we should have a hunt. My buggy was soon at the door, and with Nellie (pointer bitch), Dick (red pointer) and Bob (red pointer), started with plenty estates and drinkables and with lots of ammunition, about seven o'clock in the morning for a spot brought to big over two hundred ducks, squirrel and quail not counted, fish in such quantity as could not be eaten by the whole party, three darkies included. The party consisted of nine all told, besides divers visitors amounting to fourteen at one time. Our two visitors, already mentioned above, were entirely delighted with their short excursion and the company which kept augmenting to the last, and by the final arrival of the far-famed hunter and crack sportsman, Maj. W. M. Ireland, was as Bill Gil and I, and well known by all Western Arkansians. OLD SPORT.
